MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION

ON THE

POOR LAWS AND RELIEF OF DISTRESS.

ONE HUNDRED AND TWENTY-THIRD DAY.

Monday, 14th October, 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).

Sir SAMUEL B. PROVIS, K.C.B.

Mr. F. H. BENTHAM.

Dr. A. H. DOWNES.

The Rev. T. GAGE GARDINER.

Mr. GEORGE LANSBURY.

Mr. C. S. LOCH.

Mr. J. PATTEN-MACDOUGALL, C.B.

Mr. T. HANCOCK NUNN.

The Rev. L. R. PHELPS.

Professor WILLIAM SMART.

The Rev. H. RUSSELL WAKEFIELD.

Mrs. BERNARD BOSANQUET.

Mrs. SIDNEY WEBB.

Miss OCTAVIA HILL.

Mr. FRANCIS CHANDLER.

The Right Rev. The LORD BISHOP OF ROSS.

Mr. R. H. A. G. DUFF (*Secretary*).

Mr. J. JEFFREY (*Assistant Secretary*).

The Right Hon. GERALD W. BALFOUR, called; and Examined.

77735. (*Chairman*.) We do not propose to ask you questions about the Poor Law, because we have, to a very large extent, finished our inquiry on that subject, but we thought it would be of great advantage to the Commission if you, having been the President of the Local Government Board at the time the Act was passed, would be kind enough to give us any evidence you can in connection with the Unemployed Workmen Act. Mr. Walter Long was coming as the first witness on the subject, but he has been compelled to postpone giving evidence until to-morrow. I understand that a good deal of the preliminary work in connection with that Act was done before you came into office?—Yes, that is so.

77736. Would you kindly explain to the Commission what was the object and intention of the Act?—I presume the Commission will not desire me to go in detail through the provisions of the Act, or of the Orders and Regulations issued under it; copies of those documents I have no doubt are already in the hands of the Commissioners. What you desire, I presume, is an indication of what were, in the opinion of those who were responsible for the drafting of the Act, its proper scope and object, and the principles underlying it?

77737. In reference to the Regulations, I think we should like some information as regards those who were excluded under the Regulations from coming under the Act.

*The
Rt. Hon.
Gerald W
Balfour.*

14 Oct. 1907.

*General
scope of the
Unemployed
Workmen
Act.*

*The
Rt. Hon.
Gerald W.
Balfour.*

14 Oct. 1907.

General
scope of the
Unemployed
Workmen
Act.

Act; and that, I think, will come out in the answers you are about to give?—Yes. I shall be happy, of course, to reply to any questions which the Commissioners may wish to put to me, so far as I am able to do so. As regards the general scope and intentions of the Act, I do not know that I have much more to say than I have already said in the speeches which I made in the House of Commons on the first and second readings of the Bill. Perhaps I might begin by saying that the Act was a much more modest measure than seems to have been understood in certain quarters. It emphatically does not, and did not, pretend to deal with the whole of that vast question known as the Unemployed Question. For instance, it made no attempt to deal with the deep-seated causes of unemployment. So far as unemployment is due to a failure to bring together employers who are in search of labour and workmen who are in search of employment, the network of labour bureaux which the Act was intended to establish all over the country may no doubt prove useful, and I hope will prove very useful; and so far as migration or emigration are calculated to relieve congestion in particular labour markets, it may fairly be said that the Act deals with the causes. To some extent, the same may be said, I think, of farm colonies, so far as these can be regarded as training schools for the unemployed sent to them. But, in the main, the purpose of the Act was rather ameliorative than curative. Of course, amelioration applied wisely and properly may itself prove a cure, in so far as it may prevent the further advance of an evil; but, speaking generally, the object of the Act really was to deal with a limited class of workmen by giving them the opportunity of such employment as might prevent the necessity of their having recourse to the Poor Law.

77738. It was dealing with a stratum of society, if I may use that expression, somewhat higher in the social scale, or the industrial scale, than those who come to the Poor Law to be relieved?—Yes. We distinctly proposed to deal with the *élite* of the unemployed, if I may use that expression. I do not think I can better describe the class of workmen for whose benefit the Act was intended than by quoting what I said on that subject in my speech upon the second reading of the Bill. I said then, "The unemployed for whom the Bill was intended were respectable workmen settled in a locality, hitherto accustomed to regular work, but temporarily out of employment through circumstances beyond their control, capable workmen with hope of return to regular work after tiding over a period of temporary distress." I endeavoured to make still more clear the class whom we desired specially to benefit by illustrating my meaning with reference to Mr. Charles Booth's well-known classification of the inhabitants of the poorer districts of London. The different classes were described by letters of the alphabet, "A., the lowest, roughly corresponding to those who were hopelessly unemployed; B., those who were casually employed; C., those with intermittent employment; D., regular workers at low wages; and E., regular workers at standard rates of payment. The unemployed specially contemplated in the Bill were those who would be classed under D. and E.; it was not intended that work should be provided for Classes A. and B., or generally for Class C. A. and B. and the majority of Class C. would be regarded, in the language of the Bill, as persons more suitable for Poor Law treatment."

77739. That is to say, the persons for whom this Act was intended were those to whom casual employment, that is, intermittent employment, was an abnormal rather than a normal condition of their lives?—Yes, I think that would be a correct statement.

77740. Did you consider that you laid down any new principles in this Bill?—Yes, I think there were new principles and important new principles involved in the scheme. In the first place, there was a statutory recognition of a system of employment—relief by public authorities without disfranchisement; and secondly, there was the provision of machinery for organising this relief at the expense of the rates, but outside of the Poor Law. Those, I think, were two novel principles involved in the proposals of the measure; but their novelty was greater in appearance than in reality.

77741. It was the fact, was it not, that there had been previously a kind of irregular and spasmodic system of relief, not very dissimilar from what you have described, which had been adopted by certain local authorities?—Yes. Really, the local authorities for twenty years had been acting on the lines of these principles. They had been so acting in periods of exceptional distress ever since Mr. Chamberlain, when he was President of the Local Government Board, issued his well-known Circular in the year 1886. Since then, similar Circulars have been issued by successive Presidents of the Local Government Board whenever there were periods of exceptional distress. Not only that, but two Committees of the House of Commons sat to inquire into the question. They found that there was no reason to dissent from the policy adopted in these Circulars, and went so far, I think, as to recommend that the guardians should be empowered to make such contributions towards the expenditure of the sanitary authorities who agreed to provide work for the unemployed as would recoup them the difference between the actual cost of the work as carried out by the unemployed, and the estimated cost of the work if carried out in the ordinary way by contract labour.

77742. The class of person described, or assumed to exist, in Mr. Chamberlain's Circular of 1886 was very much the class, I understand, to whom this Act was to be applied?—Yes, that is so. But I have not got Mr. Chamberlain's Circular with me.

77743. I think the circular referred to persons who were "in regular employment"—I think those were the words?—I believe so. I referred to it in my speech, and I see I said there that in 1886 Mr. Chamberlain "issued a Circular to the boards of guardians containing a recommendation that in districts in which exceptional distress prevailed the guardians should confer with the local authority and endeavour to arrange with the latter for the execution of works on which unskilled labour might be immediately employed. . . . The Circular further suggested that the men employed should be engaged on the recommendation of the guardians as being persons whom it was undesirable to send to the workhouse or to treat as subjects for Poor Law relief."

77744. I have the Circular before me, and I will just read this passage from it, because I think it is important:—"They are convinced that in the ranks of those who do not ordinarily seek Poor Law relief there is evidence of much and increasing privation, and if the depression in trade continues it is to be feared that large numbers of persons usually in regular employment will be reduced to the greatest straits." The *quasi* authorised action of the local authorities previous to the Act was not altogether satisfactory, was it?—No; I think it was extremely unsatisfactory, principally in two ways. In the first place, the discrimination between the deserving and the undeserving was extremely imperfect; and in the second place, the relief was given in many instances, probably in the majority of instances, on a very bad principle, that is, it was habitually discontinuous. Employment was given very often for only two days, perhaps for only one day in the week, so that the amount received by the unemployed was really not sufficient to keep the household together, and could only be regarded in the light of a sort of charitable dole.

77745. Therefore I take it you would contend that you were only attempting in a better way to give effect to action that had been in operation for a good many years past?—Yes, that really was so. The situation, I think, was quite accurately summed up in a report issued by the Charity Organisation Society in 1904, in which it was said, "there are at present two public relief agencies in the field—the Poor Law guardians under the Local Government Board, and the borough council, who have a free hand." That was the situation which the Government had to deal with, and the question was, what was the best way to deal with it.

77746. In London, where the areas of the borough councils and boards of guardians are almost coterminous, I assume there was a great deal of overlapping for want of co-operation?—Yes, I think there was. There were several possible courses that might have been suggested. We might have made an endeavour by stricter administration to return to the principle of 1834—that is to say, to the uniform treatment of the able-bodied poor by the

Previous recognition of these principles by the Local Government Board, etc.

Unsatisfactory character of relief by local authorities previous to the Act.

Overlapping in London between borough councils and guardians.

Class of workmen for whom the Act was intended.

New principles involved in the Act.

offer of the workhouse. As a matter of fact, that policy, as the Commission is aware, has never been carried out in its entirety. The Commission of 1834 had rural pauperism principally in their minds; since then, the centre of gravity of the problem has entirely changed, and it is now urban pauperism which we have mainly to consider. In populous districts it has never from the beginning been found practicable to deal with the able-bodied poor merely by the offer of the workhouse; and I do not think it was possible even to insist on the alternative of the stoneyard instead of the workhouse—public opinion would not have permitted it. But over and above that, in the judgment of those who were responsible for the Act, it would not only have been impossible to adopt a strict policy of that kind—it would have been inexpedient and undesirable. Rightly or wrongly, we came to the conclusion that classification must be and ought to be, in some form or another, applied to the case of the able-bodied poor, as it had already been applied to other classes of destitute persons. We might have tried to give effect to our policy through the Poor Law guardians more or less on the lines suggested in Mr. Chamberlain's Circular; but I do not think that would have been a very satisfactory way of dealing with the question. What we actually did was to accept the situation as it had been created by the action of the local authorities, and attempt to organise a permanent machinery for doing better and more wisely what the local authorities had been for years doing perhaps with more zeal than discretion. Above all, what we wanted was a machinery which should make it possible to discriminate effectively between the classes for whom the measure was designed and others who, we thought, were more proper subjects for Poor Law treatment. In fact, to my mind, adequate discrimination, was the real *crux* of the problem; and if the measure as we framed it, and the Regulations as we framed them, have been proved insufficient to secure effective discrimination, then I should certainly say that the Act had largely failed of its object, and might be in danger of doing more harm than good.

77747. Under Mr. Chamberlain's proposal the relief given was not to disfranchise, I think?—No, it would not disfranchise, naturally.

77748. Have you followed up at all the results of the Act of 1905? Would you be able to give us an opinion as to whether or not it has in your judgment achieved the object with which it was put on the Statute Book?—I am afraid I hardly feel competent to answer that question. Of course I have no longer any official knowledge of what has been going on, and such information as has since been published has, I think, been too meagre and insufficient to enable one to form a judgment. Nor can I honestly say that since then I have been following the question very closely; I have been occupied with other matters.

77749. I think a sentence you used just now sums up very succinctly the object, which was to attempt a classification of the able-bodied very much in the same way as other recipients of relief have been classified?—That is so. From the point of view of the relief of the poor, you may say this was an attempt to classify the able-bodied poor, but the classification was not of the ordinary kind because it was intended that the superior class of the unemployed should be provided for before they came within range of the Poor Law—before they were reduced to absolute destitution.

77750. Then the Act was for the relief of those who are rather above the class that come to the Poor Law, and it was intended if possible to be a preventive Act?—Yes; it was intended to save them from the necessity of having recourse to the Poor Law.

77751. There is only one other matter I should like to put to you, and that is a little outside the subject we have been discussing. How long were you the head of the Local Government Board?—I was only eight or nine months head of the Local Government Board.

77752. We have had a great many schemes before us and we have had to consider at great length how we can best organise the local Poor Law authority, and that rather raises the question of the central Poor Law authority, so perhaps you would not mind giving us your opinion

on this question. The Local Government Board is a very hard-worked department, is it not?—Yes, very.

77753. And the head of the department does not rank as a Secretary of State?—No.

77754. Does that affect the *status* of the whole department?—Yes, it does.

77755. And puts them, so far, for the purpose of exchange with other departments on a somewhat lower position than they would be if the head of the department ranked as a Secretary of State?—Yes; the whole department is in a lower position than departments presided over by Secretaries of State.

77756. Have you ever considered whether or not the Poor Law administration should be made a separate department?—I should doubt whether it would be wise to separate the Poor Law administration entirely from other branches of local administration so far as the central department is concerned.

77757. Do you think it would be advisable, as regards this class of duty, that there should be any re-arrangement of duties between the Home Office and the Local Government Board?—I think it is possible that in some respects there might be such re-arrangement, though I should not be prepared to suggest off-hand what it should be; but if the Local Government Board was raised in *status*, and its head was a Secretary of State, I believe I am right in saying that departmental interchanges of work could be made without the necessity of an Act of Parliament for the purpose. In our last year of office we brought in a Bill, which you may perhaps remember, in which it was proposed that the Local Government Board and the Board of Trade should both be raised to the dignity of departments presided over by Secretaries of State. The Bill never got beyond the First Reading, but the proposal was actually the subject of a government measure.

77758. Turning to the Board of Trade, they supply the figures as regards unemployment; is that a satisfactory arrangement, or do you think that work of that kind could be better undertaken by the Local Government Board? Their figures apparently relate only to a very small percentage of the employees of the country?—If I remember rightly, the Board of Trade figures are entirely derived from the trade unions, and any estimate they make of general unemployment rests ultimately for its basis upon the percentages of unemployed among the trade unions.

77759. I believe those are really the only figures we have at present which relate to unemployment?—So far as I am aware, they are.

77760. And, of course, they cover a very small area of the industrial field of the country?—They cover a comparatively small area, and unless it is legitimate to assume that the proportion of unemployed among unskilled workmen is approximately that which is found among skilled workmen at any given time, no deductions made from the trade union figures are of any real value.

77761. (Mrs. Webb.) I understand that one of the objects of this Act was definitely to take one type of able-bodied person out of the Poor Law?—Yes, so far as we thought that could be wisely and properly done.

77762. Then I assume you did not wish any deterrent test to be applied to that particular type of able-bodied person?—Except in so far as we provided that the total remuneration for such labour, where the central body either contributed to it or provided the labour itself, should be less than that which could normally be earned by an unskilled labourer at the same time and place.

77763. Did you mean that it should be less per hour?—No; we expressly left that to be settled by the distress committees and central bodies themselves.

77764. Then did you mean a less time in the week?—Supposing the pay had been per hour the same as that of an ordinary labourer, then, in order to achieve the end laid down in our regulations, it would have been necessary that the hours should be fewer.

77765. Did you not then come rather near to the doles of work that you objected to under the old system?—It is a question of degree. That depends upon the amount which could be earned subject to the conditions laid down.

Gerald W.
Balfour.*

14 Oct. 1907.

77766. What has been put before us on that point is this—that the present wage of the unskilled labourer is so low that if you go below it you are practically sweating that labourer. Did that occur to you?—Yes. Of course there is that difficulty; it would be very undesirable to reduce the remuneration so low as to make it impossible for the workman to maintain his physical health.

77767. And his family's, too?—And that of his family.

77768. Do you see any way out of that?—I am not prepared to say that it is impossible for a man who abstains from all luxuries to maintain himself and his family in health for something less than the ordinary labourer now earns. I think that the views which have been expressed upon that point are often based upon somewhat speculative data.

77769. But assuming that the ordinary labourer in London earns, say, 18s. a week, and has five children, you could not go below that amount, could you?—I should think it would be dangerous to go much below 18s. in London.

77770. Would it not be possible to get an element of deterrence without the conditions of sweating if you take up a man's leisure?—Yes. I do not say that diminishing the remuneration is the only way open. It is, of course, very important that the work given by these bodies should not be so attractive as to prevent a man seeking for normal employment.

77771. Would it be possible to give up the idea of work and take up the idea of training, for which you would give the full physiological subsistence but absorb the leisure?—I think it is an idea worth considering, but it is hardly one on which I should be prepared to express an opinion off-hand. That seems to me to be just one of the questions which this Commission has been appointed to look into.

77772. There is only one other question I wish to put, and that is about labour exchanges. I understand that it was fully in your view when you passed that Act that there might be a development of a better organisation of casual employment under the labour exchanges?—Do you mean by enabling those who are now casually employed to be employed more regularly?

77773. Yes; was that within your view?—I do not know whether that is likely to be achieved by the agency of labour bureaux. If it could be achieved by the agency of labour bureaux, much would be gained no doubt.

77774. But had you that as one of your objects?—It is very important that labour should be decasualised, but I do not think that the provisions of this measure were directly pointed to that end. I think that for the decasualisation of labour you will probably have to go further afield.

77775. (*Professor Smart.*) You are aware, of course, that there is no Poor Law relief of the able-bodied in Scotland?—Yes, I am aware of that.

77776. Had you any particular thought of that when you applied the Bill to Scotland?—No. I am not really intimately acquainted with the Scottish system, and I may fairly say that I was considering the English system alone. If I remember aright, the Bill in its original form did not apply either to Scotland or to Ireland, and it was at the request of the Scottish and Irish Members in the House of Commons that it was extended to Scotland and Ireland.

77777. Then you are not prepared to answer this question, for example—whether the Bill was not more necessary for Scotland on this account, that there was no provision under the Scottish Poor Law for the able-bodied?—I think I would rather not answer that without more consideration than I have given to the question.

77778. (*Dr. Downes.*) Should you consider it desirable that relief at the public cost should be dealt with as far as possible by one authority?—No, I do not think it would necessarily be desirable. For instance, in this case we deliberately rejected any suggestion of working through boards of guardians, and preferred a different authority altogether. Perhaps I may say, though I do so with some hesitation, that one of my reasons for desiring to see some such system as was proposed in the Bill adopted is this: My very short experience of the Local Govern-

ment Board rather led me to the conclusion that the difficulty with which the guardians start in dealing with the able-bodied poor is enormously increased by the fact that they have at one end of the scale what you may call the deserving unemployed and at the other end of the scale the wastrels and vagrants; and then, in addition to those, there is the intermediate class, which I should regard as the class most proper to be treated by the Poor Law. If the plan of the Bill was successful, then we should have relieved boards of guardians, to a very large extent at all events, of the necessity of providing for the deserving unemployed. As regards the second class, the wastrels and good-for-nothing persons, my impression is that it will be necessary sooner or later to resort to stricter treatment than at present—probably some form of penal treatment. If that were done, the guardians would be relieved from having to provide for the wastrels and good-for-nothings at the other end of the scale; and then I think it would be comparatively easy to adopt some such treatment as the workhouse test for the intermediate class.

77779. The applicants for relief of any kind do not resolve themselves sharply into different classes, I think?—Not sharply—no; that is always one of the difficulties.

77780. What I have in my mind is that the man who may really be suitable for the guardians eventually, may not in the first instance think himself of that class and may go to the employment authority?—Undoubtedly.

77781. Do you think that there is a certain disadvantage in working the machinery if there are several authorities to whom a man may apply?—There may be some drawbacks in that, but I do not think those drawbacks compensate for the advantages.

77782. Mr. Chamberlain's Circular contemplated that the man should first of all apply to the guardians, I think?—Yes.

77783. And then be referred by them to the employment authority?—Yes. In those days there was no sort of machinery for discrimination, except the guardians; but gradually, as the practice of the local authorities developed, they had committees of their own to inquire into the merits of the applicants.

77784. Would it simplify matters if there were a relief authority, not necessarily called guardians, but a relief authority which should refer the applicant of one class to one end of the scale and the applicant of another class to the other end of the scale?—I am not prepared to say that some arrangement of that sort might not be devised.

77785. A kind of receiving or sorting authority in the first instance?—I would not like to say that was impossible.

77786. If it were possible, would you regard it as having advantages?—It really would depend upon who the authority was. It is a difficult question to answer in the abstract.

77787. I am assuming a neutral authority, not necessarily associated with the Poor Law as we understand it and not necessarily associated with any other form of relief, but an authority to whom the applicant could go in the first instance?—Much would depend upon how the authority was appointed.

77788. Of course, I cannot go into details?—No; I understand.

77789. (*Mr. Chandler.*) I should like to ask if, in your judgment, the Unemployed Workmen Act has not been voluntary somewhat hindered by the arrangement which made it depend solely upon voluntary contributions for providing wages?—That is a question relating to the working of the Act. We introduced the provision that only voluntary contributions should be used for providing labour, because we were extremely anxious that there should be no justification for any impression that the Act was intended to admit the principle that it was the business of the State to employ all the unemployed. Since then, I understand that, instead of relying upon voluntary contributions, a contribution has been made from the Exchequer; and undoubtedly, if a contribution is to be made other than from voluntary sources, it is in my judgment far better that it should be made from the Exchequer than that it should be made from the rates.

77790. Of course, you are well aware that that was because of the failure of the voluntary contributions to

Question of judgment, the Unemployed Workmen Act has not been voluntary somewhat hindered by the arrangement which made it depend solely upon voluntary contributions for providing wages?—That is a question relating to the working of the Act.

come forth as you expected?—That entirely depends upon whether sufficient efforts were made to obtain them. I think it was assumed that the difficulty would be so great that it was no use trying.

Was the Act a recognition of the right to work? 77791. (*Mrs. Bosanquet.*) I think it was very freely said when the Act was passed that this was at least the recognition of the right to work?—Yes, it was.

77792. Did you agree with that?—I never admitted that for a moment; I expressly disclaimed it in every speech that I made.

77793. Do you think possibly that there was some logical justification for the view?—Do you mean based upon the provisions of the Act?

77794. Yes?—No, I do not.

Effect of the Exchequer grant.

77795. (*Mr. Loch.*) As soon as the grant came from the Exchequer, was not the logical position immensely altered; that is to say, was there not then a claim, pushed beyond a claim on voluntary funds, to be financed on lines of State regulation?—I think the fact that the Act was financed from the Exchequer for the purpose of providing labour would probably afford more basis for a claim of that kind, but I do not say it would afford sufficient basis.

Voluntary contributions v. aid from rates or taxes.

77796. Are you still of the opinion which you appear to have held formerly, that that exclusion, so to speak, of the rates or taxes is a natural basis and should be adhered to?—I should personally have preferred to try, at all events, a second year to see whether the necessary sum could not have been raised by voluntary subscriptions. I do not think sufficient effort was made to do it.

Discrimination by municipal authorities before the Act.

77797. When the question of bringing this Act forward was under consideration, did the evidence that was producible of the way in which municipal authorities had already intervened, as you have explained, show that the skilled class, the regular workmen which the Act refers to, could be discriminated, and was being discriminated at all, by the authorities?—There was discrimination; and while Mr. Long's scheme was in operation during the winter before the Act was passed, I think the discrimination was more effective than it had previously been; but I certainly should not say it was sufficiently effective.

Practicality of adequate discrimination.

77798. I think you have raised the real issue in what you said about discrimination. What one wonders is this—whether with the experience we have now, including of course the first year when Mr. Long was in office and before the Act, we can say that any system of discrimination is really applicable to this question; I mean applicable in the sense that it will produce the result you want of parting one class from another?—No doubt one class passes into another by insensible gradations, and therefore any discrimination presents great difficulties. That discrimination of a sufficiently practical character can be carried out I am still inclined to believe, though of course that is a point on which my opinion might be changed by the evidence of what has taken place since the Act was passed; that evidence I have not yet before me.

77799. Roughly, might it be said that the old system of referring to the workhouse was an attempt to meet the difficulty without having to exert discrimination?—Yes; that avoided the difficulty altogether by lumping the whole of the able-bodied destitute in one class.

77800. Making it a sort of collective option to the outsider to take it or not?—Well, you may put it in that way if you like.

Wide-spread demand for classification.

77801. I was going to ask you next if that was so in the rural districts, as you described, why should it be more easy to use discrimination in the urban districts now? If the older people were forced to that policy, shall we not, owing to the failure of discrimination, equally be forced to it?—I do not think that the importance of classification was realised so strongly in 1834 as it is now. The movement of public opinion has made classification more and more necessary, and more and more impossible to avoid. I think we must face the problem.

The problem of the casual labour class.

77802. Another question arose, which was this, was it not—that directly the discrimination was applied

the large intermediate class between the wastrel and the regular worker appeared in all its greatness, and it is a very large class indeed?—Yes.

77803. Then the question arose how that could be dealt with, even by the Poor Law. Do you think that the Poor Law machinery as it now stands, if this Act were pushed through, would be able to deal with that class—the irregular worker class?—Better than it could, I think, before the Act was passed.

77804. But, in fact, the numbers dealt with by these various committees under the Act using the discrimination carefully, are very few?—Yes, but it was the presence of those few that was one of the causes that made the task of the guardians very difficult.

77805. In any case you would say, would you not, that the large irregular worker class, which is affected indirectly at any rate by the Act, would have to be dealt with by the board of guardians?—I think so.

77806. Then there you would apply the workhouse test or any other you may have at hand?—Yes; I should certainly have a deterrent test. To the class at the bottom, the wastrels and good-for-nothings, I should be disposed to apply a more deterrent test still.

Necessity for deterrent tests.

77807. You have not, I gather, given special consideration to the possibility of applying such tests, considering the number to be dealt with and the available machinery of the Poor Law?—No, I cannot say I have. I have some hesitation in expressing these views at all, as I am quite aware that I have not sufficiently thought them out for them to be of any real value. They rather indicate the direction in which my mind was moving.

77808. (*Mr. Nunn.*) I want to ask you about the relations of the Act to the work done by the men under the borough councils and the urban district councils. I think it was distinctly considered as one of the possibilities of the work that the distress committees, or any foreign bodies, would apply to the local authorities—borough councils or urban district councils for the provision of the work?—Yes.

Effect of relief work under the Act upon the employment of regular staffs of municipal authorities.

77809. That was done very largely during the years preceding the passing of the Act of 1905, and there was a considerable staff already engaged in that way in consequence of Mr. Chamberlain's Circular, was there not?—Yes.

77810. Since then, do you think that it is really advisable to substitute a class of artificial workmen in that way for the regular staff of a borough council? I am assuming that it was contemplated to use the borough councils in the way Mr. Chamberlain suggested?—I am not aware that the regular staff of the borough councils was affected. Of course, in all relief works there is a danger of displacing those who are already at work in order to replace them by those who are out of work; and that is a matter which it behoves the local authorities to look very closely after.

77811. Yes, but there is nothing at all in the Act to compel them to look after that particular body, is there?—No, and I do not think it would have been possible to do that.

77812. Did you see Mr. Whitmore's Return, which I think was asked for in 1905, of the actual numbers of men employed by the various borough councils and urban district councils?—Yes.

77813. It was a very considerable number. Did you learn that these men practically displaced a considerable number of the regular staff?—No, I was not aware that that was the case.

77814. Or that in some of the East End unions it had been said that although men might not actually have been displaced at the time, works had been anticipated which would have provided employment for them in the future?—Yes. I think there again it is almost impossible to anticipate work, or to postpone it, with a view to accumulating it against periods of distress, without to some extent interfering with those who would have been, if circumstances had been allowed to run their natural course, employed on that work.

77815. Then in framing the Act, were you on mature consideration prepared to risk that?—Yes, I was prepared to risk that.

The Rt. Hon. Gerald W Balfour.

14 Oct. 1907.

*The
Rt. Hon.
Gerald W.
Balfour.*

14 Oct. 1907.

Initial
difficulty in
connection
with estab-
lishment
of distress
committees
and central
body.

77816. To risk the dislocation of men who actually were in regular work?—Yes. But I did not anticipate that it would be on a serious scale.

77817. I suppose we have to consider the possibility of another Act, or of the old Act coming into operation again. Did you consider the difficulty which certainly arose in connection with this Act, that when you laid down the regulations for calling the distress committees into operation in London, you brought the distress committees into existence first and then the central body? Did it occur to you that that would probably set men to work in the various boroughs who probably had less outlook, less intelligence, and less power of administration than the central body which was to be appointed to supervise them?—I think the interval between the appointment of the distress committees and the appointment of the central body was a very short one. Obviously, if the central body was to be formed of members of the distress committees in the first instance, some interval must take place. That was unavoidable, but it would occur once for all, and never again in the course of the operation of the Act.

77818. In view of the fact that the distress committees did get a very serious start, in London at any rate, and that to a considerable extent they upset the machinery of the Act by what they did in the interval between the passing of the Act and the actual coming into existence of the central unemployed body, would it not be well, if any future Act were passed on the same lines, to appoint some provisional body which should supervise the first acts of the distress committees?—It might be.

77819. I merely mention that as a matter which caused a good deal of inconvenience?—We shortened the interval, according to the best of my recollection, to the utmost of our power. I mean so far as any action of the Local Government Board was concerned.

77820. Then with regard to the powers of the guardians, and the possibility of some deterrent test. The Act laid down regulations for dealing with labour colonies. Were those labour colonies regarded as parts of the Poor Law, or as parts of private enterprise and voluntary work?—Are you speaking now of the farm colonies contemplated in the Act?

77821. Yes?—They were not part of the Poor Law.

77822. Not part of the Poor Law?—No. They were to be administered by the distress committees, or the central body, as the case might be.

77823. Supposing sufficient public enterprise could be enlisted to form a sufficient number of labour colonies, would it not be possible to graduate them in such a way as to have deterrent colonies at the bottom and thoroughly educational colonies at the top—to have, in fact, a system of labour colonies?—I certainly myself contemplated the ultimate adoption of some plan of penal colonies,

probably under the Home Office rather than under the guardians. Those who were sent to the penal colonies would really be sent to a form of imprisonment.

77824. It was recognised that the system of labour colonies, to perform both purposes, must be graduated, some having a preventive, or deterrent, effect, and others having a stimulating and educational effect?—If you were to try to provide farm colonies for every class of the destitute, your farm colonies would probably have to be more or less graduated, just as the classes of the destitute are graduated, one class passing into another. But it had not been actually in my mind that farm colonies should be provided for what I have called the intermediate class; it might be a desirable thing to do, but it had not been in my mind, I confess.

77825. Has it come to your notice that in some parts of London, instead of dealing with men who were temporarily out of work owing to exceptional circumstances, the Act would really operate in relieving, or at any rate dealing with, a very large number of casual labourers?—I am rather inclined to think, from the report that was issued in 1906, that there must have been more casual labourers who received the benefit of the Act than had been my original intention; but then casual labourers are placed under the same heading as general labourers—the heading is “General and Casual Labourers,” if I am not mistaken—and it does not by any means follow that general labourers are necessarily casual labourers.

77826. Not at all; but I was speaking of the casual labourers?—It is very difficult to make out from the returns how many casual labourers have been given work under the Act.

77827. My question was rather whether you contemplated large masses of casual labourers, as distinguished from general labourers, being employed under the Act?—No, I did not; I wished to exclude the casual labourers.

77828. (*Mr. Lansbury.*) Of course a large number of the men who are casual labourers are men who are classed as casual labourers, are they not, because their work is casual in the sense that they go to one employer to-day and perhaps to another employer to-morrow?—I should think that might be so.

77829. But those kind of men are more or less regularly employed, and you would not call them purely casual workmen, would you?—No, I should not. I am not prepared to say that there are not cases of that kind which might not be quite proper cases for the Act to deal with.

77830. (*Chairman.*) There would be regularity of employment even although it was casual in a sense, and you would not put that class into what is called the casual class of labour?—No.

Mr. WILLIAM HENRY BEVERIDGE, called; and Examined.

*Mr. William
H. Beveridge.*

14 Oct. 1907.

77831. (*Chairman.*) You are a member of the Central Unemployed Body for London, and a member of the Stepney Distress Committee?—I am.

77832. You have sent us a very able and interesting Statement, which we will treat as your evidence in chief if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. I was a member of the Executive Committee of the Mansion House Fund, 1903-4. I was a member and acting honorary secretary of the Stepney Joint Committee under Mr. Long's scheme of 1904-5. I am and have been since their constitution in November, 1905, a member of the Stepney Distress Committee, and, by co-option, of the Central (Unemployed) Body for London, established under the Unemployed Workmen Act, 1905. On the latter body I am chairman of the Employment Exchanges Committee, and I am or have been a member of the committees dealing with classification, working colonies, and finance. I have, so far as other occupations allowed, made myself familiar with the principal official records and statistics throwing light upon unemployment and its treatment in this and other countries. The following statement deals directly with the causes of distress

due to unemployment (Secs. 3-23) and remedies for distress due to unemployment (Secs. 24-74).

2. The main conclusions which I wish to lay before the Commission may be summarised as follows:—

(i) Unemployment is not due to over-population, in the sense of a general want of adjustment between the rate of growth of population and the rate of industrial expansion (Sec. 3).

(ii) Unemployment is due to certain specific industrial conditions, involving permanent or recurrent discrepancy between the number of individuals seeking work and the amount of work available (Secs. 4-16):

(iii) These industrial conditions are generally found associated with, and are themselves the cause of, varying degrees of personal inferiority or deficiency in the individuals affected (Secs. 17-23).

(iv) from (i) and (ii) it follows that no measures calculated simply to affect the general balance between population and industry (discouragement of births, emigration, deliberate creation of new industries, the eight-hours' day) are as such either necessary or effective. They may be of great value

labourers
under the
Act.

Difficulty of
defining
casual
labourers.

Summary of
conclusions as
to unemploy-
ment, its
causes and
remedies.

for individual cases or they may be advisable on wider grounds. To the problem of unemployment they are, strictly speaking, irrelevant.

From (ii) and (iii) it follows that improvement of individuals—physically, morally or mentally—is neither a remedy for unemployment nor, however desirable in itself, likely to be carried very far while the industrial causes of unemployment continue.

Note.—Though the view underlying (i), that the limits of possible population in this country are neither reached nor nearly reached, is important for a full consideration of unemployment, the need for and value of most of the practical measures advocated—especially that of organising the labour market through labour exchanges—is absolutely independent of the correctness of this view (Sec. 63).

(v) The first of the industrial causes of unemployment, both in the order of importance and in the order for treatment, is the normal overstocking of each occupation with labour as the direct result of want of organisation in the demand for labour and want of fluidity in the supply (Secs. 6–9). This overstocking is most acute in the low skilled irregular occupations where it involves normal under-employment; the unemployed problem becomes from the point of view of a distress committee substantially the problem of the “general” labourer, his cause and his cure (Secs. 30, 34). The cure, and the only cure, for under-employment is the organisation of the demand for and supply of labour through labour exchanges in some form or other (Secs. 41, 48, 52–63).

(vi) The organisation of the labour market through labour exchanges, besides being the only cure for under-employment, deals directly with many other factors in the unemployed problem (Sec. 64) and forms the indispensable permanent basis for nearly all other remedies, whether of organisation or of relief (Secs. 70, 72–3, 76).

(vii) The most important of those industrial causes of unemployment which will survive any mere organisation of the labour market is cyclical fluctuation of commercial and industrial activity (Secs. 13–16, 25). The effort to deal with this by temporary relief works has failed (Secs. 26–37) and must always fail (Secs. 38–39). The difficulty must now be attacked along some absolutely different line—insurance, short time, or the better distribution of necessary work (Secs. 69–75).

(viii) The Unemployed Workmen Act, 1905, while it has served a useful purpose as a piece of experimental legislation, is from any other point of view indefensible, being a foredoomed failure in its main object (Secs. 38–39), inadequate for the accomplishing of its secondary objects (Secs. 47–49), defective in its machinery (Secs. 42–45), and fundamentally bad in principle (Secs. 50–51).

(ix) Of the secondary objects of the Unemployed Workmen Act, labour exchanges are necessary as a permanent piece of industrial organisation, while emigration and training colonies, whether permanently necessary or not, will certainly be required for an indefinite time to come (Secs. 60, 68). Provision must therefore be made for continuing all three, though not all, perhaps, in the same form, and certainly not under the same authorities as at present.

CAUSES OF DISTRESS DUE TO UNEMPLOYMENT.

3. Unemployment is not due to over-population. It does not indicate any general want of adjustment between the rate of growth of population and the rate of industrial expansion :—

(i) The distress of the last few years may be paralleled in all essential particulars by the events of 1893–5, 1885–6, 1879, 1868 and earlier periods, when the population was far smaller than it is at present.

(ii) Of the three agents of production—land, capital and working population—the supply of the second is increasing far more rapidly than that of the third; wages are rising. The land of the country cannot increase absolutely, but as an agent of production is none the less increasing relatively to the needs of the

population since this is able to support itself upon smaller and smaller areas; the countryside is emptying itself into the towns.

(iii) Production per head of the population shows no sign of that decrease which should be found if over-population were setting in. The consumption of raw materials in all the principal manufactures appears to be increasing steadily in relation to the population.

(iv) The most eminent recent economic writers regard over-population as a danger postponed to a very remote future by modern improvements in the organisation of production.

4. On the other hand, unemployment is not due merely to personal or isolated causes, *e.g.*, to unfitness or unwillingness to be employed or to the failure of particular employers. It does indicate specific mal-adjustments between the demand for and the supply of labour at certain times or places. It is in part at least an industrial or economic problem :—

(i) The records of trade union members out of employment, obtained and published monthly by the Labour Department of the Board of Trade, while they afford no basis for estimating the total extent of involuntary idleness amongst wage-earners, are conclusive as to its existence and as to its industrial character.

(ii) The records of applicants for assistance first accumulated in considerable numbers by the Committee of the Mansion House Fund, 1903–4, and later, in the administration of the London Unemployed Fund, 1904–5, and of the Unemployed Workmen Act, 1905, show that many men individually certified by their employers to have been willing and competent workmen in the near past were unable for long periods in the years 1904–6 to obtain employment.

5. The specific industrial mal-adjustments, *i.e.*, the industrial causes of unemployment evidenced by these records may be grouped under three heads :—

(a) The normal overstocking of every trade with labour (Secs. 6–9).

(b) Permanent changes of industrial conditions (Secs. 10, 21).

(c) Fluctuations of industrial activity (Secs. 11–16).

6. Every trade tends to be overstocked with labour in proportion as the demands of separate employers in it for labour are irregular, and in so far as machinery focussing these demands and for mobilising the supply of labour is absent or imperfect. The counterpart to this over-stocking of the trade is the partial idleness of some or nearly all the individuals engaged in the trade—a perpetual leakage of working and earning power between one job and the next. In certain trades (notably those connected with building and transport by land or water), and in the fringe of unskilled or low-skilled labour attached to nearly all trades, a state of affairs develops which is best described as *under-employment*, and which involves more or less chronic distress.

7. The over-supply of labour in all the low-skilled and unskilled occupations is notorious. Even in the skilled occupations, though undoubtedly local or temporary shortages of labour are experienced, there are always a certain number of men unemployed. There is a minimum of about two, below which the “unemployed percentage” of trade union members never falls.

8. The great bulk of applicants to distress committees are men normally in or on the verge of distress, men earning perhaps fair daily wages, but getting on an average only two or three days' work in a week or two or three weeks in a month. These men cannot be described as “unemployable” (so long as it pays a business firm on occasion to employ them) nor as individually superfluous (so long as they are occasionally called on). They are part of industry, not outside industry. They represent at bottom not so much want of employment as a wrong distribution of employment, a spreading, say, of 3,000 days' work in a week over 1,000 men at three days each instead of over 500 men at six days each.

9. The main force keeping together this under-employed reserve of labour is the casual demand of a multiplicity of

Mr. William H. Beveridge.
14 Oct. 1907.

Unemployment not due to over-population.

Mr. William H. Beveridge.
14 Oct. 1907. individual employers. Each employer has his own group of hangers-on at his gate, instead of all employers sharing a common reserve drawn from one centre. Certain specific methods of employment in which the tendency to accumulate a reserve of low class casuals is most obvious, may, however, be mentioned :—

Features of casual labour system.

(a) Employers with a fluctuating demand for labour do not as a rule keep a regular staff, even up to the minimum number required on their slackest day. A wharfinger requiring daily from 100 to 200 men will perhaps have only fifty regular men, and will use the other fifty places that might have been permanent in order to keep together a reserve for emergencies. Sometimes this takes shape in a very definite plan of giving out work in rotation.

(b) Employers sometimes object to men whom they employ habitually (not regularly) working for a rival employer, even on off days.

(c) The whole foreman system—however convenient from a business point of view—undoubtedly has the effect of keeping groups of men waiting about individual foremen and thus, as a whole, increasing the leakage of time between jobs, and the total volume of labour in an occupation. The system increases enormously the uncertainty of employment. Men in the building trades, and even under local authorities, may be thrown out after years of fairly constant work by the death or removal of a particular foreman. The system undoubtedly lends itself to much abuse of patronage, and encourages convivial drinking as a means of “keeping in” with foremen.

(d) During the first few days or weeks of a big building job men coming along by chance are taken on and “weeded out” after a short trial has shown them to be inefficient. They are then free to repeat the process at another job. The social effect of this is exactly the same as that of casual relief or charity in keeping together in a state of permanent demoralisation a mass of low class casuals. Incidentally attention should be drawn to the inevitable effects upon individual industry of a system of hourly payment combined with casual employment. The casual hand in such a case can have no conceivable interest except that of lengthening out his job, since he is to go and be no more remembered at the end of it. “Ca’ canny” becomes a common-sense policy needing no trade union to enforce it. The more regular men will work better because they have more to gain or lose according as they work well or badly.

Permanent changes of industrial conditions.

10. Permanent changes of industrial conditions are of several types :—

(a) The decay of a particular industry, *e.g.*, sail-making, and now of many industries connected with horses (saddlery, harness-making, etc.).

(b) The removal of an industry from one place to another, *e.g.*, of shipbuilding from London to the north.

(c) Changes of method or organisation, *e.g.* the introduction of new machines (boot-making, rope-spinning) or new forms of labour (aerated water).

The common feature in all types is that for the individuals concerned they involve a permanent displacement from their chosen and familiar occupations, and the necessity of finding their way, perhaps at an advanced unadaptable age, into new occupations.

11. Fluctuations of industrial activity are of two distinct types, seasonal and cyclical. The common feature of both types is that, involving temporary contractions in the demand for labour, they make it impossible for a certain number of men in a particular month or year to obtain employment, though they had no difficulty in doing so in the preceding month or year and may expect to be in demand again in some later month or year. The practical difference between the two types is immense. The short period (weeks or months) and regular frequent recurrence of seasonal depression makes individual provision against it comparatively easy and natural. The fact that the slack times of different industries do not coincide makes it possible for men thrown out of one to get work in another. So far as seasonal fluctuation cannot be met thus by the use of subsidiary trades it becomes very largely a question of averaging wages over good and bad times. The length (years) and rare recurrence of cyclical depression at intervals of anything from seven to twelve years make individual provision against it difficult and beyond common foresight. Cyclical depression, moreover, affects all industries more or less simultaneously.

12. Typical seasonal fluctuations are those in printing (November and March busy, August to September and January slack); building (May to September busy, January to February slack); leather trades (May to June and October busy, December to January and September slack); furnishing (April to May busy, December to February slack); London riverside labour (November busy, August to September slack). These fluctuations are in some cases due mainly to climatic conditions; in other cases to social arrangements; in most to a blend of the two causes.

13. Cyclical fluctuations of industrial activity are reflected in nearly every branch of social statistics: bank rate, foreign trade, unemployment, pauperism, marriage rate, consumption of alcohol, formation of joint stock companies, wages, prices. 1862, 1868, 1879, 1886, 1894, 1904-5 are marked out by the agreement of nearly all these records as years of exceptional depression, affecting some trades more than others, but nearly all in some measure, at about the same time.

14. The “general unemployed percentage” gives very little evidence as to the total number of the unemployed. Its weakness in this respect is illustrated by the following table comparing for the principal industries the depressions of 1893 and 1904, and showing how impossible it is from the general percentage alone to estimate their relative depths. The table shows also the wider incidence of the depression of 1904, and its specially serious character for districts in which, as in London, the building and furnishing trades are strongly represented.

THE UNEMPLOYED PERCENTAGE, 1893-1904.

* The figures in these columns are got by assuming the trade union unemployed percentage in each group to apply to all the occupied males in that group.

Fluctuations of industry; comparison of seasonal and cyclical depressions.

Busy seasons in certain trades.

Cyclical fluctuations widely reflected.

Value of the “general unemployed percentage.”

For these four groups of trades, covering in 1893 75 per cent., in 1904 66 per cent. of all the men included in the union returns, the unemployed percentage, upon the basis of the actual trade union returns, is 8·4 in 1893; 7·6 in 1904. Upon the basis of the census figures given above, is 7·0 in 1893; 7·6 in 1904. The "general unemployed percentage" is 7·5 in 1893; 6·5 in 1904.

15. The "general unemployed percentage" may,

however, be fairly used to suggest the magnitude of the problem in relation to any possible measures of direct relief. A rise of 1 per cent. in the general unemployed percentage means 6,000 more unemployed in the 600,000 trade unionists covered by the returns, so that this rise continued through a year means 312,000 additional man-weeks of unemployment. From this point of view the recent depression of trade works out as follows:—

Mr. William H. Beveridge.
14 Oct. 1907.

THE RECENT TRADE DEPRESSION.

Man-Weeks of Unemployment represented by Unemployed Percentage on basis of 600,000 Trade Unionists.

(1 per cent. = 6,000 = 312,000 man-weeks a year.

Year.	Average Unemployment Percentage.	Man-Weeks of Unemployment.	Above 10-year Average (40).	Man-Weeks of Unemployment greater than Average.	Above Best Years (2·5).	Man-Weeks of Unemployment above Best Years.
1902	4·4	1,372,800	·4	124,800	1·9	592,800
1903	5·1	1,591,200	1·1	343,200	2·6	811,200
1904	6·5	2,028,000	2·5	780,000	4·0	1,248,000
1905	5·4	1,684,800	1·4	436,800	2·9	904,800
1906	4·1	1,279,200	·1	31,200	1·6	499,200
		7,956,000		1,716,000		4,056,000

If attention be confined to the three years 1903-5 as the time of most definite depression, the loss in man-weeks of employment due to the depression is 1,560,000 as compared with the average, and 2,964,000 as compared with the best years, roughly 1,500,000 to 3,000,000 respectively for a total working population of 600,000, i.e., two and a half weeks and five weeks per man, respectively, in the three years. If this proportion be carried out over the six census trade groups of mining (ix), metals (x), building (xii), furnishing (xiii), printing and paper (xvii), textiles (xviii), it gives for an estimated total of 5,000,000* males occupied in the trades directly and largely represented in the unemployed percentage, a loss, in three years of trade depression, of nearly 25,000,000 man-weeks of employment over and above what would have been the normal leakage in good times, viz., 20,000,000 man-weeks. There remain outside the following groups: transport, agriculture, precious metals, brick, glass, etc., leather, etc., dress, food, gas and water, and general, with an occupied male population of nearly 7,000,000.

16. The effect of trade depression in London alone is illustrated in another way in the following table, which compares for the principal trade unions making returns to the Board of Trade, the six months, December, 1899, to May, 1900 (winter in a prosperous time), with the six months, December, 1904, to May, 1905 (winter in a time of cyclical depression). Except for the inclusion of various metal trades in the first period, the occupations compared are substantially the same in both tables. The broad result of the comparison is that in the first period of six months the loss of employment was 40,700 man-weeks among 58,700 members (just over two-thirds of a week per man); in the second period of six months the loss was 76,300 man-weeks among 47,400 members (just under one and two-thirds of a week per man). The corresponding figures for the six months December, 1905, to May, 1906, are 68,900 man-weeks lost among 46,700 members (one and a half weeks per man).

* The number in 1901 was 4,772,000.

Relation of
personal de-
fects to
unemploy-
ment.

17. Defects of a personal character, whether physical, mental or moral, are at the present time not so much a primary cause of unemployment as (a) factors determining upon which of many individuals the burden of industrial dislocations shall fall; (b) themselves the natural product of conditions of employment either actively demoralising or giving bad tendencies full play. An exception to the first part of this statement is formed by the comparatively small class of the utterly "unemployable" to be found for the most part living a vagrant life in casual wards and shelters. The bulk of the applicants to distress committees are removed both from this extreme and from that of the first-rate steady workman. They are in various ways untrained or inferior, not impossible.

Character of
bulk of
applicants to
distress
committees.

Persons par-
ticularly
affected by
under-
employment.
Sources of
supply of
casual labour.

18. Under-employment naturally falls upon the weaker members of each trade and of society as a whole. The casual occupations and the casual fringe at the bottom of nearly all occupations are recruited from :—

(a) Those who at any time in any occupation have been in urgent temporary difficulties.

(b) Those who have failed in regular life—whether through their misfortune or their fault.

(c) Those who have never fairly started in life—the boys who on leaving school take to some "blind-alley" occupation which throws them out untaught, resourceless, and very nearly useless four or five years later.

Industrial
training of
boys and
girls.

An organised effort is now being made through "Apprenticeship and Skilled Employment Agencies" to promote the entry of boys and girls into permanent and skilled rather than into uneducative temporary occupations. Such efforts have great value for the individual and as the assertion of a principle in regard to boy and girl employment. They cannot seriously diminish the supply of labourers to the casual occupations. Casual employment makes its own supply of labour in this generation and the next. On the one hand it acts as a trap to catch all the temporarily distressed and turn them into the chronically distressed. To cut off the supply of unskilled labourers it would be necessary to secure not only that every one learnt some trade, but that every trade was uniformly prosperous. On the other hand, casual employment, by maintaining a large number of families in chronic poverty, forces their elder children into the first

and best-paid job that offers, irrespective of the future. The casual labourers of to-day are largely the children of the casual labourers of yesterday.

19. If the casual employment of adults were directly due to the uneducative "blind-alley" employment of boys, i.e., if the casual occupations were predominantly recruited direct from the youths who had been taught nothing between fourteen and twenty, then the age distribution in the casual occupations would correspond to that of the normal self-contained population. There would be a smaller number at each successive year of age after twenty or twenty-five, because those at each year would represent the survivors of those who a year before had been at the preceding year of age. In England and Wales for every 100 occupied males per year of age between twenty and twenty-five, there are on an average eighty-four at each year between twenty-five and thirty-five; sixty-six at each year between thirty-five and forty-five; forty-seven at each year between forty-five and fifty-five, and twenty-eight at each year between fifty-five and sixty-five. In London the corresponding figures are substantially the same, though showing both the influence of the rural invasion in the group twenty-five to thirty-five, and the lower expectation of life in the later groups. The age distribution in the typical casual occupations is in the strongest possible contrast to the general distribution for England and Wales and for London. A very large proportion of those engaged in them at the later ages must have come from other occupations and can be in no sense the survivors of those already in the occupation in former years. For every 100 dock and river-side labourers per year of age from twenty to twenty-five there are not 84, but 122 per year from twenty-five to thirty-five. In other words, there are at the later age nearly half as many dock labourers again as would have been the case had the occupation been recruited solely from those driven to enter it at twenty. The period thirty-five to forty-five witnesses a fresh invasion. There is among dock labourers at those ages an excess of 33 per cent. in regard to those at ages twenty-five to thirty-five, and of more than 100 per cent. in regard to those at ages twenty to twenty-five. The residuary character of the occupation could not be more clearly shown. The age distribution of general labourers and of unemployed applicants is marked by substantially the same pecu-
liarities.

Examination of individual records of applicants to Stepney Distress Committee, and bearing thereof on question of industrial training of boys.

20. The evidence of the census statistics is fully borne out by the records of individual men. Of 135 unemployed applicants classed by the Stepney Distress Committee as now casuals, fifty-seven are known to have had regular employment of some sort, in nearly all cases for a year at least, since reaching manhood, and twenty-eight more are known to have had a long intermittent connection with one firm. The fifty-seven include many men of long unblemished records first thrown into temporary difficulties by special causes, such as the bankruptcy of their employers or by slackness of trade, and a smaller number who lost regular situations through grave or slight faults after years of satisfactory service. The twenty-eight of the second class include men whose work from being sufficient, though not regular, has through advancing age or slackness or some special cause become definitely insufficient. Both classes show casual employment, *i.e.*, under-employment, resulting in no sense from uneducative occupation in youth, but from industrial conditions affecting manhood. Striking individual instances are far from uncommon of men brought up in some typically "bad" boy's occupation (vanguard or printer's labourer), driven to find new work at manhood, finding it and giving satisfaction for many years in a regular position, and then at last falling out through an illness or a bankruptcy to become casual for the rest of their lives. The same set of casuals reveals several cases of boys originally apprenticed to trades: cigar-box making, brass polishing, cigar making, carpentering, and printing (the last-named being clearly a bad character). On the other hand, as to thirty-two of the 135 there is evidence that they had never had any regular civilian employment since the age of twenty, while as to the remaining eighteen there is no record of any such employment. There were examined in addition the cases of fifty-six applicants under twenty-five at a loose end. Here there were undoubtedly a good many cases of youths forced out of their boys' employment at eighteen or nineteen "to better themselves," and there are a certain number showing great instability of character to which the nature of their boys' employment may have contributed. The main conclusions suggested by these cases are:—First, that if the general problem, not the saving of an individual here and there, be considered, the conditions of adult employment are more important than those of boys' employment. The defect of the unemployed is less positive acquired wickedness than life-long pliability for good as for evil. Second, that the instability of industrial conditions now renders it less important to give individuals specialised training than to give them adaptability *plus* the machinery (labour exchanges) for facilitating transference from one labour market to another.

21. Permanent changes of industrial conditions are in their incidence very nearly unaffected by questions of personal character. Indeed, the more continuously a man has been with one employer or in one trade the less able is he to find other openings in unfamiliar fields. There is an art in living casually.

22. Fluctuations of industrial activity are in their incidence enormously affected by considerations of personal character. Industrial forces decide that at particular seasons or in particular years a certain number of workpeople shall be idle; personal considerations decide which individuals shall be thrown out. Every employer shortening lands at slack seasons retains the better workmen and dismisses the worst.

23. Personal character, therefore, while it largely decides the fate of individuals, is only a secondary factor in the problem of unemployment. Questions of character are all important in applying remedies to the individual case—work or relief or emigration or training. To deal with the unemployed as if they were likely on the whole to attain the same standard of ability and industry as the general population is to court disaster. But questions of character have hardly any bearing upon the other class of remedies—those which are matters of organisation—and no reliance upon improvement of character dispenses with the need for such remedies.

REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

24. The first part of the following statement deals with the administration of special relief funds and of the Unemployed Workmen Act in London from November, 1903, to the present time, in relation to the industrial conditions of the time (Secs. 25–50). It begins with a table showing the course of the recent trade depression in London. The second part indicates the new developments which appeared to be required, as the result of the experience recorded in the first part (Secs. 51–76).

(i) LONDON RELIEF FUNDS, 1903–7.

25. The following table indicates broadly the industrial position which authorities dealing with the unemployed in London have had to face during the past few years. Special attention is called to:—

(i) The steady movement of increase (1900 to 1904) and decrease (1905 to present time) shown by the general figures for the whole country.

(ii) The broad reflection of this movement in London subject to a very considerable delay in the period of recovery, appearing in printing and shipbuilding (where the worst time falls in 1905), but most marked in the building trades (where the unemployed percentage still remains extremely high and little lower than in the worst times of all).

THE RECENT TRADE DEPRESSION IN LONDON.
(Compiled from *Labour Gazette*.)

Year.	General Unemployed Percentage (United Kingdom).	Unemployed Percentages in London and District.					Daily numbers employed in London Dock and Riverside Labour.
		Carpenters and Joiners.	Plumbers.	Engineering Trades.	Ship-building.	Printing Trades.	
1900	2.9	2.0		2.0†		4.2‡	15,530
1901	3.8	3.2*	7.3*	2.9†		4.5‡	16,454
1902	4.4	4.4	8.6	4.3	7.8	4.8	14,716
1903	5.1	5.3	9.8	3.9	8.0	4.7	13,489
1904	6.5	7.7	10.7	4.6	11.0	4.8	12,988
1905	5.4	8.6	12.5	4.2	11.6	5.4	[12,078]§
1906	4.1	8.3	12.9	3.1	9.8	4.8	[11,947]§
1907¶	—	—	—	—	—	—	—

* Eight months, May–December, 1901, only.

† Includes, besides engineering and shipbuilding, certain metal trades. The corresponding figure for the whole group in 1902 is 4.9 (lying between the 4.3 and 7.8 of engineering and shipbuilding respectively).

‡ Includes bookbinding as well as printing. The corresponding figure for the whole group in 1902 is 4.9 (practically the same as the 4.8 given by printing alone).

§ These figures are not strictly comparable with those for previous years, but sufficiently indicate the continued depression in riverside labour.

¶ The figures for the first five months of the present year are as follows:—General Unemployed percentage, 3.6 as against 4.0 in the corresponding period of 1906; carpenters and joiners, 8.1 (as against 8.6); plumbers, 11.8 (as against 14.8); engineering, 3.9 (as against 2.9); shipbuilding, 9.8 (as against 9.8); printing, 3.4 (as against 4.5). As will be seen in all cases, except engineering and shipbuilding, where trade had already returned to fair prosperity there is a distinct improvement between 1906 and 1907.

Mr. William H. Beveridge.

14 Oct. 1907.

Relation between permanent changes of industrial conditions and personal character.

Relation between fluctuations of industry and personal character.

How far personal character must be considered in dealing with the unemployed.

Industrial conditions in London from 1900 to 1907.

Mr. William H. Beveridge. 26. The Mansion House Fund, 1903-4, was started as the result of a letter appearing in the London papers on November 25th, 1903, and signed by the Bishop of Stepney and others. By means of this fund—administered by a voluntary executive committee and amounting to about £4,000—relief work was provided at Osea Island and at Hadleigh to 467 heads of families (2,500 persons), resident in the four East End boroughs of Stepney, Poplar, Bethnal Green and Shoreditch. The men were sent down to the work, where they received board, lodging and pocket money, returning only at stated intervals to see their families and look for ordinary employment. Their wives received in London allowances varying with the number of dependent children. This separation from home and London was advocated in the letter of November 25th as “a real test of need and of manful purpose,” making relief work less attractive than ordinary work, without making it either dishonourable or irregular. This is the essence of the “colony” system of relief works.

Principles applied in administration of Mansion House Fund, 1903-4.

27. The administration of the fund of 1903-4 embodied several important principles disregarded in most previous schemes of emergency relief. Work was given, not money. Regular work, continued while the fund lasted, to each individual so long as he behaved well, was given in place of doles of irregular work. The necessity of making relief less attractive than industry was recognised. After the first few weeks the cases of all applicants for assistance were investigated as fully as possible and selection was made of those who, appearing to have had regular work in the past, would be most likely to recover regular work when trade improved in the future. The scheme of 1903-4 is thus noticeable: (i) as the first application of the “colony” system; (ii) as a first attempt to deal scientifically with the specific evil of cyclical trade fluctuation and to make temporary relief work a means of permanent help by tiding men over a period of exceptional depression.

Results and lesson of Mansion House Fund, 1903-4.

28. At the end of July, 1904, an enquiry was made as to the then condition of as many as possible of the men assisted. Seventy-two, or 26 per cent., were returned as having “obtained more or less regular employment according to the nature of their occupation;” 102, or 36 per cent., as having obtained casual or irregular employment (one month or so in four or five); 107, or 38 per cent., as having been out of employment ever since leaving the relief works in February or March, or having had a few days’ or weeks’ work, and as still out of employment. Seventy-five had removed without trace, while fifteen had been emigrated. Of the men assisted in one of the boroughs (Stepney), nearly 50 per cent. are known to have applied again for relief work in the winter of 1904-5. Among the remainder, some had died, some had emigrated, some had moved to other districts in London. Hardly one case of permanent recovery of work during 1904 is known. The main effect of the Mansion House Fund, 1903-4, was to demonstrate the magnitude of the problem to be solved.

London Unemployed Fund, 1904-5.

29. The London Unemployed Fund, 1904-5, had its origin in the proposals laid before a conference of Metropolitan guardians by Mr. Long, then President of the Local Government Board. Its machinery and working have been fully described in an official report. The main facts are:—

Total number of applicants to twenty-eight joint committees -	45,996
Number provided with work by the central committee (to September 30th, 1905) -	3,496
Total expenditure (less £5,594 distributed in grants to borough councils for work not included above) -	£46,926
Average period of employment -	-8 weeks.

Roughly speaking, one-third of the men assisted were employed in London itself; one-third at Long Grove Asylum (to which they travelled daily by special train); one-third on the colony system at Hadleigh, Garden City, and the farm colony at Hollesley Bay, leased by the committee from Mr. Fels, and now purchased by the Central (Unemployed) Body. In addition, during the winter 1904-5 up to March 31st, over £110,000 was spent by Metropolitan borough councils in providing relief work themselves.

30. Of the 3,496 men, selected from nearly 46,000 Numbers, applicants, for relief under a scheme intended mainly, occupations and character if not solely, for “genuine workmen usually in regular work,” 55 per cent. were returned as “general labourers,” of men and 20 per cent. as in the building trade (three-quarters relieved under London Unemployed Fund, 1904-5. A very large proportion of the remainder were labourers attached to other trades, or were low skilled and irregular workmen connected with transport. Certain joint committees, moreover, even while recommending men were quite unable to satisfy themselves that the men came within either the spirit or the letter of the scheme. The Finsbury committee, which helped 255 out of 1,080 applicants investigated, states that only sixty-six out of the 255 could be fairly described as “genuine workmen usually in regular work.” The remainder were “decent people enough, but seasonal workers intermittently employed, and would be in a similar position next winter.” The Stepney committee was able to give work to 190, and to offer it to fifty-six more, selected out of 1,300 applicants, with a searching preference for men of regular or skilled occupations. The committee was unable to find for the purpose more than 111, who had either been skilled workmen or in regular jobs within the past five years and had lost them through no fault of their own. The rest of the 246 included 100 men normally in casual employment, and twenty-seven men who had lost jobs through personal faults, slight or serious. Thirty-one per cent. of these selected applicants were living in one room, and 43 per cent. in two rooms. Seventy per cent. were living in crowded conditions (more than two to a room). Less than 10 per cent. of the selected men, and less than $\frac{1}{2}$ per cent. of the men of whom the question was asked, were members of trade unions or provident societies.

31. The Unemployed Workmen Act, 1905, followed upon Mr. Long’s scheme. The main facts of working given in round numbers because the figures are not throughout strictly comparable):—

	Winter of 1905-6.	Winter of 1906-7.
Total applicants registered by 29 distress committees up to March 31st.	40,000	28,000
Applicants investigated	35,000	20,000
Applicants held ineligible or unsuitable.	6,000	—
Individual men given work.	5,086	3,560
Number of these on relief work (<i>i.e.</i> excluding Hollesley Bay).	4,430	2,775
Average period of employment (in weeks).		
1. On relief work	6·0	7·8
2. At Hollesley Bay	8·8	10·3
Maximum number employed at any one time.	3,471	1,600

32. Comment upon the administration of the Unemployed Workmen Act in London falls naturally into the following divisions:—

- (i) The provision of temporary relief work: (a) in or near London; (b) at colonies other than Hollesley Bay (Secs. 33-39).
- (ii) The other branches of the Act: emigration (Sec. 47); employment exchanges (Sec. 41); training colony at Hollesley Bay (Sec. 49).
- (iii) The machinery of the Act (Secs. 42-45).
- (iv) General conclusions (Secs. 46-50).

33. The provision of temporary relief work under the Unemployed Workmen Act must be regarded as a failure relief under in so far as the work in question has been provided neither the Un- to the persons contemplated by the Act (workmen employed Workmen Act. exceptionally distressed), nor so as to achieve the purpose contemplated by the Act (restoration to regular employment), nor in substantial accordance with the principles

of the Act as interpreted by the Local Government Board (that relief work should be, for those taking it, less eligible than independence).

34. The only persons who may be directly assisted under the Unemployed Workmen Act are those falling within the description in Sec. 1, Sub-sec. 3 of an "applicant honestly desirous of obtaining work, but temporarily unable to do so from exceptional causes over which he has no control." The great bulk alike of those who have applied for assistance and of those who have received assistance under the Act in London have not really fallen within this description. They have been labourers or low-skilled workmen with whom distress was neither exceptional nor temporary. The Stepney Distress Committee, who took special care both in regard to investigation and classification, found among their 1,710 applicants only ninety-seven with a recent record of regular employment, and 155 with a recent record of fairly regular employment. The committee, after offering work to every one of these, and to forty-eight "special cases of various sorts," had thereafter to fill a good many vacancies from among casual workmen or from men who had lost employment, through slight personal fault. In 1906-7 the same committee, after exhausting all its preference cases (179), had to offer work to seventy-four men classed either as "casual, with some record of employment," or as "having lost their jobs through some slight fault." The preliminary report of the Central Body to May 12th, 1906, calls special attention to "the great majority of the applicants for work who have belonged to the unskilled labouring class and the large number out of these who have been casual workers." In regard to the works other than on the colony system, it is estimated "as the result of constant observation, that perhaps about 20 per cent. may at one time have been efficient workmen." A special enquiry in June, 1906, showed that about 50 per cent. of the applicants registered in the preceding winter were still unemployed. Over 80 per cent. alike of those who applied for, and those who received, assistance were engaged in general labouring, in transport or in the building trade.

35. The purpose of the assistance to be given (otherwise than by way of emigration) is laid down in Sec. 1, Sub-sec. 5. The assistance is to be "temporary work," so conducted as to put the applicant "in a position to obtain regular work or other means of supporting himself." This purpose has not, so far at least as the relief works are concerned, been carried out, because the unemployed applicants, being for the most part irregular workmen before applying, simply returned to the same state after being assisted. There was no further shore of good employment to which they could be tided over. A special enquiry by the Stepney Distress Committee in regard to those who had been given work in 1905-6, showed that out of those who could be traced, 46 per cent. were in July, 1906, still out of work, with, in most cases, no prospect of obtaining it, 23 per cent. were in casual work, 31 per cent. were in "fairly permanent work" (a description including jobs of a few weeks or for the summer only). Comparing their position with that in former years, 13 per cent. reported themselves as better off, 35 per cent. as neither better nor worse off, 52 per cent. as worse off than before. Of the 1,412 applicants to the Stepney Distress Committee in 1905-6, who were not assisted either by work or by emigration, 292 or just over 20 per cent. applied again in 1906-7. Of the 278 applicants who were given work by the same committee in 1905-6 (excluding men subsequently emigrated or retained indefinitely at Hollesley Bay), 124 or 45.3 per cent. applied again to the same Committee in 1906-7. In other words, the proportion of re-applications is more than twice as great amongst those assisted by the Central Body ("in such manner as they think best calculated to put him (the applicant) in a position to obtain regular work or other means of supporting himself"), as it is amongst those not so assisted.

36. By Art. V. (1) (f) and (g) the "total remuneration" of any person assisted "for any given period of continuous work shall be less than that which would, under ordinary circumstances, be earned by any unskilled labourer for continuous work." This regulation has been formally adhered to, in regard to the men employed in London and its neighbourhood, by paying them the full hourly rate of wages for competent labour (6d. or 7d.), but letting

them work for something short of the full number of hours each week. The principle which the regulation appears to embody—that assistance should be less attractive than independence—has not received and could not receive effect, because the persons assisted have seldom been persons used to regular work or earnings.

37. On the "colonies" at Garden City, Farnbridge, and Osea Island, to which the regulation also formally applies, the object of the regulation was thought to be secured in another way, viz., by the removal from London to unfamiliar surroundings, and the deprivation of money wages. Work on this system is undoubtedly unattractive at first sight, i.e., it is refused without trial by men who would go readily to relief work in the London parks. Upon those who do try it, the effect rapidly wears off and substantially disappears. The surroundings become familiar instead of unfamiliar. The food and accommodation are necessarily on a high scale: a public body which pays in kind cannot afford to risk grumbling and is really bound to give the men better than what they would provide for themselves. The men are not in practice deprived of the use of money, and, through it, of alcohol. A certain proportion of the allowances to the families constantly finds its way to the husband at the colony. Further, the colonies do not escape, and probably cannot escape, the grave dangers of all institutional treatment. Life there becomes gradually a life absolutely without responsibility or thought. The man does such day's work as the Central Body can exact. The Central Body takes his family off his hands, and provides him with board, furnished lodging, boots, railway tickets, clothes, notepaper, legal advice, medical advice, games, papers, and pocket-money. Where the element of training is strong—as at Hollesley Bay—this evil of making men children again may be counteracted. At the ordinary relief colony as now administered, it probably outweighs the advantage of the "test."

38. The failure of the Unemployed Workmen Act on its relief side to accomplish the objects contemplated is not due to defects of mechanism (though there are obvious defects) nor to inefficient administration. The Act on this side has failed, and was foredoomed to fail, simply because it was founded on a misconception of the problem. The class of men contemplated by the Act, men temporarily unable to obtain employment through exceptional causes beyond their control, has not been forthcoming in numbers sufficient to fill even the 3,000 to 4,000 vacancies provided. An altogether different class of men, the normally under-employed, has flooded the registers ten times over.

39. Moreover, the Act, as a measure against exceptional depression of trade, is not to be condemned as uncalled for. The trade fluctuation shown by the *Labour Gazette* returns is a reality. (Sec. 25). The experience of distress committees has proved simply:—

(1) That the effects of trade fluctuation are at present hopelessly complicated by those of normal under-employment. The "general labourer" may be a little worse off in a bad year than in a good year, but he is always so insufficiently employed that classification breaks down and "tiding over" becomes a mockery.

(2) That the depression due to cyclical fluctuation, being a matter of years, not months, outlasts any temporary relief works.

The alternative to the Act, even on its relief side, is not to do nothing, but to discover the right line of attack upon the very real problem of cyclical fluctuation of industrial activity.

40. Apart from the provision of temporary relief work, the Unemployed Workmen Act, as administered in London, includes as secondary objects, emigration, the training colony at Hollesley Bay, and employment exchanges. Only the third of these is described at any length here. The following memorandum, dated June, 1907, gives the outlines of the system of Metropolitan employment exchanges established by the Central Body.

41. There are at the present time maintained by the Central (Unemployed) Body for London, under power given by Sec. 1, Sub-sec. 4, of the Unemployed Workmen Act, twenty-five local employment exchanges, together with a central employment exchange. Nine of these

Mr. William H. Beveridge.
14 Oct. 1907.

General conditions of life at the "colonies."

Cause of failure of the Act on its relief side to accomplish the objects contemplated.

What the experience of distress committees proves as to trade fluctuations.

Secondary objects of the Unemployed Workmen Act.

Metropolitan employment exchanges.

Mr. William H. Beveridge. local exchanges have succeeded to labour bureaux formerly maintained by borough councils. Sixteen are in districts hitherto without any bureau or exchange. The system covers the whole of the county of London (with the exception of the city of Westminster, in which there is a labour bureau maintained by the city council), and was necessarily established very gradually. It was not till January of the present year that the whole of the twenty-five local exchanges were open and at work.

Oct. 1907.
Metropolitan employment exchanges.

Local Exchanges.—The object of these exchanges is to put into immediate communication employers seeking workpeople, and workpeople seeking employment. Any person resident in the district covered by an exchange—generally identical with one of the Metropolitan boroughs—may register there in person, recording his name, age, and address, the character of work which he requires, and his qualifications for such work. Registration holds good for one week. Unless at the end of that time the registration is renewed it is regarded as withdrawn, and the record card is removed from the “live” to the “dead” register. It is, of course, open at any time afterwards to a previous applicant to register again. The statistics published include such fresh registrations, but do not include renewals. The “live” register of the exchange from which vacancies are in the first instance filled, consists therefore always of the record cards of those who have registered or renewed registration within the past six working days. Employers requiring workpeople may notify their requirements by personal call, post, or telephone. All classes of workpeople are dealt with, except indoor domestic servants, women being registered at different hours from men. The staff at each local exchange consists of a superintendent and a junior, and the duties of the former specifically include the approaching of employers by letter and personal call to make known the facilities offered.

Central Exchange.—Each exchange makes up and sends to the central exchange every evening a form showing the occupations of all persons registered that day, and notifies also any vacancies for employment for which no suitable applicant is to be found on its local register. The central exchange, having all the returns before it, acts as a clearing house, arranging for men to be sent to such situations from any other district in which they are registered. The central exchange, it is hoped, will also act in the future, as the means of communication with the country outside London. All the exchanges are in telephonic communication. Any man registering at one exchange gets the chance of hearing of a job to suit him wherever it may be notified in London, and cannot be filled locally. Any employer notifying a vacancy gets the chance of obtaining a suitable workman from another district if none is available in his own. No fees are charged to men unemployed or under notice of dismissal.

Separation from Relief Work.—The system is under the direct control of the Central Body, as a branch of its work, in offices, staff, and management altogether distinct from and additional to the organisation of Metropolitan distress committees for the selection of unemployed applicants for relief work. The principle of this separation was laid down in the report upon which the Central Body first decided to exercise its powers for the establishment of employment exchanges (March, 1905), and has been often repeated by the Central Body since that time. It was felt that the exchanges would never attract either employers or capable workmen so long as they were closely identified with any avenue to relief work. It is part of this distinction that applicants at the exchanges are required to give details only as to their industrial capacity, and not also as to the size of their families, distress or thrift.

Local Advisory Committees.—With a view to securing the requisite local knowledge and local interest in fitting each exchange to the needs of its district, it is proposed to form for each exchange, under a scheme passed by the Central Body on December 7th, 1906, a local advisory committee, appointed partly by the borough council, partly by the Central Body, and including representatives of employers and employed. The number of such committees already formed is seventeen.

Summary Statistics.—The number of registrations (apart from renewals) between August 20th, 1906, and May 31st, 1907 (nine and a half months), has been 74,389. The number of situations filled during the same period has been 11,134 (8,714 males, 2,418 females)

The number of registrations (apart from renewals) during the first five months of the present year—during which alone the whole twenty-five local exchanges have been open—has been 40,318. The number of situations filled during the same time has been 7,506 (5,775 males, 1,731 females), giving an average of 1,500 a month.

As already indicated, the number of registrations (even apart from renewals) does not correspond to the number of separate individuals, since a man re-appearing at an interval of a month has to register afresh, and counts again.

42. The machinery of the Unemployed Workmen Act (in London) is cumbersome, costly, in part unnecessary, and in part an absolute barrier to efficient working.

43. The existence of the Metropolitan distress committees as public authorities prior to and independent of the Central Body which they constitute by delegation, weakens the latter, causes much unnecessary expense and makes uniformity of registration, investigation, and selection of applicants for assistance impossible. Three indications of this will be sufficient:—

(a) The proportion of registered cases adjudged after inquiry to be ineligible or unsuitable for treatment under the Act during the winter 1905–6, varied from 1 per cent. in Battersea, and 5 per cent. in Hackney, to 33 per cent. in Poplar, and 75 per cent. in Stepney.

(b) The responsible emigration societies co-operating with the Central Body re-investigate all the cases submitted by distress committees before accepting them.

(c) The Central Body, in apportioning the benefits of its funds, has neither in 1905–6 nor in 1906–7 felt able to base its decision on the numbers and quality of applicants registered by distress committees, but has gone upon an abstract principle based upon census figures and other general indications of poverty.

The Metropolitan distress committees, having now no duties or powers beyond those of registering eight times, and recommending for assistance five or six times as many applicants as have the least chance of being assisted, serve no purpose that would not be better served by officials under the direct control of the Central Body, advised, if need be, by local consultative committees.

44. The members of the Distress Committees and of the Central Body are chosen either expressly or actually on the ground of their knowledge of poverty. This is no qualification for the work they are actually required to do—in managing large contracts for excavation, road-making, or sea-walling. Left without advice or assistance by Government departments which could assist, they naturally buy their experience dear. Nor is knowledge or interest in poverty any qualification for the control of labour exchanges—which can only succeed if as industrial machinery they are managed after the German model by, or with the help of, representative employers and employees.

45. Up to May 25th, 1906, there were assisted by the Central Body, otherwise than by emigration, at Hollesley Bay or by employment exchanges, about 4,400 men for an average of six weeks each, at a cost of over £40,000. There took part in this work of assistance the following:—

Unpaid:		
Members of twenty-nine distress committees	- - - - -	645
Members of Central Unemployed Body, not on distress committees (out of a total membership of eighty-four)	- - - - -	16
Volunteers under distress committees (say)	- - - - -	250*
Paid:		
Staff of distress committees (about)	- - - - -	130
(This is for February 11th. So late as March 31st the number was eighty-six)		
Staff of Central Body (omitting four on account of emigration and Hollesley Bay)	- - - - -	16
Superintendents and staff of colonies other than Hollesley Bay and foreman at works (say)	- - - - -	100*
Total	- - - - -	1,157

* These figures are only estimates and the first especially may be excessive. In Stepney alone, however, the Distress Committee employed 70 volunteer workers.

Consideration of value of Unemployed Workmen Act.

46. For the purpose of a general conclusion as to its value, the Unemployed Workmen Act is best considered as a final effort to meet by the provision of temporary relief work, the difficulty occasioned by exceptional trade depression. During recent years the fact of cyclical fluctuation of commerce and industry has come to be more widely recognised. It has been felt that during a passing depression of trade, men hitherto industrious and competent, finding it impossible to obtain employment, may so deteriorate through idleness and privation, as to become unfit for employment by the time that returning prosperity brings them once more into demand; that temporary distress may thus lead naturally to permanent distress. It has been argued, therefore, that to provide temporary work in such cases may do permanent good by preventing deterioration or loss of self-respect and social value by resort to the Poor Law. A bridge of relief work might be constructed to carry men over the depression. It appears only necessary to take care:—

(a) That the bridge is used only by those whose past records show them to have been competent and industrious (investigate, classify, select).

(b) That the bridge, being costly, is not used unnecessarily or too long (relief work to be less "eligible" than ordinary work).

(c) That the bridge is long enough (continuous relief work, not doles).

Conclusions as to failure of Unemployed Workmen Act.

The conclusive effect of the Unemployed Workmen Act and of the preceding funds has been to break down this theory as a justification of relief works. The bridge cannot be confined to men previously in regular work, cannot be made less "eligible" than casual employment, cannot be made long enough. Their failure to deal with exceptional depression due to fluctuations of industrial activity (Secs. 11-16), leaves temporary relief works without any justification at all. In regard to normal under-employment (Secs. 6-9, 61), and to men permanently displaced by industrial changes (Sec. 10), they are worse than useless, because they immobilise instead of mobilising labour.

Emigration, its value and its limitations.

47. Among the branches of the work of the Central (Unemployed) Body other than the provision of temporary relief work for men or women, emigration has had at present the most positive results and is to be reckoned an indispensable safety valve. It is at present the cheapest and most certain way of giving real assistance to the individuals qualified for it. Where a particular industrial catastrophe has created a large local surplus of labour, emigration is now the simplest way of removing the surplus. Except to this extent it cannot be regarded as in any way a remedy for unemployment. Neither the employment exchanges nor the farm colony at Hollesley Bay can yet claim results commensurate with their cost. Neither can be dispensed with.

Present value of Hollesley Bay and of employment exchanges.

The future of employment exchanges: conditions necessary for their success.

48. The future of employment exchanges depends upon their complete dissociation from the direct relief of distress, and from any authority mainly concerned or identified by public opinion with such relief. They should become a piece of permanent industrial organisation under an authority of national scope (the Board of Trade) with so far as possible, expert management by representative employers and employed.

The future of farm colonies, two alternatives.

49. The farm colony has two possible futures. Either, it may become more definitely a technical school—a place of training to meet some specific well-assured demand, e.g., for farm labourers in Canada, or for foresters in this country. In that case the control of the school would pass naturally from a distress authority (interested mainly in men) to the authority dealing with the objects of the training given, e.g., to an Emigration Department or a Woods and Forests Department. Or, the colony may become more definitely a hospital for the physical and moral recuperation, in healthy surroundings and under strict as well as stimulating discipline, of men broken down through privation or vice. Such an institution, remaining under a distress authority (Poor Law or other), will be a necessary adjunct to any scheme of "de-casualisation," since this would in the first instance involve throwing a certain proportion of the least efficient or least reliable casual hands out of employment altogether (Secs. 68, 60).

Elements in the Unemployed Workmen Act worth retaining.

50. Some elements in the Unemployed Workmen Act may thus be continued or replaced on purely industrial lines (labour exchanges, schools of forestry, unemployed insurance); others, admittedly as relief for distress (hospital colony, modified workhouse test). The main prin-

ciple of the Act, which is to blur the line between independence and assistance, and to create hybrid authorities half-way between relief and industry, must be abandoned.

Mr. William H. Beveridge.

14 Oct. 1907.

(ii) PROPOSALS FOR THE FUTURE.

51. Consideration of the proper treatment of the unemployed problem in the future involves a fundamental distinction between measures of organisation and measures of individual assistance; between those whose object is to eliminate or to counteract causes of industrial dislocation, and those which prescribe a course of dealing with any and every able-bodied person in distress. Measures of the first class have to be based on analysis of the causes of unemployment. Measures of the second class should be based less upon a study of the causes of distress in the individual than upon certain working assumptions as to his needs. Any one individual commonly represents the concurrence of many causes of unemployment—industrial or personal. A riverside labourer in Wapping in February, 1905, would be suffering from chronic under-employment, seasonal depression, cyclical depression, a permanent change of industrial conditions (the removal of shipping to the lower docks), and probably also from physical or moral inferiority. On the other hand, any and every individual falls into one, and only one, of the following classes of needs:—

Main principle of the Act bad.

Principles essential to proper treatment of the unemployed problem.

(i) He needs merely to be tided over a temporary depression or misfortune in order to recover work at his present occupation. This whole process of tiding over must become more and more industrialised—in the way of insurance—and less and less a matter of relief.

(ii) He needs to be changed by discipline and training for a new life, either: (a) because he has become unfit (illness, privation, idleness, bad habits); or (b) because that for which he is fit is no longer required (change of industrial methods).

(iii) He needs to be changed, but probably cannot be changed (incurably defective or idle), and must therefore be kept from doing harm, in hospitals, asylums, penal colonies, and the like.

This being the basis of discrimination, the process of discrimination should, so far as possible, be by actual trial. An indefinite stay in (i) must be made impossible; if the applicant does not recover employment it is clearly because he is either in (ii) (a) or in (ii) (b). Which of these he belongs to is again determined by trial. Eventually he either recovers independence or is passed into (iii) as too bad, too old, or too defective to learn a new mode of life. Treatment in this way clearly requires that there should be only one distress authority, receiving and discriminating between all applications from the able-bodied, not as at present, two—the guardians and the distress committees. Except for the above general suggestion—arising out of experience of unemployed individuals—the present statement is confined wholly to the first class of measures—those which are matters of organisation.

52. The first step in the solution of the unemployed problem must be the organisation of the labour market by a national system of labour bureaux or exchanges. The proposed organisation has to be considered in respect of its *principles, methods, effects, and practicability*.

Necessity of national system of labour exchanges for the organisation of the labour market.

53. The ultimate *principles* of this organisation should be:—

(i) By making the supply of labour in any trade perfectly fluid over the whole area of the trade, to secure that the existing supply shall be drawn upon and exhausted before any fresh men find room or a demand for them to enter the trade. The effect of this would be to cause the recruiting of each trade in accordance with its total needs and not in accordance with local accidents.

Principles of this organisation: fluidity of labour.

(2) By making employment reasonably continuous under a group of similar employers (wherever it cannot be continuous under one of them alone), gradually to cut off all opportunities for living by irregular labour in a state of under-employment. The ideal effect of this would be to replace every 1,000 men now normally working on an average three days a week by 500 men working six days a week. The possibility of doing this depends upon the fact that separate undertakings employing similar classes of labour, though they may be to some extent affected

continuity of employment.

by general events (*e.g.*, seasons or trade changes) are to some extent also affected by events peculiar to each, so that one grows busy while another grows slack, one is dismissing men while another is taking them on, one needs ten more men to-day than to-morrow, another needs ten more men to-morrow than to-day. This point is further developed in a pamphlet on "Employment Exchanges" (dated June, 1907), which I submit as part of my statement. (Sec. Q. 77833.)

54. The *methods* of this organisation may, as a practical matter, be of many types. It is unnecessary and undesirable to insist upon any one method, for all trades organised or disorganised, regular or casual.

55. Trade Union Registries.—These, in a more or less formal way, do much of the work of organisation (Principle (i)), for their own membership and through that for their trades. The barrier to their extension so as to cover the whole field is simply the barrier to the extension of trade unionism—that under-employment develops a type demoralised by its conditions, and apparently incapable of abiding foresight or organisation (Sec. 73).

56. Public bureaux or exchanges in United Kingdom :—

(a) Labour bureaux maintained by provincial municipalities, or by Metropolitan borough councils under the Labour Bureaux (London) Act, 1902.

(b) Metropolitan employment exchanges established and maintained by the Central (Unemployed) Body for London, under the Unemployed Workmen Act, 1905—an experiment still in a very early stage, described in outline above (Sec. 41).

57. Labour Registries in Germany.—I hope that I shall shortly be in a position to describe from personal knowledge the organisation and work of some of the chief of these, particularly in regard to casual or irregular employment.

58. London and India Docks Company.—The re-organisation of staff carried out by this company during the years from 1891 onwards as between the different departments controlled by it, forms one undoubted practical application of Principle (ii) above, the "de-casualisation" of employment by mobilising a central staff to go, under the guidance of a central office, from one point to another as required. Eighty per cent. of the work of this company is now performed by permanent or weekly labourers. The average number of men directly employed by the dock company is, however, less than a quarter of the average for the whole port, exclusive of Tilbury.

59. The *effects* of this organisation must be carefully distinguished, as temporary and as permanent.

60. The immediate temporary effect of applying it to a labour market now heavily over-stocked with under-employed irregular workmen, would be to give more continuous employment to some at the expense of others, who would be thrown out altogether. To meet this temporary difficulty special measures would probably be required, and are available. (Emigration or home colonisation provided by rural training.)

61. The main permanent effect of the organisation of the labour market would be to reconstruct and improve in respect of continuity the whole conditions of employment, above all in the lower ranges of industry, raising the level of average earnings and the standard of life by gradually ruling out the possibility of under-employment. This is the direct remedy and the only remedy for the first and the most important of the industrial elements in the unemployed problem (Secs. 6–9). It abolishes the root of the disease. Every other remedy commonly attempted at worst perpetuates and aggravates the disease by making labour more stagnant than before (annual relief works); at best rescues the individual (emigration) while leaving the system to collect a fresh generation of the chronically distressed.

62. The moral or individualistic side of this reconstruction is as important as its mechanical side. Casual employment is demoralising in exactly the same sense as casual relief—it encourages or makes possible a thoroughly unsatisfactory and socially dangerous mode of life. There is the same need for "de-casualising" both charity and employment. Again, the disorganisation of the labour market making competition depend in part at least upon chance, diminishes the influence and advantage of individual merit. Labour exchanges, so far from being a means of foisting the incapable or less capable into jobs,

are necessary in order to give the more capable man the reward of his superiority, and to weed out the incapable more quickly by making competition universal and direct.

63. The need for this reconstruction is independent of any particular view as to the general question of population. Suppose 1,000 "half-places" in riverside labour changed into 500 whole places, *i.e.*, suppose 1,000 labourers, averaging three days a week, replaced by 500 at six days a week, so that the other 500 are turned out altogether. If for this other 500 remunerative permanent situations can be found—whether in the ordinary course or by special measures opening up new industries, then clearly 1,000 half-employed dock labourers will have been converted into 500 fully employed dock labourers, and 500 fully employed in some other way. If, on the other hand, spite of all efforts no such openings can be found or made in the whole country; if, in fact, it becomes clear that the reason so many persons are only half employed is not simply that they are trying to live in an already crowded trade or district, but that the country is over-populated, then the argument for "de-casualisation" becomes all the stronger. In a country already over-populated no reform could be more urgent than one which replaced 1,000 casual labourers (and potential fathers of families) by 500 regular labourers and 500 men for whom nothing would or should then be left but emigration.

64. The secondary permanent effects of the organisation of the labour market would be :—

(a) To facilitate the passage to a new occupation of men permanently displaced from their old one by changes of industrial conditions.

This is the only true remedy, and is an essential part of any treatment for the second branch of the unemployed problem described above (Sec. 10).

(b) To facilitate the use of subsidiary trades by seasonal workers (*e.g.*, to regularise the movement of builders, labourers, or brick-makers to the gas works and the docks in winter).

This would have some, though a limited, effect upon the third branch of the unemployed problem described above (Sec. 12).

(c) To improve any plan of public relief by substituting for artificial "tests" and inquiries the beneficial and natural test of the offer of a situation through the exchange.

German writers treat the labour bureau system in close connection with proposals for "unemployed insurance" as the only satisfactory safeguard against malingering. In Strassburg before a man can get help from the Poor Law he must present a note from the superintendent of the Labour Exchange stating that no work can be found for him.

65. The *practicability* of this organisation depends simply upon the readiness of employers and employed to carry it through. On the one hand, it does not involve for the employer any loss of control or of selection in regard to his staff. It can be begun with least objection just where it is most needed (with the outermost fringe of casuals who are at once the most distressed and the least attached by special experience or by acquaintance to any particular firm or foreman). It can be developed step by step so far as is necessary to abolish normal distress. It must eventually benefit the employer no less than it benefits society, by giving him better and more responsible service. From the streets he gets often a man half-fed and in the loafing habit. From the exchange he may, and as the system develops will, get a man who has just left another job.

66. On the other hand, it does not involve any direct influence upon rates of wages or conditions. Labour exchanges can certainly be conducted so as to avoid either directly weakening trade unionism or directly strengthening it, they can and should be prevented from widening the field of low wages or bad conditions. It is hard, in fact, to believe that any special measures—*e.g.*, any limitation of the use of exchanges to employers paying specified rates—would be necessary for this purpose. The whole natural tendency of exchange organisation is to raise the status of the workman, and indirectly, therefore, to promote all forms of self-help and associated action.

67. The organisation of the labour market through labour exchanges must be the first step in a solution of the unemployed, because it alone touches the largest

fluence on
wages or
conditions.

and most perplexing part of that problem ; because without it all other steps are insecure or retrograde ; because it alone will provide the information showing both what other measures are needed and how and when they should be applied. The organisation of the labour market is not the only step required :—

(a) Because even where it applies directly—as a means of checking the normal over-supply of labour in each occupation—it cannot stand alone (Secs. 60, 68).

(b) Because to one very important factor in the problem—cyclical fluctuations and industrial activity, it does not apply directly at all—while to seasonal fluctuations it applies very little.

(c) Because, being matter of organisation, it provides no general scheme for dealing with each and every able-bodied individual as he comes.

68. The organisation of the labour market—since its first effect will be to turn some of the present under-employed reserve of labour in the chronically overstocked occupations into an unemployed surplus—needs to be supplemented by provision for draining off the surplus rapidly and easily. Emigration and training colonies may or may not, have a permanent place in the treatment of the unemployed problem. Granted the success of employment exchanges, both will be indispensable as temporary resources to dispose of the weaker men whom “de-casualisation” will leave without any employment at all, and perhaps to a large extent unfit for any employment that is not casual. On the other hand, failing the success of employment exchanges or of some other means of “de-casualisation,” neither emigration nor training colonies will have the slightest effect upon unemployment, in so far as unemployment is due not to over-population (an excessive birth-rate), but to the over-stocking with labour of the certain industries and districts through definite causes (of which casual employment is the chief and casual relief of all sorts by a long way the second), which will be quite unaffected by the removal of individuals.

69. The discrediting of relief works leaves three good or defensible alternatives, three lines of attack upon fluctuations of industrial activity as a cause of unemployment—insurance, short time, and the better distribution of necessary work. These are all applicable to seasonal fluctuations as much as to cyclical fluctuations, but are of course most important in regard to the latter. Indeed, it is fairly generally recognised that mere seasonal slackness in an ordinarily prosperous year must be treated as a question of wages—of averaging wages over the normally good and bad months—rather than as one of unemployment.

70. Insurance, in the shape of trade union unemployed pay, very largely meets the case in one-half of the skilled and organised industries, notably metal and engineering trades, building and printing. It is a flexible method equally adapted to meet seasonal and cyclical fluctuations. What steps are needed to secure its extension ?

(i) If, and as de-casualisation abolishes certain industrial conditions which create and pander to shiftlessness, an extension of provident association in trade unions may be expected to come about naturally.

(ii) Such provident association might be deliberately fostered by public grants, made through the unions, for unemployed pay in times of exceptional depression.

(iii) Failing the development of trade union organisation, the labour exchanges might themselves provide the machinery of insurance (whether assisted by public grants or not), themselves acting, as trade union registers now do, as the indispensable and adequate check against unnecessary claims.

71. The magnitude and value of the work accomplished by trade unions in the way of insurance against unemployment.

ment can hardly be over-estimated. Substantially, the whole mass of unemployment recorded in the *Labour Gazette* returns is unemployment so provided against that it does not cause distress involving an appeal to public sympathy (Secs. 12–15). For the country as a whole, this amounts now to over 750,000 man-weeks of unemployment in a good year, and over 2,000,000 man-weeks in a bad year. A trade depression like that of 1903–5 means, for 600,000 trade unionists alone and met by their insurance, a loss of 5,000,000 man-week of employment. For London the following comparison is suggestive :—

SIX MONTHS, DECEMBER, 1905, TO MAY, 1906.

(i) Number of man-weeks of unemployment provided against by Central Body for London (otherwise than at Hollesley Bay): 4,400 individuals for an average of six weeks	-	26,400
Cost	-	about £40,000
Cost per man-week of relief	-	30s.
(ii) Number of man-weeks of unemployment recorded by certain London and district trade unions with a total membership of 46,700 (Sec. 15) —none of this unemployment appearing as distress	-	68,900
Cost per man-week	-	10s. to 15s.*

The table shows clearly :—

(a) The importance of the work accomplished by trade union insurance.

(b) The insignificance of what is or is ever likely to be accomplished in the way of relief work.

(c) The costliness of encouraging the method of the Unemployed Workmen Act in meeting trade fluctuations, as opposed to, and at the expense of, the trade union method.

72. Unfortunately the application of the trade union method is at present very limited. Of the 13,000,000 occupied males recorded at the census of 1901, over 9,000,000 were in industrial occupations (*i.e.* excluding Government, defence of the country, professional and commercial occupations, domestic service, agriculture and fishing). The male membership of trade unions is (1904) about 1,750,000, *i.e.*, less than a fifth of this. The trade unionists included in the Board of Trade returns—substantially all those in unions giving unemployed pay—are about one-third of this 1,750,000. In other words, less than one-fifteenth of the males in industrial occupations are in trade unions giving unemployed pay. Unfortunately, too, the progress of trade unionism—particularly in the unskilled occupations—is not sufficiently rapid to hold out much hope of an automatic easy solution along this line. The disease of casual employment must be eradicated first if thrift and association are to become universal.

73. The following table shows that whereas during the thirteen years 1892–1904 the membership of all trade unions increased 24 per cent., and that of the ninety-two “principal” unions (other than labourers’ unions) increased 33 per cent., the membership of the eight labourers’ unions included in the 100 principal unions, decreased 24 per cent. During the same period the general population increased over 12 per cent. Comparison of the figures available for 1892 and 1905 shows that during that period the general population increased 13 per cent., the membership of all trade unions increased 25 per cent., the membership of the eight principal labourers’ unions of 1904 decreased 26 per cent. Both the instability over short periods and the stagnation or retrogression over long periods of trade unionism among labourers are clearly illustrated.

* This is given as a common amount of unemployed benefit given by the best unions (very often only for a short period).

Other measures also required.

Need of drawing off surplus of unemployed by measures such as emigration and training colonies.

Remedies for seasonal or cyclical fluctuations.

Insurance, through trade union unemployed pay.

Steps needed to secure its extension.

Extent of trade union insurance against unemployment.

Short time as a means of meeting trade fluctuations.

74. Short time meets the case of trade fluctuation even more completely in the other half of the skilled and organised industries (notably textiles and coal-mining). Instead of some men being wholly unemployed during a crisis while others go on full time or overtime, all go on short time. If the normal working hours in all industries were reduced in times of depression and increased in times of expansion, the actual number of individuals employed could be made to vary less or not at all. The difference between summer and winter hours of work in the building trade is a practical instance to the point. The burden of the seasonal contraction of employment is to the extent of this difference automatically distributed over all the members of the trade.

Better distribution of necessary work as a means of meeting trade fluctuations.

75. The better distribution of necessary work implies an attempt to steady the course of industry, by putting as much as possible of the necessary work of public departments into seasons and years when ordinary industry is slack, rather than into those when it is busy while keeping it absolutely on business lines. This is generally treated as a question of public work only. The principle can be applied to private enterprise by anything putting a premium on getting work done in a slack rather than in a busy time. In this way the principle is already applied in the movements of wages in the organised industries; in prosperity they rise, in depression they sink. A higher rate of wages for building operatives in summer than in winter could not but tend to make work more even all the year round.

All remedies to be effective pre-suppose organisation of labour market through employment exchanges.

76. Consideration of these, as of most remedies for unemployment, leads back always to the same conclusion—that, in order to be effective, they all pre-suppose the organisation of the labour market, the bringing together under public or semi-public control of the whole process of industrial engagement. No remedy involving, as does every one of those mentioned in Secs. 69–75, either foresight or associated action can become universal except by the abolition of an industrial class which the conditions of its employment render physically and morally incapable of effective foresight or association. No safe system of public relief can be anything but harsh and degrading unless the state is in a position to check the abuse of humane and honourable relief by the test of work notified through a labour exchange.

77833. (Chairman.) You have also supplemented that paper by a statement as to German labour exchanges?—Yes. The witness handed in the following statement:—

German labour exchanges, 5 main types

1. Labour exchanges in Germany are of five main types, according as they are established and maintained by employees, by employers, by employers and employees jointly, by special voluntary associations, and by municipalities. There are also registries conducted as commercial undertakings and registries forming part of some philanthropic institution or dealing with some special class of people (discharged prisoners, cripples, etc.).

2. The employees' (trade union) exchanges, though formally very numerous, are of importance only in a few special trades or towns (hatmakers). German trade union exchanges.

3. The employers' exchanges are of two types: (i.) those established by the guilds or statutory associations of small masters (bakers, butchers, barbers, shoemakers, etc.); (ii.) those established by employers' associations in the modern factory or large scale industries. The guild exchanges are, like the trade union exchanges, very numerous, but generally unimportant and perfunctory. The modern employers' exchanges have been established rather as weapons against the trade unions than as means of bringing would-be employers and employed into communication. In Berlin, for instance, there is a labour exchange established by the association of metal trades employers, and no workman may be engaged by a member of the association unless he possesses a certificate from the exchange indicating that he is not an "agitator" or otherwise undesirable. The actual engagement, however, very seldom takes place through the exchange; and the latter is first and foremost a means of black-listing troublesome individuals. Outside Berlin employers' labour exchanges are most developed in Hamburg-Altona and other ports.

Employers' exchanges.

4. Of the labour exchanges established by collective agreement between associations of employers and workmen the most notable are those in the printing trades (covering the whole empire) and in brewing (in Berlin, Frankfurt and elsewhere). The Berlin Brewers Exchange is managed by a joint committee representing equally the employers' association (which includes all the principal breweries) and the men, with an impartial non-voting chairman. The employers are pledged to take all their men—except a defined small percentage—from the exchange, and all looking round for work at the breweries is forbidden. The men registering pay a fee of 2½d. (good for three months, or till they get placed); from the money thus collected grants are made to men unemployed. The administrative expenses are met by the employers' association. The situations filled in 1906 numbered 9,782.

Exchanges established by employer and workmen jointly.

5. The last two types of exchanges—those established by special voluntary associations with or without a municipal subsidy and those established by municipalities directly—are the most important, and may be considered together. There are over 200 such amongst the 700 odd exchanges, filling now 150,000 places a month, which report regularly to the Imperial Statistical Officer. Practically there is a public general exchange in every town of over 50,000 inhabitants and in a very large proportion of the smaller towns. Almost the only real exceptions to the first part of the statement are afforded by: (a) certain ports—Bremen, Lübeck, Harburg; (b) mining towns—Beuthen, Bochum, etc. The following table deals with twelve of the principal public labour exchanges, the first six of which I had the opportunity of visiting.

Special voluntary exchanges and municipal exchanges.

† General Labourers' Amalgamated Union; Navvies, Builders and General Labourers; Dock, Wharf, Riverside and General Workers; National Dock Labourers; Gas Workers and General Labourers; Gas Workers, Brick Makers and General Labourers; National Amalgamated Labourers; National Amalgamated Union of Labour. [These are all the labour unions included in the 100 principal unions in the 15th Annual Report of the Board of Trade on Unions].

PRINCIPAL PUBLIC LABOUR EXCHANGES IN GERMANY.

Mr. William
H. Beveridge.

14 Oct. 1907.

Town.	Population† (1905).	No. of situations filled in last year.*			Character and date of establishment.
		Male.	Female.	Total.	
Berlin - -	2,040,000	80,847	11,343	92,190 (1905)	Voluntary association (1883) with municipal subsidy since 1893.
Munich - -	539,000	29,658	24,105	53,673	Municipal (1895).
Frankfurt - -	335,000	21,195	15,701	37,896 (1905)	Municipal (1895).
Cologne - -	429,000	21,805	7,359	29,164	Representative association with all expenditure met by municipality (1894).
Düsseldorf -	253,000	25,862	2,844	28,706	Representative association with all expenditure met by municipality since 1905. Formerly voluntary association (1890).
Nürnberg - -	294,000	9,878	4,940	14,818	Municipal (1896).
Stuttgart - -	249,000	—	—	56,329	Municipal (1895).
Mannheim -	164,000	—	—	19,925	Municipal since 1905. Formerly voluntary association (1893).
Freiburg - -	74,000	11,268	6,433	17,701	Municipal since 1897. Formerly voluntary association with municipal subsidy (1892).
Strassburg -	168,000	12,171	3,293	15,464	Municipal (1895).
Dresden - -	517,000	11,248	22,893	34,141	Voluntary association.
Leipzig - -	504,000	9,945	16,425	26,370	Voluntary association with municipal subsidy.

6. In addition to the twelve exchanges in the table, there is one (Hamburg) filling, according to the latest return, for July, 1907, over 2,500, and seven (Magdeburg, Breslau, Dortmund, Hannover, Mülhausen, Posen, Kiel) filling from 1,000 to 2,000 situations in a month.

Most of the public labour exchanges date from the years 1894-6 or received a fresh impulse at that date. The success achieved in individual cases has been extraordinarily sudden. The Munich Exchange, for instance, filled over 25,000 situations in the first complete year of its working. The Düsseldorf Exchange, after remaining unimportant for some time, filling less than 2,000 situations two or three years ago, rose suddenly to filling 28,000 in 1906-7, and will hardly fall short of 50,000 in 1907-8. In Berlin, Stuttgart and Strassburg the activity has nearly doubled in the last two years.

7. The working of all the exchanges visited by me depends upon the frequent (in general daily) attendance of the applicants for work. Whatever the formalities of registration, the opportunity of getting work is practically confined to men on the exchange premises. In Berlin and Munich there are large waiting rooms constantly crowded with applicants. In Düsseldorf, Frankfurt, Cologne and Nürnberg men are not allowed to wait in the exchange but are constantly passing through it. Only in the two last-named exchanges is there any provision for summoning men from their addresses when suitable situations are notified.

8. In Berlin a registration fee of 2½d.—entitling to admission to the waiting rooms for three months or till work is found—is charged. In nearly all other cases the use of the exchange is free to both parties, except for the engagement of domestic servants, when the employer may have to pay 1s. or so.

9. Though the public exchanges are practically inoperative in one or two highly organised trades (printing), and have to compete in many others (bakers, shoe-

makers, metal workers) with guild and union registries their use is by no means confined to unskilled or low skilled labour. Most show a percentage of 40 to 60 per cent. in definite trades, and the larger exchanges at least have separate sections for unskilled and skilled men of various types. In Berlin this specialisation is carried very far. In addition to the general section there are now six or seven exchanges for special trades—painters, glaziers, bookbinders, locksmiths, bakers, wood-workers—each with its own rooms, officials and finances, and managed by a separate joint committee equally representing employers and workmen's associations, with an impartial non-voting chairman.

10. The estimated cost of the exchange per situation filled is 9d. or 10d. in Munich, 6½d. in Frankfurt, 4d. in Düsseldorf, 7d. in Freiburg.

11. It appears to be quite exceptional for any of the larger exchanges to take up testimonials from applicants. They throw as much as possible of the coming to terms upon the parties concerned. In all cases, however, the infirmity insurance card, which every workman has in his own custody, while unemployed, is available as a *prima facie* indication of the workman's standing and regularity of employment. In Berlin and Nürnberg this card must be shown on registration. In Munich, Cologne and Düsseldorf it may be, but is by no means invariably asked for; on the one hand the press of business is too great, on the other hand the superintendent gets to know a very large proportion of the men because they are constantly passing through the exchange. In Frankfurt every applicant sent to apply for a situation is made to deposit his card in the exchange, as a means of securing that he shall come back to claim it and so give information as to the result of his application.

12. In all exchanges given in the table (with the possible exception of Dresden), as in most others of any importance in Germany, the management is to some extent vested in a committee including representatives of employers and

* 1906 or 1906-7 unless otherwise stated.

† These figures can only be taken as a very rough indication of the area actually dealt with by each exchange; most deal with a good many cases from outside.

Mr. William H. Beveridge. workmen, with an impartial chairman. In Frankfurt, Stuttgart and Berlin (general section) the members of the committee are chosen in equal numbers by the employer and workman assessors of the Industrial Court (who are themselves the elected representatives of all the employers and workmen in the town). In Munich the workman's half alone of the exchange committee is chosen in this way; the employers are nominated by the town council. In Cologne, Düsseldorf, and in the branches of the Berlin Exchange dealing with single skilled trades, equal numbers of employers and workmen are chosen by various organisations on either side. In Strassburg the committee, apart from the chairman, consists of ten employers and ten workmen, half being in each case chosen by various organisations and half nominated by the municipality. In Nürnberg the committee consists of five municipal representatives and four each of employers and workmen, who are, however, appointed by the municipality itself and not by any organisations. The chairman of the committee is in most cases appointed by the municipality and is presumably impartial. In Cologne and Düsseldorf he is chosen by the other members of the committee. In some towns the chair is *ex officio* taken by the President of the Industrial Court.

These joint committees are not, however, often at all active. They meet in some cases only once, twice or thrice a year. Their importance is rather that of a symbol of impartiality than of practical influence upon details of administration.

Practice of German labour exchanges in trade disputes.

13. In the practice of different German labour exchanges in regard to strikes and lock-outs, each of the following alternatives is to be found:—

(1) To take no notice whatever of the dispute, *i.e.*, to send workmen to a vacancy due to a dispute just as much as to any other (Nürnberg).

(2) To register vacancies created by a dispute and notify them to applicants for work, but in doing so to give formal notice of the dispute to the individual applicants (Berlin, Frankfurt, Cologne, Düsseldorf) and also by placard in the exchange premises (Munich, Stuttgart).

(3) To suspend operations within the range of the dispute during its duration (Barmen).

(4) To make action in each case depend upon the meeting and decision of the Industrial Court sitting as an arbitration tribunal (Leipzig).

Though each of these alternatives is still represented amongst public exchanges of some importance, there can be no doubt that the second has most approved itself in practice. Amongst the largest exchanges now adopting it there are at least three which have come to it after previous trial at one of the others, *i.e.*, Berlin formerly continued its activity without any notice of disputes (1); Munich formerly suspended operations pending the decision of the Industrial Court (4); Cologne formerly suspended operations altogether (3). In Strassburg the exchange itself undertakes the work of conciliation and is in a position to make its decrees effective.

14. The practical result of the second alternative—to notify all situations but at the same time to call attention to those which are due to disputes—appears to be that such situations are seldom if ever accepted by any of the men in the exchange. This was stated to me explicitly in Berlin (at least as to the skilled men), Frankfurt, Cologne and Munich, while in the last-named exchange I actually witnessed an unsuccessful attempt by an employer to get two ordinary labourers to fill vacancies created by a dispute. It is becoming generally recognised that the importance of the question as to how exchanges should act in time of disputes has been altogether exaggerated.

Attitude of German labour exchanges towards standard wage question.

15. With regard to the further question—of whether apart from disputes a public exchange should make any conditions as to the wages to be paid to men supplied through it—there appears to be complete agreement that it should not do so, but should strictly confine itself to bringing employer and employed together and letting them make their own terms. The trade unions appear to be quite content with this position. No public exchange, so far as I have been able to discover ever refuses to notify a vacancy on the ground that the wages offered

are too low; at most the employer may be advised by the superintendent that there is little chance of his getting a workman at the rate he offers. In this respect the exchanges established by joint agreement of employers and workmen's associations (*e.g.*, in printing and brewing) are naturally with or without a formal rule on a different footing. In the special sections of the Berlin public exchange the recognised rates are notified on placards hung in the waiting room, but are not binding.

16. The attitude of the trade unions towards the public labour exchanges may be described generally as one of movement from formal opposition (on the ground that the marketing of labour was a matter for the workmen alone) to practical support. In 1896 the Congress of "Free" (socialistic) trade unions passed a resolution condemning the new movement for jointly or impartially managed labour exchanges and solemnly warning workmen everywhere "against every experiment based on any other principle other than the sole control of labour exchanges by labour organisations." In 1899 this position was formally reaffirmed, but practically abandoned by a resolution recommending workmen everywhere to take their part in the management of the municipal exchanges with a view to enforcing certain conditions. At the present time it is common for the workmen to ask for the establishment and exclusive use of a joint labour exchange as one of the terms of an agreement terminating a dispute (glaziers in Berlin, woodworkers in Eisenach.) This may indeed be one of the main objects of a strike (bakers in Berlin) or form the subject matter of public demonstrations (public-house employees in Frankfurt).

Attitude of trade unions towards public labour exchanges in Germany.

In one or two towns the trade unions besides using the public exchange for all their members have made over to it the payment of their unemployed benefits (in Stuttgart the metal workers, tailors, bakers, and decorators, and in Freiburg the tailors).

17. The main grounds of this conversion on the part of the trade unions appear to be:—

(1) Recognition of the fact that in general employers would not use exchanges managed solely by workmen and in the interests of workmen, but were far more inclined to establish their own exchanges as weapons against the workmen.

(2) Growing appreciation of the evils of the vague search for work. (This is absolutely forbidden by some unions, *e.g.*, bookbinders).

18. The attitude of the employers towards public labour exchanges is less easy to summarise. On the one hand these exchanges have clearly obtained a great and growing measure of support by employers both individually and in associations. On the other hand in certain trades (metal, building, waterside labour), and still more in certain towns (Chemnitz and Hamburg) they meet with a claim on the part of the employers themselves to organise labour exchanges as a weapon against the workmen. In these towns the public or impartially managed exchange which cannot be used for partisan purposes is strongly opposed by the employers.

Attitude of employers towards public labour exchanges.

19. In Cologne there has since 1898 been established in close dependence upon the exchange a fund for voluntary insurance against unemployment. Payments from the fund are limited to the winter months, and use is made of it almost exclusively by unskilled labourers and building operatives who are almost certain to be unemployed during these months. Ordinarily 70 to 80 per cent. of the insured become unemployed while the premiums received seldom amount to as much as 50 per cent. of the payments made. The balance and the administration expenses are met by municipal and charitable contributions. The experiment seems to show:—

Voluntary insurance against unemployment in Cologne.

(1) That no scheme of voluntary insurance against unemployment can be self-supporting. It must rest upon some form of compulsion or be part of some other institution, *e.g.*, of a trade union, or of an exchange as dominant, as that of the Berlin breweries.

(2) The value of the labour exchange as a check upon abuse of any provision against unemployment. Applicants to the Cologne Fund have to present

themselves daily at the exchange while unemployed; and are bound to accept work offered them there, provided it is suited to their powers, at their usual wages.

In the season 1905-6 as against 13,414 days of unemployment met by payments from the fund, 28,714 days of work were provided for unemployed applicants to the fund through the agency of the exchange.

20. In conclusion amongst the grounds for the success of the labour exchange movement in Germany the following may be mentioned:—

(1) The high standing given to the movement, by the advocacy of all public authorities. The town councils have been directly or indirectly responsible for most of the important exchanges. The State Governments have by circular urged the establishment at such institutions upon all local authorities (Prussia, 1894, 1898, 1902; Bavaria, 1894; Alsace-Lorraine, 1902, 1903; Württemberg 1895). The Imperial Government in 1902 began to make grants to facilitate the federation and co-operation of exchanges throughout the empire.

(2) The practical assistance involved in the support by public authorities in regard to:—

(a) Direct use of the exchanges by municipalities in their own work or that of their contractors.

(b) Making the exchange known by notices on public hoardings, in railway stations and tramcars, on infirmity insurance cards and elsewhere.

(c) Cost of travelling, telephones and postages. Men sent to situations through public exchanges can now travel everywhere at half the ordinary fare.

(3) The unequivocal character of the exchanges as industrial and not relief institutions.

(4) The general growth of industrial organisation in Germany. A great development of trade unionism has been met by a corresponding development of employers' associations and increase of collective agreements.

77834. Your paper seems to me to divide its subject into three parts. It first deals with what you believe to be the causes of unemployment; then you analyse the working of the Unemployed Workmen Act; and lastly, you make certain suggestions as regards remedies. I would like to ask you a few questions on each division of the subject. Taking the first part, it seems to me a very clear and consistent statement; but on one point, and it is an important point, it seems to me you have made use of an expression which a little counteracts your main argument. You state that unemployment is not due to over-population?—Yes.

77835. By that I gather you mean that the number of persons seeking employment is not in excess of the employment to be obtained?—I explain what I mean in Paragraph 2 in the first subsection; I say that unemployment is not due to over-population in the sense of a general want of adjustment between the rate of growth of population and the rate of industrial expansion. If that is not clear I should like to add to it.

77836. It is a very important point. Let me take you through portions of your evidence, because I think you make some statements which are a little inconsistent with that. What I understood you to mean here was that of recent years the rate of population and industrial expansion have kept pace?—The rate of industrial expansion has been greater than the rate of expansion of the population.

77837. But you speak in other paragraphs—take Paragraph 5, Section (a), for example—of the normal overstocking of every trade with labour. Then you deal further on with the percentage of unemployed persons, showing that even in the best years there is a certain number of persons unemployed; and I think there is later on in Paragraph 67, Sub-section (a), "Because even where it applies directly—as a means of checking the normal over-supply of labour in each occupation—it

cannot stand alone." Do not those statements or arguments to which I have alluded rather point to the fact that the industrial population is somewhat in excess of the employment it can get?—I think that the apparent inconsistency to which you have alluded is, from my point of view, the central paradox of the whole unemployed problem: that you have facts, absolute and undeniable facts, on both sides; you cannot deny either set of facts you have to accept and explain both of them. By "over-population" I think you must mean that each fresh person can make room for himself only at the expense of reducing the room for other people; that is to say, that each fresh person adds more to the consuming power than to the producing power of the nation. The facts against that are conclusive, I think. That is not my special subject; Mr. Bowley could say more with regard to that. On the other hand, you have in every trade, I think, a tendency to the over-stocking of that trade with labour. I think you have a tendency to permanent want of employment in every trade.

77838. You think there is a permanent want of employment in each trade as compared with the number of persons who may wish to get work in that trade?—I think there is a permanent tendency to that in every trade. In some cases that tendency finds obstacles; in some cases it is counteracted entirely by the fact that the trade is in a state of rapid growth, but the tendency is always there. I explain that tendency in paragraphs 6 and onwards, and further in the pamphlet which I have submitted as part of this statement.

77839. Under-employment is only another word for lack of employment?—I think in the substitution of that word lies the whole point of the position.

77840. You would say they were not convertible terms?—I should say that under-employment gives the essential characteristic, and unemployment the accidental. If I may put it like this, if you say a man is permanently unemployed you have said a thing which is impossible, because, except a man has private means, he cannot be permanently unemployed; he starves or goes to the workhouse. But he can be under employed. He can have enough to keep him going and keep him in a trade without having enough to maintain a decent standard of living, without having regular work. I think it is very important to dwell upon the positive side: that he does get some work, though not enough work.

77841. Take one of your own illustrations: I think you assume that there are 1,000 persons now connected with the docks who only get, or can only get, three days employment a week. I think you suggest that it would be much better that there should be only 500 of those 1,000 employed, and that they should be employed for the whole week?—Yes.

77842. What would happen to the remaining 500 that would be left? Could the remaining 500 get employment elsewhere?—One has to answer that rather differently in theory and in practice. In theory if the country is not overpopulated there must be room for 500 additional people in it, if they come there. Their own activity must serve to produce the wealth by which they live, and if you had a complete set of labour exchanges you would have the best opportunity of sending those people to any work there was. If, on the other hand, having a complete set of labour exchanges, knowing every job there was in the country, you could not find a job for 500 additional men, that would be conclusive evidence that the country was over-populated, and therefore that there was no possible remedy except to emigrate those men. I do not think that second alternative would prove to be the true one, but if it did, that would be an absolutely conclusive argument for the reform I am advocating. If the country is over-populated the first thing you want to do is to turn those 1,000 under employed people, all of whom are bringing up families or trying to, into 500 fully employed people with only half the number of families, and prevent the other people from continuing to add to the population here. I do not accept the view that the country is over populated but I do not want to base the rest of my argument upon what I admit is the abstract question of over-population or not. My argument, I think, is independent of that.

Mr. William H. Beveridge.
14 Oct. 1907.

Meaning of over-population.

Tendency in every trade to overstocking of labour and want of employment.

Under-employment and unemployment.

Disposal of unemployed surplus after decasualisation of a trade.

Mr. William H. Beveridge. 77843. I see now that you maintain that until there is a more or less perfect system of labour bureaus and exchanges, it is not possible to say whether those 500 that I alluded to could or could not be employed. Is that putting it correctly?—It is so very dangerous to prophesy before you come to practical experience. All I can say is that such facts as we have show that if you add 500 people to the population they would make room for themselves, because the facts we have show that there is room in the country, and that industry is expanding more rapidly than population.

Facts show there is room in the country for additional population.

How far improvement of individuals would counteract the industrial causes of unemployment.

Definition of unemployment.

No general want of adjustment between rate of births and possible rate of industrial expansion.

Cause of distress at certain periods.

No very accurate evidence as to whether under-employment has developed much in last twenty years.

77844. I will take another statement which it is just a little difficult to reconcile with this idea of there not being over-population. Would you look at Section 2, Paragraph 4. You say there it follows that improvement of individuals—physically, morally, or mentally—is neither a remedy for unemployment, nor, however desirable in itself, likely to be carried very far while the industrial causes of unemployment continue. Is not the meaning of that rather that no physical or mental improvement would secure employment for the persons so improved?—No physical or mental improvement would do away with the industrial forces which at present produce unemployment.

77845. But if it is assumed that people cannot get employment now and earn proper wages because they are not physically or mentally competent, and if, however competent those people, physically or mentally, may become, that will not touch the question of unemployment, is not the almost irresistible conclusion that the population is in excess of the employment?—I think if you have a physically incompetent person and make him competent he will be more likely to get work. I ought perhaps to have defined unemployment. I mean by unemployment the involuntary idleness of the fit workman. If you have a workman who is not fit and make him fit, you will increase the chance of giving him employment, but what I mean is, if you take the fit people who cannot get employment and try to make them more fit, or if you make everybody fit, you will not do away with the industrial dislocations, or mal-adjustments specified in Paragraph 5, and I add to that, that those industrial dislocations, or at least one of them, are the most potent causes, or amongst the most potent causes, of incompetence in the individual.

77846. But still, speaking broadly, you do not put down over-population, whatever its sense is, as the primary cause of unemployment?—I must limit the sense of over-population. I mean by using that phrase over-population to refer definitely to the rate of increase of the population by excess of births over deaths. I say there is no general want of adjustment between the rate of births and the possible rate of industrial expansion at present.

77847. Taking that point and pushing it back a little, you say that the distress of the last few years may be paralleled in all essential particulars by the events of 1893-1895, 1885-1886, 1879, 1868, and earlier periods. What was the cause of the distress of those earlier periods?—The general cause was that each of these periods was a time of cyclical trade depression: at those times the unemployment, which I believe is chronic, was intensified by the temporary trade depression. I think each of those times is shown by general statistics to be such a period.

77848. It is contended in certain quarters that this question of, "under employment," has very much developed in the last twenty years. You would contest that?—No, I do not know that I should lay any stress upon contesting it. I am afraid that I have no very accurate evidence about it. I have studied the history of what happened in those times, and as far as I could see it was very closely similar to what happens now. I could find no reason for supposing that things are worse now than they were then.

77849. I think all the rest of your argument seems quite clear, and I do not know that there is anything I need to say upon the earlier passages. In Paragraph 19 you say: "If the casual employment of adults were directly due to the uneducative blind-alley employment of boys": should not the word "wholly" or "solely" be substituted for "directly" because they are, it is admitted, a direct source of ultimate unemployment?—

That I think I should contest. I think that the casual employment of adults is due to the casual demand for labour. I quite agree that the casual demand for labour is satisfied by people who have been badly brought up, because those are just the people who are chosen to satisfy it, so to speak, but I do not think the evidence that I have seen is conclusive that there is casual labour of adults because boys are badly trained. I do not wish to deny it, but I have not seen the evidence. I think that casual labour of adults is due to the casual demand for adult casual labour.

77850. Putting it a little earlier in an individual's life, is it not the opportunities which boys now on leaving school can get for casual or intermittent labour, such as selling newspapers and things of that kind, and the demand for such boys being very considerably on the increase, that cause the boys so employed very often afterwards to degenerate into the unemployed?—Certainly.

77851. Should you say that the cyclical disturbances of trade and industry are greater now than they were a few years back?—These comparisons are very difficult. I should say that the evidence on the whole shows that the actual cyclical fluctuations and disturbances are smaller now than in past years.

77852. Putting it in another way, as far as you know you would maintain that regularity of employment has not diminished?—I think that is rather a different matter, if I might say so.

77853. Do not the cyclical disturbances interfere with regularity of employment?—Yes, but there are many other things which produce irregularity. It would be possible for casual labour to be much on the increase, although cyclical fluctuation was much on the decrease. I think the cyclical fluctuation, which is a very general phenomenon, is, so far as one can see it, slightly less violent than it was twenty or thirty years ago, or say fifty years ago. In saying that I cannot speak very closely from my own studies, but I believe that is the impression of economists.

77854. May I put it in another way. Would you say that the proportion of casual labour now was greater than it was say twenty years ago?—I am afraid I simply cannot answer that question; I do not know. I cannot see how one could get any information about that.

77855. Put it in this way: as men get richer, they do, as a rule, less services for themselves, and as the community gets richer it wants more services done. You do not think that that tendency in say, a town like London (the newsboy is only one illustration of it) has been so on the increase as ultimately to result in enlarging the number of unemployed?—I really feel I know nothing about that. I am not able to compare the past and present.

77856. You also deal with the returns of the trade unionists. They cover a very small proportion of the employment in this country?—Yes, I have stated that in Paragraph 72.

77857. At the bottom of Paragraph 14 you make some comparison about the percentage of unemployed. Is the percentage of the trade union unemployed as high as that of the general unemployed? The last two sentences are a little difficult; I could not quite follow them?—The "general unemployed percentage" is the percentage unemployed in all the trade unions making returns. They are all trade union figures.

77858. What would be the basis of the figures. Would they take only trade unions?—I am afraid I ought to explain the whole of that, Paragraph 14 is merely negative and purely statistical in character. It is a little experiment in manipulating the *Labour Gazette* figures to show that you can get three entirely different results by a very simple manipulation, and its only object is to show that you really cannot judge the total number of the unemployed from the trade union figures.

77859. Those figures show that they are quite unreliable if you want to get a sense of what the general state of employment in the country is?—I think they are fairly reliable as showing the movement from good times to bad times, or bad times to good times; but not as showing the total number of unemployed.

77860. They are a barometer in fact?—Yes.

77861. (*Mr. Lock.*) Whether in trade unions or outside them?—I think they are a good barometer even of the general unemployment outside trade unions.

Relation of casual boy labour casual adult labour.

Trade union returns of unemployment.

Question of reliability of trade union figures of unemployment.

77862. Broadly summing up the causes of unemployment, I think you arrive at the conclusion that each particular trade, each particular occupation, each particular class of employment at present has attached to it a reserve reservoir so to say, and those are in no manner connected, they are scattered all over the country?—Each tends to attach to itself that reservoir. I want it to be quite clear that that tendency may be overcome by a rapid growth.

77863. If you added together these margins of unemployed labour attached to these innumerable occupations, and put them into one reservoir, you would by that simple process, and distributing it, be able to control it much more?—So far as men could move from one occupation, or one district to another, by centralising your reservoir, you could make a smaller reservoir meet your ends.

77864. Now you pass on to criticisms of the Act. We have had some evidence previously to-day as to the persons for whom this Act was intended: It was respectable persons in regular employment, who temporarily had been thrown out. I gather from these figures that very few of that class, so far as you know, have been touched by this Act?—I think very few of the class defined in Section 1, Sub-section 3, of the Act have applied.

77865. I suppose, therefore, you would contend that that was a procedure which has been carried out by the local authorities and has not really got at the class for whom it was intended, or the class for whom it was intended have not availed themselves of this machinery?—I think that we have had to administer an Act founded on a conception of the problem, which did not prove in practice the reality.

77866. The persons I understand with whom you have had to deal are really only a stratum just above those who habitually come to the Poor Law?—I should say rather that they are a stratum in regard to whom the fact of chronic unemployment is far more important than the fact that they are temporarily a little worse off than before. I think they may have been a little worse off than before, in fact I am sure many were, but that difference was quite insignificant in comparison with the chronic fact of their under-employment.

77867. As regards the class of work that has to be given to them, and that the assistance should be less attractive than independent work, you point out that it is almost impossible to fulfil that condition?—I think it is quite impossible to fulfil that condition, if you are going to help more than a very few hundreds in a year.

77868. Just leaving the question of exchanges and labour bureaux on one side for a moment, you point out that this Act has rather increased complications than simplified them in London, so far as public authority are concerned who have to deal with persons applying to them?—I believe it is true that there has been less Borough Council work since the Act came into operation.

77869. I gathered from your statement that there was a considerable waste of time, and an undue number of persons in London engaged in this work?—I certainly do not think that the machinery of the Act was happily devised.

77870. In Paragraph 50, you say you do not think it advisable to have two separate authorities dealing with classes so closely similar as those who come under the Poor Law, and those who come to this new body. You express in Paragraph 50 this opinion: "The main principle of the Act which is to blur the line between independence and assistance, and to create hybrid authorities half way between relief and industry must be abandoned"?—Yes, I should lay very great importance on that as an ultimate principle. I do not know that it absolutely bars experiments like the Unemployed Workmen's Act as temporary devices, but as an ultimate principle I should certainly lay that down.

77871. You have a great belief in a development of the exchange or bureau system?—Yes.

77872. The results seem in London, even during the limited time, to have been satisfactory?—I cannot regard them as satisfactory.

77873. They may not be absolutely, but you made a fairly good start, did you not?—I think we started fairly well, but we have not developed as I should have hoped.

77874. Not during the last few months?—Not in the last few months. *Mr. William H. Beveridge.*

77875. I pass on to your paper about Germany, because that puts before us, I think, pretty clearly the sort of labour exchange which we should keep in mind. Of these various German exchanges apparently the most important is the municipal labour exchange. That is the last of this class. Are the exchanges maintained or assisted by municipalities?—That class includes the largest exchanges. I think the class of exchange established by employers and employed jointly, is, from other points of view, very important as a type. *14 Oct. 1907.*

77876. I think you give the composition of the municipal bureaux. There is no arbitrary composition, is there, in that. It is not on any fixed plan, is it?—Do you mean the composition of the Committee? *Composition of German municipal exchanges.*

77877. Yes?—It differs in every town, but I think I may say quite generally that the more completely it is in the hands of representatives of the employers and employed, without even any admixture of the municipality the greater the success appears to be; and the more completely those Committees are trusted. *Success of German labour exchanges.*

77878. The list you give here of the number of situations which have been filled in certain towns, at first sight seems very remarkable. In Munich 53,000 situations were filled out of a population of 539,000?—Yes.

77879. That is one to every ten of the people?—Yes.

77880. Would that mean that there was a general application to this bureau for positions? I do not know whether that means that practically most of the situations that were filled up were obtained through this municipal bureau?—It does not mean that in Munich. In Munich there are a good many small exchanges maintained by guilds and trades unions. I think if you look at the Stuttgart figures, which are still more surprising ones, you will find that the proportion is nearly one in every four. There I think most of the other exchanges have been absorbed by the municipal exchange. It is perhaps true to say that the exchange dominates the labour market there. I might say in Munich that the holding aloof of some trade unions is not apparently on any question of principle, and it is not general.

77881. Apparently you have been a good deal impressed by those exchanges, the committees of which were largely composed of employers and employees?—That is true of almost all the municipal exchanges, but there are also certain exchanges started without any intervention of the municipality; started by the employers and the employed alone, and one or two of those I think are rather interesting.

77882. Not only in the direct effect they may have in obtaining situations for those who apply, but also from the softening and ameliorating influence they may have over the masters and men?—The most striking of these systems of exchanges is that in the printing trade, where practically all over Germany all men are engaged through the exchanges, and that is certainly a trade in which there have been hardly any strikes. *Labour exchanges in printing trade in Germany.*

77883. Does this labour exchange regulate operations over a large area?—There is, in the printing trade, a system of exchanges covering the whole German Empire. The exchange, I may say, deals with both trade unionists and non-unionists, although it is maintained by the unionists, in combination with the employers.

77884. Do the trades unions or the working people generally look upon such an exchange or bureau as a satisfactory tribunal for either speaking or adjudicating upon labour troubles?—I do not think that it is normally regarded as part of the function of this bureau committee is to adjudicate in trade disputes. In certain towns, I think in Strassburg, it does, but the normal view is that if you have a market place for labour it had best confine itself as much as possible to being that if it wishes to retain the confidence of both sides. *General view in Germany of function of labour exchanges.*

77885. I think you mentioned in Berlin there was a Labour strike on that question. The men, I understand from Paragraph 16, wanted the establishment and exclusive use of a joint labour exchange as one of the terms of terminating a dispute?—That was the case. I may say that that agreement to use the exchange for the whole supply of labour is enforced legally by the Industrial

Mr. William H. Beveridge. Court. May I add with regard to one of these other exchanges in Berlin, the Breweries Exchange, there is the same absolute voluntary pledge of every employer to use the exchange for all his labour, and that is carried out.

14 Oct. 1907.
Lessons to be learnt from German labour exchanges.

77886. I may assume that you think that if you could put exchanges or labour bureaux in England on anything like the same footing that they are in Germany, it would go some way in the direction of simplifying this very difficult problem of unemployment?—It would give the instrument which we want in order to begin to remedy the problem. I do not know that in Germany the full significance of the instrument is yet understood. I think they are mainly concerned with perfecting the instrument at present.

77887. It seems to me, therefore, that if you get institutions of this kind on anything like the same footing, it is essential that they should be in some degree dissociated from those only who are supposed to be unemployed?—I think so. They are essentially distinct from relief agencies and their industrial character should be recognised.

Difficulties of establishing labour exchanges in England.

77888. Knowing something about England and so on, do you see any insuperable difficulties in trying to work up towards this object of making general exchanges and labour bureaux of this character?—I see none whatever. I see great practical difficulties and delays.

77889. You must have thought a good deal over this sort of scheme; could you just state to us shortly what you think would be the main difficulties?—The first difficulty is to persuade anybody that there is any use whatever in doing this. I think, having persuaded them generally, I am very much inclined to leave it to the common sense of employers and employees to work out the practical details. However, that is the first difficulty. The second difficulty is the fear that this change may be expected to injure one or the other of the parties to the industrial contract, and to affect existing organisations. I am convinced, both in the abstract and from my experience in Germany, that that fear has no foundation; but, of course, it is a thing to be reckoned with. I do not know if I might add a third very serious practical difficulty, which is pointed by Paragraph 20, Section 1 of my Appendix: that in Germany you have had a movement of a very high standing from the beginning, but at present the movement, as we try to start it in this country, has no standing whatever. We are hindered in getting facilities for making our work known, for getting conferences, and so on. We start from no sufficient position.

Objects of German labour exchanges.

77890. Attention to the advantages of these exchanges has been called by the condition of the lowest of the unemployed in this country; in Germany did it start from that low level, or was it put in operation in order to facilitate employment amongst the highly-paid and well-organised trades?—I do not think it is possible to answer quite generally, because the movement has differed in different parts of Germany; but as far as I can see, the idea of decasualisation, which was very much emphasised by Mr. Booth on the Labour Commission, and which is in my own mind one of the most important things, was not in Germany one of the principal objects. The main motive, as one finds it in Germany, is to put down the vague search for work through the streets, with all its wearisome and demoralising concomitants; the second is to do away with some of the evils of private registries, the exploitation of the employees, as it is described there, by the private registries; and, thirdly, there is the general desire to increase industrial efficiency by increasing the mobility of the labour supply. I do not think that they had the specific object of decasualisation. I ought to add, as a fourth reason, which is coming in now very strongly, the object of getting a perfect test for unemployment, a means of knowing if a man is really unemployed against his will. You can only do that if you can see the whole labour market and all the jobs that offer. That idea is now coming to reinforce the earlier ideas, as a result of what has been said about unemployed insurance.

Proper method of establishing labour exchanges.

77891. The first thing necessary to do is to try and give a status, and so on, to these proposed institutions, and you prefer to do that by discussion and persuasion rather than by an Act of Parliament putting obligations upon the municipalities to establish them?—No, I did not mean that.

77892. You would have no objection to an Act of Parliament forcing a locality to establish a labour bureau?—I should have no objection to it; but I am not sure that it would be quite the best way of going to work. I think you want to persuade the municipality if you are going to get any life into the thing.

77893. How would you persuade the municipality?—I have here a short memorandum of a couple of pages, which I shall be very glad to put in. (See Appendix No. LXXXVI(A)). I think as the centre of the movement you must have a small Government Department, a small office at tached to the Board of Trade to do the work of propaganda; and I think that that department, if it is to be effective, should also control certain funds. It should be able to offer a contribution from the national funds to pay part of the expenses of exchanges established either by municipalities or associations of employers and employed directly.

77894. Are the expenses large now of an establishment of some dimensions?—I do not know what is the best way of answering that. I have given the figures for Germany, where the amount varies from 4d. to 8d. or 9d. for each situation filled.

77895. Is it possible to charge a fee which would not be a deterrent, which would go some considerable way towards making the institution self-supporting?—I do not think it is worth while to try and charge a fee; it is apparently possible. It is done in Berlin. It is not done, as far as I have seen, in any other public exchange of any importance in Germany.

77896. You allude to a certain sum that is paid by the applicants, and that becomes a sort of insurance for them?—I think that is important. That is another possible advantage. I think you can make a labour exchange the centre of a system of unemployed insurance.

77897. What is the process? Has the person to go on paying this small fee until it has got to a certain sum or is he entitled after a certain time to a right to assistance?—In the Berlin Breweries Exchange the man pays 2½d. each time he registers, and registration lasts three months, or until he gets a job through the exchange. Then the money is given out in grants to unemployed people as it is required. The thing is not at all regularised, and the fees are not at all sufficient to afford a regular unemployment insurance. In Cologne, as I have described, it is rather different; that is a regular insurance system.

77898. If a person is in employment I do not suppose he goes to the bureau?—No.

77899. If he is out of employment, would he be able to pay whatever this little fee is?—He does in Berlin undoubtedly. I may say that in the big Berlin exchange these fees are a very important part of the finances of the institution, which is always rather in low water, because it is a voluntary association. I think that they get 15,000 marks a year from the fees paid by work people apart from sums paid by unions to compound for all their members.

77900. (Mr. Nunn.) Might I ask whether, in considering the desirability of a fee, you distinguish between men who are actually in work at the time of their application and those who are out of work at the time of their application, whether you consider it possible to draw any distinction in that way?—I think if you are going to register men in work you ought to charge them a fee. I may say that technically we do that in London. Although it is stated no fees are charged, if any man comes who is in work we have a provision to charge him 6d. and then a penny a week. I think that would have to be done; but I think it is a comparatively small point.

77901. You have not found that deterrent at all?—I have no evidence on that point.

77902. (Sir Samuel Provis.) Do you remember the amount of the fee in Berlin?—Twenty pfennigs for three months, or until the man gets a job.

77903. (Chairman.) Is there not one special difficulty which we should have to encounter here as compared with Germany: there is an elaborate system of registration in Germany about everybody, but an Englishman would detest being registered in any shape or form. Would it be possible to establish these bureaux and make them

registration effective unless there is some sort of registration or unless the men who come up bring some formal parchment with them?—I think it is quite clear that the existence of this infirmity insurance card does simplify matters; but I think it is equally clear that it is anything but essential; in Munich the business is commonly done without considering this card at all. It comes to this, that when an exchange has been in action for a long time the superintendent gets to know a great many of the men; they are always passing through, particularly in the unskilled and irregular occupations, and automatically, without any investigation, the exchange acquires a great deal of information about the individuals. I think the sifting happens in the least inquisitorial manner possible.

77904. You do not think the lack of registration really is insuperable?—I am certain it is not insuperable.

77905. Of course it would add to the difficulty?—It would mean that in some cases you would have to take up characters where you do not have to in Germany, but I am quite convinced from what I saw in some of these German exchanges that it is not insuperable. I think I have dealt with the use made of the infirmity insurance card in some of these exchanges.

77906. Assuming it was possible to establish an institution such as you suggest, we set in operation a beneficent instrument for dealing with one part of the question of unemployment. Now comes the more difficult part. Taking your own figures, supposing we try this contrivance to convert half of the 1,000 half-employed dock labourers into wholly-employed dock labourers what are we to do with the remaining 500?—I have given my theoretical answer to that.

77907. It is rather a practical difficulty, is it not?—I only want to add to my theoretical answer this: that the introduction of labour exchanges is to be regarded like the introduction of any other machine which increases the efficiency of the individual. It is no objection to increasing efficiency by a machine to say that it is going to turn a certain number of people out for the time being. I quite agree you have to deal with those people, but you must not regard the trouble as a permanent trouble that you will always have to deal with. This I should like to add to my theoretical answer. The practical answer is as follows: that if we begin doing this down in the London docks, squeezing out people, as we should have to do, very slowly and very gradually, I do not think we should have any unmanageable number to deal with, and we could, in fact, make the process of decasualisation as slow as we wished. The actual people who would get squeezed out would be the least efficient casual labourers. I think it is quite clear that the least efficient casual labourer would be a [very inefficient person indeed; the man who now works perhaps once a month or twice a month, or something of that sort. I think it is quite clear that he would be a person who would be in need of some sort of training or recuperative treatment, and we should have to provide that for him.

77908. I suppose the least efficient would be, generally speaking, the oldest of the casual labourers?—The oldest or most drunken or most irregular in various ways—the weakest. I do not think they would be above the Poor Law standard, the ones we began with.

77909. I do not know whether you have at all studied the difficulty which occasionally arises in the country from the substitution of modern machinery for old machinery, and the dislocation which takes place in a great industry, such as has taken place in the boot trade in Leicester. Your observations are mostly confined to London, are they not?—My experience is confined to London. I do not, of course, wish for one moment to make light of that dislocation; I simply used the illustration of a new machine to show you must not assume you are going to have a permanent trouble. You have, for a time, a large number of people on your hands, and you have got to deal with them.

77910. But still, it will not be a permanent trouble, but as the industries of this kind are much older established than those of more modern nations which compete with us, I think we may reasonably anticipate for a considerable period of time there will be changes of this character in a considerable number of our industries, which does mean a temporary disturbance of the labour market; and, as I dare say you know, the difficulty is a

good deal enhanced by the fact that from specialisation the men would be engaged in one particular class of special work for many years, and they are not very apt for anything else?—I am very conscious of that.

Mr. William H. Beveridge.
14 Oct. 1907.

77911. That you would deal with more as a normal aspect of the great industrial question?—As to the people who are displaced by machinery, the only absolute remedy is to get them another job. The first requisite to getting them another job is to have your labour exchange, so as to know where the other jobs are. I think it is very clear you would have much difficulty in getting some of them other jobs when they are getting old, and I think you would want special powers for dealing with those.

Remedy for men displaced by machinery.

77912. (Mr. Nunn.) In weighing the value of the Labour alliance of the German workmen's associations with this movement, does one have to take into account at all any difference in the degree in which they are able to find work for their members compared with the English trade organisations? Do they, as a matter of fact, find work for their men to the same extent?—I can only say that Germany is overrun with trade union labour exchanges, and that as far as one can see they are at least as well organised as those in most English trades. I have not made a special study of the English trade union registration system, but whenever I have asked about it I have been struck by the fact that it was not very completely organised. It might be much improved.

exchanges and Trade Union registries in England and Germany.

77913. Although it is pretty widely diffused, it is not highly organised, do you mean?—Yes. I do not think that in many trades it is the recognised place to which an employer sends for men.

77914. Do the men help one another in finding jobs for one another?—Certainly.

77915. To the same extent that our men do in the trades unions?—Are you speaking of Germany?

77916. I am speaking of Germany as compared with England?—I cannot speak of the whole of England or the whole of Germany.

77917. (Mrs. Webb.) Do you know whether there is still in the German trade unions the use of the tramp card as there is in the English unions?—I think they travel more than the English workmen; that is always said.

Question of the tramp card in Germany.

77918. Do they travel on the advice of their labour exchange, or do they travel aimlessly on a tramp card, as they often do in England?—They travel in many unions at any rate on the advice of their labour exchange.

77919. There would be a great deal of difference between going from Newcastle to London on the advice of an executive, and going on a tramp card?—True.

77920. I want to know which is the German plan?—I cannot say quite generally because in Germany, as in England, in some trades, the trade union registration system is very much developed, while in others it is very unimportant.

77921. (Mr. Nunn.) My second question (which I will not press if it answered in your Statement) is as to the bond which is to unite the various employment exchanges in different parts of the country if it is not to be a municipal or State bond?—I did not say it was not to be a municipal or State bond.

Proper bond to unite the various labour exchanges.

77922. I did not say you did. Have you answered that question as to how you would unite and co-ordinate the various employment exchanges?—I want them to be under the supervision of this Board of Trade Department, which would give contributions on condition that certain rules and regulations were complied with.

77923. They would be co-ordinated by a central department independent of the local municipalities?—I think so.

77924. Who would nominate the members?—Of the committees?

Composition of committees of labour exchanges.

77925. Would the central body nominate the committees all over the country?—Certainly not.

77926. Who would then?—The ideal thing is for the members of the committee to be composed of an equal number of employers and employed nominated by the respective associations on each side.

77927. Without any statutory machinery for bringing them together at all? Who would bring the employer

Mr. William H. Beveridge. and employed together to form a labour exchange in a particular town?—The centre of propaganda I think would be the central department.

14 Oct. 1907. 77928. That would go all over England?—It would get about and it would try to persuade local people. I hope it would also go to the municipalities. I think it is quite possible to have the exchange without the municipality, but it is better to get the municipality because then you get general local interest and support.

Relations of the municipalities to labour exchanges.

77929. (*Sir Samuel Provis.*) You do not contemplate that the exchanges should be set up by the municipalities all over the country, but by an organisation specially constituted for the purpose, do I understand?—I think I should prefer to have them set up by the municipality, but ultimately I want the management to be in the hands of representative employers and employed. Whether you have the municipality technically above them or not is not an absolutely essential question. I should prefer to have the municipal authority, because it represents the local life of the place, but I think you may deal with different trades in different ways as they are dealt with in Germany.

77930. The municipalities have not shown themselves particularly keen to do this sort of thing, have they?—I think a good many municipalities have made experiments at various times, but I really think very seldom with any perfect understanding of what they would be at, and very seldom realising quite the importance of what they were going to do if they were going to do anything at all.

77931. For instance, was it not the case that under the Labour Bureaux (London) Act, 1902, very little was done?—I think when we took over the London bureaux there was practically only one of them that had any good will—that had any really live business.

London Borough Councils and labour exchanges.

77932. Does not that tend to show that the local authorities would not be very keen to establish things of this kind, or superintend an organisation of this kind?—In London the local authorities were the borough councils, and I certainly should not ask them to intervene in London.

77933. They would be the municipalities, would they not?—In London I should take the whole of London for the municipality.

77934. And have one body for the whole county?—Yes, certainly. At present I think we are rather hampered by the fact that we practically have to set up a separate exchange in each borough whether it is necessary there or not. That has very unfortunate effects upon the geographical distribution of all the exchanges.

77935. The expense of working a thing of this kind will be small?—I think the expense can be reduced to the sort of thing it is in Germany. At present we are costing something about £9,000 a year, I believe, in London.

77936. That £9,000 is for the hire of offices, I suppose, and the payment of a certain staff?—Yes, and postage and telephones and so on.

77937. If the matter was largely extended and you had a central body through whom the whole thing was worked, of course the expense would be increased: is that the expense you propose should fall on the State?—I think the State naturally bears the expense of knitting up the exchanges. I am not sure that I should not like it to bear a bit more in order to encourage the municipalities to set up exchanges, but that is the principle adopted in Germany where the grants from the States Governments are definitely set aside for federating the local exchanges, and then you get the Imperial Government paying for the federation of the exchanges all over the Empire.

77938. I am not quite sure why you thought the Government in England should pay, whether you thought it was to encourage the thing to be done or whether you thought there was some other reason?—I desire it to encourage the thing to be done and to secure co-ordination. It is a grant to be given on condition of efficiency.

77939. If you placed the matter under the local authority, you could say that they shall comply with certain regulations?—Yes. It is a new thing, and I would rather have a perpetual power of adjustment in practice than stereotype conditions at the beginning in an Act of Parliament.

77940. Leaving that now, were you contemplating that the Unemployed Workmen's Act should cease to exist, except in so far as it might properly provide for an organisation of labour exchanges?—I do not think that any labour exchange under the Unemployed Workmen's Act will ever succeed.

77941. Why not?—Because the name "unemployed" is enough to ruin it. We leave it off our notepaper. With regard to the other parts of the Unemployed Workmen's Act, I must simply put my general view that I am not satisfied with the present system of Poor Law in this country any more than I am satisfied with it in Germany. I think they both ought to give way to something entirely different based upon a complete organisation of the labour exchange and the getting of a perfect test of unemployment, but till we get that I feel our best plan in both countries is to go on with the system of which we know something, although it is but imperfect. Therefore I should no more suggest that we adopt the German Poor Law here or add on to it this relief side of the Unemployed Workmen Act, than I should ask the Germans in Germany to abandon their system and adopt ours.

77942. Practically you would not continue the Unemployed Workmen's Act?—No.

77943. You know it is a temporary Act and expires three years after it was passed?—I should like it to expire.

77944. Then you would not make any provision for the provision of work during periods of temporary distress, even although you could not bring your labour organisation into force for some time?—I do not anticipate in the next year or two anything in the nature of a cyclical depression of trade that would make relief works at all appropriate.

Proper method at present of dealing with possible temporary distress.

77945. Supposing there was a very serious winter?—I believe there are resources in the Poor Law to deal with it.

77946. But practically has it not been the case that severe winters have led to arrangements being made outside the Poor Law for providing men with work?—I should let the borough councils go on. I would not try to stop them, although I think they would do harm.

77947. The object of the Unemployed Workmen's Act was rather to deal with difficulties of that kind, to have an organisation of work when there was a period of distress?—I do not think from my reading of the Unemployed Workmen's Act that it was intended to be applied to merely seasonal distress.

Real intention of Unemployed Workmen Act.

77948. Not merely so, but seasonal distress is one thing it would apply to, would it not?—I have not read it as meaning to apply to distress which was no more than seasonal. I will put it like that. There is a rule that a man is not to have assistance in more than two years running, that is to say, supposing there are three hard winters, he is not to get relief. I read that as implying that the Act is specifically an Act for cyclical trade depression.

77949. Supposing you did, in fact, have a severe winter, would you say that the Poor Law could still deal with it?—I am not experienced in the Poor Law, but I do not see that what we do is of any use.

77950. (*Mr. Patten-MacDougall.*) I think you said that, looking to the existing Act, its machinery is, in your opinion, not happily devised?—Yes.

Bad features in Unemployed Workmen Act.

77951. Have you considered at all how, assuming that Act to be re-introduced after its expiration, you would improve its machinery?—Yes. Perhaps I may specify one or two of the unhappy parts of the Act. The first is the existence of twenty-nine independent distress committees. That means that a Central Body in carrying out its work, instead of being able to give orders to its own local officials, has to correspond formally with an absolutely independent body. That adds to the amount of correspondence, minutes and agendas, and all the committee expenses.

77952. That is in London?—I think I specifically limited my statement as to the machinery of the Act to London. It also absolutely prevents any co-ordination or uniformity. I think the principles upon which the Distress Committees go are very different in fact, and it is almost impossible to co-ordinate them. It is impossible to deal with London as a whole. I think the

Question of proportions of cost being borne by the State.

Expense of working labour exchanges.

Central Authority in London itself is necessarily weak because it is composed of delegates who come to it from another body and go back to that other body, and who are practically foreign ambassadors. That is the weakness of a body of delegates which is subsequent to the bodies which it has to control and not prior to them. The Central Body is appointed by Distress Committees, and does not appoint them in any way. I think that is a cause of constant friction. I think the Distress Committees themselves are not well composed. Their business is to sit in judgment, but they are actually composed of all the people who should come as witnesses to give evidence about the individuals. To have on them the guardians and the people experienced in the relief of distress is not really important; those are the people who should be consulted about individual cases. They are not a good judicial body, because they know individuals, they cannot know the district as a whole. I do not know whether I ought to add anything to that. I speak only for London, and I see that this independence of the Distress Committees creates extra expense, is a barrier to efficiency and means a great deal of reduplication of work.

77953. And the administration is not uniform?—It is not uniform.

77954. They do not adhere to the regulations of the Local Government Board, is that what you mean?—I think a great many of them say it is necessary to apply the regulations in a very elastic manner. That is because the people regularly employed do not apply in any large numbers.

77955. How would you re-adjust the composition of the Distress Committees?—If I wanted to give the Act a chance of success in London, I should say that there should be no independent Distress Committees prior to the Central Body, but that the Central Body, if it wanted to keep as close as possible to its present constitution, should have one member from each board of guardians and one from each borough council. Then your local work of registering the unemployed could be done by officials directly under that Central Body, who might have a consultative committee, but I would have that committee appointed by the Central Body and subject to the Central Body. This only refers to London.

77956. You told us, I think, that the printing bureaux covered the whole German Empire?—Yes.

77957. Does that mean that anyone wanting employment in a printing establishment must apply through the bureau?—Any man wanting employment in a printing establishment belonging to the Employers' Association. That does not include absolutely all printing establishments but it does include nearly all. There are a few establishments outside. I ought to add also that I believe that the rule about taking men on only from the exchange is not absolutely enforced in that trade. It is practically the rule, but if an employer knows a man specifically he can send for him.

77958. How many bureaux are there dealing with this printing trade?—I am afraid I cannot answer that off-hand. I can let you have that. My impression is there are about forty-two districts with main bureaux,* and I expect there are smaller houses of call scattered over other towns.

77959. And with separate administrations in communication, I suppose, with their centres?—The whole of the administration is in close connection with the administration of the collective agreement as to wages and conditions arrived at between the two associations, the employers and workmen.

77960. Then it is not a joint association, so many representatives of the employers and so many of the workmen?—The management of the whole system is under a joint committee of employers and workmen.

77961. Actually represented by them?—Yes; in fact it is a conciliation board: it has just taken on the business of being the labour exchange as well.

77962. I think you added that in Berlin there is a similar system of labour bureaux applicable to the brewery industry?—One bureau deals with all the breweries.

77963. That does not extend beyond Berlin?—There are some in other towns. In Frankfurt I believe there is one, but I only studied the Berlin one.

77964. Are the other trades following the example of the printing trade and establishing bureaux everywhere?—There is a general movement to have bureaux, but a great many of the trade unions and employers simply decide to use the municipal bureaux for all their men. In Munich, for instance, I was told by one leading trade unionist that all the trade unions there were quite willing to give up their own exchanges and use the public exchange if the employers would pledge themselves to use the exchange for all their men. There is a great movement towards the organisation of the search for work in Germany.

77965. That is rapidly growing?—I think it is rapidly growing.

77966. (Mr. Loch.) In the case of these printers to whom reference has been made, I think you said that some of them belonged to trade unions and some did not?—Yes.

77967. Does any question of difference of wage arise between the two?—That system of bureaux being managed by the employers' association and the men's association only supplies men to employers belonging to the association, and therefore pledged to certain rates of wages. It also will only register men who come from a fair house. In fact it is a very efficient agent for enforcing the standard rate.

77968. That is to say it in itself is an organisation for trade purposes?—Quite.

77969. Self-constituted?—Yes.

77970. Although some may belong to the trade union and some do not?—Yes. I imagine that almost all do belong to the union.

77971. (Mr. Gardiner.) Is a blackleg held to be eligible?—What do you mean by a blackleg?

77972. A blackleg among the printers?—A man who does not belong to a trade society is eligible, but a man whose last job has been in an unfair house is not eligible. The exchange is impartial on the question of non-unionism or unionism, but it is very strict on the question of standard wages.

77973. (Dr. Downes.) Who decides what is an unfair "Fair" and house or a fair house?—The members of the employers' association are fair houses, printers who are not members are unfair houses. The thing is so strictly organised that the little establishments outside do not count much. That is the impression I had given me.

77974. (Mr. Loch.) On the other hand, if there were a large number of houses outside the union there would still remain an unorganised area?—The danger of the rule that you shall only supply men at the standard rate is that you leave out just the people who most want the elements of organisation.

77975. That is what I was driving at?—Certainly that is the danger.

77976. Can you say with regard to any of these trades other than this that there is any hold on those outside men who have been earning a lower wage, whether rightly or wrongly, so that they are brought into the advantages which the unionist has by reason of his organisation? I mean in this way: I take it there is outside the organised trade, as in this case, a certain fringe of people who are not in the organised trade, but need the advantage of the exchange as much as their neighbours do—does the bureau deal with that class outside the organised trade?—This printing trade exchange is quite exceptional in Germany. I do not want it to be taken as the type. The type in Germany is the public exchange, which in every case in which I made inquiries (and I made special inquiries) takes no account of the rate of wages or the conditions of labour. In every case it acts simply as the market place both for men taking only the recognised rate and for others.

77977. Then gradually the rules will apply that the bureau of the municipality, if it works well, will be giving opportunities to people outside organised trades just as if they were in the organised trades?—Yes, certainly.

Mr. William H. Beveridge.
14 Oct. 1907

General spread of labour exchanges in Germany.

Attitude of labour exchange in German printing trade to questions of wages and non-unionists

printing trade in Germany.

Attitude of ordinary public labour exchange in Germany to wages and conditions of labour.

* The number as given in 1906 is 45.

Mr. William H. Beveridge. 77978. Can you say whether in the result the unorganised trade so helped has, as a matter of fact, been able to get through its winter's work better than it would otherwise have done?—That is a very difficult question.

Effect of labour exchanges in Germany on unorganised trades and unemployment in general. 77979. Is there any evidence to show that the existence of the bureaux has affected this fringe of men, those outside the organised trades, and has thus led to the prevention of distress?—Practically that comes to asking if there is less unemployment in Germany than in England?

77980. The piecing together of the unemployed at times, as you have yourself suggested, has it led to the result which you yourself have supported?—As far as the figures go there is much less unemployment in Germany than in England. I do not know whether the figures are to be trusted. It is definitely stated by the people who advocate the labour bureau that this is due to the labour bureau, but, of course, that is an *ex parte* statement.

77981. Even as it stands do the figures show that your idea of the labour bureau acting in regard to this particular class is effective, that is to say, there is as a result more employment?—With regard to the unorganised classes?

77982. Yes.—There are no figures about that, because they do not distinguish between the trade unionist and the non-unionist at all in these public bureaux.

77983. Therefore, from the statistical point of view one has not quite the data one wants with regard to this particular point?—No.

77984. In Paragraph 7 you say there is a minimum of about two below which the unemployed percentage of trade union members never falls. That minimum of two, I presume, includes all sorts of causes for non-employment, sickness and everything?—Not sickness, strictly speaking.

77985. Have you analysed it?—I have not analysed it; I have tried in several cases.

77986. I take it that the result of your method, if applied everywhere, would be practically to bring such an amount of labour into the market that there would be no reserve of men unemployed.—I do not think I shall ever get to that ideal state, but I certainly wish to reduce the reserve of men in each trade.

77987. Is not the call on the reserves frequently at the same time in different places so that it is very difficult to call from one reserve to supplement another?—That, of course, is putting to me the problem of seasonal supply, to which I definitely say the exchange does not apply.

77988. Not necessarily seasonal, it may be that it is due to particular demands which are temporary and not seasonal, not repetitional at all?—It may happen that the same cause affects a lot of employers altogether, and they all want men. I quite agree that they may conceivably have a difficulty in getting them, but I think that they will have far less difficulty under the exchange system than any other, because after all the exchange is going to be able to call on the reserve of the whole country. The employer at present has men outside his gate. He will in the ideal state not have any men outside his gate, but he will be able to call for them from all London.

77989. You are inclined to think that these unemployed or under-employed men, are interchangeable, that is to say that they will do equally well here or there and can be removed?—Here one must answer by a distinction; the under-employed men who get the lowest wages are least skilled, that is to say they are the most interchangeable. In the least skilled occupations you have both the greatest need for organisation for moving labour (because the men having low wages cannot stand much unemployment), and the fewest obstacles to such movement, because you can transfer labour from one unskilled occupation to another. You cannot make a carpenter into a bricklayer, but the carpenter can stand much more unemployment than the labourer, because he has much higher wages. The requirement of special skill, while it stands in the way of mobility of labour, also makes it less necessary.

77990. On the other hand, in dealing with unskilled labour, do you not deal with a certain inability almost

to move, and a feeling of the undesirability of moving on the part of the men, so that they are less venturesome and in many other ways less inclined to move. Will that be a block rather to your suggestion of bureaux?—I suppose it is a very common thing for people not to like to move but I think there are not many men who would not rather move than starve; that is the question.

77991. You have to leave it to that issue finally, move or starve. Are you prepared to do so?—Perhaps I ought to say "move or the Poor Law."

77992. Are you prepared to leave it even to move or the Poor Law?—That depends on the particular conditions; in the normal case certainly yes. Of course, there may be exceptional depression in the special place which has to be tided over.

77993. Generally speaking, your position is that a Labour new man introduced into the community of workers exchange makes not only a place for himself, but more work for another man industrially?—That is the evidence of the growing productivity per head of the nation.

77994. That is the basis of your major proposition practically?—It is the broader proposition, but it really is not necessary for my practical conclusion as to remedies.

77995. I am not sure that it is not.—I should like to make that quite clear, it really is not necessary for my practical conclusion.

77996. Then, again in a time of distress, when there is a general pressure, will labour exchanges function, because there will be no place, will there, from which the men who want work; there will be no place to which to send the men who want work?—Of course, at a time of trade depression the activity of the exchange will be less, but it certainly will not disappear. In Germany, for instance, in Munich, I think the numbers in 1902 dropped from perhaps 52,000 to 50,000 vacancies filled.* You do see the effect of a depression, but I do not think the depression is so deep as to stop the activity of an exchange, or very seldom.

77997. Of course, in London you are dealing with very large numbers, if you take for granted that the numbers put down on the register are to be considered, so that those numbers would imply very considerable difference in the figures, whether they rise or fall. Do you think you could control a market of that size?—I do not quite follow.

77998. In Munich you are dealing with a comparatively small number?—Yes.

77999. You say a drop of 2,000 makes the difference between a bad year and a good?—That was I think in 1902.

78000. In London the proportion would be entirely different; the drop between a bad and a good year might be hundreds or thousands, who would represent more or less your unemployed?—The drop in numbers would naturally be greater in London than in Munich.

78001. Does it follow from Munich or any such suggestion of that kind that you could control such a market as London with your labour bureau system?—I think the larger the market the more easily you can meet deficiencies in one place and supply excess in another.

78002. Is that really so? Does it not really largely depend in a place like Munich or Berlin even, upon a knowledge of the district and the people, which you would not have dealing with the very large number in London?—No, I do not see that.

78003. You do not think that the size of the problem in London invalidates in any way your conclusion drawn from Germany?—It puts some fresh difficulties in the way. In Berlin you have only one central exchange sub-divided for administration according to trades and occupations. You get as a matter of fact a former employer and a trade union secretary as the two joint officials of the exchange in that particular trade, and they know all about it; they are experienced men. The advantage is that you can divide the administration according to

* The correct figures show a drop from 45,173 in 1901 to 40,513 in 1902.

trades and not according to localities. In London we have to have these exchanges in different districts, each dealing with all sorts of trades. That is a difficulty.

78004. Is it not also the fact that in London you are dealing with the large outside trades, and that they have no organisation on which to depend, as they have in the case of an organised trade?—I do not think that is a difference between here and Germany.

78005. It may not be so, but it is a problem of difficulty here. I could not get from you the number of those outside trade unionists that were dealt with by the bureaux in Germany?—Because it is the first principle of the bureau not to ask whether they are trade unionists or not; therefore it publishes no statistics. I could give you the number of trade unionists in Berlin, compared with the total population.

78006. That might show whether it was to any large extent affecting the demand for labour in the place. Judging from one's experience of bureaux in the past they have been very small institutions, not really touching the labour demand of the unskilled type in the place at all?—I should not think there has been a single bureau in England which has yet been an important or indispensable industrial institution.

78007. Another point which is of importance it seems to me is this; you say in your last paragraph "that in order to be effective they"—that is all these remedies—"all pre-suppose the organisation of the labour market, the bringing together under public, or semi-public control of the whole process of industrial engagement." They pre-suppose that; does not that mean that to carry out your proposal you must first of all bring labour under public control?—No, I do not think so. The labour market is not the whole of labour.

78008. But your phrase here is very broad; it is organisation of the labour market, the bringing together under public or semi-public control of the whole process of industrial engagement—the whole process?—If that has been misunderstood, I am quite prepared to leave out the "whole." The word "whole" simply meant the process of engagement in all industries.

78009. You would have to bring your trade unions, and all the rest of it, under a sort of industrial régime?—Not in practice.

78010. I suggest that these words are open to that construction?—"Public or semi-public." I think I should call the control of a representative association of employers and employed semi-public.

78011. Of course, "semi-public" may be defined?—I define it in that way.

78012. On the other hand, it leaves one with this difficulty, till you do organise the outside labour it seems very hard to make it do anything that you want. I do not see that you make any suggestion towards that excepting this paragraph; possibly it may be elsewhere. So that the major difficulty, it seems to me, remains, that this group of people passes through the hands of the bureau or stands aside: they are not brought under any industrial control so as even to be obliged to use the labour bureaux?—I think they are. If the employer says: "I am going to take all my labourers from the bureau," the unskilled labourer will necessarily go there to be taken on; and personally, I hope, his going there will be the beginning of a further organisation. I think the man who stands alone is always lost.

78013. I agree as to that. There is just one other question I want to ask, and again it is a question of organisation; you have suggested what, I think, is an important question, namely, that of an insurance fund. There again something like organisation must hypothetically exist if you are to take the next step?—Yes.

78014. What would you suggest as the basis of organisation before we could take such a step as the insurance fund, not dissimilar necessarily from a trade union fund which might be established for such a class?—The first step in organisation is the labour exchange. I can only repeat that I am perfectly clear that it is the first step, because it is the easiest thing to do. You get your employer to say: "I will go to a centre," and then the men of the unskilled trade go there. Having got that, you can introduce voluntary insurance funds. Personally, I hope the

men, having their work more regular, would themselves organise trade union unemployed insurance funds. Apart from that if you have a bureau you can say to a man: "Come and register and pay in so much, and when you are unemployed you will get this benefit," but you must have the exchange in order to test whether the man is really unemployed against his will. From an insurer's point of view, the only way of determining a claim to an insurance for unemployment is an exchange; that is the utility to a trade union of its registration system.

78015. Do you see any possibility of a fund being created in connection with those men who are more or less regularly employed at large docks or any other large business?—I think the more regularly a man is employed the more easy it is to create a fund in connection with him, but our difficulty is with the men who are not regularly attached to any one business.

78016. I am speaking of the men outside trade unions who have no organisation behind them and therefore do not have an employment fund?—I think if they get employed together they probably have their own shop clubs or something of the sort.

78017. Would you put the shop fund as equivalent to the unemployment fund which the trade union has?—No, I think the trade union unemployment benefit is one of the best instruments yet devised against unemployment.

78018. You admit there is that class of not-so-regularly-employed man often connected with a particular institution or business, but you do not think there is any way in which they could provide for their future as things stand, apart from personal thrift?—I think there are any number of ways.

78019. Would you suggest any?—They could subscribe to a factory fund.

78020. That would turn, would it not, upon the manager of the factory having practically the management?—I think when you get a factory where the men are not unionists at all, it is likely enough the employer is doing something of the kind.

78021. Do you think something could be done systematically, so that in an employment of that kind there should be what is equivalent to a fund?—Yes, I think more could be done. I think the difficulty about unemployment and the grouping of it about a particular factory is that when a man is discharged from a factory he does not know that he is coming back to that factory; he is simply cut adrift. That is the advantage of a trade organisation; he has the advantage if he goes to some other factory.

78022. You do not see the way of getting over that difficulty?—I have not considered your case. The man who is regularly attached to a factory is much too well off for my experiment.

78023. But irregularly?—Who is well attached to a factory.

78024. Your reference to this insurance fund led me to ask the question?—I think a good deal could be done. I believe, in the extension of unemployment insurance you have one of the great general methods of dealing with this problem.

78025. (Miss Hill.) You speak about the relief works in your 46th Paragraph, and you say they cannot be confined to men previously in regular work, they cannot be made less eligible than casual employment, they cannot be made long enough. You also speak in Paragraph 44 of the members of any distress committee and of the central body as having no qualifications for managing large contracts for excavation, roadmaking and sea-walling. I gather from that that you would rather feel that all those relief works do not educate the men to work, that the standard of work could not be kept up because there was no motive to make the men do their best and no controlling power which kept them up to the mark?—I think it is extremely difficult to keep up the standard of work. I can base that on the reports of individual men of good character who have been sent to the relief works.

78026. That would be a very grave reason against relief works, that they really do not raise the capacity

Mr. William H. Beveridge.
11 Oct. 1907.

Possibility of unemployment insurance for unorganised workmen.

Uneducative character of relief works.

Mr. William H. Beveridge. of the people who were accepting work under them as a rule?—I do not think our relief works as distinct from our training colony are doing anything to raise the capacity of the people.

14 Oct. 1907.

78027. That is your experience?—That is my impression, certainly.

78028. That is the reason why you would rather place any such work under the schools of forestry or the people who really had some experience of what ought to be done?—If you want to have the work done properly you must have it done under people who know something about it.

The proper standard to be demanded of men for whom work is provided.

78029. You must not give the work as charity, but because the men are willing to do it, and are capable more or less of doing it?—If I wanted to have work for a time of exceptional depression I should put it in the hands of people who knew about that sort of work. I should apply a standard of competency. I should expect the men to earn the money. In distress work the men do not earn the amount of their money; they are employed because there is distress.

78030. It would be difficult to make them earn the money if it was work for which they were paid whether they did it or not?—Of course that is so.

Statistics of situations filled by London labour exchanges.

78031. (*Mrs. Bosanquet.*) You give us some figures in Paragraph 41 as to the number of situations. Could you tell us at all of what type they were?—I have some figures which have been prepared for me in the central office which I could give you. I am afraid they are not as complete as I should like, but the Commission can get much more complete figures from the full report. The situations filled in the six months ending June 30th, 1907, were 8,737. Of those, 2,460 are temporary in the sense that they are known to be for less than one month; and 6,277, or 72 per cent., are permanent in the sense that we do not know they are for less than one month. I do not think it is at all possible to get anything more accurate than that. Further, of those situations 2,909, or 33 per cent., are classed as skilled; 2,020, or 23 per cent., as for skilled labour; and 3,808, or 44 per cent., as unskilled. I could also give the separate groups of trades, but all that will be very fully before the Commission later.

78032. Will you tell us how many of your situations were found for the same man over again?—I am afraid I cannot give you that now. I will make a note and see if we have information on that point. (Subsequently sent, See Appendix No. LXXXVI(B)).

78033. I suppose it is known to the people whether they have provided a situation to a man before or whether it is the first time?—Of course, they know the men for whom they find the situations.

78034. That would be recorded?—Yes, I will try to get it out.

Attitude of trade unions to labour exchanges.

78035. My great difficulty about the labour exchange lies in the question of trades unionism. I do not see how that is going to be got over. Can you suggest any way?—Only by persuading the trade unions that labour exchanges are absolutely necessary for them to get very much further with their organisation, especially in the unskilled trades.

78036. They always bar, do they not, any situation being found for a man under the trade union rate of wage; that is the inflexible attitude?—That is the proposal that has been made to us in a letter received from the joint board which represents the trades unions.

Effect of attempt to extend the functions of labour exchanges.

78037. Is it possible to extend the exchanges to any extent?—I think that condition applied generally would absolutely prevent one beginning with the organisation of the people whom it is most necessary to organise to prevent them from standing alone. I think the demand is based upon a complete misconception of what you can get and what you ought to get from an exchange. You cannot use a market-place for more purposes than to be a market-place without tending to frighten off everybody. That I would say in the abstract. It is also the experience of Germany, where you had exactly the same sort of demand, where that demand has now been practically abandoned because it was found if you tried to make your exchange directly the means of promoting the interests of one side against the other you got, of course, the other side violently opposing those exchanges, and the thing coming to an end.

78038. My second great difficulty lies in the foremen. Do you see any way of getting over the foremen who like to look after their own men?—Of course, the foreman has very often an interest in keeping a little coterie of men hanging about him. It is a financial interest, and it gives him patronage, which is very valuable. I think we should have much more difficulty with the foreman than with the employer, but one must simply try; and, of course, there are certain trades with which one can begin in which the foreman difficulty is not so serious. Also I ought to say this: that of course one begins with the casual fringe at the bottom, the casual people whom the foreman does not know, whom he takes on anyhow. One persuades the foreman it is better to get those men from the exchange than from the public-house or the street corner. I think one can begin there. I quite know that the foreman system is a practical difficulty.

Mr. William H. Beveridge. 14 Oct. 1907.

Attitude of foremen to labour exchanges.

78039. It would be rather detrimental to the reputation of the bureau to begin with the low-class men; you would have to begin with the high-class men?—I would begin wherever I can.

78040. You would want to have a good standing?—I desire to begin by substituting the office of the bureau for the public-house as a house of call. I use the public-house as a type of the unorganised centre at which men are now taken on.

78041. Do you think it would be a desirable thing to do to link your exchanges with the schools, and get hold of the lads as they are leaving?—I think it is very important to do that. I should like to put in a memorandum which I have just drawn up upon this very point. It is not an argumentative memorandum, it is merely a business memorandum made for the Exchange-Committee putting the reasons why I think the educational authority ought to support the exchanges. (See Appendix No. LXXXVI(C)). I should say again in Germany this is one of the most important things that the exchanges attempt.

Importance of linking labour exchanges with schools.

78042. Is there any system there of referring the boys to the exchange as they leave school?—Yes, before they leave; during the last month or two they come and register regularly at the exchange, and their places—their apprenticeships and so on—are fixed up for them before they leave the school.

Connection between labour exchanges and schools in Germany.

78043. Does the man in charge of the exchange use any advisory powers in dealing with the young people, or is he completely neutral?—At the only exchange where I saw this, or might have seen this, in practice the whole process of placing the boys had come to an end, because there were no boys to place. The school age had been raised suddenly by six months or a year, and so no boys were leaving the school at that time. I understand that one of the objects of the exchange's activity is to check the tendency of boys and girls to go into some factory industry where they learn nothing, and encourage them to go to a trade where they learn something.

78044. (*Mr. Chandler.*) In Paragraph 7 you say: "The over-supply of labour in all the low-skilled and unskilled occupations is notorious." I suppose we may take it that is your opinion applied to the country generally, not London in particular?—I speak with much more certainty about London, but in a great many other towns it is notorious. I can mention other towns that I know of.

General over-supply of labour in all the low-skilled and unskilled trades.

78045. I think it is unnecessary. I think it is pretty well known. In Paragraph 18 you also give two or three sources from which you say the casual fringe at the bottom of nearly all occupations are recruited from. That source of supply, I take it, in your judgment will still continue, will it not?—Yes, but my whole point is, that if you merely turn a man out and he has nothing to keep him going along in a miserable state of life you do not produce this particular evil of casual labour. It is the fact that these men can get just a little work to get along with that prolongs the evil. If they could not get casual labour you would have a definite problem to deal with at once.

What perpetuates the casual labour class.

78046. I think we may take it that if it were not for that particular class your distress committees would have had practically nothing to do?—I think they might have had

something, but I know that really it is a very great difficulty to satisfy oneself honestly about any applicant to a distress committee that he has been regularly employed in the recent past.

78047. I was speaking more of the lower skilled or unskilled man who had no trade whatever to his hand?—You mean are most of them unskilled?

78048. Yes?—Certainly.

78049. In your proposed method of rectifying this state of things by the introduction of more continuous labour you may displace a very large number, and that will increase that number for the time being?—It will increase at the time the number of those wholly unemployed; it will turn a reserve into a surplus.

78050. In answer to Sir Samuel Provis you gave us to understand you were prepared to see the Unemployed Workmen's Act lapse, and in the meantime, pending the establishment of your labour exchanges of which you are so hopeful, you would have to have the Poor Law deal with all that class of people?—I should submit to the continuance of a rather unsatisfactory state of affairs. I do not think we improve it substantially by the Unemployed Workmen's Act.

78051. In that method of labour exchanges I suppose you contemplate providing funds for transferring persons from one part of the country to another out of the local rates?—That, of course, is already provided under the Unemployed Workmen's Act, and I think I should continue that.

78052. You would continue the Unemployed Workmen's Act in some modified form?—No, only that provision for migration.

78053. In your experience on the distress committee did you utilise that provision of Article 4 for transferring unemployed workmen to other parts of the country where work could be found for them?—It is utilised by the Central Body. I do not know whether it is utilised to any great extent.

78054. With regard to your last paper dealing with the labourers' unions, those are the men I have really in my mind just now, there are no statistics possible to be obtained from the Board of Trade Labour Department which will give you the number of unemployed organised labourers?—I think there are no statistics about it. I believe that some of the unions of the unskilled labourers do try and keep some record of their unemployed, but I believe there are no regular statistics.

78055. All those statistics you have given relating to trade unions and to the unemployed percentages, of course, only apply, as you truly put it, to about one-third of the trade unionists in the country?—Yes, I ought to make one small correction. I believe there are a certain number of unions giving unemployed pay which do not appear in this unemployed percentage, therefore possibly the number is just a little above one-third, but I think substantially the fact that one-fourteenth or one-fifteenth only of the working classes of the country are in such unions is true.

78056. So that any percentage or conclusion we may draw from them, if we take a separate trade, is pretty reliable as the percentage of any particular trade, instead of grouping them all?—I think it is necessary to take each trade separately. If you take them separately, I think the figures apply to the unskilled labour of the trade, because the unskilled labourer depends upon the skilled man.

78057. (Mr. Phelps.) When you use the expression over-population, and your remarks about it, do I take you to mean that, speaking generally, since the world began, everybody who has come into it has produced more than he has consumed?—I do not desire to go back on such ancient history. I thought it was sufficient to take the Fiscal Blue-book from 1878 onwards. I did not go further back than that.

78058. Have you considered the question of over-population from the point of view of the possibility of continuing the rise in the standard which has been going on in the last half century?—Would you mind explaining?

78059. I can quite understand that the growing population might be consistent with the development of trade and so forth, and it might be consistent with the permanent

rate of increase in the population, but it might not be consistent with the same growth of standard of living on the part of the working classes that has obtained. The standard of living of the working classes has improved very much in the last fifty years, and that has implied a considerable increase in the production of wealth?—Yes.

78060. Unless that increase goes on proportionately increasing it would not be sufficient to maintain the same rise in the standard progressively?—I should suggest that the rise in the standard is determined by the amount there is produced.

78061. You do not see signs that the standard is beginning to falter?—I see no signs.

78062. You think on the whole the evidence is that the increase is sufficient to go on maintaining the rise?—I cannot bring the figures up to later than say 1903 or 1904, except as to wages. Wages are going up again now. I see no evidence up to the latest one can get of any faltering.

78063. The point which people often make, that the growth of population has gone hand in hand with the fall in the price of food, need not necessarily prove more than that it might be consistent really with a cessation of rise on the part of the standard, so to speak. However, I do not want to press that question. I gather the main object you aim at is practically to improve the mobility of labour?—Yes, I want to begin by organising the labour exchanges; there are a good many uses to which you can put the labour exchange afterwards to which I attach great importance.

78064. One of the great difficulties is the absence of mobility of labour, and you want to improve the machinery for the opportunities for it?—I should rather say the great difficulty was the increase in the need for mobility. I do not say that workmen are less mobile than in the past, but they need to be more mobile.

78065. The question I want to ask is this, do you think there are many artificial obstacles to mobility which you would wish to see abolished?—All casual charity is one of the great obstacles.

78066. From what point of view would you regard that as an obstacle?—Because it keeps people in a district irrespective of the industrial need for them there.

78067. That is to say the connection of charities with locality is a great hindrance?—Yes, I should think so.

78068. The fact that you must live in a particular parish to have a particular charity is a great difficulty?—I should think so.

78069. Do you think that the evil of charity could be reduced by extending those areas practically?—I am afraid I have not thought of that point. I have no doubt that could be reduced.

78070. Do you think, on the whole, that the Poor Law, as at present administered, is an obstacle?—It is administered in so many different ways, is it not?

78071. Do you think the law of settlement is an obstacle, for instance?—I am willing to answer, but I really do not know about these questions at all. I would rather not answer them.

78072. Taking another difficulty in the way of mobility from the point of view of successive generations, the tendency is very much in England, is it not, for one generation to follow in the footsteps of another, to follow in the same employment, speaking roughly?—Once again, I should not like to generalise. The only statistical evidence about that which I have just had goes the other way.

78073. That sons do not go into their father's business?—As far as skilled and unskilled labour is concerned, from a certain number of cases in Stepney. I feel that is no basis to go on. I have no general knowledge on the point.

78074. You do not find that skilled labour is becoming to any extent a caste?—No, I should have thought that there was no definite evidence of that. I have none.

78075. Should you think that there are many instances of people being the sons of unskilled labourers who have become artisans?—I have not come across many; I have not studied that question.

Mr. William H. Beveridge.
14 Oct. 1907.

Rise in Standard of living of the working classes.

Labour exchanges and mobility of labour.

Charity as an obstacle to mobility of labour.

Uncertainty as to whether there is tendency for sons to follow father's trade.

Mr. William H. Beveridge. 78076. I gather that in Germany practically any influence which the family would have in that direction is counteracted by the superintendent of the bureau?—
14 Oct. 1907. How?

78077. You said in answer to Mrs. Posanquet that his position was an advisory position; that he told people what they ought to do and where they had better go?—He asks them what they would like to do and then he consults with them, and they always tell him the opinions of their family; I do not think he does violence to the family feeling.

78078. (*Chairman.*) Is it not the fact that in Germany employment is very much more hereditary than it is here?—That I really cannot say. The superintendent has a sort of policy about boys that they had better learn something rather than not learn something. That is about all it comes to.

Question of
apprentice-
ship.

78079. (*Mr. Phelps*) How does the development of technical education in Germany work in with this?—That I am afraid I must say I know nothing about.

78080. Do you know how far it really takes the place of apprenticeship in the old English system?—I do not know. I merely know that of course there is much more apprenticeship in Germany than in England.

78081. Do you think it is possible in this country for technical education, as directed by the State, to take the place of apprenticeship?—I have not considered that. I think it is necessary that something should take the place of the old formal binding of apprentices, because I think that is going out.

78082. Do you think you can really give people opportunities of that sort by the spread of technical education?—I have not considered that much, I am afraid.

78083. You say, I gather that at the back of all the causes of unemployment you find variations in demand?—The disorganisation of the labour market I have called it.

Effect of
irregularity
of demand
upon the
labour
market.

78084. The disorganisation of the labour market; but would you say that there was anything on the other side of that, that that disorganisation is due to the irregularity of the demand, not merely the length of it, but the commodity?—I do not know that I would say that.

78085. Take, for instance, such a thing as fashion?—That produces great variations.

78086. It would be answerable for a good deal of the irregularity of employment?—Yes.

78087. Take a thing like lace at Nottingham as a case in point?—I have not gone into the reason of the irregularity of the demand of the individual employer. I start from the facts that you have the irregularity of demand on the part of the individual employer, and that there is no machinery for running together the demand of different employers at present so as to regularise it.

Comparative
advantages
of labour
exchanges
and attempt
to regularise
demand.

78088. Must not we go further and see if we cannot educate the consumers and regularise the demand in that way?—Everything you can do in that direction is good, but it is much harder to interfere with the demand, and, as it were, to force the employer to make his business regular, than it is to induce him to take his men from an exchange rather than from the street. It is simply a question which is the easiest thing.

78089. Are you not trying in a way to palliate an evil instead of going to its root? That is what was in my mind?—I am going as far as I can along this line. When I can show I have organised the labour market as far as I can and have eliminated all the irregularities that result from the market being split up between a number of different employers, yet there are still fluctuations which are due to fashion, then I shall have a good stick to hit fashion with. At present I have not.

Advantage
of labour
exchange as
"test of
unemploy-
ment."

78090. Would you explain a little further your expression "test of unemployment"?—I will explain it by reference to the troubles of distress committees. We are told to assist men who are "temporarily unable to obtain employment through exceptional causes beyond their control." We have no machinery for discovering whether the men are in that state. What we can do is to find out why they left their job in the past. We have nothing to tell us why they cannot get a job now, or whether they cannot get a job now. What

we know about their past is absolutely no evidence, logically, on the one point whether they could get employment now if they looked for it. If we could get the demand for men concentrated at one place we should know at once how many men were in excess or if a man were in excess, and if he was unemployed we should know whether it was against his will. I attach considerable importance to that. I think the labour exchange in that sense is a pre condition of any honourable form of relief for the unemployed; it is the only possible alternative to the extreme deterrence of the Poor Law that you should be able at once to test automatically and directly whether a man is unemployed of his own will or not. You can relieve him honourably because you know the moment there is a job for him you can offer him that job, and he has to do it or give up the relief.

78091. Do you think that the deterrents that have been suggested or applied as a test of unemployment as "tests of unemployment." Deterrents
have failed?—I do not see how deterrent is a test of unemployment.

78092. Surely you come in the last resort, do you not, to the application of a deterrent?—I think you must have some form of deterrent on your ultimate system, the means of saving people from starving, but if you want to do more than save them from starving i.e. if you want to support them in a manner that will not hurt their self-respect, you must have some other test. I say that in a completely organised labour market you can get a direct test of unemployment, whereas deterrents are no test of unemployment at all.

78093. In the last resort I suppose if a man did not avail himself of the opportunities given to him you would be prepared to subject him to penalties?—If a man will not work I do not think you need waste any pity on him. You have to deal with him in certain ways. At present we do not know whether a man will not work or simply whether he cannot find work, and we treat them all alike. Treatment of those who
work.

78094. (*Professor Smart.*) I suppose you are aware that your statement is not very easy reading?—I have been told so; I must apologise.

78095. On the contrary, that is rather the principal interest for me; but so much seems to depend upon your premises. I should like to take you over them in my own way to be quite clear that I do understand them. I think one point of your paper is to show that we cannot find a cure for unemployment unless we diagnose the industrial world better than we have done?—Certainly, I think that is an industrial problem. Correct
diagnosis
necessary
before un-
employment
can be cured

78096. You think one mistake we have made, for example, is in thinking that the evil of unemployment is temporary, whereas you consider it is permanent?—Yes, I think that is one of the mistakes we have made. At the same time I want to make it quite clear that there can be a chronic problem of unemployment without there being over-population. Unemploy-
ment not a
temporary
evil, but
permanent.

78097. So your diagnosis is contained, I think, in the single phrase "industrial mal-adjustments"?—I should not stress the word too much, but I mean the phrase "industrial mal-adjustments" to exclude the idea of over-population and of an excess of births. "Industrial
mal-adjust-
ments" the
correct
diagnosis,
not over-
population.

78098. May I put that point this way; you say there is no evidence whatever that the people of this country are producing less per head than they ever did; on the contrary, everything goes to prove that they are producing more per head?—All the statistics of consumption of raw material in all the principal manufactures (I have those here), all the statistics of foreign trade per head, and all the statistics of rising wages go to prove that each man seems to be finding more working room and not less on an average all through the nation.

78099. And still that is quite reconcilable with the fact that there is now a great deal of labour which has difficulty in finding steady employment?—Yes, I think that is consistent.

78100. You would say the employment of the labourer is not in his own hands, but in the hands of the employer: the employer seeks the man and the man seeks the employer, and there is a possible dislocation, or what you call mal-adjustment?—Yes.

78101. Possible seeking and not finding?—Yes.

78102. Then, again, owing to nature and owing to the want of training, the labour which employers want may not be the labour which is offering, and there is another mal-adjustment?—Yes.

78103. And thirdly, the demand for labour, from the nature of the labour may be intermittent, and it may suit the employer if the supply of labour is intermittent also?—Yes.

78104. So when employers and employed are left to seek each other there is always this chance of dislocation, and you think the time has come when society should see if it cannot do something to bring the two together instead of leaving them to seek each other?—The recognition of that necessity is one thing I wish to urge upon this Commission.

78105. That is a function of the labour exchange?—In a perfectly general way. It has specific uses besides.

78106. With that I agree. I want to know if you agree with me in this, that the problem is to a certain extent a new one, and that is the reason we have not recognised it before?—I cannot speak very well of a distant past, but I am inclined to agree that it is a new problem.

Changes in the character of the problem of unemployment.

78107. For what reason, may I ask?—When industry was stereotyped and local, all a man had to do was to learn a trade and get into it in a particular village, and he was pretty secure there for the rest of his life. Now industry is in a state of perpetual flux, both in regard to the sort of labour required and in regard to the place where it is required. The mediæval workman had only one business problem—he had to work. The modern workman has two absolutely distinct functions—he has to work to satisfy an employer, and he has to be constantly finding a market for his labour. These two functions compete with one another; the more trouble he has to find the chance to labour, the less efficient he is as a labourer; and the more time he puts in in finding the work, the less is the time during which he is at work. In that sense it is a new problem, because industry is no longer stereotyped and local, but is in a state of perpetual flux.

78108. I am alluding to a further question than that, namely, the problem of the last few years. Would not you say that the demand of the employer on the labourer is now becoming more stringent, especially in the great fields of manufactures. He is asking labour to do things which labour never did before, inasmuch as he is asking labour in many fields to compete with machinery, and so is carrying the human standard to a very high point?—I have no evidence of that one way or the other.

78109. Do you not think it is a disadvantage?—I cannot explain it, because I have no evidence against it. I think it is possible.

78110. It is certainly my experience, that nowadays labour finds it more difficult to compete unless it can find a sphere where machinery is not employed, and many men are utterly unfitted for that sphere. If that is the case, it leads to rather a curious conclusion, that the more perfect your industrial organisation is the more possibility there is of large classes being left out?—I do not see that. Perhaps it is only a question of words, but I should say the more perfect your organisation the less there was in it to create these weaker and half-employable classes. It is a great defect, I think, of our present imperfect organisation depending upon the use of the casual labourer that it fits the people for nothing better than casual labour. I think that really I have not the experience upon the points which you are trying to put to me.

78111. I dare say I am thinking rather of the higher employments; the second and third rate artisans and artists would be left out altogether?—I have not the experience, therefore I would rather not speak about it.

78112. In Paragraph 5, and the paragraphs which follow, you mention three specific industrial mal-adjustments: the over-stocking of every trade with labour, that is your first; then permanent changes of industrial conditions is the second; and the third is the fluctuations of industrial activity?—Yes.

78113. Take first the second of these for a moment, that is the change of industrial conditions. You give three types there: the decay of a particular industry, the removal of an industry, and the changes of methods.

You say the common feature in all these types is that *Mr. William H. Beveridge* for the individuals concerned they involve a permanent displacement from their chosen and familiar occupations?—Yes.

14 Oct. 1907.

78114. I would ask if you do not think a fourth should be added, namely, the subjective type that comes of advancing age; does not that lead to a permanent displacement from a man's chosen and familiar occupation?—Yes, of course.

78115. Industrial organisations are now requiring men who are young?—But I have no evidence that they are. The only definite statistical evidence I have as to one highly skilled group of men is to the contrary effect. I think the figures of the superannuation fund of the Amalgamated Society of Engineers published in the last blue-book as to the cost of Old Age Pensions are to the contrary effect. Of course, that does not do away with the fact that the older men do find it hard to get work, but I am not sure that there is evidence that old men find it harder to get work now than formerly. I will not deny it absolutely, because I have not got the evidence.

Effect of age on chance of getting employment.

78116. We have it on the Clyde, that there are no men now above the age of forty in certain large branches of the shipbuilding industry?—I quite agree that the problem of the old man who is incapable of doing much is one for which it is difficult to find any remedy.

78117. That problem is coming before the distress committee in Glasgow. It is a fourth type, is it not?—I have one or two things I would try with those classes. I do not know whether I had better deal with that now or later.

78118. I will return to the first mal-adjustment, the overstocking of the trade with labour. You find, I think, of trades that the worst cases of unemployment are in such trades with labour as docking?—Yes.

78119. And particularly in such trades as docking it suits employers that there should be a reserve of labour?—So long as he has no organisation for getting men he must have a reserve.

78120. You take that as the point of departure, and generalise, and say that every trade tends to be overstocked with labour in proportion as the demands of separate employers in it for labour are irregular, and in so far as machinery for focussing these demands and for mobilising the supply of labour is absent or imperfect. The condition of things at the docks is your type, but would you go beyond that?—As I attach very great importance to this I should like, if I could, to explain it. The whole question of overstocking was suggested to me by my first experience in trying to administer a relief fund in Stepney three years ago. One found, if one was willing to take casual labourers at all, that one was going to be swamped with them at once. There was an endless supply always. It is perfectly clear they were not permanently unemployed; any one man like that would starve unless he lived on his wife, which can be done to some extent, but not a large extent; therefore it was perfectly clear that these people must be getting some work, in fact, one found that they did now and again get a little work. I came to see that the fact that they did now and then get a little work was a more important fact than that at other times they did not get work. One must look at the positive fact that they get enough work to keep them there, but not enough to keep them properly. There was no man out of work altogether, but A's men were out of work to-day, B's to-morrow, and C's the day afterwards; always some men out.

78121. (*Mrs. Webb*.) Did you come to the definite conclusion that this was not due to character?—I think that the casuals that we dealt with were certainly people whom you would call rather demoralised in character.

Relation of character to under-employment.

78122. Was it the cause or the effect of their under-employment?—It was in the first instance the effect, then it would become the cause again.

78123. In the first instance it was the effect?—I think so.

78124. You are quite clear about that?—I am quite clear that it was the effect in this sense, that many of these men would come to this casual work after having been formerly in good regular work; therefore, presumably that they were men able to do regular work. No doubt.

Industrial mal-adjustments. 14

Changes of industrial conditions.

Mr. William H. Beveridge. these men went to look for regular work and did not find it, and then they got into the habit of lying in bed and only looking now and again. It is quite clear that the root of the evil was that every employer had his own separate reserve of labour.

14 Oct. 1907.

Cause of overstocking of trades.

78125. (*Professor Smart.*) Not casual?—I am supposing that every casual employer had his own reserve of labour, and I generalise from that, and say that in every industry you get the tendency to overstocking because there are so many different employers, and each employer's place of business is one of the many ways into the trade. There are too many ways of dropping into every industry; there are as many ways as there are employers or places of business in it. People come to the docks and drop into that occupation at one place of business, whereas other people are being sent at that moment off from some other place of business. In the same way the people drop into an occupation in one town, although there are people qualified to do that work unemployed in some other town. That is the answer to the paradox of there being perpetual unemployment although there is always a perpetual growth of employment—that the new generation, instead of being sent to new occupations, is able to drop into occupations already overcrowded and go on dropping into them, taking the line of least resistance.

78126. (*Mrs. Webb.*) What you are describing just now is a process of unspecialising the labour and making it less special?—I am describing the perfectly general fact that if you have a large number of different ways into an industry, you will tend to get that industry overstocked.

78127. Quite so, but you have just described a process by which more specialised labour becomes less special by dropping from a special function into a general groove?—That is not quite what I mean. I simply mean if all your new people who get born into a country were compelled to find fresh openings, I think the statistical evidence is that they could do so. The great evil is that they are not compelled to do that, that they are able to fall to some extent into this system of casual labour. You have to keep them out of it. I think the great reform is the negative reform of keeping the new generations out of the casual occupations. I am afraid that is rather a long answer to Professor Smart's question, and I do not know whether I have answered him altogether.

78128. (*Professor Smart.*) I am only afraid of the use that may be made of your expression. You say that "every trade is overstocked with labour"?—I should like to correct that if I may, and say that every trade tends to be overstocked with labour. I would say that every trade tends to be overstocked with labour; that tendency depends upon the multiplicity of different engagements; the fact that men are always being taken on in a trade means that men will always come down and try to be taken on in a trade. That tendency to overstocking is therefore most strong in the trade where you have perpetual taking on of men at different points. The type of that trade is docking. Therefore, I should agree with your statement that each trade tends to be overstocked in the proportion as it approximates to docking. I should like to add, as I have said before, that, of course, that tendency meets with certain obstacles in certain trades. I do not know if I may explain that?

Obstacles in certain trades to the tendency towards overstocking.

78129. I do not think it would be waste of time if you did?—The tendency is for every separate employer giving out work to collect men looking for work outside the gate of the works. If the men he wants are highly skilled men he will not get them to do that. The highly skilled man will not be produced in sufficient quantities to wait outside, so in those highly skilled trades you get the other phenomenon—instead of a reserve of labour waiting outside the gates you get the employer sometimes waiting for the men. Disorganisation of the labour market is always wasteful, but the waste takes two distinct shapes. Sometimes the waste takes the shape of the employer not getting men, or as good a man as he wants, and there is an absolute waste of time and an economic waste. There it is quite easy to show that a labour exchange would be very good, and there labour exchanges run by trade unions have developed naturally. But the other form of waste is really in my point of view much more serious, the waste which is represented by the fact that there are always men wasting their time outside, waiting for the employer to call on them. The disorganisa-

tion works out in these two distinct ways. I want, as strongly as possible, to say that in my point of view a labour exchange is more wanted where the employer can always get as many men as he wants when he wants them than in a trade where he sometimes has to wait. The obstacle to this tendency, which is sometimes called the tendency to overstocking, is the special skill required, or sometimes the fact that the trade is expanding very rapidly.

78130. In addition to the dislocation, owing to dull times, which might be remedied by tiding over, you would the under- there are three classes always with us; there is first employed. the class who may be called the three-days-a-week man; secondly, the seasonal man whom we might call the three-months-a-year man; and then the third class, perhaps an increasing class, who are constantly thrown out by change of method, industrial changes?—I quite agree that the third class exists. I want to point out that the third class as such cannot be always with us, because if a man is thrown out of work and finds nothing to do he dies or emigrates or goes into the workhouse. The "third class" is simply one means of recruiting the casual class.

78131. But that class is always being recruited?—Yes, I should like to stop it from being recruited.

78132. Then you say quite rightly this heterogeneous mass comes before our distress committee, for which you dealing with only offer one remedy, temporary employment?—Yes. problem of unemployment.

78133. Whereas you say you have no less than four different problems, and the probability is that four different methods are required?—Yes.

78134. Those are the premises upon which you found your proposal for a labour exchange?—Yes.

78135. (*Chairman.*) Would you enunciate the four remedies?—I have not accepted it that there are four remedies; I say one remedy to be used in four different ways.

78136. (*Professor Smart.*) I should like you to make clear the connection between decasualisation and the labour exchange?—The two things, decasualisation and the labour exchange, are quite inseparable, that is to say you can have a labour exchange without decasualisation as they have in Germany, but you cannot have decasualisation without a labour exchange. Decasualisation is merely one of the uses to which you put the labour exchange, the use of the labour exchange in its broadest possible sense of a common office for supplying labour to different employers, or different departments under one employer; the first thing is to get your labour exchange, then you can gradually decasualise labour. Connection between decasualisation and labour exchanges.

78137. You must keep these two things separate; you cannot say that a labour exchange is the one remedy?—Before you can get to decasualisation you must have the labour exchange.

78138. Supposing that your labour exchange were entirely successful I want to see what they would do with these various classes. Take your regular artisan, what would they do for him?—I would enable him always to hear of any job that suited him in the minimum of time. The present isolated search for labour is absolutely the worst possible way of bringing men where they are wanted. The bringing together of the would-be employer and employed is one of the things in which organisation is emphatically superior to individual effort. Advantage of labour exchange to regular artisan.

78139. I think you spoke of a negative advantage which would be very great, that it would show the labourer conclusively when there was no employment for him?—Yes, of labour it would certainly, I think, tend to drive men away when there was an excess of labour. That is definitely part of the policy of the German labour exchanges. Negative advantage of labour exchange to labourer.

78140. Then take casual labour, I think you have admitted that this would probably throw, roughly, 50 per cent. of that casual labour immediately out of employment altogether?—I should certainly not admit it quite in that shape. Displacement of casual labour by labour exchanges.

78141. We quite understand what you mean from your own illustration. If you employed all the three-days-a-week men six days a week would leave 50 per cent. of those men out?—That will do as an illustration to start from.

seasonal
employment
and labour
exchanges.

78142. Then with regard to the seasonal labour, what would they do for the seasonal labour?—The labour exchange cannot make work, therefore it cannot when you have a big seasonal depression deal with that quite directly, but it can organise the movement which at present exists to some extent between winter and summer trades. There is such a movement in certain trades, and we could organise that.

alternative
employment
for seasonal
labourers.

78143. Is there really any movement?—Yes, certainly. The gas works in winter take on many men who are employed either in the building trade or brick works in the summer. That is quite undoubted. Or again, the Docks in London are busier about November or December and they take men who are employed hopping in the summer, or employed in building in the summer. I am sure that you could extend that a good deal. There is a tremendous demand for labour of all sorts about December—just about Christmas. That work is of no use if that goes to a man who has been out of work all the rest of the year, it is wasted on him if he has reached the Poor Law stage; but if you give it to the builder's labourer who has been working in the summer you can give him a decent living all the year round.

78144. (*Mr. Lansbury.*) There would be someone out of work all the time?—The whole process of this organising is to concentrate work, to bring some people up to a certain minimum at the expense of others who get nothing at all.

78145. (*Professor Smart.*) I am not sure that this movement of seasonal labour, taking two trades is getting on very fast or extending very far?—I do not think it could extend very far, as far as seasonal labour is concerned. I trust more to the effect of improving the general level of employment, so that men would save for the winter.

question of
women's
labour in
seasonal
trades.

78146. Is not the fact that most of your seasonal labour is women labour, and that mostly the very lowest paid labour, and thus labour which cannot save?—I should not like to say that; the building trade is not a woman's trade.

78147. There is the jam trade, the pickle trade, and so on.—I cannot do more than say there is a possibility of certain movement.

advantage of
labour
exchange in
dealing
with "too
old at forty"
man.

78148. Now, take the fourth example. What would the labour exchange do for the "too old at forty" type of man—so long as the trade union refuses to allow him to work, of course?—I think you might very well have a lower rate for men over forty, or old men, but I am quite in sympathy with the refusal of the trade unions to allow that until they are perfectly organised. I do not think they can afford to imperil their standard rate.

78149. So that any man thrown out at forty will remain one of your problems?—Yes, I think he remains largely one of my problems. May I say what I would do with him? In the first place at the present time a person may be thrown out at forty years, without in the least knowing where to turn, yet quite able to do something, and the labour exchange will at once put him in touch with that. I think you can go a step further. I think if you take any big industry, say a big railway company, you will see a lot of jobs, which are evidently old men's jobs, or injured men's jobs, and they are given to the men who are injured or have grown old in the company's service. I think with a little public spirit you could spread that. I think you would find, taking industry as a whole, a number of old men's jobs. At present it is possible those old men's jobs get filled by young men; there is nothing to prevent it, because the labour market is disorganised. If you have the labour market organised, and you have a labour exchange getting these old men, it may find employers quite willing to find the old men a place where the old men are as good as young men, whereas without the exchange the employer would take the first man who came, who might be a young man. I think you have to help these weaker members of society into a place which they can fill, and throw upon the young men the burden of finding new openings; the old men cannot force new openings.

78150. (*Chairman.*) Have these German labour bureaux or exchanges ever approached the question of old people working at a lower rate?—I do not know about that, but they do definitely make special efforts to find places for people who are in any way weakened or incapable.

*Mr. William
H. Beveridge.*
14 Oct. 1907.

78151. (*Mrs. Webb.*) I suppose the German trade unions provide a lower rate for old men as the English trade unions do?—I do not know how far the English trade unions lower the rate.

German
labour
exchanges
and the
infirm.

78152. If you attend the branch meetings of the trade unions you will find five or six cases each time?—I did not know of that.

Trade union
rates for
old men.

78153. (*Professor Smart.*) Finally, what would the labour exchange do for the men who did not want to work?—What do you mean by the man who does not want to work? The man who does not want to work at all, I suppose, will not come to the labour exchange, therefore, I do not think the labour exchange would do anything for him or with him; but for the man who wants to work once a week and lie in bed the rest of the week the labour exchange will make that wish unrealisable. For the man who wants to get a casual job now and again the exchange will gradually make his mode of life impossible. It will take that one day a week he wanted to get and give it to another man who has already four days a week and so will enable that other man to get a decent living. Then the first man will be thrown on your hands to be trained and disciplined into better ways. The result of the exchange is the direct opposite from that of assisting the lazy or incapable, it makes it instead harder for them and compels them to be regular.

Result of
labour
exchanges as
regards the
lazy and
incapable.

78154. Would it not be a perfect test in this way: if you found a man had not applied to a labour exchange he would obviously not be an object for charity or relief?—You could send him to the labour exchange and he might find a job offered him; if he refused that, you would know of it. In Strassburg no man gets Poor Law relief unless he gets a certificate that he cannot get work from the exchange.

Possibility
of labour
exchange as
a test pre-
cedent to
granting of
relief.

78155. You think the labour exchange ought to be a concomitant of the Poor Law. You would rather reform our Poor Law on German lines?—I certainly would not reform it on present German lines.

Relation of
labour
exchanges to
the Poor
Law.

78156. I mean the labour exchange lines?—I want in this country, as in Germany, to have all the tiding over relief made an industrial incident, as it were, dependent on a labour exchange, but I should not call that quite a concomitant of the Poor Law. It is simply taking over from the Poor Law the business of tiding over. I should try to make it some form of insurance; that is the ideal to which we have to work.

78157. But you would make this labour test, it struck me, very much like a workhouse test?—I think it is a preliminary test for an honourable form of relief; it would be a substitute for the able-bodied test to some extent.

78158. Is it not important then to ask about the practicability of this scheme. Is it your judgment that employer will be likely to use it, or can be compelled to, or find it to their self-interest to use it?—I think it is directly to the employer's interest to use the exchange instead of going to the street for his supply of men. He will get a better man—one who has just dropped out of another job—at the exchange than he will if he gets a man who has been loafing about the street. It is not easy to get the employers to go to the exchange, but I think it is quite possible to get them to do so.

Attitude of
employers
towards
labour
exchanges.

78159. Have you ever spoken to a representative employer about it at all?—I have spoken to a great many employers about it; one I know is very enthusiastic upon the exchange, simply because he wants to get the men from the exchange and not from the public house, whence they come to him full of beer. Another was very favourable; he used the men to unload barges of lime, and he wanted them casually. He offered me a subscription if I would run an exchange which would do the work for him. Of course I find much more the argument: "We can get as many men as we want, why should we use you?" I have also met with the argument of an employer who said: "I want men coming outside my gates; if you are going to do anything to remove them I shall oppose you."

Mr. William H. Beveridge. 78160. I shall confine myself to only one more question, that is with regard to the trades unions. You are aware that the trades unions officially have declared that they would offer an active resistance to this scheme?—I have the actual letter of the joint board. (*See Appendix No. LXXXVI (D)*). I want to say quite definitely that I am sorry that has been published. I do not think it represents the serious mind of the trades unions on this, question at all. It is a new question on which it was very difficult to make up their minds. It might just have happened that we got the official declaration for us instead of against us. I do not think it represents their mind. Of course the result of this publication is to make things rather harder for us.

78161. How long has that been published?—The letter was on May 29th.

78162. Are you aware that on April 26th, 1907, a deputation reported to the general board: "In view of the fact

that trade union conditions are not being insisted upon by the agents at exchanges, the board may desire to take action in the matter by advising an active resistance to exchanges unless these conditions are agreed to." That the deputation recommended the adoption of this course; and that the report was accepted in these words: "Employment exchanges cannot be supported unless trade union conditions are recognised"; and that it was further agreed that the letter be published?—I should be very glad if I might, to put in a copy of this letter at once; and I should also like, if I might, to put in a memorandum which I prepared for the Employment Exchanges Subcommittee on the subject of the proposal contained in this letter. (*See Appendix No. LXXXVI (D)*). One of our superintendents, Mr. Fair, is going to give evidence here, and he has had dealings with the local trade unions. I think his evidence shows very clearly the uncertainty of the trade union mind on this subject if it had not been crystallised in this way.

ONE HUNDRED AND TWENTY-FOURTH DAY.

Tuesday, 15th October, 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT :

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.
Mr. J. PATTEN-MACDOUGALL, C.B.

Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
The Rev. H. RUSSELL WAKEFIELD.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. the LORD BISHOP OF ROSS.

Mr. R. H. A. G. DUFF (*Secretary*).

Mr. J. JEFFREY (*Assistant Secretary*).

Mr. WILLIAM HENRY BEVERIDGE, recalled; and further Examined.

Attitude of trade unions towards labour exchanges under the Central (Unemployed) Body.

78163. (*Professor Smart.*) Referring to the matter of trade unions about which you spoke yesterday, I should like you to explain the present attitude of trade unions to the present Central Body in London?—If I might just give a very short summary of what has happened, that would make the position clear, I think, to the Commission. In January, at the proposal of the Joint Board (which represents the Parliamentary Committee of the Trade Union Congress, the Labour Representation Committee and the General Federation of Trade Unions) we, of the Employment Exchanges Committee held a small and quite informal conference with a deputation representing the Joint Board. They put before us certain conditions which they had formulated, which they desired to be adopted by our exchanges. I think those conditions are so important, that I should just like to state them quite clearly. They are: "(1) That labour registers or exchanges should not be used to the detriment of organised labour by preference of employment being given to non-union workmen, nor by the supplying of workers during any industrial lock-out or dispute, nor in any case providing labour at less than the recognised rate of wages or under conditions of employment other than those obtaining in each particular trade in the district. (2) That such trade unions as agree to register their unemployed members at labour exchanges shall provide their own vacant books, and with the exception of the place of registration, shall be allowed to continue their present methods. (3) That where an organised system of registration is already in existence covering any trade, such registration shall be accepted by the distress committee in the locality as sufficient

for the purposes of that trade, and the members of such union shall participate in the operations of the exchange in the same manner as those who register directly." Those are the three conditions or proposals that were put before us. The conference was quite informal, and no decision was arrived at, we being represented by a sub-committee of our Employment Exchanges Committee. When the employment exchange committee came to consider these points, they found that they had no insuperable objection to any of them, except to the proposal as to not providing labour at less than the recognised rate of wages, and under the recognised conditions of employment. They did not come to any vote on the subject, and they certainly did not reject these proposals, because the prior question was at once raised, namely, supposing we wish to make this limit upon the use of these public exchanges, shall we be legally authorised to do so; and would it be competent for us to use a labour exchange established for common purposes to recognise certain rates of wages? We felt it was necessary to obtain the opinion of the Local Government Board upon this, as a purely legal point, apart from the question of policy; and in March of last year, the Central Body on the recommendation of the Employment Exchanges Committee asked this question of the Local Government Board—Whether it would be competent for them so to limit the use of exchanges established by them as to make them available only to employers and employed adopting specified rates of wages or conditions of employment? There was some delay in receiving the answer to that letter, and before any answer to that letter was received, the Joint Board came to the

Mr. William H. Beveridge.

15 Oct. 1907.

Attitude of trade unions towards labour exchanges under the Central (Unemployed) Body.

conclusion that the Employment Exchanges Committee was hostile to its proposals, and published a letter dated May 29, 1907, which I should like to put in. (See Appendix No. LXXXVI (D)). I need not read it, because it simply resumes what I have already stated. It states the fact of the conference, then it states the three conditions which I have already read out, and then it says: "We gather that the committee is unwilling to agree to the latter part of No. 1 (underlined)"—that is, to the proposal that the exchange should not in any case provide labour, "at less than the recognised rate of wages, or under conditions of employment other than those obtaining in each particular trade in the district." The letter proceeds, "Under these circumstances we can take no other course than advise the workers of London to refrain from patronising or supporting your exchanges in any way whatever." That letter was sent to the Central Body and was published at the end of May, 1907. The Central Body had not made any decision upon this point, because it was asking the opinion of the Local Government Board upon it. Within the last month a reply has been received from the Local Government Board, and the reply is to the effect that it would not be within the power of the Central Body to limit the use of the labour exchanges in the way suggested by the trade unions, in other words, that the labour exchange is to act simply as a market place, and leave the fixing of the rates of wages and conditions of employment to the two parties concerned. That is the present position. I should like to say that I do not think that the mind of the trade unions has really been applied to this question at all. This letter is signed by three people who presumably have authority to sign such a letter, but I think it is very clear that we have not yet become big enough to loom very large in the eye of the trade unions as a whole. In fact, where we have on certain points come across trade unionists locally, they have not in any way insisted upon this condition, and they have not quarrelled with us. I would like to give one or two illustrations. I was addressing a public meeting about these labour exchanges, and certain trade unionists were there, and they definitely made the proposal that the exchange committee should notify in the premises of the exchanges what were the recognised and usual rates. They said: "We cannot ask you to make them binding—we see that; but we think that this information should be given, so that men shall not accept less than the usual rate through ignorance." That is a suggestion which might, in my own opinion, very well be carried out. Again, in certain places we are actually co-operating with the trade unions, as one of our superintendents, who will come, I believe, next Tuesday, will be able to say. In other cases, we have had a proposal of co-operation from trade unions without any insistence upon this recognition of definite rates of wages by ourselves. I think really the position is that the establishment of exchanges is quite a new proposal, and trade unionists and employers are quite uncertain as to how it will work out, and naturally they are very anxious on each side to see that it will not work out to their detriment. I feel that it is a very difficult question in which to lay down any hard and fast lines at the very beginning; though ultimately the practice of the exchanges on all these points, if you have the intention of impartiality, can settle itself without in any way directly injuring employers or employed.

78164. In the case of a labour dispute, if you are advised there is such a dispute going on, you take very definite steps not to supply labour, do you not?—Yes. We have no formal by-law upon it, because some question arose about the wording of the by-law; but there is a definite instruction to superintendents not to take any action with regard to vacancies caused by a dispute or with regard to men unemployed owing to a dispute, without reference to our Central Body. The practice of the Employment Exchanges Committee and of the Central Body has always been to say, You are not to supply men. In one or two cases, I think—the music hall dispute and so on—we issued that circular. There again, I think we could invite the co-operation of trade unions—it is done in Germany—and ask them to keep us informed as to disputes; at present we get the information from the Board of Trade.

78165. (Mr. Lansbury.) Is not the attitude of the Local Government Board rather destructive of that?—I think not. We have not asked the Local Government

Board whether we have any power to make any rule about strikes and lock-outs. Mr. William H. Beveridge.

78166. Have you a copy of the last communication from the Local Government Board?—I have not got it here. 15 Oct., 1907.

78167. It might be put in, might it not?—Certainly, I should like to suggest that the Commission send to the Central Body if they wish for all the correspondence.

78168. (Professor Smart.) I think we might have your view of the gain and loss to trade unions of these labour exchanges?—I think that in theory there may be a possible loss to trade unions when a public body establishes labour exchanges, in so far as a trade union really is an efficient way of getting work for its members. If a trade union really acts as a labour exchange and you set up a public labour exchange, you do, in theory, take away one of the reasons for joining a trade union. But I am very clear that except in certain trades that objection is quite theoretical. In certain trades it might be serious, and I should be quite prepared to suggest compromises that would prevent any loss there. I think it will be found that in most trades the action of the trade union register is very rough and ready, and that in not many does it go much beyond what is done in the way of mutual information and assistance by men in the same trade, whether organised or not, being constantly in touch with one another and meeting in all sorts of places and ways or recommending one another to foremen. I had rather a good illustration of that in the building trade, when I talked to a carpenter who was a trade unionist. He said: "The trade union is very useful in getting one work"; so I said: "Well, this is very interesting; you are a trade unionist; supposing you fall out of a building job—that is, a job came to an end and you had no other job in prospect—what would you do to get a new one?" He said: "I should go to Liverpool Street and leave my tool bag in the cloak-room, and then I should go on the tramp round the streets." Here was a trade unionist, and the typical way of finding work for him in this Union of Associated Carpenters was to go on the tramp—after he had definitely said that the union was a useful way of finding work.

78169. (Mrs. Webb.) That was because he did not belong to the Amalgamated Society of Carpenters?—Possibly. I should like to add to that that he told me another interesting thing, namely, that that union had tried to introduce a regular system of registration and had given all its members, I think, post-cards, which they were to send to the union office when they heard of a job; but that that had broken down as the men had not acted up to it. Still, I am quite prepared to say that there is a theoretic loss. What I should say after that is that the practical gain absolutely outweighs any possible loss. It is directly to the interest of the trade union to have the labour exchange as efficient as possible, because it is paying unemployed benefit to its members, and it wants to get them off its books as quickly as possible. The greater you can make that mobility of labour, the better it is for the union which pays unemployed benefit to its members. There really is an absolute obstacle to the complete efficiency of a trade union exchange in any but the most highly organised trades, and that is, of course, that unless the employer is practically compelled to use the trade union exchange, he will not use it—I mean union because it puts him in the hands of the other side. Where you have a trade already completely organised, the employer may be compelled to use the union exchange; and there the trade union exchange comes in at the end of a long process of organisation. But elsewhere the employer will not habitually telephone to the union exchange if he can help it. I think the experience of Germany, where the trade unions have tried to have their own exchanges, and have practically given up the idea because they find you must have two parties to agree to use a market place if it is to be used regularly, is conclusive on that point. Then of course from a wider point of view, in so far as having exchanges and increased mobility of labour reduces the reserve of labour, that is a direct advantage to the seller of labour as opposed to the buyer of labour. I think it is perfectly clear that the ultimate effect is to increase the possibilities of trade union organisation; and that is most marked in the unskilled trades. I think if one is told that the unskilled trades still hope to organise, one has only to look at the figures which

Question of possible loss to trade unions through establishment of labour exchanges.

Weakness of the trade union register.

Labour exchanges gain to trade unions.

Weakness of trade union exchange.

Experience in regard to separate trade union exchanges.

Mr. William H. Beveridge. I put in Paragraph 73 of my Statement to see how very unlikely it is that any rapid organisation of unskilled labourers will take place. The table in Paragraph 73, I think, shows how very uncertain and hesitating is the progress of organisation among unskilled labourers, simply because they have no centre round which to organise. A labour exchange would really be a centre, and, personally, I think it would cause them to organise in various ways—whether according to pure trade union ways or not I do not know—but it would be the beginning and the centre of an organisation. Once again, there is a very curious and extremely appropriate illustration that I got from a German exchange established purely by a trade union, and yet deliberately opened to non-unionists. They said, "It is better for the union that the non-unionists should come to the exchange than that they should go outside, therefore, we will open our exchange and we will have non-unionists using it if they wish to." That was in the wood-working trade.

78170. (*Chairman.*) What was the rate of wage there?—There, of course, the trade union would insist upon its rate of wage.

78171. And then the non-unionists would get the same rate?—Yes; I think they would only send men to a fair house from a pure trade union exchange. But my argument for the impartial exchange against the pure trade union exchange which insists upon a certain rate of wages is that that sort of market place which fixes the rate of wages cannot ever obtain complete success unless trade unionism is already perfect. A market place, if it is going to succeed, must limit itself to being a market place.

78172. (*Professor Smart.*) Then with regard to the employers, do you desire to make the use of the exchange compulsory on employers?—I am very clear that I want all employers to use the exchanges, and I think that ultimately that means making the use compulsory in some form or other. I do not know whether I should start with compulsion or not—I think that is a question for practice; but I am quite certain that at any rate, as regards casual labour, you will ultimately have to have compulsion.

78173. You would then require another form of compulsion, for I understood you to say, in answer to a previous question, that you would not object to an Act of Parliament compelling local authorities to establish labour exchanges?—I certainly would not object to it. I did not lay very great stress on it for two reasons. Firstly, I want to guard against the idea that the labour exchange is no use unless you have it all over the country all at once. I think that when any two wharves are agreed to pool their labour supply that will improve matters. Every step is a step in advance. That was the first misconception which I wish to guard against. The second point is that I do not want it to be supposed that merely to compel every public authority to establish a labour exchange is sufficient. I mean there are labour exchanges and labour exchanges, and you must have a living and propagandist centre as well. I am quite clear that you must have very vigorous backing from the central authority. I think I might fairly describe the attitude of the central authority, and indeed most other authorities towards labour exchanges, in the past as being that they could not do much, if any, harm. I think you must have a more vigorous backing, giving the movement a standing, and I think that it might be desirable—I think it would be desirable—to have power for making the establishment of exchanges compulsory by order of a Government Department. Supposing there was a great unemployed agitation in any town, and supposing the guardians began to apply, as I suppose in some cases they have to apply, for leave to open a stone-yard, or supposing you get local authorities about to start great works for the unemployed, or supposing that in any way the unemployed question becomes acute in a district, then I would have an inquiry there, and if I found, as in most cases I should find (even if not in all cases), that this was a case also of merely intensified chronic under-employment, then I should say: "Clearly, you have the disease of casual employment and under-employment in this district, you must have an exchange and do away with it"; that is to say, instead of coming down on the centre and giving money to immobilise labour, and so continue the evil conditions in a district which had bad

conditions, I should compel that district to clean up its reserve of casual labour.

78174. I have rather gathered that you would not countenance in any way the re-enactment of the present Unemployed Workmen Act, but you would not say, I take it, that it was altogether futile now?—I desire to separate the labour exchange absolutely and entirely from the word "unemployed." I do not mind very much what is done in the way of unemployed relief, but I do want purely industrial labour exchanges, and I think merely to renew the Unemployed Workmen Act and let the exchanges go on under the Unemployed Workmen Act would simply be to continue the period during which the exchanges had to mark time.

78175. Then you would require entirely new legislation as regards labour exchanges, quite independent of the possible passing of any Unemployed Workmen Act, would you not?—I am not very familiar with what can be done without legislation. It did seem to me that this very year it would have been possible to devote some of that £200,000 to pay for a central and propagandist department and then to go straight ahead.

78176. I am rather anxious to see how you would begin the labour exchange system. I do not see that you have given us any idea yet how you would begin it. You have spoken of a propagandist department of the Board of Trade, for example?—Yes, I have.

78177. But you cannot have a propagandist department pure and simple, can you? It is an entirely new thing, at any rate?—You can have a department to advocate and co-ordinate labour exchanges.

78178. (*Mrs. Webb.*) You have a propagandist Government Department in emigration, have you not?—We have it in emigration. We must have power of the purse enough to help in paying for labour exchanges, and I think we should also have the power later on, if not at once, of compelling their establishment. Or we could have, as they did in Germany, a series of circulars, not compelling, but strongly urging the establishment of labour exchanges. You will find that in Prussia they had in 1894 a circular, and that produced a little effect; then there was another in 1898, and that produced a little effect; and then there was another in 1902. You should hammer away at the local authorities. I think, for all this work, you do want a small propagandist department, which of course will also have to do a great deal of co-ordinating and of actual administration.

78179. (*Professor Smart.*) Then you do not make any positive recommendation about the present Act, its emendation in the future, or anything of that sort?—That is rather a different question. I think the present Act in its present form is not worth renewing; but there are useful elements about it other than this labour exchange, or, at any rate, there are useful ideas which might be applied.

78180. Up and down the country we are starting labour colonies, for example, and if the Act is not renewed those colonies will be left very much cut adrift from all support?—My idea is that the labour colonies are in a way an excrescence on the Act almost as much as the labour exchanges—at any rate the farm colonies, regarded as training colonies, are. We have definitely had the opinion from the Local Government Board that the Act is not intended to provide training; and I do not think it was. I think it was intended to provide relief work. I think, so long as the idea is that it is intended to provide relief work, that that hinders the efficiency of the farm colony as a training colony, as much as it hinders the efficiency of the exchange as a piece of industrial organisation.

78181. (*Mr. Bentham.*) I want to ask one or two questions with regard to the working of labour exchanges in Germany. As I understand there are practically three main kinds, those are the municipal labour exchange, the trade union exchange, and the employers' exchange or voluntary exchange?—I mentioned five main kinds.

78182. But these three are the main three, I think, are they not?—The largest exchanges are either municipal, or voluntary with municipal support; and then in addition there are important exchanges which are established and managed entirely by joint associations of employers and employed.

Necessity of keeping labour exchanges clear of unemployed relief.

How far as regards labour exchanges, quite independent of the new legislation is necessary for labour exchanges.

Question of propagandist department to assist in formation of labour exchanges.

Labour exchange propaganda in Germany.

Unemployed Workmen Act not worth renewing, but contains some useful elements.

Labour colonies and the Unemployed Workmen Act.

Classes of German labour exchanges.

Difficulty in way of organisation of unskilled trades.

Benefit of labour exchanges to unskilled trades.

Advantage of impartial exchange over pure trade union exchange.

Question whether use of labour exchange should be compulsory on employers

Possibility of gradual establishment of labour exchanges.

Mere compulsion of local authorities to establish exchanges not enough; necessity of strong backing from Central Authority.

Desirability of having power to make establishment of exchanges compulsory by order of a Government Department.

78183. Do each of these exchanges embrace all kinds of labour?—An exchange set up by employers and employed in a particular trade only deals with that particular trade.

78184. Such as the brewers, for instance?—Yes. That exchange, of course, deals with all sorts of labour in connection with brewers. The public exchanges embrace practically all sorts of labour.

78185. Is there any inter-communication between the various exchanges, or do the men put their names down on several lists?—There is very great inter-communication between the exchanges, particularly in South Germany—Bavaria and Würtemberg. I think you may say that all those southern exchanges are pretty well completely linked up over a very great area, and men are sent into and out of towns.

78186. In one area men may register their names on the municipal register and also on the trade union register and also on the employers' register?—They may do so, but of course they tend not to do so. The sphere of influence tends to be separate for each sort of exchange.

78187. Would there be any inter-communication between, say, the municipal exchange at Berlin and that at Munich?—I doubt whether there is much inter-communication there, as those two places are rather a distance apart. I have no evidence of any inter-communication there.

78188. Has it been found in Germany that the ordinary municipal exchanges are detrimental to the interests of trade unionists?—I can only say that in Germany trade unionism is growing very much faster than in England, and that there are more trade unionists in Germany now than in any other country in the world.

78189. There is no objection on their part to the municipal exchanges, is there?—I think there is now strong practical support. Of course, there is sectional feeling in many places—and a great variety of feeling.

78190. Has the common law of Germany with regard to unemployment anything to do with the success of the labour exchanges?—What do you mean? I am afraid I do not quite follow you.

78191. I am referring to the law which compels a person to find work within a given time or he may be sent to prison or to a penal colony. Has that law any influence in compelling men to put their names down at the various exchanges?—I doubt if it has much direct influence. I think that police law must have some, but I could not trace it.

78192. Do you think its success is due to its practical utility?—I am sure of it.

78193. (Mrs. Webb.) I understand that you think there are two quite separate problems before this Commission—namely, the prevention of unemployment and the treatment of the persons who are actually unemployed?—I think that distinction is very important.

78194. It is very much the same sort of distinction as that between dealing with the drainage of a district and treating patients suffering from typhoid in a hospital, is it not?—I am rather worried by metaphors, but I see nothing wrong with that metaphor.

78195. Now to go to the first—the question of preventing unemployment; that is the most important of the two, I think?—Yes, it is.

78196. There was a point raised by Professor Smart and also by the Chairman with regard to the possibility of every trade in the country being overstocked with labour; you hold that that is a paradox, but a paradox representing an economic truth?—I think in theory it is perfectly possible for every trade to be overstocked with labour and yet to have a growing industry.

78197. That would be explained by the fact that the pools of labour round each employer consist at present of a sort of labour which on account of its demoralised conditions and lack of mobility is not available for a new industry in which there is a scarcity of labour?—It might conceivably be transferred. At present, there is no machinery to transfer it and there is all the force of inertia to keep it where it is.

78198. That is to say, you would quite understand the fact that when there was a great excess of labour in the cheap clothing trade in East London I found it impossible to find twenty women who were fit to take part in a new factory in Wales?—Quite, certainly.

78199. And that might be true of every industry?—Yes, I think that might be quite general.

78200. You might have a considerable over-stocking of every industry of the country by these pools of under-employed labour, and yet have a positive scarcity of labour in other places, thereby diminishing the wealth production of the country?—Yes, that is quite true.

78201. I gather that you consider that this fact of under-employment is not decreasing?—I dislike very much comparisons between past and present, because I cannot make them. The evil is very serious now.

78202. And you consider that it is not due primarily to the character of the persons concerned?—I am clear about it.

78203. You are quite clear about that?—Yes. I should like without occupying the time of the Commission to put in, if I might, a short table showing something of the past history of a large number of people who have worked at the docks and wharves in Stepney. It shows the large number who had had regular work before they were driven to take to the docks and wharves. (The Witness handed in the following table.)

RIVERSIDE LABOURERS AMONG STEPNEY UNEMPLOYED, 1906-7.

Ages.	All Applicants.	Applicants known to have worked at docks or wharves.	
		Total.	Of these there were known to have had since age of 20 regular work for at least 12 months at 20s. weekly or more.
15-19	47	3	—
20-24	217	30	7=23%
25-34	434	130	51=39%
35-44	389	151	44=29%
45-54	228	81	25=31%
55-64	84	34	14=41%
65-74	20	2	—
Total -	1,419	431	141=33%

78204. That is to say, you would say that this fact of industries being organised on the basis of under-employment is putting on the individual wage-earner practically an obligation which he cannot under the circumstances fulfil—that you are making it easy for him to do wrong and very difficult for him to do right?—Yes; that sums up my criticism.

78205. Then you think that if we leave this alone it will not right itself?—I am sure of it.

78206. Therefore we must take deliberate thought to alter it?—Yes.

78207. Now with regard to your remedy of a labour exchange. Would it not be better for a moment to try and visualise the idea of a labour exchange in its more or less completed form, because, as I understand you, you think that most people rather pooh-pooh this remedy?—Yes.

78208. That is their tendency?—I think so.

78209. Is it not possible that it is due to the fact that you have not shown them what you eventually wish to do with this labour exchange?—I do not know; at any rate, they have not seen.

Mr. William
H. Beveridge.
15 Oct., 1907.

Unemploy-
ment not

personal
character.

Helplessness
of the under-
employed.

General
attitude
towards
labour
exchanges.

Mr. William H. Beveridge. 78210. Let us try and visualise this idea of a labour exchange. Supposing every employer in the country who employed casual labour was compelled to take all his labour from the labour exchange, would that not enable you to offer a very practical alternative to all employers, and to say to all employers, "If you wish freedom and free choice of your own labour you must give it a minimum period of employment, or if you do not choose to give your labour a minimum period of employment, then you must take it from the labour exchange"?—That is certainly the form in which I have always desired to apply compulsion. I think it would be a very legitimate form of compulsion, and would not in any way injure the employer.

78211. Do you regard this idea of a labour exchange as really the only method by which we can practically force employers to give permanent employment, or a minimum period of employment?—I do not attach much importance to forcing the individual employer to give permanent employment. The main thing is the use of the labour exchange. Giving permanent employment is the alternative.

78212. You would leave that choice open to him?—Yes, I would.

78213. Then as regards our dealing with the workman, would not this idea of a labour exchange enable us to tighten up the personal obligations of the workman by offering him either employment through the labour exchanges, or, if he refused to register and accept employment, coming down on him pretty severely?—Certainly.

78214. Take the case of feeding the children: suppose a wage-earner was out of employment, and his children were lacking in food, would it not be possible for the appropriate authority to say: "Why are you not registered at the labour exchange if you are not feeding your children?"—Yes, it would certainly become his duty to be registered at the labour exchange.

78215. And he would have to account for the fact that he was not registered at the labour exchange?—Yes.

78216. But, once registered at the labour exchange, the labour exchange would force him either to take the work that was offered or to go into some sort of training?—He would be liable to have work offered him at a moment's notice.

78217. And he would have to accept it?—Yes; or proclaim himself as not anxious to work.

78218. You suggested that the labour exchange has been used in Germany to put down vagrancy, and that that was one of the reasons for starting it, I think?—I do not think it is directly used to put down vagrancy, but the motive in Germany that I always find recurring is the putting down of *Umschau*—the walking round the various factory gates to look for work.

78219. It is enabling the police to offer an alternative?—I am not sure that the offering of an alternative by the police is the conscious object.

78220. How then is the labour exchange connected with vagrancy in the minds of the Germans?—The idea is simply that it is demoralising for the man to go knocking at various factory gates and walking about the streets. That, of course, is also the evil of vagrancy. I have never seen the argument put forward that it will enable the police to be severer, though I have no doubt it has been put forward, because it is such an obvious argument.

78221. To go to the other question of dealing with the able-bodied when they are actually out of work, I gather you want that done by one authority, not by two authorities, and that you are strong on that?—Yes.

78222. That does not mean that you would want it necessarily done by the same authority that deals with the children or the sick, does it?—I have not any opinion on that.

78223. All you want is that the treatment of the able-bodied destitute person shall be dealt with by one body?—That the receipt of all applications from able-bodied persons should come to one authority, and should pass through the hands of one authority.

78224. And the treatment of them, because they have to be treated in some sort of way?—I do not know; the treatment would have to be so different in many cases.

78225. Would you visualise an authority which would have different treatments for different classes of the able-bodied?—I would have one authority to decide what treatment each man should have. I think that is the important point.

78226. Would you suggest that that authority should be of a judicial character?—Well, its function is judicial.

78227. You would have no objection to a judicial authority for deciding how a person should be treated, would you?—I have no objection to it, but I feel that it is a subject to which I have not devoted much attention in preparing my paper.

78228. Have you thought at all about the possibility of substituting for this provision of work for the unemployed an industrial training of some sort?—May I say that I am quite clear as to the ideal that we should aim at in relief—that all mere tiding-over of men should become industrialised in the form of unemployed insurance, and that all other relief should be educative—training.

78229. Therefore if we had our idea of a labour exchange to which everybody who employed casual labour should be obliged to apply, you might accompany that by the industrial training of the persons who could not get employment under this labour exchange and that would give an impetus to trade unionism in providing unemployed benefits without the liability of giving industrial training to their members?—I think it would. I think it is important to do something of that sort—to give that impetus.

78230. If you combine your labour exchange with this industrial training then it would be enormously to the advantage of the individual man to join a society which provided unemployed benefit with a view of getting free leisure when he was unemployed?—I think the desire to avoid training might be made into a reason for that form of thrift.

78231. It might be made into a reason for forcing people to insure against unemployment?—Yes, certainly.

78232. (*Mr. Lansbury.*) I do not quite understand, because I am not a political economist, what you mean when you say as I understand you to say that with the labour exchange practically when once you have got rid of the present number of people who are out of work then everybody could get a situation. I do not understand how that is possible?—If all the work was regular there would be nothing left to attract and get together these pools of reserve casual labour.

78233. But I suppose we should go on improving machinery and having what you call in your Statement dislocations of industry?—Yes; but I am clear that at present industry is always expanding faster than population.

78234. That may be through the aid of machinery, surely?—It is of course through the aid of machinery.

78235. That does not mean that the population is being employed?—There are more good things to be divided between the population.

78236. But that is not the point, surely? Surely the point that we are discussing is employment?—Yes.

78237. If, at Leicester, as we have evidence, machinery is put in which enormously increases the productivity of the individual who operates the machine that cannot be used as an argument that because of the increased productivity therefore the population could get employment?—I believe that with the presence of more population increasing productivity makes more employment; but I can quite see that there are these dislocations which hinder that process.

78238. What I am wanting to get at is how your proposed system is going to help a condition of things like that which has prevailed and is prevailing to a large extent at Leicester just now?—I cannot prevent these industrial dislocations, but I can help to get over their effects as quickly as possible.

78239. But the fact that there are more good things to share out, or more bad things, if you will, to share out amongst a certain population, does not mean that therefore there is enough employment to go round?—No, not necessarily—not at any one time.

78240. Then, as I understand it, you rather think that the big pool of reserve labour is at the docks and connected with the docks; am I correct in that?—No. That is the big pool which everybody can see, but I am

15 Oct., 1907.
Compulsion which may be applied to employers through labour exchanges.

How labour exchanges would affect the workman.

Main object of German labour exchanges.

Relation of labour exchange to question of vagrancy in Germany.

Necessity of having one authority to deal with all able-bodied unemployed.

All relief should be either insurance or training.

Industrial training, its connection with the labour exchange, and its effect upon trade unionism.

How organisation through labour exchanges would get rid of surplus unemployed.

How far labour exchanges would meet dislocations of trade through introduction of machinery.

very clear that you have that casual and reserve labour everywhere.

casual labour 78241. And in all trades?—And in all trades. I should reserve not just like to refer to the table that I have put in this morning, which shows that in Stepney, which is a dock confined to district, less than a third of our applicants had ever worked at the docks or wharves. Yet I should think exists in all fully three-fourths of our applicants were irregular or trades. reserve workmen; that is to say, in this dock district you have this very large number of people who are in reserve without having anything to do with the docks, that is, there are many other trades upon which these people depend.

78242. Is not that because of the modern organisation of industry, especially in the building trade?—Yes, I think it is. It is due, I think, to the reproduction in other industries of the typical dock and waterside organisation of casual employment.

78243. Take the building trade; formerly a man could get employment at a certain firm and practically be regularly employed; but that does not hold now, does it?—No.

78244. Your experience will have taught you that, I suppose?—Yes.

78245. I mean that is what you will have learnt from the men you have examined, and all the rest of it?—Yes.

question of 78246. How do you propose to compel employers to compelling simply take one group of men and only employ those?— employers to I do not propose to compel the employers directly to se labour take one group of men. First of all, I am going to tell exchange, or the employers, "You must take men through the give regular em- exchanges, but you shall have considerable liberty, indeed, ployment. you shall have perfect liberty of choice." But I shall proceed so to arrange the work out between the men that to some of them I shall be able to say, "It is no use your coming back here; you must go away." Then that will indirectly limit the employer's freedom of choice; he cannot have that man, because the man has gone away.

78247. He may not go away; the man may object to going away. He may say that it is a free exchange, and that the employer has a right to call on him as on anyone else unless there is some compulsion; and I do not see where that is coming in?—I am prepared to take any steps that are necessary to prevent the exchange from keeping labour casual. In practice you will not find the employer sending specifically for a man who has been unemployed for a week in preference to one who has just left another job.

78248. I want you to tell me what is to be done to meet that emergency—the emergency that all the men will consider they have a right to be submitted to the employer, and he must be the person to judge whom he will employ. Will you say straight away that you are going to compel employers to give regular employment and continuous employment?—My position is this: I am going to compel employers to give regular employment, or to come to me; and I am going to take whatever steps are necessary to see that the men whom the employer gets through me get regular work, if not with one employer at any rate with two or three in succession, or get sufficient work to keep them. I feel that it is a little difficult to say exactly what will happen in each particular trade but I am quite clear on the principle.

Labour ex- 78249. Of course, what you are really aiming at is changes are a what you say at the finish of your Statement—the State part of State regularisation of industry, or the State organisation of industry?—There is a great deal more in industry than the taking on of men. I think that this is part of a State organisation of industry.

Labour ex- 78250. I do not want to tie you down to anything changes mean else than the State organisation for the employment of the public men and women?—The public organisation of the labour organisation of the labour market. I will put it like that, and I do not mind being of the labour tied down to that as much as you like.

Meaning of 78251. (*Mr. Loch.*) Does "public" mean "State"? "public." —If you mean by "State" the central government, no, not necessarily.

78252. Do you mean by "public," then, not the central government, but the local government?—Not neces-

sarily. I mean control in the interests of the reduction of casual labour. *Mr. William H. Beveridge.*

78253. But, definitely, who would pay the bill? Would it be a public affair paid for by local rate or taxes, or who would pay?—I think that it would be divided probably; I think all might pay. 15 Oct., 1907.

78254. Then "public" would mean "State"?—I am quite prepared to use the public funds for it.

78255. Then your phrase just now "public" means "State," definitely?—Not to the exclusion of anything else; it would include the State certainly.

78256. You would not exclude voluntary aid?—I Voluntary labour ex- changes not to be ex-

78257. But the responsibility would be a State responsibility?—Yes. I think the State should say "If a voluntary association is doing the organisation, then it is the State unnecessary for me to come in; but if a voluntary association is not doing it, then I am going to come in, because whatever else happens I am going to see that it is done." always to have the responsibility.

78258. The State, therefore, would have the responsibility?—The State would have the responsibility.

78259. And the State would pay the account?—No, not if a voluntary association came in.

78260. But it would be expensive, and if the voluntary association came in, who would pay?—If the voluntary association said "We would rather run our own labour exchange," I think the State would say, "Yes, and if you do, and if there are no under-employed men hanging about your factory gates, I will say, 'Go your own way, and pay your own way.'"

78261. I was referring to your answer to Mr. Lansbury, and not to this particular detail. The question was a question of State or public industrial organisation, and I wanted to know what you meant by the word "public." I understand that you really meant by "public" a State industrial organisation?—I would have the ultimate responsibility rest upon the State, certainly.

78262. Therefore the whole of this would rest ultimately upon a State industrial organisation of labour?—That is rather a wide phrase. I said "labour market."

78263. You limit your phrase to "labour market"?—Yes.

78264. Very well; then it would be the State industrial organisation of the labour market?—I prefer that phrase, because I know what it means, and I do not know what you mean by the State organisation of labour. "State industrial or- ganisation of the labour market."

78265. What would you express by "labour market," then?—There is unfortunately no English term for it, but it is what the Germans call *Arbeits-vermittlung*. Meaning of "labour market." I mean the work of the middleman between the employer and the employed.

78266. Did not your answer to Mr. Lansbury go beyond this *Arbeits-vermittlung*? I understood him to ask you with a particular object, that is to say, he was aiming at getting your view upon what would be the ultimate object of the introduction of this system, and your answer to him, as I understood, was that you would have to put this labour organisation generally on State lines. We are passing from the *Arbeits-vermittlung* business?—Quite so. It is the instrument to all sorts of other objects. When the employed use it they may have one object, that of expanding the standard wage; when employers use it they may have another object, that of breaking strikes or black-listing agitators. When the State uses it it may have two objects to which I attach great importance. These are, first, the decasualisation of labour and the eradication of under-employment, and, secondly, the obtaining of a perfect test of unemployment. Those are two objects which I think the State should have; I think there may be others. Two objects of State changes.

78267. (*Mr. Loch.*) May I suggest that you are dealing with the question in a more limited form than the question that was put to you by Mr. Lansbury, which was the broad question whether the ultimate result of all this did not entail the organisation of labour as a whole by the State?

78268. (*Mr. Lansbury.*) What I really mean is that in the ultimate you have got to compel the employer either to take men from you or to continuously employ them?—Yes.

Mr. William H. Beveridge. 78269. I put the question to you whether that did not involve really the State organisation of labour, and you said not quite, as there are other things besides the employment of men in the organisation of labour. Then I put it to you that it meant the State organisation, or employment, of labour, and you said not "State" but "public," and I am quite willing to take your answer as "public."

Question whether labour exchanges involve State organisation of labour.

78270. (*Mr. Lock.*) I want a definition?—I am quite prepared to stick to "ultimate State responsibility"; but I do not want to exclude what I think is very often the better way of managing it, that is, by voluntary associations—Why, I definitely will not say, "the State organisation of labour" is that that includes rates of wages, conditions of employment, almost everything under the sun, and I am not dealing with that at present.

78271. (*Mr. Lansbury.*) Only you are dealing with this one thing which does govern rates of wages to some extent. You are going to lay down a hard and fast rule that an employer must give a man continuous employment, and that is a revolution in industrial employment in England, and especially in London—well, it is everywhere. You are going to say to the employer "You must employ this man whether it pays you or not for so many days a week, unless you come to the exchange, and then we are going to so organise that the man shall work for you to-day and for somebody else to-morrow"?—Yes.

78272. I think you have cut the bottom from that by telling me there will be dislocations when there will not be enough employment to go round, and you will have these people on your hands; but apart from that you are going to compel the employer to do certain things, and I suggest that that is the State organising for the employer whom he shall employ and how he shall employ them?—No.

78273. It strikes me like that?—No.

78274. (*Chairman.*) Do you wish to go further than the system which has been developed in Germany?—Certainly.

78275. You do want to go further?—Certainly. The Germans have just got an instrument, and this decasualisation is the most important use of that instrument that I know of at present. I think that one must go on to that.

78276. Then what I understand you suggest is this—that the State must have in its mind certain ideas, but if by voluntary associations these ideas can be carried out, well and good, and if by local associations they can be carried out, well and good?—Yes.

78277. But if both fail, then the State would interfere; is that your idea?—May I sum up the whole thing by another illustration from Germany? In Germany the State says: "Every man must be insured against sickness; if you are insured in a voluntary association (there are many different sorts of voluntary associations), well and good; if not, here is a subsidiary State association in which you are insured." That is the central principle of German sickness insurance. That is the principle I have in mind. I hope I have made it quite clear why I prefer "labour market" to the "the organisation of labour"?—

Reorganised system of London and India Docks Company.

78278. (*Mr. Lansbury.*) We will come down now to something practical. I am going to ask you about the London and India Docks Company. You quote the London and India Docks Company as having reorganised their staff; have you any figures as to that?—I have not got them here.

78279. Could you put them in?—Yes, I could, but I think, if I might suggest it, that the Commission would get them very much better from the London and India Docks Company itself.

78280. You are aware, are you not, that the B. men are not regularly employed now?—Quite so.

78281. Are you aware that under their system of reorganisation the amount of work that is done by an individual man is now very much increased, and that the total output of a man with the aid of the electrical machinery, which they also installed at that time, is very much greater?—I have been told by the engineer of that company that the men are much more efficient than they were under the casual system.

78282. My point is that they are casual now?—A certain number are casual.

78283. I am referring to the men that they have got in there of the first and second class?—I can simply state the system. They have permanent men, and they have registered A. men. The registered A. men are weekly servants, and till recently, when they had to discharge some because their business is going down, those men were practically permanent. Then you get to the B. men, who are irregular but have a preference, which is not of much value and is coming to be of less value. Then there used to be C. tickets, but I think those are gone. I think there are simply casuals below the B. men. If that agrees with your knowledge, that is my knowledge of it.

78284. The point about it is that the dock company, with the limited amount of work they have had in the matter of handling goods, have not been able to carry out the system of regular employment?—They have not been able to carry out the system of regular employment, because they do not have enough work; if they had more they would be able to.

78285. Now I will go to another point. You have been actively engaged in work amongst the unemployed for the last four years, I suppose, now going on for five?—Yes, it is over four now.

78286. Do you consider that there has been work in England which people have not known anything about, finding to which people could have been sent if you had had an efficient system of labour exchanges?—I certainly do not think that I could have laid my hands on work to employ these men during the last four years.

78287. You have made some efforts to find work for people who have been sent away to the colonies, and been found work there, have you not?—Well, not very much—not outside London, at any rate. We have not been able to link up outside London.

78288. I will not say "most," but a very considerable proportion of the jobs that you are getting now are quite trumpery jobs, are they not?—No, I should not say so.

78289. I mean they are jobs of under a month?—I gave the figures; about 2,000 out of 9,000 are under a month.

78290. But in regard to the others, unhappily, you have not any knowledge as to how long they go on afterwards?—It is very difficult to say.

78291. I understood you to say yesterday that you wanted the first Act to lapse, and you did not want it renewed?—It comes to be a question of words, but I think I should say on the whole I do not want the present Act renewed.

78292. Are you quite prepared to let the borough councils go on as they did previous to the Act?—I do not wish them to go on as they did previous to the Act, but I am not sure that what we do is any improvement except in regard to the one point that we collect better information and more information.

78293. Would you say that the work at Garden City, which you had something to do with, was not better from the point of view of morale for the average man than the work of the ordinary borough council which lasted for two or three days?—I think that there are distinct advantages in the country air, but I think that the permanent effect to those men was probably not much greater than that of the borough council work, simply because the problem is bigger than could be touched by that temporary work.

78294. You have changed your view, have you not, as to borough council work, and the other work?—No. If I may say so, I attach less importance to trying to run the relief work as well as possible, because I think, however well it is run, it is of very little use. I used to attach importance to considering the best way in which you could use and manage relief work; I attach less importance to that now.

78295. I understand you agree that even supposing you got your perfect system of labour exchanges to-morrow we would have on our hands, under present conditions, many thousands of men whom we have got to do something with?—We should have a very large legacy from the present bad system.

Bay.

78323. If some good work has been done, even under those circumstances, and if part of the fault is also in the Act itself, does it not point rather to an improvement of the Act in various directions than to the ultimate throwing it over altogether?—I think that again is a question of words in some ways. I think there are inherent defects in the Act which lead me to say that the change I want is the abolition of it rather than an amendment of it. The inherent defect as regards training is that we who are on the Central Body have no particular qualification for that training, that we are not in any direct touch with

Inherent defects in Unemployed Workmen Act.

Mr. William H. Beveridge. anything or anybody for whom we are training, and that therefore we do not give the training idea a fair chance—I am quite clear on that.

15 Oct., 1907. 78324. Those are defects of machinery, are they not?—They are defects of the bodies established to run this Act.

78325. Which is the machine?—Yes, I quite agree with that; it is the machine.

Question whether applicants to distress committees were persons for whom Unemployed Workmen Act was intended.

78326. Now, you said something with regard to persons applying under the Act to the effect that they were not the persons for whom the Act was intended; could you amplify that a little?—The persons for whom the Act is intended are applicants who are “honestly desirous of obtaining work, but temporarily unable to do so from exceptional causes” over which they have no control. The intermittence of a casual labourer’s occupation is not an exceptional cause, and therefore I should say that most of our people being habitually employed in irregular occupations were not unable to obtain work from an exceptional cause.

78327. These might be an exceptional lack even in those cases?—I quite agree that a cyclical depression which hits all trades hits the casual trades; but the predominant fact about these people is their chronic unemployment, and not the temporary intensification of their sufferings.

78328. But taking it generally, do you say from the point of view of character, they were below the idea of the Act?—I do not know what is the idea of the Act with regard to character.

78329. “A person honestly desirous of obtaining work”?—I am clear that a good many of them—a very large number of them—had been in the past honestly desirous of obtaining work, but I have no evidence of what they are now at all, because I have no means of testing.

78330. There was a certain test before they were given work, was there not?—There was an inquiry as to their past which is quite irrelevant to the present.

78331. Would you say they were as a rule people that it was desirable should be kept from touch with the Poor Law?—I think all people should be kept from touch with the Poor Law.

78332. That they were people who were standing just on the border, and that they were really desirous to keep from going over the edge and getting amongst those relieved by the Poor Law; would you say that?—I do not quite understand. That is simply asking me whether I think it is desirable to give them relief work, is it not? May I put it in this way. I quite agree that a great number of them were not irredeemable; they were people whom you might have improved and built up possibly into independent and self-supporting citizens; I cannot say definitely, but I should say there were possibilities of good in a very large proportion of them.

78333. Do you think that what was done for them under the Act, and what is being done for them under the Act, did not help them, and does not help them in that direction?—I do not think that what we have done for them under the Act has helped them to return to ordinary industry except in certain cases; in more cases it has produced a tendency to look to the Act for perpetual re-employment.

78334. One word about your labour exchanges. How many did you take over of the Municipal Exchanges in London, do you remember?—Nine, I think.

78335. In what condition were most of them when you took them over?—Most of them had been killed, once in 1902 by the passage of the London Government Act, and then they were killed again when the Unemployed Workmen Act came into force, and the staff was taken away to do distress committee work. I think, as I have said before, there was only one which had any real good will.

78336. They were moribund institutions?—I think they were moribund institutions.

78337. I want to discover why the municipalities took so little interest in them and thought so little of them—that is only fair to your own effort. Was one reason because in the old labour exchange only very inferior workmen applied?—There was simply no knowledge of what the exchanges were intended to do. They were not properly staffed; they were hampered by all sorts of bad

rules and they were almost all started in times of depression. I want to say this, that the time of depression is exactly the wrong time to start a labour exchange; the time to start it is when trade is going up, because then the people whom you decasualise have the best chance of finding other places for themselves.

78338. Employers held aloof practically altogether from these exchanges, did they not?—I think they did mostly.

78339. They knew nothing about them, in fact? They knew nothing about them; they were not advertised, and no effort was made to advertise them, though everything depends on that.

78340. And there was no cohesion between one labour exchange and another, was there? They simply worked each in its own area?—An attempt was made by the London Unemployed Fund to provide a central unemployed exchange.

78341. I am thinking of the time before that?—Before that they were quite separate—absolutely separate.

78342. Therefore, strictly speaking, might it not be said that the average municipal worker in London knows nothing at all about what a labour exchange should be?—I think that the failure of the municipal bureaux is simply no argument whatever against labour exchanges run with some understanding of their objects.

78343. We were told just now the idea of labour exchanges was rather pooh-poohed; is that not because of the utter failure of those that existed in the past, and the idea that you are doing something of the same character of thing over again?—Yes, certainly.

78344. Therefore, you want rather an educative process to make your labour exchange a success, even in London?—Yes, we greatly want an educative process.

78345. (*Mr. Nunn.*) Are we to understand that the employment exchanges at Egham, Ipswich, Fulham, Hampstead and two or three other places were dead failures?—I do not think they were dead failures. The Egham one stopped suddenly in 1894. I do not know what the Ipswich one is doing. The Fulham one stopped suddenly, though I do not know quite why.

78346. That was owing to causes connected with the Unemployed Workmen Act, I think?—I am not sure. I think they all just did a very little, but it was very little.

78347. (*Mr. Russell Wakefield.*) You are an enthusiast for labour exchanges, and that is the one part of what has been done under the Unemployed Workmen Act which you think might go on; is it not also true that the chairmen of the other committees, in the main, think their particular piece of work is the one that ought to go on?—I hope they do. But may I say I do not accept your statement that I think the labour exchange is the one part that should go on? I definitely say in my statement there is room for emigration, and there is room for real training in a treatment of this question.

78348. Therefore some of the things in the Act are excellent, though the instrument has been inefficient? I think the instrument is incurable—in London. You are asking me about our exchanges; as I said yesterday, I was not at all satisfied with them, but I meant no reflection on the efforts of our staff, which have been, I think, admirable; and of course there is a certain amount of real life, at any rate about some of them.

78349. (*Mr. Nunn.*) I think you said just now that an inquiry into a man’s past did not indicate his suitability for present work?—No, I did not say that. These inquiries do not tell you whether he is now unable to get work through exceptional causes beyond his control.

78350. I did not understand you to say “now unable”?—They do not tell you whether he falls within the definition of the Act. I put it as a logical proposition that inquiries about the past do not tell you anything about the state of the labour market at present.

78351. (*Mr. Lansbury.*) Without any evidence against a man, if he had been a man in fairly regular work and satisfied his employers, that is rather evidence, surely, that he would do the work and would take it?

78352. (*Chairman.*) That is not quite your point, is it? Your point is that he does not come within the

Causes of the weakness of these exchanges.

phraseology of the Act, which says that he is to be honestly desirous of obtaining work but temporarily, that is for the time being, unable to do so?—That was with regard to casual labour, but I think this is a different point. I simply put this as a logical proposition, that an enquiry about the man's past can tell you a lot about the man, but cannot tell you anything about the labour market at the present time.

78353. (*Mr. Lansbury.*) But it will tell you whether he is likely to honestly want work, and that is all you want to know?—It can tell you whether he is likely to want work; but that is not all you want to know.

78354. (*Mr. Nunn.*) Do you suppose any inquiry into human character could go so far as to absolutely determine that a man was not only able but willing to do work at the present moment, short of actually offering it and setting him to work?—That is my point, that no inquiry into character will give you that information. May I say that the only thing that will do it is the offer of such jobs as there are going through the labour exchange.

78355. Is that not rather a worthless point? Are not all the positions that are given to men given to them by inquiring as to what they have shown willingness and capability for in their past work? In regard to all the appointments that we give to people, are not those the points which really determine us in offering an appointment to a person or in offering him a piece of work?—Are you comparing our relief work with the ordinary appointments, we will say, made under a public body or anything of that sort?

78356. I put this case, that I have some work to be done and I want to find out a suitable candidate for it?—The suitability for an ordinary appointment is whether a man is able to do that work; but suitability, as defined by the Unemployed Workmen Act, is absolutely different.

78357. He must also be willing to undertake the work?—He must also be unable to find work himself.

78358. That is what nothing can prove, of course?—A complete control of the labour market would prove it. Nothing else could.

78359. Nothing short of actually offering the man the work, that is to say, you would have to have work ready for every candidate whether he was suitable or not, and that would be quite an impossible situation, would it not?—That is not my point. You would either have work ready and offer it to him, or you would know that there was no work ready for him, and therefore that he was unable to get work.

78360. But that would be a very expensive way, you will perhaps admit, of finding out who were the persons who might be able to fall under the Act?—I do not know whether you have seen what our inquiry on the distress committee has cost per man?

Mr. HARRY RUSSELL MAYNARD, called; and Examined

78371. (*Chairman.*) You are late Clerk to the Central Body for London?—Yes.

78372. You have been kind enough to prepare for us a Paper relating to the work of the Central Body in connection with the unemployed, in which you give us a great deal of interesting information, and some very useful analyses that we can take as your evidence-in-chief?—(*The Witness handed in the following Statement.*)

1. My experience of the problem of unemployment is based upon certain experiments in the management of relief works between November, 1903, and October, 1906. I was honorary secretary to the Mansion House Unemployed Committee from November, 1903, to October, 1904; secretary to the Central Committee of the London Unemployed Fund, established under Mr. Long's scheme, from November, 1904, to November, 1905; and clerk to the Central Unemployed Body for London from November, 1905, to October, 1906.

2. This period coincides with the greater part of the depression which was reflected in the *Labour Gazette* in the winter of 1902, and, more markedly, from May, 1903, onwards, and which was still indicated, though to a decreasing extent, in those returns in the autumn of 1906,

78361. I do not remember?—The mere inquiry cost *Mr. William* 28s. 6d., before we began to put a man to work. I think *H. Beveridge* that is a very expensive method.

78362. (*Mr. Lansbury.*) I do not think it ought to go down quite like that. Surely you know that that figure includes the investigation into several applicants who did not get work given to them?—I quite agree.

78363. It is a very much reduced figure for those whom you employed, who formed quite a small proportion of those cases that you investigated?—I only want to show that we have to make these inquiries in order to select the people who are fit.

78364. But those whom you employed did not cost 28s. 6d. each?—I quite agree. We do not differ.

78365. (*Mr. Nunn.*) Is it not also true that you have to consider the difference between the waste in the work done by a comparatively efficient person whom you have accepted as the result of inquiries, and the work done by a comparatively inefficient person whose work you have rejected as the result of inquiries?—I do not see that that has any bearing. I merely say that this is the cost of determining who are the people who are to be helped by the Act. I quite agree that you ought to get a more efficient person by these inquiries—in theory you do at any rate; I do not know whether you do in practice.

78366. (*Mr. Lansbury.*) The men who got work were not the only men who were worthy of work, because the giving of work was limited by how much money you had to spend on the giving of work?—Of course, on my interpretation of it we gave work to many people who I do not say were not worthy but who were not expected, under any strict interpretation of the Act, to get work under it.

78367. (*Mr. Nunn.*) Is it not true that in estimating the cost of those inquiries you ascertained that there were a large number of persons suitable for the work who did not actually get it, because the work was not forthcoming?—I do not know.

78368. (*Chairman.*) The figure that you gave of 28s. 6d. was really the cost of the general investigations?—Yes, I meant no more than that.

78369. (*Mr. Gardiner.*) Could you put in a return showing whether emigration in certain selected cases has been justified by results, and showing also those cases which have been trained at special institutions?—I have no special knowledge on that subject, and I think that might be much better got from someone else.

78370. (*Chairman.*) The emigration is not under you, is it?—No.

78370a. Would you put in copies of the forms used in London Labour Exchanges?—Yes, I shall send them to you. (Subsequently sent. See Appendix No. LXXXVI. (E)).

Mr. Harry R. Maynard.

especially in the building and dock trades, which affect large numbers of the less skilled workers in London. 15 Oct., 1907.

MANSION HOUSE COMMITTEE, 1903-4.

3. The Mansion House Unemployed Committee had been dormant since the depression of 1892-4. During the winter of 1902 there had been exceptional distress in various parts, and newspaper funds had been opened for the collection of money, which was forwarded for distribution to some of the clergy and other workers in the East End. The results of this method of distribution, together with the prospect of increased distress in the winter of 1903-4, led to the revival of the Mansion House Committee as a central collecting and administering agency, and the adoption by that Committee of a definite scheme of relief works. It may be well to mention here that during the winter of 1904-5, when the centralised organisation of the London Unemployed Fund occupied the area of the county of London with a scheme limited to employment relief, large newspaper funds were at the same time collected and distributed with disastrous results in districts outside the county such as West Ham; while in the winter of 1905-6 the Unemployed Workmen Act provided an organised machinery for the administration, by means of employment relief, of the greater part of the Queen's Unemployed Fund.

Mansion
House Com-
mittee, its
scheme and
operation.

4. The main feature of the scheme of the Mansion House Committee* was the provision of continuous work for male heads of families, the men being boarded and lodged and employed in rural colonies, while an allowance was paid to the families in London on a scale based on the number of children, and averaging 14s. 6d. a week. The men were allowed to return home on furlough at regular intervals to visit their families and look for work.

5. At first no enquiries were made, as it was hoped that the removal from London would prove a sufficient test. It was soon found, however, that the conditions, designed to be slightly deterrent to regular workmen accustomed to 20s. or 30s. a week, proved unduly attractive to casual labourers accustomed to more or less irregular earnings of 15s. or 18s. a week, especially as the presence of such men in large numbers led to a low standard of industry and output. It was therefore decided after about three weeks to give preference to men who were accustomed to regular work, especially as these would be more likely, if tided over a period of depression, to regain regular employment.

6. This led to the development of a special enquiry form, the most important question on which, beyond elementary enquiries as to residence, etc., was as to "longest employment," the answer to be verified by reference to an employer.

At the same time the area of operations was extended from Stepney to the four Eastern boroughs and the furlough period lengthened from a fortnight to a month.

7. These changes resulted in the exclusion of fresh casual labourers and in a marked improvement in the standard of work and conduct on the colonies. Of the 160 sent without enquiry or references 119 described themselves as labourers. Of the 307 with references 132 were labourers, while 67 other occupations were represented.† Of the first 160, 50 per cent. left the works for unsatisfactory reasons, while of the later 307 only 23 per cent. failed, although the standard of work and conduct gradually rose.

8. This experiment revealed four different classes of unemployed:—

First.—The high-class mechanics and other highly skilled workmen—the class from which the membership of the more organised trades unions and friendly societies is drawn. These did not as a rule apply, and for the most part those who did found the conditions too deterrent.‡

Second.—Men usually in regular work though of less skilled character. This was the class selected during the later period; and they seemed to find the conditions, as regards the balance of sacrifice and remuneration, neither too deterrent nor too attractive.

Third.—Casual labourers. These formed the majority of those employed during the first period, and to them the conditions as compared with their ordinary standard were too attractive. As it was impossible for the Committee to establish a second grade of colony to accommodate them, they had to be entirely excluded.

Fourth.—Those who refused the test of work altogether or were unwilling to make the necessary sacrifice of leaving town or who proved otherwise unemployable.

9. Of these four classes the first and the fourth were deterred, for opposite reasons, by the terms of the offer. The second and third could only be distinguished by enquiry, and until they were so distinguished and a class selected to whose standard of living the standard of relief was appropriate, the automatic tests of removal to the country and continuous work were insufficient to weed out the unemployables mingled with them or those not in real need.

10. The colonies were kept open altogether for seventeen weeks. The period of employment offered varied from four weeks to seventeen weeks. The actual period of employment averaged five and a half weeks. The number of men employed was 467, the maximum number at one time being 305, the number of persons relieved was 2,456.

The total cost was £3,909, the amount spent in actual relief being £2,973. The average relief to each family per week was 13s. 11d., besides maintenance and 6d. a week to the men. The total cost per family per week was 30s. 6d.* In addition to this sixteen families, or seventy-eight persons, were emigrated, mostly through the East End Emigration Fund, at a total cost of £410, of which the Committee contributed £360. An attempt was also made to find employment in the country for some of the men. Twelve were tried, but without success.

11. The works closed for want of funds on March 24th, Closing of a week before Easter. An enquiry into the subsequent works of position of the men helped, made in the following July, Mansion House Com- showed that of 200 out of the 307 who had given proof of mittee and subsequent position of men helped. being usually in regular work, and had done well on the relief works, one-third were in regular employment, one-third had had casual employment amounting to about one month in four, and one-third were out of work altogether.† This result should be compared with the *Labour Gazette* figures, which show that the want of employment during that summer was worse than during the winter of 1902-3.

12. The chief difficulty of the Mansion House scheme, Difficulties considered as an organisation for relieving distress and of Mansion House scheme. for carrying out an experiment, lay in the smallness of its resources. This compelled the works to close before any revival of trade could be expected, even had the depression not been far too prolonged to be tided over by any system of relief works. It also compelled the Committee to limit their area of operations, in spite of applications from various local committees in other parts of London.

13. The Mansion House Committee had, however, cer- Advantages tain advantages over the larger central committees that of Mansion House Committee. followed. It worked, like them, by means of central House and local committees, the central providing employment and the local recommending applicants. But the Central Executive was independent of the local committees. Except in the one case of Poplar, it existed prior to them and called them into being to co-operate on certain definite lines. Its organisation was in working order and its principles established before they were formed and their representatives co-opted. This fact, together with the smallness of its operations, gave it a control over the experiment which the later central committees lacked.

14. During the previous winter various borough Borough council relief Government Board Circular of 1892 of putting in hand works in special work for the benefit of genuine workmen who 1902-3. would be demoralised by having to resort to the Poor Law. These municipal relief works were usually rendered worse than useless by the system adopted. In the first place only three days' work was offered as a rule to each applicant. This was insufficient to give any real assistance, or to enable any reasonable standard of work to be demanded. In the second place no proper selection of applicants was made, so that such assistance as was given failed to reach those for whom it was designed.

15. During the winter of 1903-4, however, representa- Relief works tive committees, composed of members of borough in London councils and boards of guardians and others interested in the problem, had been formed in various parts of 1903-4. London for the purpose of receiving and dealing with applications. In some cases these committees distributed relief, in others they only recommended suitable applicants to the borough surveyor. In one case the borough council was running three-day relief works, while the representative Committee did not consider that there was exceptional distress sufficient to justify them in opening a register. In Camberwell a complete classification of applicants was made and all suitable cases were sent on to the borough surveyor, but owing to the small amount of local work available only a small proportion could be provided with work. House Committee took a few cases from some of these committees late in the season.*

16. The reports of the Mansion House and Camberwell Committees were referred to by Mr. Long in the autumn of 1904 as being among the sources which provided suggestions for his scheme of central and local committees.

LONDON UNEMPLOYED FUND—1904-5.

17. The organisation of the London Unemployed Fund, set up in accordance with this scheme, consisted of (1) Joint Committees in every borough composed of members of borough councils and boards of guardians and in some cases members of charitable and parochial associations and others interested in the problem. (2) A Central Committee composed of delegates from the joint committees, the City Corporation, and the London County Council, together with certain members nominated by Mr. Long.

18. The joint committees were to receive, investigate, and classify applications, while the Central Committee was to co-ordinate their operations and provide work. The funds were to be provided by voluntary contributions, but it was suggested by the Local Government Board that the borough councils should later on contribute to that part of the fund which was used for making grants in aid of work put in hand by local authorities.

19. The Central Committee met for the first time on November 25th, 1904, many of the joint committees having by that time already begun operations. By March 31st, 1905, the joint committees had registered about 45,000 applications. Including a small number dealt with during the summer the Central Committee had by September 30th, 1905, provided employment for 3,498 men for an average period of eight weeks, besides making grants of £5,600 in aid of borough council work, and had emigrated forty-two families. The total amount expended, exclusive of £10,948 represented by remaining assets chiefly at Hollesley Bay, was £41,260, of which £34,194 was spent in relief, £4,349 in expenses incidental to the various works, £1,480 in rail fares, £1,555 in office expenses, £465 in advertising contributions, £1,012 in emigration and £205 in establishing a central employment exchange. The expenses of the joint committees were paid by the borough councils.

20. The London Unemployed Fund had the advantage over the Mansion House Committee of covering the whole of London and so avoiding differential treatment of different areas of distress. On the other hand, its resources were, considering the increased area, almost equally limited, and the administration difficulties were enormously increased. The method of its composition—by delegation from joint committees of local authorities—weakened its control over the local committees, gave an undue preponderance to conflicting local interests over common central interests, and introduced an element wanting in experience or of special interest in the problem in hand.

21. These weaknesses affected both the selection of applicants and the management of the works; and prevented the close correlation of the two which the experience of the Mansion House Committee had shown to be necessary if undue attractiveness to the lower class of unemployed and deterrence to the higher was to be avoided.

22. The weakness in the selection of applicants was due in the first place to the want of uniformity in the different boroughs. The original scheme had contemplated the division of applications into two classes—respectable men temporarily distressed owing to inability to find employment, and those who should be regarded as ordinary applicants for Poor Law relief. The Local Government Board had also laid down certain principles of selection—the exclusion of cases of chronic distress, of persons of bad character or of less than six months' residence in London; and preference to persons possessing established homes. But owing to the fact that the joint committees were formed before the Central, and began operations either before it met or before any central instructions could be drawn up, there was very little uniformity in practice. There was, for instance, no common model for an application form—the most essential instrument of classifica-

tion. In the second place there was no central staff adequate to supervise or co-ordinate the work of the local committees. Each committee was asked for particulars as to its methods, but the application forms of selected men were not submitted to the Central. Finally there were few signs of knowledge of the past history of the problem or the causes and conditions of past failures, and consequently of effort to avoid them.*

23. In the provision of work the resources of the London Unemployed Fund were equally limited in proportion to the size of its area. It was formed too late to make preparations in advance, and it was compelled to rely upon contracts hastily made with local authorities or private bodies having access to land. Consequently it was unable to provide employment outlets on a large enough scale or rapidly enough to meet the demand or to keep the machinery of selection in motion and so to secure some degree of control over it by dealing with its products; and the greater part of the works had to be closed before any considerable revival of trade had taken place.

24. The work actually provided consisted partly of colony works on the lines of the Mansion House Committee, partly of London works managed by the Central Committee, and partly of municipal works put in hand by borough councils and assisted by grants from the Central Committee. In the London works an attempt was made to avoid undue attractiveness by reducing the hours so as to bring the weekly wage below the normal total for the class of work, and in many cases, automatically, by the distance of the work from the men's homes. At Long Grove, for instance, men from several different boroughs had to catch a train at Waterloo at 6.40 a.m., to arrive back at about 6 p.m. and to pay 4d. towards the railway fare. The borough council work did not demand the same amount of sacrifice and was consequently more attractive.

25. There were thus possibilities of grading so that to some extent, by a little deliberate increase in the differences, each class of applicant could have been offered work under conditions just sufficiently unattractive to them. The local committees were recommended to classify selected applicants into the three classes mentioned above; they were told in each case that the conditions were appropriate (as it happened) to the second class (men usually in regular work of a less skilled character), and asked to send men accustomed to at least as high a weekly wage. But there was no means of judging how far any attempt was made to carry out these precautions. In the absence of such precautions the most attractive work tends to fall to the lower class of applicants since they are less ready to make sacrifices required by the less attractive. Gradation was, in fact, rendered almost impossible by the lack of time for preparation, because the least attractive work (Hadleigh) happened to become available first, whereas priority could not very well be given to an inferior class of applicant.

26. The character of the men selected can be to some extent judged from the records of the special works and the relative numbers who were discharged or gave relief by up the work for insufficient reasons. (See heading London "Character of Men on Works," in Index to Committee's Report.) Not infrequently about one-third of those selected proved to be capable or industrious, one-third were fair, and one-third indifferent or bad.

The statistics of reasons given for leaving show the following general results:—†

	London works (exclusive of municipal).	Colony works.
Stayed to end, or left for good reason -	2,057	752
Discharged or left for insufficient reasons -	312	291
	2,369	1,043

* This absence of uniformity made it necessary to distribute the benefits of the Fund amongst the local committees, not according to the number of applicants passed, but according to a scale of allotment based on estimates of relative poverty independent of the statistics of the local committees. Particulars of the scales of allotment adopted are given in the Report of the London Unemployed Fund, p. 28, and the Central Body Report, pp. 14-16.

† See Report, p. 127.

* For particulars of some of these schemes see report of evidence before the Charity Organisation Society Committee of Enquiry, 1904.

Mr. Harry R. Maynard.

15 Oct., 1907.

The Central Body for London under Unemployed Workmen Act.

Weakness of the Central Body.

Difficulties with the record papers

Result as regards class of men selected.

Numbers of persons registered by distress committees and cost of relief.

It should be noted, however, that such figures as these are liable to be affected by the character of the individual foreman or superintendents, and by the conditions of the various works, as well as by the class of men selected.

CENTRAL (UNEMPLOYED) BODY FOR LONDON, 1905-6.

27. In respect of funds the Central Body established under the Unemployed Workmen Act had the* advantage of receiving large grants from the Queen's Unemployed Fund for the maintenance of its works, while for establishment expenses, emigration, employment exchanges and the purchase of land it could levy a rate in the Metropolitan boroughs. But it was subject to many of the same disadvantages as the Central Committee under Mr. Long's scheme. It also was formed subsequent to, and was to a large extent dependent upon, the local Distress Committees, which it had to centralise, co-ordinate and control. It came into being at the same late date, although it had a more complicated organisation to create. It had the same lack of employment outlets and consequently of automatic control over the machinery of selection.

28. A certain amount of uniformity was, however, secured by the regulations of the Local Government Board,† which embodied some of the results of the recent experience and provided for central control. There was a uniform application form (known as the record paper). (For copy see Appendix No. LXXXVII. (A)), which included questions covering the particulars necessary to distinguish the three subdivisions of the genuine unemployed already mentioned, and to enable preference to be given to those who gave evidence of thrift and whose homes were best kept. But the objects of the inquiry were often not understood, and the Central Body was not established early enough and had not staff enough to issue explanations or exercise sufficient supervision.‡

After two months, moreover, the record paper was altered, and the questions distinguishing the trade union and friendly society class, the regular workers,§ and the casual labourers, omitted. (For copy see Appendix No. LXXXVII. (B)). A very large number of applications had, however, been registered on the old form and the first season's work was therefore largely unaffected, though doubtless owing to ignorance and inexperience the old form was often used during this period at once harshly and ineffectively. The record papers were in all cases passed by the Central Body before final selection, but while this enabled the worst to be returned with comments suggesting rejection or further inquiry, and so tended to promote efficiency and uniformity, it was impossible, owing to the pressure and the absence of previous central explanations, to exact a high standard.

29. For these reasons, while it is certain that large numbers of those employed on the works had never been accustomed to such regular work or to such a high rate of wages as they received, it is possible that there were on the books of the distress committees at least as many regular workers who might, had preference been given to them, been tided over the worst of a period of exceptional distress, and who could have been helped without the same undesirable consequences.

30. The total number registered by the distress committees to March 31st, 1906, was 39,800. Up to May 12th, 1906, the Central Body had assisted (including about 400 employed in borough schemes aided by grants) about 5,000 men by employment for periods averaging in different works from fourteen to fifteen weeks, and by May 31st had emigrated 350 families. By May 12th the expenditure had been approximately as follows:—Out of the Voluntary Fund (mainly grants from the Queen's Unemployed Fund): as relief £31,075, and expenses

* See Preliminary Report (November, 1905, to May, 1906).

† Summarised in the Preliminary Report, p. 2.

‡ A specimen of the instructions issued prior to the opening of the registers for the following winter is enclosed. (See Appendix No. LXXXVII. (C).) Cf. also the suggestions included by the Central Committee of Mr. Long's scheme in their Report, pp. 36-45.

§ The past employment record was reduced to twelve months, and was therefore frequently insufficient to elicit the longest ordinary employment of a regular worker when the period of depression had, as in this instance, lasted already more than twelve months. Specimens of the forms are enclosed.

|| Certain particulars extracted from the record papers of men employed are given in the Report to May 12th, App. XI. See also pp. 26 and 29.

of works, £7,227; total, £38,302. Out of the Rate Fund: emigration, £3,500 establishment charges, distress committees, £5,420, and central office, £1,728; total, £10,600.

31. The temporary work provided by the Central Body was of the same character as that provided by the Central Committee of the London Unemployed Fund, viz., partly colony work, partly London, and partly municipal. These various kinds had the same advantages and disadvantages as before.

32. The colony system, with its residence, maintenance, supervision and money payment direct by visitors to the family, provided an automatic test of genuineness, a security for the maintenance of the home, and bodily health and social discipline for the men; but with a danger of loss of independence and enterprise.

The work near men's homes became, to large numbers of the men elected, an easy and well paid local job demanding the minimum of energy or sacrifice, and possessing in many cases, owing to defective supervision and the low class of men selected, the features of a new kind of out-relief accompanied by an inadequate labour test.

The municipal works aided by grants were by the Local Government Board regulations far more under central control than in the previous winter, the record papers being submitted to the Central Body just as in centrally managed works. The evidence thus obtained showed that in these works, which should have been, and were advocated as being, the most like contract work and the best suited for the self-respecting and genuine unemployed, both the supervision and the selection tended to be particularly lax. In one case many of the worst record papers (which came before the Central Body subsequently owing to a grant being made to the work) were marked: "For local work only, not central." In spite of this the number of discharges from municipal works was usually very small, and this fact suggests that in most cases the element of relief predominated over the element of employment.

33. The work provided by the London Unemployed Fund and the Central Body included levelling, double digging, trenching, road making, sea walling, various agricultural operations and a certain amount of painting and other lighter tasks. The reports showed that the quality of the work as compared with ordinary employment was usually satisfactory, but that it took longer to do.*

34. The value of the work done, as reflected in the recoupment received, depended upon its nature and its relation to the immediate requirements of the contracting party. With the exception of Hollesley Bay the Unemployed Committee possessed no land and were dependent on contracts with public authorities or private parties having access to land. Time did not permit of a full consideration of the kind of work which should be the subject of such contracts or of the terms of contract appropriate to each case. It was more important to provide immediate relief and to keep the machinery of selection working and under control. But an attempt was made in all cases to see that the work accepted was not useless and yet not such as would ordinarily be done by contract labour or out of the ordinary resources of those offering it. The degree to which these opposite dangers were avoided affected the amount of recoupment which could properly be asked for. If the work was useful and within the province of the contracting authorities it was obviously only the expense, as compared with the resources of the authorities and the demands of more urgent work, that prevented them from doing it themselves. A fair recoupment would therefore have been the amount which the contracting authorities would have been justified in spending on the work in the ordinary way if the work could have been done in the ordinary way for that amount; and only when the value of the work thus calculated was less than its ordinary contract cost would it be a proper subject for the intervention of a central authority with funds for the maintenance of relief works.† According to this standard, an Unemployed Committee, having ample choice of employment openings,

* See Report of London Unemployed Fund, Index, "Work done," and similar passages in the Mansion House Committee's report, pp. 21 and 22, and Central Body Preliminary Report, pp. 29, 30, 42.

might have felt bound to make further enquiries with a view to deciding whether, for instance (judging from the recoupment offered), some of the work in the London County Council parks and at Long Grove, at Hadleigh and in the Royal Parks, was sufficiently useful; and whether, in accepting the work on the City markets, and in some of the borough schemes where the local authority paid everything but the extra cost due to unemployed labour, they were not in danger of interfering with ordinary contract employment. Such a Committee would be justified in doing work without recoupment only where the work was useful to the community and yet not within the province of any spending authority or profitable to any private individual or corporation.

35. Besides ordinary relief works there were certain special operations undertaken by the Central Committee of the London Unemployed Fund, and the Central Body respectively.

36. *Hollesley Bay.*—This estate, leased at a peppercorn rent to the Central Committee by Mr. Fels and purchased by the Central Body, was utilised partly for the provision of temporary unskilled work for large numbers and partly for the training in agricultural pursuits of a few men (together with their families) selected out of the larger number for their observed fitness and desire for country life. The original programme of the colony contemplated three stages in the treatment of selected men.*

First.—The preliminary testing, while the families remained in London, the men being observed by the superintendent of the colony, and the families by the visitors paying the weekly allowances and by special representatives of the Central Committee.†

Second.—If both appeared *prima facie* suitable, a period of training for both men and families in a cottage on the estate.

Third.—The establishment of families in agricultural pursuits, preferably by means of market gardening, small holdings, or emigration.

By October, 1906, about fifty-six men were on the selected list and twelve families had been removed to cottages on the estate for the second stage. The transfer of further families was hampered by lack of cottages.

For the purpose of temporary relief work the colony had the advantage that the whole value of this work became the property of the Committee and no question of contracts with outside authorities was involved.

37. *Women's Work.*—Lack both of funds and of time prevented the Central Committee from undertaking this branch, but the Central Body took it up as soon as opportunity permitted. Many of the Distress Committees had not invited applications from women, but such applications as had been received by the Distress Committee were analysed and after cases of dependence on male breadwinners or of chronic poor relief were eliminated some of the applicants were given a week's employment and training at the Association of Trained Charwomen, while for those better suited for needlework, workrooms were opened for the manufacture of articles for use in the colonies or for the outfit of emigrants. In the case of women the difficulty of devising reasonable conditions not unduly attractive to such low-paid workers was peculiarly great, and the degree of success or non-success had not been ascertained by October, 1906. The registers which in the case of men were not reopened till the autumn were opened for women in July in view of the summer slackness of certain women's trades.‡

38. *Emigration.*—This has been assisted on a steadily increasing scale each winter, especially by the Central Body which can utilise the Rate Fund for the purpose.§

* See Report of London Unemployed Fund, pp 72-3 and 74-84. See also Preliminary Report of Central Body, pp. 35-37.

† See Preliminary Report of Central Body, p. 49.

‡ A specimen of the instructions issued prior to this second opening of the registers is enclosed. (See Appendix No. LXXXVII. (D).)

§ See Mansion House Committee Report, p. 24. London Unemployed Fund, pp 91-99 and Index: Central Body, pp. 43-48.

39. *Employment Exchanges.*—Under Mr. Long's scheme the joint committees were to endeavour to find ordinary work for applicants and the Central Committee was empowered to assist by the establishment of labour exchanges. The Central Committee therefore established a central employment exchange in connection with the existing municipal labour bureaux. Under the Unemployed Workmen Act labour exchanges could be maintained out of the rate fund, and the Central Body has established an organised system of exchanges covering practically the whole of London and co-ordinated by means of a Central Employment Exchange.*

40. The following are the conclusions based on the above experience with regard to the points on which the views of witnesses are requested.

I. EXTENT OF DISTRESS.

A.—Numbers, Classes, and Character.

41. *Numbers.*—The numbers vary more or less according to the state of trade. The variations are reflected in the *Labour Gazette* tables; in the applications to labour exchanges; in the applications to distress committees, when properly investigated and classified; and in the statistics of Poor Law relief. The first source of information is very imperfect as regards absolute numbers, but useful as indicating fluctuations and thus proving the reality of the industrial problem at least as far as regards the excess above the minimum percentage. The second was too small by October, 1906, to be of much use. The third is very unreliable, being affected by the methods of administration and the prospect of assistance, but in the experiences of committees where the work is carefully done fluctuations are indicated by changes not only in the numbers but in the class of applicants.

The Poor Law figures also vary with methods of administration and deal with a lower class, but the statistics for London taken as a whole show at least for certain limited periods an apparent tendency to follow the unemployment curve at an interval of about a year.

All these figures except the first are affected by the large mass of casual labour which is never wholly employed and consequently always liable to be at any given moment reckoned largely as unemployed. This element has vitiated all attempts hitherto made at a direct census.

42. The unemployed may be classified in a variety of ways more or less valuable,† e.g.:—

Classes and Character.

43. *As to Trades.*—This is of value as indicating the extent and character of the depression which produces the distress, and thus assisting in the provision of remedies. For instance, in 1892-4 the engineering and shipbuilding trades were specially affected; in 1902-6, in London, the building and docks. But in London depression in individual trades is less easily distinguished than elsewhere, and the distinction of less value, owing to the mass of unskilled and comparatively unspecialised labour.‡

44. *As to Personal Character.*—The unemployed naturally include a large proportion of the less efficient since these are the first to be discharged, and because unemployment produces degeneration. But in times of depression they include a considerable proportion of men of average efficiency. Defects of personal character may be a cause of chronic unemployment of individuals, but it is doubtful whether they necessarily affect the total amount or the amount of fluctuation except in so far as they hamper enterprise by producing waste of material or want of confidence.

45. *As to Age.*—Figures extracted from the Mansion House Report, p. 40, and Central Body Report, p. 75,

* See London Unemployed Fund Report, Index, "Employment Exchanges," and Central Body Report, p. 52.

† Compare also the particulars extracted from samples of the record papers of men employed, Central Body Report, Appendix XI, and of applicants, Appendix XIII.

Personal character of unemployed.

Mr. Harry R. give the following results for a portion of the men Maynard. helped :—

15 Oct., 1907.	Mansion House Committee.		Central Body.	
	Ages of unemployed.	per cent.		per cent.
	under 20	1	25 and under	7.9
	20 to 29	22.5	26 to 35	35.5
	30 „ 39	47.5	36 „ 45	36.4
	40 „ 49	25.0	46 „ 55	15.8
	over 50	4.0	56 „ 65	4.1
			not stated	.3
		100.0		100.0*

Skilled and unskilled labour.

46. *As to Industrial Skill.*—The distinction between skilled and unskilled is not of much direct value since the proper proportions of these depend upon the relative demand, rather than upon the absolute amount of employment. The excess of unskilled labour amongst applicants may be accounted for by the facts that it is easier and therefore more likely to be overcrowded; that it is more casual and therefore more likely to attract a supply in excess of the demand; that it is the residuary occupation of the degenerate skilled; that the more highly skilled workmen hold aloof from relief committees.

Classification under Mr. Long's scheme according to general industrial status.

47. *As to General Industrial Status.*—The two main classes recognised by Mr. Long's scheme as a classification appropriate to relief works—

- (i) Those exceptionally distressed owing to inability to obtain employment;
(ii) Those chronically distressed—
may each be sub-divided as follows:—

- (i) Exceptional:—
(a) High class mechanics, etc.
(b) Those accustomed to regular employment though less skilled and less organised.
(c) Casual labourers.

- (ii) Chronic:—
Age, illness, vice, defect, or other non-industrial condition.

Class (i) (a) forms the basis of the *Labour Gazette* figures and a small percentage of applicants to distress committees—much smaller than their proportion of the total unemployed.

Class (i) (b) are included in considerable numbers amongst the applicants to distress committees and form a larger or smaller proportion of those employed on comparatively well paid relief works according to the care exercised by the selecting committees, e.g.

Under the Mansion House Committee when casual labourers were excluded the longest references from single employers obtained in 274 cases employed were as follows:—

	per cent.
Under 1 year	12.4
1 to 5 years	37.5
5 to 10 years	19.2
10 to 20 years	20.2
Over 20 years	2.6
Uncertain	8.1

Total - - - - 100.0

This may not always have meant continuous employment, but it indicated definite association with a given employer.

Under the Central Body an analysis of a proportion of the record papers of the men employed on certain of the works showed †:—

	per cent.
Casual or under 3 months	11.1
3 months to 1 year	12.9
1 to 5 years	31.4
5 to 10 years	19.5
10 to 20 years	16.4
20 years and over	3.5
Uncertain	5.0
Total	100.0

* The returns issued by the Distress Committee covering the whole of the applications give almost exactly the same percentages. (See Central Body's Preliminary Report, Appendix XIII.)

† See Preliminary Report, p. 77.

Of the cases of one year and upwards about 40 per cent. were reported as “not continuous.”

Class (i) (c) (Casual Labourers) formed the greater number of the applicants to distress committees and the most difficult problem, partly because it is impossible to provide employment on ordinary lines where the remuneration will not be unduly attractive and partly because it is practically impossible to ascertain whether or not they are any better off after the period of assistance than before.

Class (ii) was under Mr. Long's scheme to be considered as ordinary applicants for Poor Law relief. This definition does not, however, cover all cases of chronic distress, while on the other hand many cases of exceptional distress cannot be usefully assisted by the mere provision of temporary work. For both these classes the presence on the local committees of representatives of charitable agencies afforded a possibility of providing appropriate assistance.

B.—Periods of Distress.

48. Distress from want of employment is partly periodic, partly chronic.

The periodic may be seasonal or cyclical:—

(a) Seasonal distress should be provided against in the trade itself by means of high wages, or by alternative occupations. Otherwise the trade is being subsidized. Both these remedies, however, require a much greater degree of industrial organisation than is at present found in most seasonal trades. Otherwise high wages may attract larger numbers than the trade can support, and the alternative occupation may become merely a second seasonal trade with its own period of distress.

(b) Cyclical depression is beyond the resources of all but the most highly-organised trades, and seems bound to require at times exceptional public assistance. A cyclical depression may affect a seasonal trade and render its employees proper subjects for exceptional assistance, when the mean of the good and bad season is for any period considerably below the average.

Chronic distress may be, in some instances, the result of prolonged exceptional distress, but exceptional and temporary assistance can do little to remedy it. Investigation may, however, reveal industrial causes, such as the permanent migration of an industry, and thus indicate possible remedies.

2. CAUSES OF DISTRESS DUE TO UNEMPLOYMENT.

49. Unemployment is the result of a want of correspondence between the supply of and demand for labour combined with a system of short period engagements.

50. This want of correspondence is due to:—

(a) Fluctuations of the demand as regards time and place and quality of labour demanded.

(b) Defects in the supply, as regards time, place, and qualifications, in relation to the demand, combined with comparatively slow changes in the quantity of the supply.

Both the fluctuations of the demand and the defects of the supply may be partly inevitable and partly capable of correction.

3. EFFECTS OF DISTRESS DUE TO UNEMPLOYMENT.

51. The effect of distress from unemployment which renders the search for a remedy necessary is the degeneration of individuals and families which results when the distress is too prolonged, and which rapidly counterbalances any stimulating effect which the possibility or experience of temporary distress may be expected to produce. Hence the evil is one which, beyond a certain point, instead of providing its own corrective increases in a vicious circle.

4. REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

52. The directions in which remedies are to be sought are indicated by the foregoing analysis of causes and effects.

53. The remedies may aim at either:—

- (i) Preventing the want of correspondence between demand and supply by preventing or reducing fluctuations of demand.

Classes of remedies for unemployment.

(ii) Preventing this want of correspondence by increasing the adaptability of the supply.

(iii) Counterbalancing, in respect of the individuals left unemployed, the effects of want of employment.

The first and third class of remedies must in practice be kept entirely distinct. In applying the third every effort must indeed be made not to counteract the aims of the first, but in practice these efforts are sure to be only partially successful. While, therefore, administrators of the third should bear in mind the objects of the first, the administration of the first should exclude all element of the third. The second class of remedies come between the two, and their object should be borne in mind in the administration of both, and they may be applied in conjunction with the third to individuals who have already fallen out of employment.

Regularisation of Employment.

54. The first class of remedies would include all forms of regularisation of employment such as:—

(i) The retention for periods of slackness of part of the ordinary work of private employers or public authorities. This is the natural method applied in cases where the employees are not engaged on short-period contracts; and the practice could be largely extended in the case of short-period engagements if there were sufficient financial or moral inducement to do so. Under this head would come indirectly any efforts at reserving expenditure for periods of slackness on the part of individuals or corporations not themselves direct employers of the labour affected.

(ii) The starting in times of depression of "special work" not forming part of the ordinary operations of a public authority (or possibly private individual) as a means of regularising employment. Such special work should be done under ordinary contract conditions and confined to fully-qualified workmen engaged in the ordinary way according to competence, not distress, and subject to the ordinary employer's demand for a full day's output of work; i.e., there should be no element of relief work so far as the men employed are concerned.

(iii) Any system of short time that may be found practicable and desirable in any trade. This is another method applied instinctively in cases of long-period engagements. Its converse (where the short time in slack periods is itself equal to a full day) is overtime during periods of pressure. The abolition of occasional overtime would, therefore, only reduce the net amount of unemployment where the period of pressure of the trade in question coincided with the period of slackness in some other trade or trades within reach. In any other case it would only increase the number of unemployed attached to the trade in question during its slack period; exactly as the substitution of discharges for short time would increase the number of unemployed in a trade where overtime was not practised.

(iv) Any developments that may be practicable of supplementary occupations independent of the demand for labour by outside employers, such as allotment cultivation.

Increase of Adaptability of Workmen.

55. The adaptability of the supply to changes in the demand may be increased in the following ways:—

(i) As regards time: by means of employment exchanges, enabling workmen to obtain information as to distant employment without spending time in search of it.

(ii) As regards place: by means of migration and emigration, assisting workmen to travel to the site of a demand where the distance, or the change, would otherwise be too great.

(iii) As regards qualifications, by means of technical education producing qualified workmen; or indirectly by the agencies already mentioned, assisting to bring the most qualified workmen into communication

with the employer; or by means of training in Mr. Harry R. adaptability for alternative occupations which would enable workmen to change their industrial habits rapidly so as to keep in touch with permanent changes of employment demand, or to take advantage of the special works suggested in paragraph 54 (ii) or (iv) in cases of temporary changes.

Training colonies come under all three subheads. All these methods may be administered by a public authority, by mutual organisations, such as trade unions, or by voluntary agencies.

Counterbalancing, for the Individuals Unemployed, the Effect of Unemployment.

56. However thoroughly the first class of remedy might be attempted, there would always be a certain amount of demand for the third class, while the third would often be a necessary accompaniment of the second. The fluctuations of demand would not be entirely neutralised, and periods of exceptional and general depression would recur. However adaptable the supply, it can never follow the demand instantaneously. Many individuals would prove incapable of acquiring the necessary adaptability while still being industrially valuable. Further, since one effect of a fluctuating or casual demand is to attract a supply in excess of the average or even of the maximum required, every step towards the regularisation of demand or the increased adaptability of supply as far as these employments were concerned would tend to render wholly unemployed for a time some part of the existing excess.

57. Counterbalancing remedies include such methods as the following:—Trade Union unemployed benefit, as distinct from travelling allowances; other forms of mutual or other insurance; charitable maintenance through voluntary agencies; Poor Law relief; relief works.

Since these remedies are useful merely for bridging the gaps left by fluctuations of demand combined with comparative inelasticity of supply, care must be taken in applying them, firstly to confine them to individuals needing this compensation, and secondly not to increase the divergence between demand and supply, either by decreasing the amount of available employment or increasing the lack of adaptability. Thus they must not encourage dependence upon non-industrial maintenance, or immobility as regards place or trade,* and they must not act so as to remove altogether the stimulus of possible hardship, or the penalties of personal slackness.

58. Again, since the resources from which the cost of such remedies is to be met can only be obtained in the long run from the products of ordinary industry, they are themselves ultimately only another and more indirect form of averaging (as regards either different times or different persons) prosperity and distress. This is most obvious in the case of Trade Union benefit, derived as it is from contributions of members in employment, but it is equally the case with relief works or poor relief. The source of the funds requires therefore as much consideration as the method of administration. All questions of organised national or municipal relief of any sort are bound up with the question of the incidence of central and local taxation. Similarly the comparative advantages of public and voluntary funds cannot be determined without a consideration of the ulterior sources of each.

Relief Works.

59. In the application of these principles to relief works experience indicates the following considerations:—

(i) Employment relief is as a rule superior to a similar amount of maintenance relief in that it demands effort from the recipient and so affords at once a test of genuineness and a means of preserving energy and self-respect.† Emergency charitable funds especially require organised safeguards. But

* This consideration may prove to be of great importance in the question of relief works in London at present if the lack of employment in the building and dock trades in the metropolitan area prove to be more than a temporary depression.

† Exceptional circumstances or special care in the administration of maintenance relief may in some cases counterbalance these advantages (e.g., in the case of Trade Union benefit and some charitable agencies), especially where the element of mutual insurance is present.

relief work, to be of any value, must be continuous. Doses of work are little, if any, better than doses of money.

(ii) Relief works are inferior to special works put in hand under contract conditions, in that they tend to be more costly, and more demoralising to the beneficiaries. They should, therefore, not be undertaken unless it is proved that the various methods of the regularisation of the employment demand do not meet the crisis, *i.e.*, that there are a considerable number of unemployed belonging to trades in which special works cannot be put in hand without competing with ordinary industry.

(iii) Relief works, therefore, have properly the special function of providing assistance under the least demoralising conditions for unemployed workmen either unused to, or otherwise not fully competent for, the particular work of which the relief works consist. Whereas special works on the contrary should be rigidly confined to men competent for the work provided and subject to dismissal for incompetence.

(iv) Upon relief works, therefore, the ordinary employer's standard of competence cannot be demanded, since the men employed are of mixed trades or otherwise partially incompetent. Further the demand that can properly be made differs with each workman according to the degree in which his ordinary occupation resembles or differs from the work provided. Hence relief works require a specially careful kind of supervision. And even with the best available supervision they inevitably tend to become soft jobs for the men whose ordinary occupations render them comparatively competent, since the general standard of work tends to be set by the less competent or the less industrious.

(v) Relief works are also attractive in that, being provided to meet distress, they relieve the workmen of the responsibility for the search for work.

(vi) Hence relief works require some special element of test or sacrifice to counteract this element of attraction to those who combine strength and indolence. This element of test must be such as will press as far as possible equally upon all irrespective of their ordinary occupations and must, therefore, have a non-industrial character. For this reason the method of payment by piece-work is inapplicable.

(vii) Three tests of this character have been more or less deliberately tried, singly or in combination, during the experiments already described:—residence involving a certain amount of discipline; remuneration not in the form of money payment to the men; and distance of the work from the men's homes. The colony systems possessed all three; Long Grove, Chingford, and some of the parks works, involved the third only; a great part of the Parks works and of the municipal work (although not involving the ordinary employer's demand for competence) possessed neither.

(viii) Where such tests as these were not deliberately introduced it was considered that the danger of attractiveness could be sufficiently avoided by reducing the total earnings below those of similar work under contract conditions. Most of the controversy upon the desirability, the adequacy, and the method of making this reduction is based upon a confusion between the function of special work for the regularisation of employment and relief works. In the case of special works under contract conditions with the ordinary employers' demand for competence some reduction of attractiveness might possibly be desirable as trade improved in order to ensure that such works might not be preferred to ordinary employment otherwise available and the real state of employment be thus concealed; but anything in the nature of a rate of payment below the ordinary rates prevailing in the trade in question would be subject to the same disadvantages and dangers as such underpayment in the case of any ordinary public works—the danger of tending to lower the ordinary standard to the same extent; thereby, moreover, incidentally defeating the end in view.

It would, therefore, be advisable that where Lower special works were required, work involving the remuneration and other element of distance should be put in hand first and kept open longest, those not involving this element methods of being opened only during the acutest period. This counter-balancing would in practice mean that Government and county special works, such as coast protection, afforestation, attractiveness of and main road improvements, should be begun first and municipal special works later. This would have provided the incidental advantage that workers in a district from which a trade was permanently departing would not be tempted to look to the local authorities of the district for local assistance.

In the case of relief works, where the essential characteristic of ordinary employment—the demand for competence—is absent, it is desirable, on the other hand, that the external conditions also should be to some extent unlike ordinary employment. By adopting this principle the reduction of attractiveness made necessary by the essential difference can be effected without danger of lowering the standard of ordinary employment. If the remuneration (being necessarily payment by time, not by piece) is to be lower, as may be desirable in the case of low-grade works, it should be paid indirectly so as not to form a precedent to ordinary employers. If, as is usually the case, the ordinary remuneration for the available work is already at the lowest limit of family subsistence and below the ordinary limit of earnings at their own trades of the better class of the men who would under a carefully administered system be selected for the higher grade works, any lowering would defeat the object of the works, which is to maintain efficiency and self-respect. Moreover, such reduction would press most hardly on the better class of men to whom already the element of attractiveness is least. Consequently the element of unattractiveness should be produced in the conditions other than remuneration. It should also be, if possible, such as would be most felt by the lower class of men. Perhaps the nearest approach to such a condition which has as yet been observed are the requirement of order and cleanliness at the various colonies. Conditions which put the financial interests of the family before those of the man have also something of the same element. The colony system, with its necessary discipline, its absence from London, and its non-industrial methods of remuneration, presents many of the required features, but at the same time tends to reduce the personal independence of the men and the mutual moral responsibility of the family and its head. London works at a distance involving early rising, the unpaid toil of walking, or an expenditure on travelling, demand somewhat similar sacrifices but in a less degree. Further experiments in colony and other administration are required. Experiments in the introduction of some limited degree of payment by results might be particularly fruitful. The following conditions would probably be necessary:—(a) A minimum remuneration sufficient for proper maintenance must be guaranteed to all employed. This maintenance might be in kind or family payments and any extra piecework payment in cash. (b) The extra payments should not be introduced until sufficient time has elapsed to allow those unused to the work or physically run down to acquire a fair amount of skill. (c) The maximum of extra payment should be strictly limited so as not to give any great advantage to the comparatively competent over the merely industrious.

(ix) Many of these conditions are only attainable and all would be greatly simplified by preliminary Importance of classification of applicants and grading of relief works. attention to the classification of applicants and the corresponding grading of relief works. In the first place, this would avoid the necessity of the several variations within such relief works in the conditions to suit various classes of men employed, already alluded to in the preceding paragraph. In the second place, it would meet the fundamental difficulty that the attractiveness of relief works varies with different classes of applicant according to the different standard of their ordinary work and income. Conditions that present the desired balance of sacrifice and remuneration to men earning usually 30s. or 35s. a week are unduly attractive to men usually

earning 20s. or 25s. On the other hand, conditions appropriate to men usually earning the lower wage afford insufficient maintenance to families accustomed to a standard based on the higher. This is especially the case where the different industrial status is combined with a different standard of comfort, cleanliness, and conduct. This principle applies not only to the rate of money remuneration but also to housing accommodation, food, and (where the various classes are mixed) company.

In the absence of any preliminary classification, the more attractive work actually tends to fall to the lower class of applicant, since the better class are more willing to make the sacrifices demanded by the less attractive. Consequently the standard of work on the more attractive works tends to be lower. The ultimate result is that large numbers of casual labourers receive an easy job at what to them is a high rate of pay, while the better class of unemployed, if they do not stand aloof altogether, are crowded out, or have to be employed under demoralising conditions and amid undesirable surroundings. Under these circumstances the work test does not operate successfully. The lower class are practically bribed by the high pay to do the minimum that will avoid dismissal, while the better class are discouraged by unnecessary hardships. But if such a classification were made and the conditions of different works correspondingly graded, each class could receive employment at a fairly appropriate standard, and neither be unduly over- or under-paid. Under these circumstances the relief works form a real test of genuineness. It could not be expected that such classification or grading could be very minute or exact. The three main classes of genuine unemployed observed by the Mansion House Committee (highly skilled, regular but less skilled, and casual) could fairly readily be distinguished by means of investigation. The first grade have not as a rule been suitable for relief work treatment, but they nevertheless form a definite branch of the problem for which, if they were isolated, a separate remedy might be sought (as at Hampstead in 1905-6). For the next two classes, two grades of relief works might be organised when necessary, differing in the attractiveness of their conditions. Within each grade there might be differences to a limited extent in the character of the work offered, so as to provide for marked differences in ordinary occupation or physique.

It may be worth noting that in two examples of relief works, comparatively favourably commented on—the Lancashire Cotton Famine relief works* and the Mansion House Committee of 1903-4† this principle can be traced. In the case of the Lancashire famine relief works a considerable proportion of those assisted seem to have belonged to the same trade, "cotton operatives," and so to have been more homogeneous than the applicants to the London distress committees.‡ There was thus a comparative uniformity in industrial habit and in initial absence of skill, and a single grade of relief works would under these circumstances be sufficient. It is noteworthy that with this material, aided proportionately with skilled men, an experiment in piece-work was successful.§

Under the Mansion House Committee only one grade of works was possible, whereas the applicants were mixed; and as the conditions were found to be too good for casual labourers the offer was subsequently confined to men accustomed to regular work. The Committee thus achieved a comparative success, with the class for which the conditions of the work were designed, by the total exclusion of the inferior class. The Central Committee of Mr. Long's scheme and the Central Body were less successful with both classes because insufficient efforts were made by the local committees to separate them.

(x) It is obvious, however, that the exclusion of the classes below those for which the conditions of the works are designed, while it is essential to the success of the works, leaves the excluded classes as a problem still to be faced. Under the London scheme just mentioned the great mass of the casual labourers who formed a large proportion of the applicants would have been left unhelped. But this class included at that time a considerable element of genuine unemployment. And it is in practice impossible to secure on a large scale careful classification and selection when such selection means the exclusion of any class who appear to the selecting committees to have a real claim to consideration. The next step would, therefore, have been (had time and resources permitted) to establish a lower grade of relief works adapted to this lower class. It is difficult, however, to devise conditions which, while including adequate maintenance, shall not be unduly attractive to a class accustomed to so low a standard of ordinary life. It is conceivable that a lower grade of temporary colony half-way between the existing relief works and the Poor Law might have been formed by means of the modified workhouse test combined with the employment of the men in the country under conditions which, while not degrading in themselves, should have involved liability to prosecution for refusal to work or observe discipline.

(xi) The problem of the casual labourers is, however, to so large an extent one of defective ordinary employment rather than one of unemployment, and when, as in times of exceptional depression, unemployment supervenes, the two elements are so inextricably intermingled, that temporary relief works cannot do much good. Remedies must be sought rather in the direction of the regularising of employment and the reduction of the present fluctuating demand for casual labour and the consequent speculative excess of supply. But, however thoroughly this was achieved, the need for occasional relief works would remain. The decasualisation of employment in so far as it was complete, would divide the present casual labour class into two, one section regularly employed, the other totally unemployed, and therefore practically unemployable. These would have to be provided for as a special problem for a limited time, similar to that attempted by the Mansion House Committee of 1892, after the re-organisation at the London docks. But the process would be a gradual one, both as regards industry in general and as regards the individuals concerned. However limited the opportunities for partial employment, there would still be a certain amount of casual demand, and this would be relatively increased in times of depression. There would also be amongst individuals a continual struggle for employability, and a period of depression would, through the competition of men usually in regular work, force many marginal cases down into the totally unemployed class. Unless these were to be left to become permanently unemployable there would occasionally be a demand for suitable relief works.

(xii) Even assuming that conditions could be devised suitable for the temporary relief of casual labourers during periods of exceptional depression, the success of such relief works would again depend upon the exclusion of a still lower class—those who are not normally members of the industrial army at all—the unemployable. It is because it cannot legally exclude the lowest class that the Poor Law is unsuitable for the temporary relief of the classes above. This was one reason for the non-success of the extensions of Poor Law administration previous to 1834. The relief works known as parish employment, for instance, failed because, as the men employed were well aware, "they must have their 12s. a week . . . whether they worked or not."* The establishment of the workhouse test as a condition of the minimum that alone could be legally demanded, rendered classification possible; but just as high-grade relief works fail because selecting committees will not, for want of alternative works, exclude

casual labourers, so low-grade relief works would fail through the inclusion of a still lower class if such committees should not recognise in the Poor Law some satisfactory alternative. The workhouse is not a satisfactory alternative, and experiments should be made with some form of detention colony, the methods of which should be disciplinary, while its aim should be as far as possible reformatory.

(xiii) Certain conclusions as to the form of authority suitable for the organisation and conduct of relief works follow from the above analysis of their proper aims and methods. They must be kept distinct from ordinary employment, and dissimilar to it, in order that they may be made less attractive without tending to lower its standards. They require a special form of supervision, the aim of which is to judge the amount of effort made by each man, apart altogether from the amount of output. The ordinary clerk of the works or surveyor usually begins by expecting too much from the men and ends by demanding too little. The selection of applicants should be based upon conformity to general principles and kept entirely free from local personal influences. The cost of the works and the responsibility for the administration should not fall exclusively upon the localities where the distress is greatest, and the leisure for public duties least, unless the local areas are large enough to include the wealthier districts with which the distressed part is connected.

In all these ways the Central Body for London, in spite of its defective constitution, possessed advantages over any existing authority. It had no function other than the relief of distress and the provision of remedies for unemployment. It controlled no ordinary employment with which the relief works could be confused, and had no ordinary employees who could be demoralised by working with the incompetent. It could train its own foremen in the peculiar standard and methods required. It could build up a body of doctrine on the subject and apply general principles to the selection and dismissal of applicants; and it could bring the financial and personal resources of the wealthier districts of London to the assistance of the poorer parts of a great portion of the same industrial area. Finally, its interest in the problem would not be confined to the periods of excitement when the question was forced to the front, but would continue during the fruitful periods of quiescence when the demands of reviving industry automatically sift to a large extent the higher ranks of the unemployed.

78373. (*Chairman.*) I only propose to examine you on three points. The first is what was the class who under the Unemployed Workmen Act were employed or relieved; next, the kind of work that was given to them and its result; and lastly, the cost. In Paragraph 47, you describe the classification of applicants under Mr. Long's scheme, which was prior to the Act?—They are divided into two classes, first, those who are respectable men, temporarily distressed owing to the inability to obtain employment; and secondly, those who should be regarded as ordinary applicants for Poor Law relief.

78374. Had you any experience before of Poor Law work or of work germane or similar to Poor Law work?—Not before the formation of the Mansion House Committee.

78375. Then you would not be able to answer the question as to whether there was a substantial difference between those persons who came up as able-bodied and those who applied to the Poor Law for relief?—No, not so far as the applicants were concerned.

78376. I see you have made an analysis of both their ages and their employment. Both as regards the Mansion House Committee and the Central Body, I observe that the overwhelming proportion of those who came up or applied for assistance, were under forty years of age?—Yes. The figures I have given in the text (Paragraph 45) are of those who were employed; but I have had the figures taken out for those who applied to the Central Body, and the percentage comes to the same as in the case of those who were employed by the Central Body.

78377. The age of the applicants is much the same, you mean?—It comes to much the same as in the case of those who were employed.

78378. The younger a person is who is in distress, I suppose the greater would be the assumption that he was not a person who was in regular employment under ordinary circumstances?—The same form which gave the fact of his age, would give the facts as to his past employment.

78379. Now we will pass on to the question of employment, that is given in the next Tables, from which I see that 11 per cent. are given as "casual or under three months." What does that mean? Does it mean to say that they had not been employed for more than three months at a time?—That would mean that that was the longest employment recorded on the paper, that the longest employer's reference that they could give us would be something under three months.

78380. The next would be longer, for I see that 12.9 per cent. had been employed from three months to one year?—Yes.

78381. And the next class from one to five years?—Yes.

78382. The figures would rather point to the fact that the great majority of these were persons who, under ordinary conditions, had some regularity of employment, would it not?—Yes. There is a considerable difference between the two sets of figures. Under the Mansion House Committee, when that particular class of regular workers was very definitely aimed at by a Central Committee which could control the selection, there was a much smaller percentage of casual labourers, the percentage of those having under one year's record being 12.4 as against 24 per cent. under the Central Body; but there was a large body in both who had a past record of long continuous employment with a single employer, or of connection with a single employer.

78383. Then you refer to Class (1) (c) (casual labourers); those under that head you consider came in under the terms of Mr. Long's scheme?—I think the casual labourers in Class (1) (c) did come under Mr. Long's scheme, because in a time of serious depression even the casual labourer would be in exceptional distress.

78384. This was new work to you; what was your impression on examining them? Should you say that the partition between bare ability for self-support and indigence would in the vast majority of these cases, in ordinary times, be very thin?—I have very little experience of the applicants as they come to the distress committees. I had a little experience at the time of the Mansion House Committee, and there, I think, we were dealing at first with practically a Poor Law class. Later on, I have only come into contact with those who have passed through the sieve.

78385. And you would only be able to give an opinion as regards those who had actually passed through the sieve and were relieved?—Yes.

78386. Now, coming to the work, there was a great difficulty in complying with the conditions as to the work, was there not? You had considerable difficulty, had you not, in deciding what class of work to give them?—There was great difficulty in obtaining any work at all.

78387. You set up no special work of your own, did you?—The only work which either of the Central Committees could control of its own was the labour colony at Hollesley Bay, which, at the most, would accommodate about 350 men. For all other work, contracts had to be made with authorities or persons who had access to land, which we had not.

78388. Was it through your instrumentality that contracts were made?—The contracts were made through our instrumentality.

78389. With whom were they made?—Under the Mansion House Committee they were made with the Salvation Army Colony at Hadleigh, and with the proprietor of Osea Island, which was an estate being laid out for semi-philanthropic purposes. Under Mr. Long's scheme, contracts were made with Hadleigh again, with the London County Council, with the Garden City Company, and with the Office of Works.

78390. Do you give figures showing the proportion of those to whom employment was given, as compared with the number of applicants?—Yes, I have given the figures for the Central Body in Paragraph 30, and for Mr. Long's scheme in Paragraph 19. Under Mr. Long's scheme

Length of
previous job
of applicants

Percentage
of casually
employed
men relieved
by Mansion
House
Committee
and by

Numbers
employed
under Mr.
Long's
scheme and
Unemploye
Workmen
Act.

there were 45,000 applicants, and 3,500 received employment; under the Central Body there were 39,800 registered and about 5,000 received employment.

78391. What was the proportion under Mr. Long's scheme of the men who had passed through the sieve and who got employment?—That is a figure which it would be very difficult to give, because the sieve, under Mr. Long's scheme especially, meant such very different things. One joint committee, for instance, passed through the sieve the whole number of the applicants, while another passed a very small percentage.

78392. The sieves were of very different sizes, then?—Yes, they were.

78393. I suppose you could give the figures of the proportion under the Act?—I could obtain them, but I have not got them. The sieve varied there, though not to the same extent.

78394. What sort of proportion would this 5,000, of which you have just spoken, bear to all those who passed through the sieve?—The particulars for each committee are found in the Report of the Central Body, but the total was not given for that very reason that the figures are really incomparable.

78395. You have found employment for 5,000 persons for a period of from fourteen to fifteen weeks, I see?—Yes.

78396. And you emigrated 350 families?—Yes.

78397. The expenditure being about £50,000?—Yes.

78398. Have you any lists of the number of dependents of these 5,000?—No, I have not. The average under the Mansion House Committee was about two and a fraction, or three and a fraction including the wife.

78399. Then I assume we may take them as something between two and three?—Yes, there would be between two and three children.

78400. You are the late clerk to the Central Unemployed Body; when did you resign?—A year ago.

78401. So you would have no information as to what the result on individuals of giving them work has been?—I have no information subsequent to about June, 1906, and that information was very imperfect, giving only the fact that so many were in work on a given day in June. That information I put in as an appendix.

78402. (Mr. Nunn.) Do you attach any value to that June return?—I do not. It may be a correct statement of "in work" or "out-of-work" on the day of the visit, but I should not attach any importance to conclusions drawn from it.

78403. (Chairman.) You have practically spent £50,000, you have relieved 5,000 individuals and emigrated 350 families?—Yes. That £50,000 includes the setting-up of the machinery which would deal in time or could have dealt with a very much larger number.

78404. What is your idea—you have had time to think over it—of the result of this work of the Central Unemployed Body? Do you think it has made any impression for good upon the class of persons who came up for relief; or do you think the effect has only at best been of a very temporary character?—I think the effect upon the persons brought up has probably been of only a very temporary character, largely because there has been such an extraordinary prolongation of the depression in London in the building and docks trades. Whether it is only a temporary depression or whether it is a permanent shifting of industry, it is difficult to say; but that fact has prevented the experiment of tiding men over the depression from having a chance of being carried out. There has been too long a depression.

78405. You have thought over this matter; should you say that the depression was anything exceptional?—Distinctly it is exceptional in length, but I do not know whether this depression is exceptional in intensity as compared with other depressions.

78406. Was it mainly due to the building trade, or was it general?—It was very largely in the building trade. The building trade failed to recover with the general trade of the country, as evidenced by the "Labour Gazette" figures, and there are no other figures.

78407. Was there any considerable proportion of skilled workmen or persons who had been skilled workmen who applied?—Skill is of very various degrees. Of the highly-skilled workmen only a very small proportion applied; that does not mean that there were only a small proportion of such men out of work.

78408. Then the bulk would be of unskilled labour? I will divide the unskilled labour into two grades, and I will take first rather the better class of unskilled labour which gets regular employment, and I will take secondly that which picks up casual jobs. To which section do the majority of the applicants belong?—I should say, as far as I know, the majority of the applicants would belong to the second class.

78409. If that is so it would almost follow that their conditions were only a little bit below what they normally were at the time of relief?—I do not know that that follows. A man might be casually employed, going from employer to employer picking up odd jobs, and yet if there were a depression that might make all the difference between an average of three days a week and an average of three days in four weeks.

78410. Do you mean that there would be a very small margin which, in ordinary times, would enable him to keep himself?—Yes. The wages for three days a week casual labour are not always small, of course; in some branches of the docks they are very good.

78411. Had you many dockers?—At first, under the Mansion House Committee, we had all dockers. I do not know what proportion got through in later committees.

78412. Did you investigate at all what their impression has been on this point; it has been stated to us that there is a tendency rather for people to put themselves down as dockers when they are out of employment?—There is a tendency for men to put themselves down as unskilled labourers when they are out of work, because of the impression that the work to be given would be labouring work, but I am inclined to think that the actual description of "waterside labourer" would not be very largely used by men except in the dock districts, and in the dock districts the unskilled labourer would have drifted to the docks.

78413. Did you visit Hollesley Bay at all?—Yes, three or four times.

78414. How long was it in working operation whilst you were clerk to the Central Body?—About twenty months, taking Mr. Long's scheme and the Central Body together.

78415. Have you traced or kept touch at all with the results of the training of the people who have been there?—No, I have had no opportunity.

78416. Then you would not be able to say whether it had permanently set a certain number of persons on their legs and enabled them to become independent, self-supporting members of the community?—I doubt if the actual training would have done so, except in the cases of those who were emigrated, because at the time I was there, at all events, there was no immediate outlet for the trained men in England, and the period of their training had not been of sufficient length to enable men to take advantage of what outlets there might be.

78417. A witness yesterday, Mr. Gerald Balfour, who was responsible for the Act of 1905, described it as an attempt to classify able-bodied labour so that there might be a distinction between those who were respectable and trying to maintain themselves, and those who go to the Poor Law. Would you accept that as a correct description of the work that you had to do?—Yes, I should think that would be a correct description of one side of it—that side which dealt with the selection of men for assistance.

78418. Do you think it is necessary to have two tribunals—a tribunal in addition to the Poor Law to deal with this class of case?—I think it is necessary to have a means of dealing with them separate from the assistance which can be legally demanded, because the assistance which can be legally demanded, cannot be refused to the lowest class, and, therefore, is unsuitable for the higher class.

78419. Then you would put the applicant in a position in which he could not legally demand assistance, and you would put the authority who gave that assistance in the position of attaching conditions to it?—Yes, conditions as to the eligibility of the applicant.

Mr. Harry R. Maynard.
15 Oct., 1907.

Skilled and unskilled applicants for relief.

Effect of depression on casual labourers.

Dockers applying for relief.

Hollesley Bay.

Function of Unemployed Workmen Act.

Necessity for treatment of respectable unemployed separately from Poor Law.

Conditions which should attach to relief.

Mr. Harry R. Maynard. 78420. I think in Paragraph 59 (vii.) you have enumerated the tests which you found most effective, namely, "residence involving a certain amount of discipline, remuneration not in the form of money payment to the men, and distance of the work from the men's homes" ? —My impression is that the colony system forms the best test, at all events at the outset, but there is evidence to show in the actual experience of existing colonies that the best is not so deterrent after the men have had experience of the colonies. I am told that is chiefly so at Hollesley Bay, where perhaps the conditions are rather easier than they have been at some of the other colonies.

15 Oct., 1907. Colony system as a test of un-employment. The object of a test. 78421. "Deterrent" is the word I used, but perhaps it is not quite the correct word. You do not want to deter people who are respectable, and who wish to get employment; what you want really to do is to impose a test rather ?—Yes, you want to impose a test which shall balance the comparative ease of relief works, in order to make sure that they are not being preferred to ordinary employment.

Advantages of "distance" test. 78422. Have you any suggestion to make about the tests ? Do you think there could be any improvement on the tests that were imposed ?—I think the test of distance is a very simple and easily applied one, and one which has the particular value of having no sort of degradation or deprivation in it, compared, for instance, with entering into an institution or a low form of remuneration.

78423. The distance test, has, I suppose, the disadvantage of disconnecting a man from his family for the time being ?—The colony system, which is the extreme form of the distance test, has; but the mere distance that involves a long daily walk or journey has not.

78424. Do you think that is a good test ?—Yes, I think that has proved in practice to be a useful test.

78425. Of course, it is a physical test which entails fatigue in addition to the work to be done ?—Yes, but the work to be done usually has to be rather short hours in order to prevent the pay being too attractive, and the physical demands of the work are often comparatively small.

Question of remuneration on relief works. 78426. Had you difficulties about remuneration, because certain applicants would be much better qualified, or would have more experience with the work that they were put to do than others, though they might not necessarily be the most respectable or most deserving ?—This is one of the fundamental difficulties of all relief work since the aim of the supervision has to be to judge the effort of the men and not the result. It is that which makes piece-work remuneration so difficult, though that would otherwise be the best test.

78427. I suppose you would try to fix your remuneration so that even a capable piece-worker would not be able to obtain sufficient to put him in a better position, or really in quite as good a position, as an independent labourer doing the same class of work ?—In practice, we were unable to try piece-work at all, and where the payment was in wages they always paid at time rates, which were in very many cases, fixed by the authority with whom the committee was making its contract.

Supervision on relief works. 78428. I assume you had to have a close supervision and a considerable number of supervisors ?—Yes. That was one of the difficulties of a large number of the works, for instance, in the London County Council parks. In our own colonies we could keep a superintendent over a large number of men, and pay him well, and really educate him at the same time; but where there was a great number of small jobs scattered about, we had to take ordinary foremen, and the supervision, in spite of a certain amount of central supervision, was really very defective.

78429. I assume you attach great importance to supervision ?—Yes, as much importance as to anything, but it has to be of a special kind, because you cannot judge the conduct of the men by their output, on relief work.

Difficulty of getting work for relief, and suggestions thereon. 78430. You had considerable difficulty, I suppose, in getting work, or in finding work ?—Yes.

78431. Have you any suggestions to make on that as regards the future ?—I do not know that it would be possible, but we had hoped that it would be possible with the aid of Government Departments, say, that access to land might have been obtained.

78432. Assuming that any system of this sort is to continue, what really seems wanted is to have some plan or scheme prepared in advance ?—Undoubtedly all the work on all the committees is hampered by having to make all the plans after the emergency has begun.

78433. What is the result now, putting it into pounds, shillings, and pence, of the work given, compared with what it would have been by independent labour or contract labour; in other words, what would have been the loss if you could put it into percentages ? Would it have been considerable ?—As far as I remember, it would vary from perhaps 25 per cent. to 50 per cent. In some cases it would be perhaps more, but where it was average, straightforward, unskilled work, without requiring a great amount of plant, it would be that.

78434. Was there much improvement in the amount of work done as the work progressed ?—A very general feature of all the works was the marked improvement in the output of the men as time went on, partly because the men start physically run down, and partly because they start more or less unused to the particular work, or a large number of them would be more or less unused to it.

78435. Had you to get rid of any ?—Yes. That varied in different works with the character of the supervision. I have stated the figures in Paragraph 26. Discharges of men from relief works.

78436. I see the proportion discharged was much larger in the colonies than in the London works ?—Discharged or left for insufficient reasons, yes.

78437. There was rather a sort of *émeute*, was there not, at one time ?—There were one or two events of that sort.

78438. If the quantity of work done steadily increased, I suppose we might infer that those employed were exerting themselves ?—Yes, I think there is no doubt about that. After the supervision and the test had had the weeding-out effect, for a time those who were left did undoubtedly try. The figures, as we can get them from the superintendents, seem to show that about one-third tried and were pretty good, about one-third tried and were not much good, and about one-third had either to be discharged or driven to it all the time, because they did not really make any effort.

78439. Now, about the physique of these men. What was the physique like ? I suppose very many of them were run down perhaps for want of food, and so on. Was the physique much below the average, generally ?—I do not know; no statistical inquiry was made into that.

78440. As regards the future, would you say that this Act ought to be renewed, and if renewed, would you renew it much in its present shape ?—I would hardly like to give a definite opinion upon the point whether it should be renewed or not. I think the experiment has been to some extent a useful one, and that it would be premature to bring the experiment to an end. Opinion as to value of Unemployed Workmen Act.

78441. I suppose, therefore, you would not care to commit yourself at all to suggestions as to what alterations you would make in the Act ?—No. I think I would rather confine myself to emphasis upon its weak points, which I have given in my Statement—the *personnel* of the committee, the absence of sources of employment, and the subordination of the central to the local, which is involved in the constitution of the committee. Weak points of Unemployed Workmen Act.

78442. The Central Body was set up after the local committees ?—It was, and that was a fatal defect in the starting of it.

78443. Assuming there is any work of this sort to be carried on in the future, do you think that there must be a Central Body ?—I think so, undoubtedly, otherwise you would get no kind of uniformity in the sort of assistance given and the class of men selected by the different localities. Necessity of having a Central Body.

78444. Assuming that uniformity is all-important, it therefore follows that you must have a Central Body ?—Yes, otherwise you would have the burden falling upon the districts least able to support it.

78445. (*Mr. Nunn.*) I do not know whether you have any suggestions to make as to one of the great difficulties which was encountered in the preliminary work of the unemployed body, namely, the difficulty of finding work for the men. Supposing the Act had to be renewed for a certain length of time, have you any suggestions by

which, for instance, the Central Unemployed Body might overtake the demand for work by providing it, or securing it?—I think the Central Body must have access to land somehow, and if there is any work of a more or less unskilled character which is of public utility and yet is not exactly within the province of, or is outside the powers of, any existing local authority, if there was some central department so that in some way the Central Body could be given access to that work, it would be of advantage. Take, for instance, the question of road improvement on a large scale for the general benefit, apart from the benefit of the particular county in which the road is, or take reclamation. If there were some Government Department through which the Central Body could be put into touch with that work, I think that would be one way in which the necessary employment outlets might be found.

78446. Would you limit the work that such a body could undertake to work of public utility which would not have been undertaken otherwise than as relief work?—Yes, because if it could be otherwise undertaken I think it would be much better that it should be put in hand by the authority properly charged with the duty of undertaking it, and carried out under ordinary contract conditions.

78447. Are you familiar with the return moved for by Mr. Whitmore in the House of Commons as to the work performed by local authorities in connection with relief?—No, I am not.

78448. I have no doubt you have come to some conclusions, however, on the question of the employment-relief given by borough councils and other local authorities?—Yes. I think that is subject to several very serious defects. In the first place there is the tendency to make it intermittent, in order to cover the largest number possible. In the second place, there is the tendency not to take it seriously in the way of supervision, or in the selection of the men, and connected with that there is an absence of the particular kind of supervision which relief works require. Supervision on borough council works is naturally, under the ordinary borough councils, put under their surveyor, who tends, as I say in my statement, either to expect far too much from the men, or to expect far too little. Finally, it has the disadvantage that it leads the unemployed in the borough where the unemployment exists to look to the local authority for local assistance, thereby tending to stereotype the unemployed conditions in the district.

78449. From the point of view of the local authority, I suppose it leads the local authority to obtain less valuable assistance though paying a possibly remunerative rate of wages?—Yes, if the work is useful.

78450. And work which the ratepayers look to have performed efficiently?—Yes; it tends to demoralise the ordinary employees.

78451. You are not prepared, I understand, therefore to risk throwing out a certain number of regular labourers either in the present or in the future by anticipating work in order that the present unemployed might reap the benefit?—The question of anticipation would depend upon the prospects of the labour market in the district. If an anticipation of work at one time meant that there would be more work in that district in bad times and less in good times, I should have no objection, because it would tend to regularise the employment demand there, and as an irregular demand tends to create a speculative excess of supply, the regularising of the demand might really be a condition of any real alleviation of the problem.

78452. Do you think it often happens that anticipated work does not throw out of work in the future regular workmen who are looking forward to it—of course, it is impossible to give an exact answer to the question, I am aware?—I can conceive of cases where painting work, for instance, done in a time of depression in the painting trade, supposing the weather conditions permitted, would relieve distress during the depressed period without causing any real hardship during the busy period if the busy period is one of great pressure in that trade. I omit for the present any consideration whether it is desirable to help a seasonal trade in that way.

78453. That would not apply to road works as much as it would to such a trade as the painting trade, and I suppose you would say that the less seasonal a trade is the less it would apply?—Yes, it would apply less to the trade which was less seasonal. It would apply to any anticipation over a long cyclical period, and if at the time that the work would otherwise have been done there were plenty of alternative occupations, the hardship to the men disappointed of it would not be so great as the hardship that is going on in the depressed period.

78454. Now as to another difficulty that you alluded to. Supposing the Act had to be temporarily re-enacted—for a time I mean only—have you any suggestions to make as to the importance of getting the central body to work before the local committees made all their arrangements? I think you have mentioned that as a defect in the Act?—Yes, I have mentioned that as a defect, because it weakens the central control over the local. You cannot plan out the work of the local bodies, or give them instructions as to what class of men to select, or how to carry out the inquiry, if the central body is not in existence first. I only object to that because I object to the central body being in a subordinate position to the local body, or not having complete control. That object might be attained by a different form of central body more efficiently than by a mere alteration in the time of its meeting. The central body being formed by delegation of local committees was a necessity when it was determined that it should be formed later than they were.

78455. If the Act were generally re-enacted for a year, or two years, do you think it would meet the case if the present unemployed body were given provisional powers to carry it over the interval between the expiration of the present Act and the formation of the new central body by the distress committees, so as to prevent any hiatus?—as a mere temporary expedient?

78456. If the Act has to be prolonged for a time that would be a serious question in the immediate future, would it not?—Yes, if the present central body should lapse and a new one have to be created after the distress committees were formed. Certainly, as a temporary measure, I should think that would be very advisable.

78457. With regard to the regulations of the Local Government Board, and especially those relating to the inquiries, have you any fresh suggestions to make as to an alteration of the machinery for making inquiries in order to get more closely to the applicants if one actually wanted to do so? Would you, for instance, extend the inquiries any further than those of the relieving officer and the employers, or would you extend the term over which you would inquire into previous employment?—I would not extend the term in so many words, but I should certainly like to see reintroduced the definite question as to the longest employment, coupled with the essential explanations which would make the inquiry efficient where there was a long gap between the longest employment and the application to the distress committee. That gap was bridged in a way by the five years' inquiry, but the five years' inquiry strictly applied was a very inquisitorial sort of thing.

78458. I think the regulations of the Local Government Board contemplated that a preliminary classification of the unemployed would be made, dividing them first of all into those who were actually unemployed from a variety of circumstances, and, secondly, taking out of those a special class of persons who not only were out of employment, but had been in regular employment and had been thrifty and well-conducted, and giving preference to those who were in this latter smaller class?—Yes, I believe that was so.

78459. To what extent do you think that was actually carried out by the distress committees?—My impression is that it was not carried out to any great extent except in a few instances. I consider that to be chiefly due to the fact that distress committees will not make the selection and classify them when classification means that any class whom they consider worthy of assistance would be left entirely unassisted; whereas, from the central point of view, it is extremely desirable that the class selected should be the class to whose ordinary conditions of life the conditions of relief works were appropriate.

Mr. Harry R. Maynard.
15 Oct., 1907.

Unsatisfactory relation of Central Body to Distress Committees, and suggested alterations thereof.

Suggested changes in form of inquiries into applicants' past.

Classification of applicants, how far properly carried out by Distress Committees.

The Right
Hon. Walter
Long, M.P.

The Right Hon. WALTER LONG, M.P., called; and Examined.

15 Oct., 1907. 78460. (Chairman.) You were at one time President of the Local Government Board?—Yes.

78461. You have been good enough to send in a statement, which we will take as your evidence in chief if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

Conditions
necessitating
legislation
on un-
employed
question in
1904.

1. The reasons which led me to come to the conclusion that some special legislation was necessary in order to deal with the unemployed question, were in the main as follows:—

2. First, there could be no doubt that for various reasons the difficulty of dealing with the unemployed had become more acute—whether there were actually more unemployed people than there had been it is very difficult to say, because the available statistics apply only to skilled labour, but there was this evidence that an increasing number of boards of guardians throughout the country were asking for guidance and calling the attention of the department to the increasing pressure of the unemployed problem. Processions through the streets and various other methods of public appeal led to considerable sums of money being subscribed which were really wasted. There was no proper supervision over the expenditure and no real effort was made to improve permanently the physical or mental condition of those who received assistance, and owing to the absence of any recognised authority to deal with the question there was an entire absence of that discrimination which is essential if any good is to be done at all.

3. What happened was, roughly speaking, this—as soon as the weather became bad and the numbers of the unemployed considerable, applications were made to the boards of guardians, who dealt with a certain proportion of the applicants in the ordinary way by opening stone-yards, etc., and appeals were also made to the municipal authorities, who found employment for a certain number of the unemployed on the streets—sweeping and scavenging—or in any other work which they found themselves able to carry out. The result of these two systems was that a certain number of respectable people who had become unemployed, in many cases through no fault of their own, were made paupers. They lost all heart and confidence, and they turned, not I think unnaturally, to the counsel given them by those who wished them to believe that the entire blame for all that was going on was due to the condition of society.

4. The work done by the municipal authorities was both extravagant and inefficient—extravagant because men were paid wages which they did not earn; inefficient because the foremen or gangers, whose business it was to superintend the work, while fully capable of getting full value out of able-bodied and capable workmen, had no experience of dealing with men who, through want or physical infirmity, were not able to give a full day's work in return for the wages paid.

5. It appeared to me to be desirable to set up some authority, independent of the Poor Law, to whom applications could be made, who could, if they had the machinery in existence, sift all the applications, separate the sheep from the goats and then make certain experiments in regard to the deserving applicants with a view not only to giving them temporary employment, but also with a view to securing their permanent re-establishment, so that they might become self-supporting citizens in future.

6. In regard to emigration, representations were made to me by people representing the colonies that there was the greatest objection to emigrants being sent out by boards of guardians. Even though they might not be actually paupers it was considered by the colonies that the fact that the board of guardians sent them out made it almost inevitable that they should be in some way affected by the taint of pauperism.

7. Then, again, there was no means by which it was possible to ascertain what the conditions of labour were in different parts of the country. In one part, labour might be comparatively speaking scarce, whereas in another, there might at the same time be a redundancy; but there was no central body able to ascertain these facts

and place them at the disposal of the unemployed. For these reasons I thought that there ought to be a central body who should have some permanent machinery ready to hand, and who would be able to deal with any funds which might be provided for the purpose.

8. I think if these experiments had been carried on Advantage carefully and continuously, by this time there ought of Mr. Long's scheme. to have been some useful information available as to the proportion of *bona fide* applicants among the crowds who claim the sympathy of the public as unemployed. I of course admit that the problem is one of extreme difficulty, and I do not for a moment suggest that my plan—which was somewhat hurriedly conceived—is not full of flaws, but, at all events at present, it is the only plan which has been suggested by anybody to meet the difficulty. I am confident that some *via media* must be discovered between the extreme school, who, on the one hand, say that the Poor Law is sufficient and that everybody who cannot get work must be offered the workhouse, and the other extreme school who say that the State must employ everybody whether good or bad.

9. It is, of course, difficult to find out what is the precise Difficulty of cost to the rates. For instance, during the winter of discovering 1902-3, when many of the borough councils in London cost to the were employing crowds of so-called unemployed, there rates. was no record kept of the additional cost to the rates involved in so doing. It was known, of course, that so many extra men were being employed, and the amount of their wages could be ascertained, but that only tells part of the story.

10. I am informed on reliable authority that some Value of extremely useful experiments have been made at Hollesley Bay, where a certain number of unemployed have been Bay. proved to be genuine and have taken advantage of the opportunity offered them to really learn how to cultivate their land to a profit. If an opening can be found for men like these, it would no longer be possible for people to say, as they do now, "that there is no chance for a man if he fails to get employment." I personally investigated a great many cases and ascertained beyond any question of doubt that failure to get work was in no way the fault of the individual. The really sad cases are not the Effects of creation of one year. The man who is really industrious unemploy- and wants to be self-supporting goes through many ment. privations before he allows himself to be described as an unemployed. He gives up his cottage as well as his furniture, and takes to two rooms, and then finally to one. He tramps the country for miles in all directions only to come home to find his children crying for the bread he cannot give them. The effect of this is to bring him down in spirit and in health, and to force him into the ranks of the discontented.

11. Paupers are manufactured out of the weakly, Objects of thriftless, intemperate and idle. The object of the Poor Poor Law Law, in my judgment, is to check this manufacture by and of imposing upon those who are thriftless, idle or intemperate Unemployed Workmen Act. the strictest possible regulations, and to provide proper infirmary accommodation for those who are physically broken down. But for the other class—the men who want work and can't get it and who have nobody to turn to to ask for guidance or from whom to obtain information—that these people should be manufactured into paupers seems to me to be a national crime, and it was to deal with these cases that the Unemployed Workmen Act was passed.

12. The fault of the present system is, in my judgment, Evil of that pauperism is manufactured out of materials which present Poor ought not to be used for the purpose: strong, healthy Law system. industrious men are by force of circumstances turned into paupers and added to the ranks of those I have described above. It appears to me to be unjust to them and injurious to society as a whole, and it is in order to remedy this that I think some fresh powers and new machinery are required.

13. The method of testing and sifting should be of Necessity for the most rigorous kind. The regulations upon a farm strict testing colony should be very strictly enforced; nobody should and sifting. be kept there who was found to be a wastrel, but should be sent to the workhouse and treated accordingly. But I believe there is room for great improvement in the

districts.

direction I have indicated if only there be an adequate staff and machinery in existence.

14. So far, I have dealt only with the history of the Unemployed Workmen Act, but I am told that the Commission would be glad to have my views as to any changes in the law that it is desirable to make.

15. I am strongly of opinion that there ought to be some separate organisation to deal with the unemployed question. To mix it up with the ordinary Poor Law is, in the first place, to throw an undue burden on the guardians; in the second place, to introduce the taint of pauperism; and, in the third place, to limit the administration to the existing Poor Law divisions—whereas, if it is to be effective it should cover as wide an area as possible. I also think it desirable that some grant of public money should be made, as the present President of the Local Government Board has done, in order that the Unemployed Committee—or whatever the body is called—may be able to carry on certain carefully thought out experiments. To denounce this as Socialism is, in my judgment, a great mistake. After all, the State and the rates have to keep the drunken, lazy, ne'er-do-wells, who have to take refuge in the workhouse through their own folly, and they have to maintain in the workhouse those who drift there through misfortune. While the former class ought to be, and can be, reduced by strict administration, the latter can, I believe, be reduced, if not altogether got rid of, by some machinery such as that which I have described.

16. Unless the body appointed to deal with the unemployed problem have some means at their disposal, it is obvious that they cannot carry out their experiments long enough to be able to arrive at definite conclusions. If we are to meet effectively the demand for universal State employment we must strive at all events to remove the grievance which undoubtedly exists when a man is able to say that he has done his utmost to find employment and has been compelled to choose between the workhouse and emigration, even though there may be employment to be had in some parts of the country. I would therefore maintain the Unemployed Committee, putting them under the Local Government Board as they are now, and enabling this Department to finance them from time to time, in order that, subject to the approval and control of the Department, they may carry on practical experiments in the shape of farm colonies and in other forms of labour.

17. I should like to be allowed to say a word as to the Local Government Board. I have frequently urged that this Department ought to be given the *status* of a Secretaryship of State. There is no justification for the difference in dignity and in pay between the Home Office and the Local Government Board, and I believe that a comparison of the duties of the two will show that the Local Government Board has now much more work to do than the Home Office, and certainly work of at least as important a character. The great bulk of our social legislation is either introduced by the Local Government Board or has to be considered in some of its details by that Department, and there is no doubt that the fact that the head of one Department is President while the head of the other is Secretary of State tends to unfair comparisons being drawn and to the weakening of the position and lessening of the authority of the Local Government Board.

78462. (*Chairman.*) Mr. Gerald Balfour gave evidence yesterday, and there are two questions, I think, that we should like you to answer. The first is whether there was a class which you thought required treatment other than that which the boards of guardians could give to them, and, secondly, whether, that being so, it was advisable to set up a second tribunal. As I understand, you found before you issued your Memorandum that in a considerable number of places there was a kind of questionably legal assistance being given to this particular class?—Yes; that had been the practice for some considerable number of years. I do not think it ought to be described as a class; there was a certain number of people who clamoured for assistance when the pressure of the bad times became acute; and in order to avoid the pauperism which follows from relief from the guardians municipal bodies took the relief on their own shoulders, and gave it in the form which I have described in my statement.

78463. Therefore your Memorandum really did not start this system, it was in force?—You mean the Memorandum which was issued when I was at the Local Government Board?

The Right Hon. Walter Long, M.P.

15 Oct., 1907.

78464. Yes, that Memorandum. This system was in force, and your idea was rather to regularise it?—Quite; and not only to regularise it, but to secure some more beneficial results.

Mr. Long's Memorandum

78465. The results were not satisfactory before, were they?—Not at the time, because, in the first place, the municipal bodies who took this work in hand had to carry it out with their ordinary machinery, which consisted of surveyors and their subordinates, and neither the surveyors nor the subordinates were accustomed to deal with men who in some cases were not able to give an honest day's work for an honest day's wage; and, therefore, when they estimated the value of the labour given by a labouring man in return for his pay they were quite unable to make allowances for the condition of the man's health, or for his previous want of training for the work upon which he was engaged. Consequently they, I think properly, said that they did not care to employ that class of man; they were not qualified to deal with him; he did not give a proper return for the money paid for his labour, and they took no interest in him. They realised that he was a discredit to them; and they did not feel that it was part of their work, as in fact it was not, to, as it were, lead the man on until he found himself able to give a better return. Therefore the results were unsatisfactory in the sense that they did not leave the man after he had had this employment better than they found him. Then further than that, there was this very great objection: The municipalities, of course, took this work on as extra work, and according to their powers they did their best to meet what appeared to them to be an almost overwhelming difficulty; they could not possibly find work for all the unemployed; consequently they adopted what I have always regarded as a most unfortunate shift. They gave the men so much work apiece; that is to say, supposing they had 1,000 men and they only had work for 200 men, instead of saying: We will submit these 1,000 men to severe tests, and then take the 200 that appear after that examination to be most likely to be improved and helped by that employment, we will give work to 200 men on five days; therefore you had 200 men employed on the Monday, 200 on the Tuesday, 200 on the Wednesday, and so on. If the number was not so great or greater you may alter the figures. The result of that was that by this endeavour to relieve the unemployed you were leaving out of account the good men; there was no discrimination between the good and the bad, and you were playing into the hands of the loafer who got his one or two days' work a week and loafed the rest of the time. He took his money and came back for his day or two next week, and this lasted as long as popular opinion seemed to justify the municipality paying extra money in order to employ an extra number of people. Therefore from both points of view the experiment was undoubtedly, in my judgment, a failure.

78466. I think it has been alleged, if not asserted, in some of the evidence that has come before us that this very class who thus get these two or three days' work a week, the loafing class, seem to think they have a right to get this employment?—Certainly. I have no doubt that the same thing will happen again if nothing is done to provide proper machinery. It is all forgotten now, but during the eighteen months that the pressure of the unemployed was growing, the methods adopted by the unemployed towards all the authorities, municipal and Poor Law, were violent in the extreme. There were crowds besieging the offices of the relieving officers and boards of guardians in London, in Leeds, in Liverpool, in Manchester, in Birmingham, and all our great cities where the unemployed difficulty arose in an acute form; the boards of guardians could hardly sit in some places without safeguarding their doors, which were besieged by a crowd of people demanding assistance. In the same way when it was found that the relief given by the guardians brought in its train pauperism and deprivation of all civil rights, they turned their attention to the municipalities, and demanded that great works should be carried out by the municipalities on which they should be employed.

Attitude of the unemployed demand for assistance.

able un-
employed.

78467. Mr. Balfour described the Act for which he was responsible, although I think the greater part was framed during your term of office as President?—The original Bill was framed while I was at the Local Government Board.

78468. He described it as an attempt to classify the able-bodied seeking employment. Would you take that as an accurate description?—I am afraid I should hardly agree with him in that. No, I do not think that would be an accurate description, for this reason—that I should leave out altogether the question of able-bodied. A great many of these men become unemployed not as the result of a month or two's difficulty, or even a winter's difficulty, but as the result of a series of years, sometimes running into five and six; they become necessarily deteriorated, not merely in mind, but actually in body, and in many cases they ought not to be regarded as able-bodied. I should prefer to describe it as an attempt to discriminate between the wastrel and the honest man who, whether strong in body or weak in body, is genuinely anxious to get employment, and ought to be helped to get it.

78469. I suppose by "able-bodied" Mr. Balfour meant those who were seeking employment. I suppose he used it perhaps not in a very technical sense?—I think perhaps in that sense it may be correct, if he meant that the object of the Act was to provide machinery by which those who were able to work could get work by legitimate means.

78470. The idea was when you framed your memorandum, and subsequently the Act, that it would provide relief for the class above that which resorted to the Poor Law?—Who have no alternative if they are penniless, they must go to the Poor Law; there is nothing else for them to do under the existing circumstances.

78471. It was not intended that this should be, as it were, another outlet for those who were in the habit of applying, or might at any moment apply, to the Poor Law; it was for a higher stratum, was it not?—It was certainly not intended to apply to those who were in the habit of applying for Poor Law relief, because those belong to the class who apply every year, many of whom come under the head of vagrants.

78472. The words of the Act are: "Any applicant honestly desirous of obtaining work, but who is temporarily unable to do so from exceptional causes over which he has no control"?—That is so.

78473. That, of course, would not include those who are chronically on the verge of destitution, although they may not have applied to the Poor Law?—No.

78474. Your Act was experimental, as you say. Have you been able to watch the results of it at all. Has it come out much as you thought it would?—I think on the whole it has, but I do not think that I can justify my opinion, because necessarily the opportunities for the Central Unemployed Body in London have been very limited. They have not had sufficient funds, and therefore they have been unable to carry their experiments really to a conclusion. My belief is that at all events these results, although they may be small, have shown that you have got machinery which enables you to apply tests to these people which enable you also to ascertain whether a man is a genuine seeker after work or whether he is a genuine seeker after living at somebody else's expense. I think further than that, in the case I mentioned in the memorandum that I sent to this Commission, the Hollesley Bay case (I have not visited Hollesley Bay myself, but I have interviewed the people who are employed there as over-men), men have been found who were genuinely willing to work, willing to learn, and who have become possible self-supporting citizens owing to the training they have had there.

78475. I see you are strongly of the opinion that for dealing with the class that you indicate there should be an authority other than the Poor Law?—I am.

78476. And you have thought that this body which was set up would be able to apply an adequate test to those, thus enabling them to decide whether a person was really genuinely desirous of maintaining himself by work or whether he was merely a loafer?—Yes. I should like to answer that by a short statement rather than a monosyllabic answer. What arose under the old conditions was

this: things went on, the onslaught was parried as best it might be until the time arrived when the door of the relieving officer, for instance (taking the case of the guardians), was besieged by a hungry crowd. It happened in a variety of cases that really in order to avoid greater difficulty, really in order to prevent the people starving, orders were given for relief in the form of food, which were taken promiscuously by men both good and bad, and my idea was that machinery such as is to be found in the Unemployed Central Body would obviate that, because it would begin by doing the right thing, in my judgment—that is to say, apply tests which would enable the central body to discriminate between those who ought to be relieved on special terms and those who ought not.

78477. As regards the future, you, I think, in Paragraph 16 of your Statement, say you would maintain the unemployed committee, putting them under the Local Government Board as they are now, and enable this Department to finance them from time to time, in order that, subject to the approval and control of the Department, they may carry on practical experiments in the shape of farm colonies and in other forms of labour?—Yes. I think it is most desirable that they should have an opportunity of making experiments. It is impossible for anybody, in my humble opinion, to say what would be the result of those experiments. The evidence that you get from abroad I do not think is very reliable, because the conditions and the tests vary so completely from those that are to be found in existence here, but I cannot believe it passes the wit of man to find means by which a man who is really anxious to work, but who, owing to unfortunate circumstances, is unable to find work, can be temporarily carried over the bad times and finally landed in a condition of mental and physical activity which will enable him, if he has the chance, to earn money for himself.

78478. The difficulty that has been suggested to us is that, assuming there was a committee permanently established such as you suggest, and they did carry on those experiments in the shape of colonies or other methods of labour, that they can only meet the demands of a very limited number of the applications made to them?—That, no doubt, is true.

78479. You have no idea, I think, of the local authorities preparing great schemes by which public employment on a large scale should be given?—Oh no.

78480. This really was, to use an expression that a previous witness did, a sort of sieve through which you thought persons who were entitled to live and whom you did not wish to pauperise might be tested?—Yes. The evidence of the absence of anything like a practical machinery was so extraordinary. It came to my knowledge just before I took the steps to which you have referred that actually here in London, where probably there is, or ought to be at all events, more information available than throughout the rest of the country, there was a borough in the North which had work which they wanted to have done, and had not enough people to do it, while in the South of London there were boroughs who were besieged by applications for employment and could not find work by any means for the people who sought it. It seemed to me to be extraordinary that there should be no machinery in this great metropolis by which these two extremes could be brought together.

78481. Therefore I suppose the idea of an exchange or labour bureau was part of the scheme which you had in mind?—Yes, but even without a labour bureau the mere fact that you had a central body which comprised the whole area and could obtain information and distribute that information, without the labour bureau, would of itself, it seems to me, deal with this particular difficulty. I remember a case that may interest the Commission; it does not apply to London. Mr. Carlile, of the Church Army, organised a scheme by which he got together a large number of people whom he found to be out of employment, and as to whom he made such investigations as were possible, and he took steps to make the thing known in the country that he had done this. What was the result? Certain people, amongst whom were some personal friends of my own, made up their minds that they would spend a little extra money

Injustice and disadvantage resulting from inferior status of Local Government Board.

on their estates that year, and they applied to Mr. Carlile, who sent them down a certain number of these people. I saw some of these men myself engaged in such work as hedging and ditching, and helping to clear underwood in the coverts, and I saw a considerable number of them on one occasion as beaters out shooting. I am not sure that that was the best place for them on the whole: they were somewhat inclined to get into dangerous positions and to solve the question for themselves of dealing with the unemployed, but apart from that they certainly did the work that was set them very well, and the employer was thoroughly satisfied with the result but of course the difficulty there was that, without any permanent body, when this temporary employment was over (it obviously could not last for ever) there was no machinery to take these men and send them on to places where they might be wanted.

78482. One of the difficulties that have been suggested to us is as to the nature of the remuneration which should be given to persons employed under these conditions. The remuneration must not be such as to attract persons in regular employment, or be in excess of what an independent labourer could obtain. I assume your idea was that the remuneration of the employment should be such as to interfere as little as possible with the regular labour market?—Certainly. That is always one of the very great difficulties that meets us in these cases. I remember in the case of a private enquiry which was held into General Booth's Submerged Tenth Scheme (there was a private committee formed, of which Lord Onslow was chairman and the present Lord James was a member, and I also was a member) we had an exhaustive enquiry, and the results of that enquiry were all published. One of the difficulties which presented itself there, dealing in a much more limited way with the question of the poor, was that by setting up an industry like the industry of buying wood wholesale and supplying it to these people to chop—they were allowed to sell it from barrows—it was, of course, proved that if a large organisation set to work to buy wood wholesale and distribute it amongst their beneficiaries, the result was to bring them into competition with those who were buying and chopping wood on their own account; therefore when you have to employ labour it is obvious you must not adopt a rate of wages, or a scheme of employment which, while it might relieve one man from destitution, would plunge two others into it. I do not think it is an insuperable difficulty at all. If a man is really genuine and wants to be extricated from the hopeless misery into which he has sunk, he will not quarrel over wages of a shilling or two shillings a week more or less. He will be too thankful to take the hand that is held out to him and do his own share towards his own extrication.

78483. You would like, so far as this unemployed question is concerned, the special machinery to be retained for the future with a view to carrying out further experiments in the direction you suggest?—I should.

78484. We do not want to trouble you with any questions about Poor Law administration, except upon one point. We have been giving a good deal of attention as to how we can improve the local administration of the Poor Law, and that naturally rather involves the status and organisation of the central authority. It is clear to us from the evidence given before us that the Local Government Board is very heavily worked. You have had a long experience there. Do you see any reason why with regard to that Department, which has, in addition to Poor Law duties to discharge other responsible work, the head of that Department should not be on the same footing as say the head of the Home Office?—I think it is a very profound misfortune that there should be these distinctions between high officers of State, and certainly in a Department like the Local Government Board it, to me, seems a grave injustice. I have had the advantage, and it is a very great advantage, of knowing the Local Government Board from service within for more than ten years. I was six years Parliamentary Secretary and for nearly five years President, therefore I have between ten and eleven years' personal knowledge of the Department. I have served in other Departments, and I do not hesitate to say that the work of that Department is far harder than the work of an average public Department. The hours worked by the permanent officials are longer, the amount of extra work given to

the minor officials is very great, and in my judgment not only is it a sentimental injustice that there should be a distinction, but it is more than sentimental, and I will say why. From the permanent officials at the head of that Department down to the junior messenger the difference in status involves a difference in salary and emoluments, and consequently in pension; and it follows that any man in those Departments, whether he be a clerk or whether he be a messenger, the better he is the more anxious he is to get transferred to another department where his personal position will be improved. I have seen, in those years that I have referred to, excellent men leave the Local Government Board because there were vacancies in the Home Office or in the Treasury, and no man could possibly stand between these men and their own advancement in life, and however great a blow it might be to the Department to lose them it was necessary if a man begged to be transferred, if he was a good man, to do your best to get the transfer for him; but apart altogether from that, which is, I think, a very strong argument indeed, I quite fail to see why a clerk in the Local Government Board should be called upon to write a letter at a $\frac{1}{2}$ d. a line and be replied to by a clerk in the Home Office at 2d. a line; the letters deal with precisely the same subjects; they are written in two rooms which are hardly 150 yards apart; the men have gone through precisely the same examinations and the same training to get to where they sit when they write, and yet there is that difference. My arithmetic is one of the weakest of my many weak points, so I do not ask you to take the $\frac{1}{2}$ d. and 2d. as being accurate, but this will serve as an illustration. Now to my mind that seems a very great injustice. Apart from that, anybody who is conversant with the relations of Government offices with the public must know that when you talk of the President of a Department and a Secretary of State there is a sort of impression there is a difference and a distinction between them. The Secretary of State is a person who has many attributes of dignity, the wretched President has none, and the general public take all that in. I think that is unjust having regard to the fact that all our social legislation proceeds from the Local Government Board, and that there is hardly a Bill affecting the domestic affairs of this country brought in, I do not care what Department it is from, with which it is not concerned. During my experience at the Local Government Board I have had as head of that Department to advise upon Bills drawn in the War Office and the Board of Education, in the Scottish Office, in the Irish Office, and so on; that is to say, Bills come to us for our opinion, and not only our opinion, but our information as to how they would affect, or how they would be considered in connection with, the law in England and Wales. It seems to me that the work of the Department is widespread, and why there should be such a difference I do not know. I think it is very unfair to the permanent officials who are certainly not less single-hearted, nor less industrious, than those in any other Department, and are certainly not less able, so why they should all be paid at a lower rate and get a less pension, when they work harder than many others, I do not understand. I think it is a great misfortune there should be any distinction between the head of the Home Office or the War Office and the head of the Local Government Board.

78485. You have had a long experience, would you not say that the President of the Local Government Board of President more corresponds to what is known abroad as the Minister of the Interior, almost, than the Home Secretary?—Certainly.

78486. I do not know if you would like to answer this question, but your impression is, I should say, that the Local Government Board and the officials there are much harder worked than they are at the Home Office?—From the cursory visits I have paid to the Home Office, I should say there is no comparison; it is work in one case and in the other it is not over-hard work.

78487. With regard to the Poor Law, I do not suppose the Poor Law is a very popular branch of the administration of the Local Government Board, is it?—Do you mean in the Department itself?

78488. Yes, is it sufficiently attractive, do you think, as compared with other branches?—In the Department itself, I should say certainly. I believe myself, from my

Similarity of President of Local Government Board to Minister of Interior abroad. Work at Local Government Board harder than at Home Office. Attractiveness of Poor Law administration to Local Government Board officials.

districts.

experience there, that the Poor Law administration of the Local Government Board attracts some of the best men and arouses as great keenness as any other work that we have to do. I cannot conceive it being otherwise because, although it is called Poor Law administration, in reality, of course, it goes to the very root of our system. It is upon our system of Poor Law to a very large extent that the training of our people depends, and the Local Government Board is intimately connected with that administration, of course, as well as the public health; and the public health administration has been, up to the passing of the Act of 1894, so closely connected with the Poor Law that it was, for our purposes, almost impossible to distinguish between them. Before the passing of the Act of 1894, as you know, the Poor Law guardians, outside the boroughs and districts, were the sanitary authority, so that the two things were done by practically the same body. The Act of 1894, of course, rather altered that in a way that puzzles people who are not conversant with local government to understand; it did to some extent alter it, but previous to 1894 the Poor Law authority, that is, the board of guardians, was the authority upon whom every duty was cast, public health, education, and so on.

78489. As you have had such experience I am rather pressing you on this point. Would it meet your idea simply to put the President of the Local Government Board on the same footing as the Home Secretary in *status*, or do you think there ought to be in addition to that rather a re-adjustment of the work between the two Departments?—I think first of all the alteration in the *status* certainly ought to be carried out; with regard to the second point I have often had it under consideration. When I was President of the Local Government Board we had to consider what duties we could transfer; there was a suggestion that there should be a re-distribution. It is very difficult to suggest any duties which now could with advantage be taken away from the Local Government Board. There are some I think, although I am not quite sure. Sir Samuel Provis will of course know. I think the motor administration has been transferred.

78490. (*Sir Samuel Provis.*) It has not been, although it was suggested?—That is the kind of thing which might be done, because it is really more a matter of justice than of local government; but as to all the other duties, the public health duties, and the Poor Law duties, I do not think they could be materially lessened.

78491. (*Chairman.*) They fit very much one into the other?—Yes, very much.

78492. Taking the Board of Trade, the only figures relating to unemployment are those which come from the Board of Trade?—Yes.

78493. It has been put before us with great force that they only touch a very small proportion of the population?—That is all.

78494. Do you think that work might be transferred to the Local Government Board, or that some improved method of getting statistical information might be made?—I think that there is immense room for improving your statistics with regard to unemployment. I should be very sorry to suggest how it is to be done, because it is extremely difficult, because at present I think I am right in saying all the information you get from the Board of Trade deals with what is called skilled labour, and there is practically no return as to the unskilled labour, which is really much the most terrible feature in any time of acute unemployment.

78495. If you could establish a really efficient system of statistics in connection with labour, it would be a sort of barometer as regards unemployment?—Certainly.

78496. It would be very useful I should think?—Very useful. You were good enough to say you did not propose to ask me any question about the Poor Law, but might I say one thing with regard to the general question of the Poor Law?

78497. Any evidence you are kind enough to volunteer upon that we shall be pleased to hear?—I should like to say this with regard to any change in the Poor Law system I hope it will be borne in mind that immense improvements have been made in our urban districts. I think it would be difficult to improve upon the Poor

Law administration in many of the Poor Law unions of the Metropolis, Liverpool and other large centres. The real difficulty in country districts is that all the changes which have been made with such advantage in urban districts, and in the great boroughs, cannot be made in the rural districts for the reason that there is no money. You have not the means. Where £1,000 means a penny rate it is quite obvious that you cannot provide the necessary accommodation which is required if you are to differentiate between your different classes of paupers, and I believe that it is useless to recommend changes in the Poor Law unless that fundamental difficulty is realised, and unless some attempt is made to grapple with the very serious objections that there are to dispossessing people already in authority, and merging areas, and thereby giving opportunities for doing in the country, in a very limited way, what you have done in the towns. As you have mentioned the general Poor Law, I thought I might be allowed to say that much.

78498. You would not be against merging several areas into one?—No, I think that the line we shall have to take will be to extend the areas considerably; either extend your areas considerably or divide your administration between what are now called the boroughs and the county councils. I believe myself if you take any of the agricultural counties like my own County of Wiltshire, where we are almost entirely agricultural—we have very small manufacturing towns, the only big urban centre is Swindon, where the Great Western Railway Works are the real cause of the existence of the place—if you take our rural workhouses, you will find, I am convinced, that you have got an establishment which is altogether out of proportion to the number of paupers you are maintaining, but, on the other hand, you will certainly find that the quality of the provision made for the paupers falls immeasurably behind that which is made for the same individual if he happens to have recourse to the Poor Law in Liverpool, Manchester, or Leeds.

78499. We have visited a good many rural districts and I think what has struck most of the Commissioners most is the knowledge which the guardians have of the individuals?—Yes, that is so, of course.

78500. (*Mr. Loch.*) From your experience of the Poor Law, are you satisfied with the system of training and appointing inspectors?—Do you mean the Local Government Board inspectors?

78501. Yes, who do Poor Law work?—Yes, I think the results have been to give us on the whole as good men as you would get by any other system.

78502. With regard to the staff at the unions, do you think that any advantage would come from their forming more of a service, so that one man could be removed from this place and another to that, rather than that the appointment should be entirely by the Local Board, and that the person should remain for a very long period in the same place?—I should hardly like to answer that question, because the suggestion has never been made to me. The appointments of officers by boards of guardians, or local boards as they used to be called, by these urban councils as they are now, are so very much local in their character that it would involve a very great change. I have no doubt it would be advantageous if there could be the same sort of transfer that there is now with regard to such offices, for instance, as borough surveyors. Borough surveyors, schoolmasters and, to some extent, masters of workhouses, are interchangeable, but whether you could work the same system with the subordinate officers, I do not know.

78503. With regard to the relieving officers, are you satisfied, or were you satisfied, with their ability to do their work? Had you experience about the local administration?—The relieving officers vary immensely. I do not think you could generalise upon that subject, because, to begin with, the relieving officer is the servant of the board of guardians, and he is, to some extent, what the board of guardians makes him. Wherever you have got a good board of guardians you probably would have good relieving officers, but, in the second place, relieving officer's work no doubt is work which a man can make great or small very much as his energies and abilities lead him to do. On the whole, I think the relieving officers have not been found failing at all. There have been, of course, black sheep, as there are in every service,

Relieving
officers.

but I should not say, from my experience of the Local Government Board, that the relieving officers had turned out a failure in any way.

78504. You do not think it desirable for them to have a period of training or something like evidence of efficiency in this or that department?—I do not think there is any training that I know of, at all events within my limited knowledge, which would enable a man to find out what he has to do, that is to find out whether people are in want or not; a relieving officer's duties are extremely difficult to perform.

78505. You would limit his duties and outlook to that? Certainly.

78506. Have you attended many meetings of the General Relief Committees at any of those places, Liverpool, Birmingham, and such like?—Not myself.

78507. With regard to your remark in Paragraph 8 as to the offering of the workhouse, the workhouse, of course technically is a building available for the Poor Law in any way that the guardians may deem right. Was the question before you of placing outside London, under new conditions, workhouses that might, owing to their being in a large area, have provided work which would have been a fair offer under the old conditions of Poor Law administration?—No.

78508. You had no suggestions made of re-organising the workhouse conditions to meet the new demand?—I should not like to say no suggestions, because suggestions innumerable were made. I should be very sorry to say now what suggestions were made to me, but I do not remember any. I received, and most people do in the position I was in then, a great deal of advice and suggestion.

78509. Was not the system introduced in a manner, if not in your time immediately afterwards? Was not the proposal to have a modified workhouse test, as it is called, before you for consideration?—I think that was before us when I was there.

78510. Did not that carry with it a proposal that practically a large area outside London might be taken, and on that work done under conditions which were quasi workhouse conditions?—I am afraid I could not tell you.

78511. With regard to the application of the system, you rely, I presume, upon a certain character of deterrence as well as on investigation in providing work?—Certainly.

78512. On what would you rely from the point of deterrence?—Do you mean when the first tests are applied?

78513. Yes?—I should rely first of all upon the knowledge of the people in charge of the class of people that they are dealing with, the capacity to deal with men who may not be able to do a good day's work, not from want of will, but from want of power. I should rely, having secured the right man as official, upon such test being applied as would, I believe, according to my experience, very soon tell whether the man was genuine or a wastrel. I believe, for instance, at Hollesley Bay there has been very little difficulty in finding out the wastrels within a day or two of their being tested.

78514. Is it not true that at Hollesley Bay all the investigation has been made beforehand, so that it will be a wastrel who has gone through all the meshes and would get to Hollesley Bay?—You may be right; that is not my information. I do not see how the tests could be applied until the individual got to the scene of work, because the only test which really will operate in these cases is the demand for work.

78515. Then the investigation that goes on before you would set aside as a test?—The investigation that goes on beforehand, I imagine, would only be into antecedents, character, etc.; that of course only tells part of the story.

78516. The number that made application in the last year is 45,000, and the number that was passed was 40,000?—Yes? I am not assenting to the figures.

78517. I simply take the figures and put the problem in a form in which it is put to us?—I must not be taken as assenting to the figures.

78518. At any rate there will be a large difference between the number passed and the number who applied?—I should think so.

78519. Supposing that number which has passed represents truly the number which might be dealt with under the Act, and are dealt with, if you will, it still leaves a large margin over, does it not?—It does.

78520. On whom are we to rely for the help they require, if they require help, for the number which is not passed?—If the result of your experiments is to show that you have got a very large class, which you put at 41,000 out of 45,000, who being able to work are unwilling to work, then in my judgment you must resort to some form of penal colony. You cannot send a man to prison because he will not work, that is obvious. You now send him to prison by a very ingenious method. You get hold of a very turbulent character, you give him a job which you know well will make him a good deal more turbulent, and then you send him to gaol. That is a very round-about and expensive way.

78521. In the Poor Law, you mean?—Yes. Supposing you find you have got this large body of incorrigibles, I would deal with them by further legislation, establishing what are called penal colonies. Probably I have misunderstood your question; I took it to be that there was a certain number who had applied, out of whom only a very small number received assistance; I thought that meant that the others had been rejected.

78522. We do not know what happened to the others?—It is quite obvious that those figures are governed by the capacity of the central body, or whatever it is called, to give work. Their relief was governed not merely by the capacity of the men to work, but also their own capacity to find work.

78523. That means that in any case there was a large margin unprovided for, does it not?—Certainly.

78524. It is that margin that is the issue I wish to put before you, and what is the best way of dealing with that margin, provided the fact is admitted that they applied because they were in want?—If it were possible to strengthen the position of the central body, I imagine that the 4,000 might be very largely increased, and would be very largely increased it is to be hoped, and you would have nothing to deal with but the incorrigibles.

78525. Supposing the body should, as they did this year, reject a very large number, are those who are rejected to go to the Poor Law?—Do you mean rejected as being unsuitable?

78526. Yes, for work under the Act?—Yes, they must fall back either on the Poor Law, or, if the Poor Law is found to be insufficient, you must devise some other machinery.

78527. Then practically supposing the ground for application be want of work, you have to rely on the two methods, the method of the Act and the method of the Poor Law?—Certainly, this Act never intended to ignore the Poor Law.

78528. Do you think, having had this matter in your own hand, that the Poor Law as at present managed does or can meet the demand which results from this difference, that is to say, this selection?—I am inclined to doubt whether it can. I think that in the residue you will find a considerable number of people with whom it is very difficult for boards of guardians to deal as things are.

78529. Then I would ask what your suggestion is, granted that?—I thought I had told you my suggestion is that if you find as the result of your experiments that there is a class which has to be dealt with in a special way, that you must set up something in the form of penal colonies.

78530. You would use the three elements then?—I should.

78531. The penal colony, the Poor Law and the relief works?—Yes.

78532 (*Mrs. Webb*.) What authority would you look forward to as exercising this principle of compulsion? authority for—I think you would have to have a separate authority altogether. I do not think you can give that to a board of guardians.

The Right Hon. Walter Long, M.P.

15 Oct. 1907.

Penal colonies for those who will not work.

Number assisted depends on amount of relief work available.

Poor Law or penal colonies, the alternatives to assistance Unemployed Workmen Act.

*The Right
Hon. Walter
Long, M.P.*

15 Oct., 1907.

Guardians
not a
suitable
authority
for penal
colonies.

78533. Why could not you give it to a board of guardians?—As things are at present, the areas of your boards of guardians are in my judgment too small to enable them to deal with a difficulty of this kind, because it is quite obvious that the residue would come, as the unemployed came, from all parts of the country and from a whole variety of unions. You may have a large percentage in an East End union, for instance, and quite a small percentage in one of the unions of the West End of London (I am taking London merely as an illustration). In that case to lay upon each board of guardians the obligation of dealing with a penal colony would, I think, not meet the case. I think you would have to have a separate organisation.

78534. And also from the point of view that it will be a judicial act or a magisterial act?—Obviously it would have to be safeguarded in every way. You could not interfere with a man's liberty without taking every precaution.

Question
whether penal
colonies
should be
under police
or magisterial
authority.

78535. Have you thought whether it should be handed over to a police authority or a prison authority?—I have not considered that question in connection with this particular branch of the Poor Law question. It arose, of course, as you are aware, in connection with dealing with vagrancy. As you know, a great deal of controversy has raged round it. I am not sure myself that the police authorities in the country are ready at present to take over administrative work of that kind; but I think you would have to associate with any such administration either some body which would carry judicial knowledge, or else you would have to have actually the intervention of magistrates before you could deal with these cases.

Possibility
of guardians
being
authority for
penal
colonies.

78536. (*Chairman.*) You gave the area as a very good reason for the difficulty of the guardians taking over anything like a penal institution. Assuming the area was very much larger, would your opinion still hold good?—I am a little afraid of conveying too much. The moment you extend your area it is quite obvious you will very much add to the labours of your boards of guardians; they might be managed by the same general body with some subordinate committee in the same way, for instance, as we have our reformatory schools.

78537. It really is not a matter of very much importance, because I understand the guardians would have the power of sending the person, possibly through a majority or possibly by means of a certain tribunal, to an establishment of a quasi-penal character; so whoever managed that would not very much matter?—I do not think so. The reformatory school system under which we deal with the juveniles is an admirable one. I think it forms a very good illustration of what we might do on an extended scale for other people.

Right to
work not in-
volved in
Unemployed
Workmen
Act.

78538. (*Mr. Loch.*) Do you think in this process what is called the right to labour has been accepted by statute?—No.

78539. Because you think this is so guarded that it cannot be so claimed?—I do not think there is anything in this Act which can be in any way shown to involve the right to labour on the part of the community.

78540. (*Miss Hill.*) That was just the point that I wanted to be quite clear about. In your view of the Act it is intended to be so exceptional that that right is not involved in it?—Certainly, and it is temporary in its working.

78541. You would not have this central unemployed body a body permanently existing?—I mean temporary in regard to the individual. The chairman read out just now the words of the Act which show that it has carefully guarded against providing perpetual employment for individuals. The idea rather is to take them in the period of their difficulty and tide them over that, and help them into permanent employ.

78542. But supposing they are not floated again into the labour market?—I am afraid I cannot undertake to make suggestions to deal with every possible eventuality. If that be one of the results you will have then either to face the fact that you have got here a very large proportion of your population for whom you cannot find work, and whom therefore you must frankly tell they must emigrate to another country, or you must adopt some other method, which I do not know anything about.

78543. Does it not seem to you that the provision of temporary work under conditions other than those of the ordinary world is rather apt to enervate than stimulate the people whom you bring under their influence?—On the contrary, the limited experience I have had sets in exactly the opposite direction. With regard to the work that was done in London, for instance, where it was done under proper superintendence with people who in the first place (which is essential) believed in the work they were doing, and in the second place knew how to carry out their operations, the results were quite the contrary, the people themselves were improved.

78544. Are you thinking of work done by municipalities?—No, I am thinking of the work done by the Central Unemployed Committee. I do not think the work done by the municipalities had any other effect than that of deteriorating the people, because they were in most cases only employed fitfully, and there was in most cases no attempt made to train them and direct them.

78545. Although the work of the unemployed body has had that effect?—In one instance there was a road made across the Green Park. I watched the men in that case myself carefully, and there is no doubt that they improved under their control and under their labour, and some of them went on and did fairly well.

78546. That has not been a very usual result of work like that, has it?—I am not aware: the number of experiments is so very limited that I am not aware of any sufficient information for me to draw a conclusion from.

78547. Would your impression be the same of men taken to Hollesley Bay and so on?—Hollesley Bay again has been too short a time in existence for us to tell. I have not myself visited Hollesley Bay, but I am told that a certain number of cases there have resulted in both physical and mental improvement on the part of the men. I only give you that for what it is worth. I have not seen them myself.

78548. I have seen very few, but one wants to know the individual case to really know what the effect has been?—Yes, you want to follow them quite through and it takes time.

78549. You would agree that there is something in the provision of unreal work which has the tendency to undermine rather than to stimulate?—Certainly, it is the great danger and difficulty which has to be overcome or you will do much more harm than good.

78550. Do you think it has been avoided in this present Act?—That I should not really like to say. In the first place I do not myself, as I have said in this memorandum, regard the Act as anything approaching perfection. There was not too much time for thinking the problem out.

78551. Have you any special suggestions to make with regard to its modification if it should be continued?—No, I should not like to make any suggestions until there is much more information before us than we have got. There was absolutely no information to go on. You had plenty of people who had opinions of their own, some of which there were foundations for, and some not; but there was no information to go upon such as you would have after a certain number of experiments have been made in different parts of the country.

78552. (*Mrs. Bosanquet.*) Have the men who fulfil the conditions of the Act a legal claim under the Act?—I am afraid I am not a lawyer, and I really could not tell you. We constantly have questions as to the legal claims on the law by people who clamour for relief. I am not a lawyer and could not tell you, but I should have said not.

78553. I am not sure that I know what is the system by which inspectors obtain appointments?—Inspectors, as far as I know, have not been trained at all; there is no training for an inspector. Inspectors as a rule are selected from men who have had some experience of Poor Law administration, very often as members of boards of guardians, or chairmen of boards of guardians. Occasionally they are taken from the permanent officials in the department, from the clerical staff of the Local Government Board. Generally in that case they are men who have been in the Poor Law Department of the Local Government Board, but there is no training college for inspectors.

Appointment
of Poor Law
inspectors.

78554. There is no condition that they should have had previous experience?—I am not aware of any. So far as I know the power of the President to appoint an inspector is unlimited. So far as I know he might appoint anybody, but in practice, I think—I can speak from an experience now of nearly twenty years, certainly men are selected who have had practical experience, either within or without the department.

78555. (Mr. Chandler.) In Paragraphs 15 and 16 of your statement, where you make suggestions as to the changes in the law which you think it is desirable to make with regard to the Unemployed Workmen's Act, you mention in Paragraph 15 that it is desirable that grants of public money should be made "as the present President of the Local Government Board has done in order that the Unemployed Committee—or whatever the body is called—may be able to carry on certain carefully thought out experiments." Do you prefer that plan to a rate levied over the area of the district that has to do with the carrying out of these?—Yes, I do, for this reason. I admit it is a clumsy way of getting at it, but if you take the case of London (and I imagine that the unemployed question would almost always be in one of the big towns, and more largely affect London than any other big town) a certain percentage of the unemployed would have nothing whatever to do with London; they would be those who have come to London because they are at the end of their resources, who have come because they hear there is a fund, or think there is work, or for some reason they come and have to be provided for. I think it is unfair, if you have to experiment with a view of dealing with them permanently, that the ratepayers of London should be called upon to pay for this. It would be either the ratepayers of the union, or the ratepayers of the whole area of Poor Law London. I think if anything of the kind is to be done it should be done by public money.

78556. You do not think that the twelve months' residential qualification is a sufficient safeguard against that?—No, I do not attach any importance to the twelve months' residential qualification, because, after all, if a man comes to live in London for a year, and then comes on the London rates, I think it is very hard upon London. We all know the difficulty of finding out the domicile and home of a person.

78557. You are exceedingly anxious that the Unemployed Workmen's Act should have at least an opportunity of testing the value of them?—I am.

78558. It did occur to me that a carefully thought out scheme by local authorities is rather subject to the whims of the President of the Local Government Board for the time being, if this plan of subsidising by grants is carried out?—There is that danger obviously, and personally I made this suggestion, because I think if the money comes from the State you would have much more control, and much more right to interfere; but I quite admit that that objection is a very very strong one, and certainly if anything of the kind were adopted it would be most desirable that the two alternatives should be very carefully weighed before you decided in favour of the one I have put here.

78559. (Dr. Downes.) In Paragraph 15 you give the reasons why you consider there should be a separate organisation to deal with the unemployed?—Yes.

78560. May I take it that those reasons apply rather to the existing condition of things, the existing organisation of the Poor Law?—Entirely. I am dealing entirely with the Poor Law system as it is to be found now.

78561. Assuming that it were possible, I do not say for a moment that it is possible, to so re-organise things that your objections could be met, would you admit that there would be an advantage in having one body?—Clearly. Provided that such changes were made as would remove all my objections, then clearly it would be a distinct advantage to invest all the authority of the kind in one body.

78562. (Mr. Bentham.) I suppose you were at the Local Government Board at the time the Unemployed Bill was being drafted?—Yes, when it was being drafted.

78563. Was there any evidence got from the provinces as to the necessity for an Unemployment Act from the officials, that is, from the inspectors?—Do you mean any evidence from my inspectors?

78564. Yes, from the Poor Law inspectors?—I do not quite understand you. The Poor Law inspectors are not in the habit of giving evidence that I am aware of.

78565. Were they asked for their opinions upon the necessity for an Act dealing with the unemployed, apart from the Poor Law?—Certainly; I communicated with them myself in the ordinary way.

78566. Were they in favour of some Act being passed outside the Poor Law?—I should hardly like to answer that question, because, in the first place, I think I should say that your question involves a slight misconception as to the relations between the inspector and the head of the Department. The inspector makes his report from time to time, and his special report upon any workhouse that he visits, but it is not his vocation to advise as to legislation, either for or against it. It is his business to answer any questions that the President may put to him, and, of course, in this particular case London was the chief difficulty. We had a great many applications from the towns, from Liverpool, I think, Bristol, Leeds, and other towns, I have forgotten which now, but I should not like to commit myself as to what was said by inspectors, whose interviews with me were, of course, confidential.

78567. Perhaps I have put my question rather clumsily, but I meant, did the information given by the inspectors suggest the necessity for some machinery being established for dealing with this question?—I should not think that any one of the inspectors ever made any suggestion of the kind; it would be entirely outside his province to do so.

78568. Was it intended that the Act should always remain in operation, or that it should only be put in operation during periods of depression?—I think it was intended that the machinery should always be in existence, because one of the difficulties that we sought to deal with was this, when the sudden outburst arose there was no machinery in existence ready to deal with it; consequently you had to improvise everything, your office, your clerks, and so on. You had no records or anything, and you had to start afresh each time. It is to that fact, I think, more than any other that the history of the various Lord Mayor's Funds (the unfortunate history, as I regard it) is due; that each fund which comes into existence has been managed by fresh people, without any trained officials who have been able to take advantage of previous experience, who would be able to do what is done for the Parliamentary officials by the permanent officials, namely, act as guide, philosopher, and friend.

78569. Am I right in thinking that it was not expected that the Act would always be in operation?—I am afraid I cannot answer that. I do not know what was expected by anybody.

78570. Do you think that there is any temptation in a provision of this kind for able-bodied people to rely upon similar work being found periodically; that they will exercise less efforts to insure against unemployment and rely more upon State action?—I do not believe in that at all.

78571. You do not think there is any danger in that?—No, I do not. I think the English working man is much too fond of his home and his independence and of the respectable character of himself and his wife and family and of his connections. I think he is just as fond of his home as I am of mine, and just as reluctant to part with it. I do not think the setting up of machinery to deal with special cases would tempt the working man to rely on outside operations. It may be that you may weaken his independence; if so, any Act of Parliament which tended to do so had better be repealed at once, because you would do more harm than good.

78572. (Mrs. Webb.) In respect to the inferior class of unemployed, the wastrel and the vagrant, if you are going to apply compulsion in a semi-penal establishment, would it not be better either to transfer the management, or adopt the area of the county and accept the county council, to a National Department; because the present reformatories are managed by the Home Office, and industrial schools, in which there is the principle of compulsion, are managed by the county?—Yes.

The Right Hon. Walter Long, M.P.

15 Oct. 1907.

Question of evidence from Poor Law inspectors, suggesting necessity of some Unemployed Act outside Poor Law.

Question whether Unemployed Workmen Act was intended to be permanent.

No danger of undermining independence of workmen by setting up machinery for relief of special distress.

Proper authority to manage penal colonies.

*The Right
Hon. Walter
Long, M.P.*

15 Oct. 1907.

Proper
authority
to manage
penal
colonies.

78573. Is it quite safe to give over such a very delicate business as applying the principle of compulsion to any authority likely to employ less skilled officers than the national department or the county?—No, I think it should be a large central department. I should prefer myself the county to the Government Department.

78574. You do not like the management of reformatories?—I think that the industrial school system is better for the difficulty we have to deal with.

78575. You do not advise a smaller area than the county?—No, certainly not.

78576. Supposing you take the county as the area, it would be very difficult to get a new *ad hoc* county authority, would it not?—Yes; it would have to be done by the county council.

78577. Practically you would put the management of this semi-penal establishment under a committee of the county council?—I think so, with certain safeguards, of course.

78578. You would not contemplate setting up a new *ad hoc* body?—No, certainly not.

78579. Would you contemplate setting up a new *ad hoc* authority in the county area for any purpose whatsoever?—None.

78580. If we do take the county as our area, you are distinctly against a new *ad hoc* authority?—Certainly. I think the county council is very well able to do, through committees, any work that is likely to be thrown upon it. I must ask you not to include London in this; London is a case of its own.

58581. That is absolutely set apart?—I am thinking of the ordinary administrative county outside the Metropolitan.

78582. It has been suggested to us that for nearly all the purposes of institutional treatment, both for this penal purpose and also for the treatment of the sick, that a larger area is desirable than that of the present Board of Guardians?—I entirely agree.

78583. It has been suggested to us that the county should be that area. Assuming that that is correct, you would not be in favour of establishing a new *ad hoc* authority to manage the institutions connected with sickness, for instance?—Certainly not.

78584. If we transferred the present Poor Law infirmaries to an authority having jurisdiction over the county area, you would suggest it be transferred to the county council?—Certainly.

78585. Assuming you transferred the care of the sick to the county council, would it not be natural that that should come under the Public Health Committee which is dealing with sickness in another form?—I do not see any reason why it should not; would you make it statutory that it should be part of the duties of the public health committee of the county council?

78586. To provide such accommodation for sick persons as was required?—I see no objection to that. Of course the public health committee of the ordinary administrative county, the administrative county as it is called, has not been constituted hitherto from the point of view of that class of work. You would have, I think, to reorganise your public health committee, but I see no reason why their duties should not include those; their present duties are very light.

78587. They have only a medical officer of health?—Yes.

78588. There is a suggestion that the infectious hospitals of the rural district councils should be transferred to the county councils with a view to their more efficient management. Does that occur to you?—We did something about isolation hospitals when I was at the Local Government Board. I am afraid my memory fails me as to it, because it is some little time ago, and I have had many other things to deal with since. I should say off-hand that the county council would be a better authority to deal with isolation hospitals or infectious hospitals than the local authority, because quite obviously their situation ought not to be controlled by a small area. It is far better that the county council should settle their situation with reference to a larger area than that it should be settled by a small area.

78589. If the county council had the management of isolation hospitals it would be natural that they should manage the other hospitals?—Certainly.

78590. To take it from the point of view of the individual concerned, your whole object in the Unemployed Workmen's Act was to relieve the absolutely honest *bond fide* man who failed to obtain a livelihood, because he could not get work, from the taint of pauperism, was it not?—I do not know that I should say that was my whole object.

78591. It was one object?—One of my chief objects certainly was to prevent manufacturing paupers out of material which I did not think ought to be used for that purpose.

78592. Surely that would apply still more strongly to a man who loses his chance of a livelihood from an attack of phthisis?—Certainly.

78593. So that you would relieve the individual who dropped into misfortune from no fault of his own, by illness, from the taint of pauperism?—In the temporary relief given to him, that is to say, dealing with him during the time when the pressure comes.

78594. In the curative treatment given to him?—That must necessarily only be for a limited time.

78595. Only for the time he is ill?—Yes.

78596. During the time he is ill you would wish to relieve him from the taint of pauperism?—Yes, if, as I have explained in my Statement, I thought that by adopting special methods I should prevent him becoming a permanent charge upon the rates.

78597. To go back to our county authority, if you put up a new kind of infirmary under the public health authority, and if you made all treatment in them given exactly on the same conditions which it is given in an isolation hospital with regard to infectious patients, you would be relieving that man from the taint of pauperism?—A man who would now have to go into the workhouse infirmary you suggest should go into the county council infirmary?

78598. A public health hospital, and be treated, if he had phthisis, exactly as he would be if he had typhoid. At present if he has typhoid he is not a pauper, he is not disfranchised or chargeable to his relatives. Would you extend that idea which underlies the basis of your Unemployed Act, to destitution brought about by phthisis?—Phthisis is now supposed to be a curable disease. I am not a medical man, therefore I do not know why we should discriminate between phthisis and typhoid; I may be quite wrong; but it seems to me to be opening up rather a wide question in which I should like to be guarded in my reply.

78599. (*Mr. Lansbury.*) Taking your penal colony, you would have that colony curative rather than merely repressive, would you not?—My penal colony was only suggested in answer to a hypothetical question put by one of the members of the Commission. Of course the whole question of penal colonies is a very large one by itself, and would take up as much time as I am able to give to my whole evidence. I do not know whether a penal colony is ever likely to be necessary, but on the other hand if it is true that you have a very large percentage of people who will not work, and who can work, I for one do not see why we should continue to maintain them in a workhouse or anywhere else. If they are not industrious enough to work, and not clever enough for criminals, then it seems we must find some other way to deal with them. If they are industrious they find work for themselves; if they are clever and idle they get into gaol; if they are stupid and idle they remain outside, and we keep them, and that is what I object to.

78600. The only point is that you would not suggest that you should take them into a colony and simply keep them there for ever?—No, I do not think you can do that. I think the plan you want to adopt is very much the plan they have adopted in some of our great municipal Poor Law areas, where they discriminate between the classes of work given to the classes of paupers they have to deal with, and where it has been found, I think, by practical experience that some of these shirkers avoid the labour house, as it is called, a second time, because the work given is very disagreeable and the regulations are very irksome. I think you might extend that principle.

by county
councils.

assuming that you find there are a large number of people such as was suggested by Mr. Loch. I do not know whether there are or not; I do not think anybody knows very much about it at present; we have no definite information, though we have each got our own opinion. As to definite information there is hardly any evidence obtainable. That is the great difficulty I think.

78601. (*Mr. Nunn.*) There were two ideas that you had in your mind in forming your first unemployed body. One was to have a system of graduated colonies was it not, which should deal with different classes of the unemployed. At one end you would have extremely deterrent or positively preventative colonies which would absolutely detain the men, and at the other end you would have colonies which should go a long way to educate men and reinstate them in the industrial world?—Yes; if it be true that the result of your experiment goes to show that there are a large number of men who want this special treatment, then you would have to provide for it.

78602. Did you think that the State ought to provide for it, or some municipal form of government, or that it should be provided for by voluntary enterprise?—If you determine to punish these men and treat them as if they were criminals the State must do it. If you are going to do it to aid them, then private sources can do it.

78603. At some point of the line of graduated labour colonies you would draw the line of demarcation between State government and government by private individuals?—Yes, I think you would have to.

78604. There is one other point upon which, I think, you felt strongly when you formed the first body, and that was the very large amount of work which the local bodies were taking up in various parts of the country, in place of the Poor Law guardians, giving men practically employment relief?—Yes.

78605. In the Regulations on which the Act of 1905 was administered, however, room was made for a good deal of this work to be undertaken by local authorities?—Yes, there is no objection to that; that is beneficial.

78606. Was not that what you complained of originally?—No. It may perhaps be my fault; I may misunderstand you. What I was referring to was the attempt made by municipalities to deal with the unemployed as they flocked to the municipal offices; there was no discrimination, no attempt to select the good from the bad, no attempt made to so deal with the men to whom employment was given as to leave them at the end of their employment better than they were at the beginning. The work we contemplate under the Act is where the men had been tested and selected by the unemployed committee for work. They can be sent for by the municipalities, then you would have the men selected for a particular kind of work, and no doubt there would be a certain number of men found capable of doing municipal work just as well as anybody else.

78607. Has not the actual process been that the men have not been tested but selected? Their character has been scrutinised to some extent, but the distress committees have sent up to the Central Unemployed Body a number of applicants for work, and lists have been returned to the localities for any work which the municipality may have in hand, and the municipality has then taken these men on in preference to ordinary men found in the labour market, thereby ousting the ordinary men from work to which he might have had a claim otherwise. The difference between what would have been paid for efficient labour and what has to be paid for inefficient labour being made up out of unemployed funds?—That I could not say.

78608. Suppose that has taken place, does that approve itself to you?—Obviously not.

78609. (*Mr. Russell Wakefield.*) One of the difficulties with regard to the provision of municipal work in the metropolis is, certainly in the heart of London, the finding of the actual work itself which is to be done. I think there was some encouragement of boards of guardians anticipating work, was there not?—Yes.

78610. One of the results of anticipating work, I believe, is that eventually there is no more work to anticipate?—Certainly.

78611. Therefore it is a good thing, is it not, that an authority spreading over the whole of London should have charge of the provision of work for the unemployed?—Yes, certainly.

78612. One question has not been asked you. At the start of the Act your idea was that the main amount of the money would be procured from voluntary sources, was it not?—Yes.

78613. You yourself, I think, collected a very considerable sum before actually the Act was in operation at all, so as to give it a good start?—Yes.

78614. You have, I think, come to the conclusion that by means of voluntary funds it would be impossible, year after year, to go on administering the Act?—Yes.

78615. Also that if you have funds from any other source, whether Imperial or local rates, you cannot get voluntary funds side by side with that?—Certainly.

78616. Therefore you are driven to what has been done?—Yes.

78617. With regard to the Act itself you did not imagine the Act was perfect when the Act was first passed, did you?—No, I did not.

78618. You imagined it would require amendment if experience taught people what might be necessary?—Certainly.

78619. You have seen no reason so far to imagine that the Act, generally speaking, with the Amendments which might be introduced through experience, would not be doing good work for this class of society?—No, none whatever.

78620. (*Bishop of Ross.*) One of the means of dealing with the unemployed was providing farm colonies?—Yes.

78621. In the hope that the men would be set up physically and morally and be able to return to find remunerative employment. At the end of their term either of two things might happen; they might go back set up physically and mentally, they might return to their original trades, or you might hope to find work for them on the land. No doubt in Wiltshire you have considerable experience of farm work. Does farm work require considerable experience and considerable training?—On the part of the employer or the servants?

78622. On the part of the cultivator, the workman the husbandman?—Undoubtedly a man, if he is to take a responsible place must be specially trained for it, but some of the best workmen we have now are men who have spent their early days, for instance, in the Army or Navy, and have come back to us as agriculturalists and do extremely well.

78623. They have done no agricultural work till well advanced in years?—No, not since they were boys, in fact you may say they practically have done none.

78624. They have been born in the country?—Yes, nearly all of them are country-born.

78625. Do you think a man born in a city who has never handled a spade or any other agricultural implement will become an efficient workman if he commences at thirty-five?—I do not see any reason why a man at thirty-five should not in a short time be an efficient labourer if he means business. I know it is frequently said that the worn-out townsman if he comes into the country will never be able to use a spade or scythe. That is not my experience. I do not know why the working man should be inferior to the clerk or the mechanic, many of whom live in the country and do a good deal of work of their own. I think a working man, if he had training, could dig. I do not think he could go down from the town and dig the next day. I think probably some of us who live in the country would beat him, but I think if he was all right physically and had some training he would soon be all right.

78626. There is a muscular question also, is there not, the muscles have to be trained?—Yes, there is no doubt that is more difficult than the want of knowledge.

78627. That seems to be the main difficulty?—Yes.

78628. The great majority of those who went to Hollesley Bay were townsmen. I see here in a list of 1,711 only 248 have been born in the country, and those had spent an average of nineteen years in London, and the average age of the men was 35½ years?—Yes.

The Right Hon. Walter Long, M.P.

15 Oct. 1907.

Question of voluntary and State funds for purposes of Unemployed Workmen Act.

Unemployed Workmen Act not bad.

Possibility of townsmen making efficient agriculturists.

*The Right
Hon. Walter
Long, M.P.*

15 Oct. 1907.

Question of
rural de-
population.

78629. Therefore there would seem to be a considerable difficulty in these men becoming efficient agriculturalists and efficient working men on the land?—Undoubtedly that is a practical difficulty, and one of the things which could only be tested, I think, by experiments.

78630. In several places it was complained to the Commission as we went round the country that the rural population was flocking into the towns and overcrowding the labour market, and a witness here to-day expressed it by saying the countryside is emptying itself into the towns. Could the question of unemployment in the towns be tackled from the opposite end, by endeavouring to keep the rural population in the country, and thus relieve the pressure on the dock labourers and all the lower classes of labour?—I think we ought to have a little more accurate information upon that point. I observe it is said by people who do not themselves live in the country, as a rule, that the agricultural population is flocking into the towns. I spend most of my time when I am not compelled to be in London in the country, and I do not find empty cottages, nor do I find the people trooping into the towns, nor do I think they are. I think all this is going on information which is twenty years old. Twenty-five or thirty years ago they were flocking into the towns, because at that time the use of machinery in its present form was only, comparatively speaking, young; and no doubt a great many men were displaced, but now that has all accommodated itself, and at this moment (I speak of my own county, which I know well) with the exception of here and there a cottage which is in a hopelessly out-of-the-way district, I do not know of a cottage which is empty or of an agricultural family moving up to London. We lose, of course, some of the young men, because they like the amusement and excitement of the towns more; they get bored in the country, where they have to be up at 5 a.m. and work till 6 p.m. or 7 p.m. They know they can go and work in the towns, and after they have done work they can go to a music hall, and no doubt they are tempted, as other young men in other walks are tempted, by other temptations.

78631. If one person could keep one person born in the country and prevent him from going to the towns on the one side, and on the other side he could take a town-born person out and plant him in the country, would you agree in the first case he would have done better work for the nation than in the second?—Certainly, by all means let us keep our lads at home if we can.

78632. (*Chairman.*) There is one question on which you have given a strong opinion upon which you are an authority in a double sense, both as President of the Local Government Board and also as a country gentleman, that is as regards the changes that there may be in the Poor Law in rural districts. Assuming there was a scheme by which the unions were left, as far as hearing applications, much the same, but that the institutions of the county, as you rather adumbrated, were put under one authority, and that authority had the exercise of certain control over the relief committees as well as the others,

would you be in favour of handing that work over to the existing county council, or would you have another authority?—I think it had better go to the county council. I think you will be obliged to have something more than relief committees, because the county council could not do it through one or more committees. You would have to have local committees. We tried to devise a scheme when I was at the Local Government Board for dealing with valuations in the counties. You know what a thorny subject that is, and the line we took there was the same sort of line. The idea was that the county council should be paramount; it should be the controlling authority and should issue regulations, but have subordinate committees to do the actual work. That, I think, you would have if you had any change in your Poor Law authority.

78633. You are clear in your mind that if there should be a central authority it should not be a new *ad hoc* authority?—No; do not let us have any more authorities.

78634. One little difficulty will have to be got over which perhaps did not at first occur to you. If these changes are made, probably there would be other reforms perhaps not very popular in the county. Do you think you could get a committee of the county council to carry them out as well as an *ad hoc* body?—I think they would do it. The unpopularity springs, as you know, not so much from the administrators themselves as from those who are supposed to serve the administrators. If you once get over that I do not think you would have any difficulty with the county council.

78635. I suppose you think of the objections to a double election, and the difficulty of finding suitable people?—Yes. Besides, why have a double election? You have got a county council which is elected to administer the affairs of the whole county; and if it can be shown that in any case the members of the county council are not sufficient for the purpose you can increase them. I do not think it could be shown in any of the ordinary counties—I do not know what would be the case, I am sure, in the populous parts of Yorkshire, the East Riding, or in Lancashire; but certainly in the ordinary agricultural county the county council has quite enough to do, but not too much.

78636. Is there anything in the work of the county council which would lead you to think that you would have any difficulty in getting people to perform it?—I have not met one yet; there may be one in the future, but I have never yet heard of any complaint. It does happen in this, as in many other cases, that the work falls into the hands of one or two people, partly from their own activity and partly from other people letting them do it; but I do not think there would be any difficulty generally.

78637. Assuming you were a Minister, and had to give effect to great changes in the direction I have indicated, you would prefer to trust those things to a county council rather than form a fresh authority?—I would.

*Mr. Alfred
G. Gardiner.*

15 Oct. 1907.

Distress in
West Ham
in winter of
1904.

Mr. ALFRED GEORGE GARDINER, called; and Examined.

78638. (*Chairman.*) You are the editor of the *Daily News*?—I am.

78639. You have been good enough to send us in a statement, which we will treat as your evidence in chief, if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. On December 21st, 1904, Mr. C. F. G. Masterman, now M.P. for West Ham (North), who had been for some days in close touch with the leaders of the unemployed and their friends, brought to the editor of the "*Daily News*" a letter signed by Councillors Hayday and Jones, in which it was stated that about 50,000 persons (men, women, and children) were suffering through lack of employment and that funds were instantly needed to deal with cases of extreme want and starvation. The letter also stated that the great demand was for work to enable the men to provide a living for their wives and children and that the committee was prepared to undertake the proper distribution of any subscriptions in money or clothes.

2. Our own diagnosis of the East End, conducted by a trusted and competent member of our staff, also convinced us of the urgency of the case.

3. The letter of Messrs. Hayday and Jones was printed in the "*Daily News*," together with our commissioner's account, and an editorial appeal for immediate help was made. The result was an immediate flow of money into this office and also to the address given by Messrs. Hayday and Jones.

4. It at once became necessary to form a representative committee to deal with subscriptions and organise their administration. The following was the *personnel* of the committee:—Councillor Hayday (chairman), Councillor Jack Jones, Mr. H. Cubbon, co-warden of Mansfield House University Settlement, Mr. Tarrant, West Ham Board of Guardians, Councillors Baldock and Hurry, of North-West Ham, with the Rev. George Hooper as treasurer.

5. When such relief as would safely tide the people over Christmas had been given, the need for continuous

Proper relief authority in rural districts.

Feasibility of county councils managing relief.

Origin of "*Daily News*" Fund.

Relief Committee.

Organisation for relief in West Ham. organisation was faced. Ward committees for investigating cases and administering relief were formed; all the clergy, ministers and members of public bodies were asked to join, and in a few days the whole of South-West Ham and (in some degree) North-West Ham were covered.

Contributions from "Daily News" readers. 6. The flow of contributions from "Daily News" readers was constant and liberal, rarely falling below £100 a day, and by the end of March a total of some £12,000 was collected, together with several thousand pounds' worth of goods.

Chief works. 7. The chief object of the committee was to administer relief in the form of wages. The first success was in placing twenty-five men at the Abbey Mills, Stratford. A week later we had 150 at work on the recreation ground at West Ham. Afterwards we induced the Epping Forest Commissioners to allow us to level a large portion of Chingford Plain, then lying in ridge and furrow, but now a smooth playing ground. Other work included the making of an open-air swimming bath and the painting and decoration of the West Ham Hospital. Altogether, some £7,000 was paid out in wages.

8. In every case the wages were undertaken by the committee, those who were to benefit by the work finding tools and appliances.

9. Premises were hired in Barking Road for a clothing store administered by a committee of ladies. Here nearly 150,000 articles of clothing sent by our readers were distributed.

Operation and results of the chief works. 10. The work on the whole was very satisfactorily done, though necessarily at a considerably higher cost than if it had been done by expert labour under normal conditions. The administration of the relief we found very thoroughly and satisfactorily carried on. The sub-committees carefully investigated all cases submitted to them and limited relief to those who could establish, by residence and other circumstances, an honest claim to consideration.

Cost of administration. 11. The cost of administration was trifling. We were allowed a room at the Town Hall at Canning Town for the purpose of our work. The only charges were in connection with clerical assistance, and this was in the nature of relief, for we employed members of the unemployed class for the work.

Character of employment. 12. On the whole, we found that the men employed by us were honest and hard working. There were cases in which men complained of under-payment or other grievances, but, generally speaking, they were extremely grateful for the help given and honestly desirous of work.

Rate of remuneration. 13. As far as possible we adhered to trade union rates of pay. This was objected to in some quarters, especially by the Epping Forest Commissioners, but we are convinced that, especially in view of the circumstances, we took the right course in the matter. It must be remembered that consecutive employment for a considerable period was not possible, as there were so many claimants for work that it was necessary to alternate their employment. This, it will be seen, was a further reason for observing an adequate rate of payment.

Result of "Daily News" fund. 78640. (Chairman.) We are anxious to get the opinion of those who have been connected with the administration of funds that have been raised by newspapers. I think your statement is a very clear one. You, on the whole, think that the result of raising this fund was beneficial, not only in its immediate purpose, but also in its ultimate purpose?—I think it was beneficial in the sense that it saved many people who were in very serious distress from becoming paupers, and prevented them drifting into that position from which it is very difficult to get them out when once they have got into it.

Form of relief given. 78641. You did not give out doles, practically the money was all given in the shape either of wages or of clothing?—We gave out some money, but the bulk of it was in wages. The actual amount paid in wages was over £7,000. £7,000 of the £12,000 raised went in wages; the rest went chiefly in the form of food which was purchased by the committee.

Personnel of committee. "Daily News" fund. 78642. Your committee was constituted as you mention, and it was practically independent. The great majority of the members were quite independent of the *Daily News*?—They had nothing whatever to do with the *Daily News*.

78643. You say you put twenty-five people at the Abbey Mills; were they there long, do you know?—*Mr. Alfred G. Gardiner.* May I tell you how we employed the people?

15 Oct. 1907. Employment relief given. 78644. If you please?—We actually employed at one time or another 5,090 people, but, of course, the time they were employed varied very much, and none of them were employed continuously—that is, we took a certain group and gave them two days' work in the week, and then the work the next two days was allotted to other men, and so on, so that it is quite impossible to say how many men we employed continuously, but actually 5,090 were employed at the rate of about one or two days a week. We sent twenty-five to the Abbey Mills at first; their places would be taken later on by twenty-five others, and so on. Then our next work, I think, was in connection with the Epping Forest Commissioners, whom we approached. We found, I may say, a very great deal of difficulty in getting work. We wanted to find work which would not interfere with the normal process of trade, which would be at the same time advantageous to the public, and we had a good deal of difficulty in finding that sort of work. The Epping Forest Commissioners were contemplating at that time levelling Chingford Plain, which was then in ridges. We did the work for them; we provided the labour, that is, and they provided the tools and implements. Then the council of West Ham allowed us to level playgrounds and do work in the recreation grounds and parks that needed to be done. For example, we made an open-air bath, which was one of the most costly and one of the most valuable things we did, I think, and also we painted and decorated the West Ham hospital. The costs of those works were: At Chingford Plain we spent £959 in labour; at Wanstead Flats we spent £66; at the Abbey Mills (which was the making of an embankment or road which had fallen down and was greatly used by the public, and which it was no one's duty to repair), we spent £442. The decorating and painting of the West Ham hospital cost £656, and our work in the West Ham parks and recreation grounds, including the making of an open-air bath, and so on, was £4,946, making a total of £7,072.

78645. What you generally had in view was to take up Kind of work which would not take away employment from work the neighbourhood?—Quite so. provided.

78646. The West Ham Hospital was rather an exception to that?—Yes, I think that was the last work that we undertook.

78647. Because that seems to me rather to be a class of work which otherwise would have been done?—It would have been done, but in that case it was able to be done by actual workmen who were out of employ, painters and decorators who were unemployed.

78648. By skilled workmen?—Yes. The other work was, of course, unskilled.

78649. Did you get an analysis from the committee of what the status of the persons employed was; were they persons who were generally in regular employment, or were they mostly people whose employment was very intermittent or casual?—Generally speaking the labour down there is not of a permanent kind, it is intermittent. The dock labour and that sort of thing is very casual, but the people generally were of a very reputable type and we only relieved those who had been resident in the district for a certain time, I think it was six months.

78650. Did you get any from Canning Town?—They were from Canning Town chiefly.

78651. Allegations have been made that a certain considerable portion of the persons who avail themselves of these funds are almost of the class, if not the same, as those who get Poor Law relief?—I do not think it was so in our case. It was not our experience. We went very closely into every case that we relieved. In addition to the central committee, we had a committee for every ward in the town, a separate committee, and every case relieved was visited. In all there were 5,700 families visited by the separate committees, who sent their recommendations to the central committee.

78652. Was there a house visitation?—Yes.

Mr. Alfred G. Gardiner. 78653. How long did operations last; just during the winter?—We opened the fund on December 21st, 1904, and we continued our work until the end of March, 1905.

15 Oct., 1907.

Effects of the assistance from "Daily News" fund.

78654. Were you able afterwards to trace the results of this assistance. Did persons who were so helped get regular employment afterwards, and were they able to keep themselves off the poor rates?—I think so. That was the general experience that we had that one by one they drifted off our hands, and as employment increased and the weather improved they found more or less sufficient employment.

78655. I think it is pretty clear that if a fund of this sort only gives very temporary assistance to persons in a congested district, to persons who are almost in a chronic state of destitution, it does not do much good?—It enables them to live.

78656. They can, of course, get assistance from the Poor Law?—Quite so, with the loss of citizenship.

78657. If on the other hand it enables them not only to live, but to tide over the difficulty, and to get employment afterwards, of course the assistance is very valuable. I think the assistance you gave here comes into that second category?—I think so certainly.

Result of paying trade union wage to men employed by "Daily News" fund.

78658. You gave trade union wages?—Yes, as far as possible.

78659. In the last paragraph you say one reason for doing that was that the persons you employed got not consecutive employment but only so many days in the week?—Yes.

78660. Would not the result be that as they were unskilled workmen and had been employed at trade union rates, really they would do considerably less work than an independent labourer outside who was put to the same class of work?—And who was familiar with the work, do you mean?

78661. Yes?—I have no doubt that is so: we were prepared to have a considerable wastage. We did not think that that could be avoided.

78662. It seems to me rather that that course may be open to the objection that it is rather an encouragement to the people to flock for that class of payment and employment than go and seek for work in the open market?—It might be open to that objection, but of course, it is not an encouragement to people to flock to it from outside because of the proscription with regard to residence. We decided that we would give the trade union wage to avoid any suggestion of sweating, or anything of that sort. We found it was the only clear course we could pursue with regard to a matter which was obviously a little difficult.

Condition of West Ham in 1904-5.

78663. You have been good enough to give evidence about the administration of the fund. Did you go down at all, and did you get any personal impression with regard to the question of unemployment in West Ham?—I was down there very frequently, and the unemployment at West Ham was quite obvious to anyone who went down there. It was obvious in the streets as well as from the statistics. It was stated that there were 10,000 families who were in a condition of unemployment and destitution, and I should think that that statement did not seriously exaggerate the fact.

Normal condition of West Ham.

78664. What was your idea about the normal condition this was rather abnormal?—It was abnormal, but the normal condition in West Ham and Canning Town, I should say, is that there is a large measure of unemployment owing to the fluctuating condition of the work there. The dock work is naturally very casual, and then the mechanical means of unloading has also lowered the demand for actual labour, and further while the total trade of the docks has increased, much of it has drifted to the Tilbury Docks. Then, of course, the failure of shipbuilding on the Thames has had a very important bearing on the conditions in the district which was built in a very mushroom manner years ago, and is now left with less labour than that under the influence of which it was built, one effect of which is an enormous depreciation of property, and practically the entire collapse of the building trade, which tends to increase the normal condition of unemployment.

78665. That I understand comes from the building having been pushed to an excessive point?—Quite so.

78666. I suppose the condition of that neighbourhood is that there is a congested mass of very low grade life?—Yes.

78667. Should you think in normal years there would be a majority who are always on the border of destitution?—Yes, I should think that is quite an exceptional district.

78668. (*Mr. Russell Wakefield.*) The painting of the hospital, I assume, was not done by two-day shifts?—It was done by competent workmen who were unemployed. Relief work of "Daily News" fund.

78669. Were they employed the whole time?—Yes.

78670. I presume that the other plan was only adopted because of the excessive number to be relieved; you thought you would do something for each?—Yes.

78671. You do not regard that as a satisfactory method?—No, certainly not, it increases the wastage, undoubtedly.

78672. You were driven to it. You wanted to do a little for a great many?—That is so.

78673. (*Mrs. Webb.*) With regard to the trade union rates, you say in one part of your Statement that the Epping Forest Commissioners objected to them. What were those trade union rates? The work was digging, was it not?—Yes, it would be digging. I forget the amount that we arranged, but I think it was 8d. or 9d. an hour. Rate of wages paid for Chingford work.

78674. There is no trade union rate for digging, because there is no trade union of diggers, so to speak. What should you call the trade union rate; how did you fix it?—In that case I am afraid I could not say precisely what the basis of the amount was.

78675. (*Mr. Lansbury.*) Might I suggest that you had as your chairman one of the officials of the Gasworkers' Union, and one of the prominent members was a member?—Yes, I remember it was the General Labourers' rate.

78676. Are you sure it was 8d.?—I am not sure.

78677. I believe it was 6½d., but I am not sure?—My impression is it was 8d.

78678. (*Professor Smart.*) There was another fund "Daily raised the previous year by the *Daily Telegraph*, was there not?—The *Daily Telegraph* raised a fund in the same year, but they applied it purely in the form of direct relief, and also for emigration purposes. Telegraph fund.

78679. You did not co-operate at all with them?—Not at all.

78680. At the same time the Mansion House Fund was being administered in London proper?—Yes. Relations of "Daily News" fund with Mansion House Committee.

78681. Did you co-operate with them?—We approached the Mansion House Fund chiefly with a view of getting suitable work. We met Mr. Russell Wakefield on that occasion, I remember.

78682. Do you know if they approved of your methods at all?—I do not know that they disapproved of them. As far as possible we were working in sympathy with the committee.

78683. You never heard them use the words "with disastrous results"?—Never.

78684. Your peculiarity was paying trade union wages, and you say this was objected to by the Commissioners? On what ground did the Commissioners object?—Much on the ground that the chairman has put to-day, that this being casual work, and obviously work which was not economically sound, we should not pay the standard rate of wages, but we pointed out the difficulty of going below that standard, and the suggestions it would lay us open to, and not having to bear the burden themselves, they agreed that we might do so. Objection of Epping Forest Commissioners to wages paid by "Daily News" fund.

78685. But their objection was the attractive character of your work compared to other work?—Yes, that was generally it.

78686. Do I understand that usually you gave the men only one or two days a week?—Very seldom more than two days a week.

78687. That would give them a very small amount, not sufficient for relief even?—It was more than we should have paid them in the ordinary way without labour.

Inquiries by
Daily
News in
West Ham.

78688. (*Dr. Downes.*) In Paragraph 2 of your statement you say you made some inquiry by your own staff. How long did that inquiry take?—That practically continued throughout the distress and throughout the administration. We had two men down there for a time, and throughout the time we had one, Mr. Copping, who was visiting the homes daily. The results of his visits were published in the form of articles, and they appear now in the form of a book which is called "Pictures of Poverty."

78689. (*Mr. Loch.*) With regard to the inquiries, did you find out who was helping in the district besides yourself?—Yes. Our committee was quite in sympathy and in touch with all the other bodies; it consisted, as I think I say here, of members of all the public bodies.

78690. The ward committee?—The central committee.

78691. I am thinking of the ward committees, which would be the committees of distribution?—Yes.

78692. Upon those ward committees were the clergy acting?—Yes.

78693. A great deal of money, it is said, was flowing into West Ham at that time?—Yes.

78694. Did you come across any of the flow, apart from your own current?—No. I think the suggestion that there was any sort of abuse applied rather just before Christmas, when the thing was at its height, and the emotions of the people were naturally a little bit sensitive; some of the money was perhaps distributed with some want of regard. I do not think that applies to the administration of our fund, but it may have applied to the administration of one other, which was very temporary, and disappeared immediately after Christmas. It was I think administered with a certain amount of generosity, but little care.

78695. Did you also take notice of what the Poor Law people were giving in outdoor relief?—We were kept in touch with the Poor Law, because we had the guardians on our committee.

78696. When you made investigation you had forms?—Yes.

78697. Was it stated on the forms what the Poor Law was giving?—I could not say that.

78698. Have you any theory as to what is the right course for voluntary newspaper charity to adopt in a

time of emergency in relation to the existing authorities? —I think certainly it should work through the existing authorities and in association with them as far as possible, and in this case, of course, we approached all the members of the board of guardians and sought first of all to get them in touch with our movement, and also the mayor and corporation.

78699. Would your idea be that it should rather strengthen existing authorities than form new nuclei for relief administration?—Certainly, it should be administered with regard to the nature of the other and permanent forms of relief, and should only be supplementary to those forms.

78700. Did you refer cases to the board of guardians amongst those you came across?—I could not answer that.

78701. Taking a future year in which there might be excitement and possibly the newspapers might intervene, do you think there is any possibility of coming to an understanding generally, on the side of the Press, as to what is to be done?—It is quite clear that one or two of the newspapers, if they poured their funds into a district might spoil the organisation?—I should be very anxious, and was very anxious then, not to thrust a stick, as it were, into existing machinery. We had been appealed to for several weeks in this matter. It was only when the appeal became so urgent and seemed to us irresistible, that we agreed to go into the work, because, as you may know, we had a fund some two years before, and my experience of that was not such as to make me desire to enter into another enterprise of the same kind, but here there seemed no alternative, and, using the experience of two years before, we endeavoured to place the thing from the beginning on such a basis as would prevent anything like abuse of the administration.

78702. Do you think it is at all possible to have a concerted consideration of this matter by the Press?—It was very difficult. I endeavoured to arrange such a concerted system. I approached another paper which was organising a permanent relief. One, the one to which I referred, was quite a temporary one, the one which I think was abused to some extent, but the other, the "Telegraph" fund, had elements of permanency in it, and I approached them with a view to common action, but they were not disposed to do that, and it fell through. They had their own ideas in view.

ONE HUNDRED AND TWENTY-FIFTH DAY.

Monday, 21st, October 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT:

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH

The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
The Rev. H. RUSSELL WAKEFIELD.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. The LORD BISHOP of ROSS.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

*Mr. William
Amyas
Bailward.*
21 Oct. 1907.

Mr. WILLIAM AMYAS BAILWARD, called; and Examined.

78703. (*Chairman.*) I believe you are a member of the Central Unemployed Body for London, a member of the Bethnal Green Board of Guardians, and Chairman of the Bethnal Green Committee of the Charity Organisation Society?—Yes.

78704. And you have prepared a statement which we may accept as your evidence-in-chief?—Yes. (*The Witness handed in the following Statement.*)

1. Though the Royal Commission have done me the honour of inviting me to make a statement upon this

Mr. William
Amyas
Bailward.

Experience
of witness
during first
twenty-one
years.

question, I cannot claim to speak with especial authority upon it. I have never considered it apart from the general question of the relief of distress; neither have I, like so many others, visited foreign labour colonies or taken part in the administration of special relief funds. What knowledge I have of the subject I have picked up during twenty-one years as honorary secretary and (later) chairman of the Bethnal Green Committee of the Charity Organisation Society. I have also for about sixteen years been a guardian for the same parish, and was for many years a constant attendant at relief boards and committees. I was also for some years chairman of the "Settlement Committee" of the guardians, a committee which has the duty of examining fortnightly the fresh admissions to the workhouse and infirmary, and in these various capacities I have had the opportunity of watching the history and developments of a very large number of cases of distress, including many of distress from want of employment. I have also kept notes and memoranda of my experience.

Local
Authorities
and provision
of work for
unemployed
previous to
Unemployed
Workmen
Act.

2. During these years I have also seen a good deal of the attempts made by local authorities to provide work for the unemployed before the "Unemployed Workmen Act." The Bethnal Green Vestry opened their labour bureau in 1892, in consequence of the re-issue by the Local Government Board of the Circular of 1886. In 1893 I obtained figures from the district surveyor showing that 10,526 days' work was given to 752 men in 1892, and 4,954 days' work to 815 in 1893. More than one-third of those who applied in 1893 had also applied in 1892. The cost for 1893 was put at about £4,900, and as the work has been going on ever since in a greater or less degree, it is obvious that the total cost must have been considerable. The work was of the nature which is now so familiar, chiefly odd days of road sweeping, etc., the horse brooms having been taken off. Attempts were made from time to time to employ the unemployed at the ordinary work of the vestry, but always at a heavy loss. There was much talk also of whitewashing railway arches, laying out recreation grounds, painting town halls; but it was soon found that such work is subject to very narrow limitations, and the usual work was "broom and shovel." It was, of course, totally inadequate: in 1895, a letter to a local paper put it at one day in three weeks. Still, as the "trade union" rate was paid, it passed muster. The natural result was that before long "a day from the vestry" came to be looked upon as a matter of right and its refusal as an injustice. Crowds gathered round the vestry every winter waiting for work and gradually losing their hold upon the open labour market. At a meeting of the vestry in 1895, a young man complained that "he had been up every day for ten weeks, but had not been taken on once," and he was one of many. Almost every man capable of work who applied to the Charity Organisation Society or the guardians had had one or more days from the vestry, and a generation has grown up which has learnt to look upon it as a right. Our workhouse was also in those days pretty full of able-bodied men, some of whom went out occasionally for a day's road sweeping and then came in again. A considerable amount of outdoor relief to the able-bodied was also given by way of "interim relief" till the board met, or on the ground of "sudden and urgent necessity." But the relief work of the vestry was quite as much out-relief as that granted by the guardians. We had in those years many deputations of the unemployed to the board of guardians; in one winter they were continuous for several weeks. These deputations complained as a rule of the insufficiency of the work provided by the vestry and of its degrading nature, and they usually pressed the guardians to give outdoor relief. The action of the guardians was largely determined by the size of the deputation and the strength of its language. Speaking generally, the guardians referred the men to the vestry and the vestry referred them to the guardians, and the unemployed were "shuttle-cocked" between the two authorities, which was the natural result of having two public bodies to deal with the same question. I have throughout watched the conditions prevailing in other parts of London and they were very similar. The pressure upon local authorities was acute. Meetings were being held on Tower Hill, which adjourned to visit various town halls and guardians' offices. Shoreditch Town Hall was at one time in a state of siege and the vestry communicated their decision to the deputation by a resolution wrapped

round a stone and thrown out of window. In Bethnal Green we had on one occasion 300 men in the waiting hall and hastily rescinded a resolution when their leader (Mr. "Jack" Williams) threatened to bring them into the board room. Pressure of this kind has always to be reckoned with and becomes especially acute when the duty of providing work for the unemployed is thrown upon local bodies directly or indirectly elected.

3. In 1903 and 1904 we had the Mansion House Committee, which was followed in 1904-5 by Mr. Long's scheme. I attended meetings at the Local Government Board and at Clerkenwell when Mr. Long put forward his scheme. We had then the first intimation that "permanent machinery" was to be created to deal with a question which had hitherto been considered as exceptional, a new and very important departure. Mr. Long, however, was very emphatic that the machinery was only intended to be used in times of pressure and that under no conditions could money be granted from the Imperial Exchequer. In 1905-6 the principles of Mr. Long's scheme were embodied in the Unemployed Workmen Act, of which we have now had about eighteen months' experience. The operation of the Act and of Mr. Long's scheme are identical for all practical purposes.

4. The Unemployed Workmen's Act was passed almost unanimously. Mr. Gerald Balfour assured the handful of members who opposed the Bill that the restrictions and limitations contained in it would be a sufficient safeguard. One of them expressed a doubt as to the wisdom of passing a Bill requiring so many safeguards. The Act was mainly promoted by a small number of distinguished persons who thought they saw in it the means of assisting the better class of workman "usually in regular employment, but exceptionally unemployed," in order "to prevent physical and moral deterioration." All the machinery of investigation and selection was intended for that purpose.

5. The Act has been in operation for about eighteen months. Already a large number of the restrictions and limitations that were most insisted upon at the outset have been thrown overboard and others are sure to follow. First the record paper was relaxed, then the restriction as to the receipt of Poor Law relief, then the condition as to the payment of a lower wage rate, though by a sort of compromise rather less than a full week's work was given. Next, in spite of Mr. Long's declaration in 1904, £200,000 has been granted from the Treasury and the principle of such grants accepted. The benefits of the Act have been extended to others than those for whom it was originally intended, for the simple reason that very few of those for whom the Act was intended applied. More recently the words "wives and children under fourteen" has been interpreted to include children over fourteen, not able to work, parents, and even sisters. From all this it appears clear that when once the principle of providing work has been accepted there is no limit to its extension. The Trades Union Congress tells us that "the fringe of the question has not yet been touched."

6. I was a member of the Joint Committee for Bethnal Green under Mr. Long's scheme, and am now a member of the Distress Committee. It appears to me that these committees, as constituted, are quite unsuited for the work which has been imposed upon them, and that even if they were not so the work has inherent difficulties which it is impossible to meet satisfactorily. In the first place the work of investigation is absolutely uncongenial and even repugnant to a large number of their members, who look on it as "inquisitorial." There is neither uniformity of action nor unity of purpose, the personnel is constantly changing, and there is no stability. To quote the words of a recent report issued by the Central Body, "Distress Committees still vary in thoroughness and even in action . . . owing to conflicting opinions as to the legitimacy of claims for assistance." The investigation, such as it is, is only enforced by strong pressure from the least popular committee of the Central Body, and only rendered possible at all by the presence upon distress committees of a small number of people whose presence is often strongly resented. The inherent difficulties of the investigation of a large number of cases in a shifting urban population are obvious. The difficulty of arriving at the facts, the large number of "borderland cases," the want of a common standard of decision, all tend to make a judicial decision almost impossible. The

Objections
Distress
Committee

Select Committees of 1895-6 pointed out these difficulties, and their anticipations have been fully realised. Investigation, unless it gets at the truth, is worse than useless, both because it causes needless irritation and because it has a sort of plausibility which disguises the real issues.

7. We found in Bethnal Green in 1905-6, and 1906-7, that the vast majority of our applicants were those "who for years past had only been accustomed to casual work," and that "all we could do was to offer them further casual work." None belonged to a trade union or friendly society. In fact, they were exactly the same class, perhaps in some cases the same people, who had had "a day's work from the vestry" ten years previously. More than half those who registered in 1906-7 had been on the register in previous years; 22 per cent. of those who registered in 1905-6 re-applied in 1906-7. In both years attention is called to the effect of "provided work" upon the employed workman. "The number of regular workers had to be reduced."

8. The central difficulty of the position has, however, been to provide work which, to quote the words of the Circular of 1886, "all can perform, whatever their previous avocations, and which will not compete with labourers already in employment." Local bodies have been racking their brains to devise such work since 1886 without success, but of course the difficulty is a much older one. The Central Body has been no more successful in solving it than its predecessors. Hardly a meeting has passed of late without a protest from some district against the insufficiency of the work provided, and the complaints are loud within the Central Body itself. The agenda for May 3rd this year shows that work has been provided for 2,911 out of 27,816 registered. Various schemes of work have been entrusted to the Central Body by the Board of Works, London County Council, and others. It has all been done at a heavy loss and at the expense of the efficient workman in the open labour market. It may be said that some of the work is work which would not have been undertaken in the ordinary course, *e.g.*, the construction of bathing ponds, and the laying out of golf courses, but such work, apart from the fact of its necessary limitations and of its doubtful economic value, would have been better done by the ordinary labourer, and would have been equally effective as relief work. At Farnbridge an experiment has been made in the "reclamation of foreshores," which commercial enterprise has not thought it worth while to attempt. The cost was originally estimated at, I believe, about £8,000. It now exceeds £20,000. The land reclaimed is valued at £800. I believe that the attempt by the State to provide work in ordinary times is a fatal expedient, but I also believe that, if it is to be done at all, it had better be done through the ordinary labour market which constitutes a far better test of "industrial efficiency" than the cumbersome and expensive paraphernalia of the Act, and which is far less wasteful and demoralising.

9. Emigration is the one remedy for distress from want of employment, as to the efficacy of which I have no doubts. During twenty years I have seen a large number of cases of men who have been dragging on here in decaying trades with the gloomiest prospects for themselves and their families. I have read their letters later from Canada or other colonies, full of hope and enthusiasm, advising others to follow in their footsteps. I have never known of a failure where the right people have been emigrated. They need not be, and indeed are not as a rule, of the first class of industrial efficiency, but are usually those who have been the first to be crowded out of the English labour market. But there is plenty of room for them abroad, where they help to build up the empire. I have also seen something of emigration in Norway, where it is almost automatic, those who go first sending for their friends. I should like to see the same in this country.

10. Of labour bureaux in England it is too early to speak, but since reading the Report of the Board of Trade of 1904 I have wished to see the experiment made, and it has my cordial sympathy as a step in the direction of the better organisation of labour. The dangers to be avoided are congestion at certain points and the suggestion that registration implies the provision of work. Much will depend upon the tact and judgment of the managers of the bureaux.

11. Of labour colonies abroad I have already said that I know nothing from personal observation. What I have read inclines me to believe that they are "colonies of social wreckage, not colonies of unemployed" (Board of Trade Report, 1893), and that their reformatory influence is very small. The conditions abroad are of course very different because there they have no workhouse system similar to ours. I have, however, to some extent watched the operation of labour colonies in England in connection with my own work and have visited some of them. So far as I can see, though our experience of them, except in the case of Hadleigh, is too short to justify any dogmatic conclusions concerning them, the tendency would appear to be in the direction indicated by the Reports of the Board of Trade of 1893 and 1904. In or about 1895, when our workhouse in Bethnal Green was full of able-bodied men, we passed almost all of them through the Salvation Army colony at Hadleigh and some of its other workshops. I am unable to point to a case of real reclamation or reinstatement in the labour market. I know that most of them returned to the workhouse. Many other boards of guardians had similar experience at the time, and yet the managers of the Hadleigh Colony were certainly neither wanting in ability nor in enthusiasm for their task. More recently we have seen numerous instances of men who have been in other labour colonies applying again for relief within a short period. In April, 1904, 150 men who had been at Osea Island and elsewhere, under the Mansion House Fund, applied immediately afterwards to the magistrate at Worship Street, representing themselves to be destitute. Probably every board of guardians has had applications from men recently returned from labour colonies. I know that we have had such in Bethnal Green. We had, on May 24th this year, an applicant to the Bethnal Green Charity Organisation Society who had been at Hadleigh, Chingford, Finsbury Park, and with the Church Army. On June 7th, one who had just returned from Hollesley Bay. It is plain that in many cases the stay in a colony is only a dole of work.

12. Whilst a member of the Distress Committee I have noticed some change in the attitude of the men towards colony work. At first they resented discipline, and from time to time mutinied and left the various colonies in batches. Later, I observed that they expressed themselves as "perfectly satisfied" with colony treatment and have asked to be sent back again when their time has expired. Already, within the short experience we have had, there are many men who have been to various colonies in successive years. There is a danger that we may be making a new class of vagrant analogous to the "kolonie bummler," well known in Germany.

13. The success of the colonies as training grounds for agricultural work is open to question. So far as I can see the training and reformatory influence of Hadleigh, which has been in existence more than twenty years, has not been very remarkable. Most of the men are beyond the age at which it is reasonable to expect that such a change of life can be expected. The agriculturist must be "caught young." Apart from that there is a flavour of artificiality and institutionalism about these colonies which is not calculated to develop individual initiative and responsibility. It is also very doubtful whether the Central Unemployed Body is well qualified for the business management of colonies and schemes of work. Most of the members are too busy to undertake, weekly, long journeys into the country, and the management drifts into the hands of a few. I have only once attended a "rota committee," but upon that occasion there were only two other members present, one of whom, was a clergyman, the other a gentleman who had, I believe, been in the Royal Artillery. I am sure that neither of us knew much about agriculture or estate management.

14. Distress from want of employment would appear to be due to a multiplicity of causes and there is no one remedy. The chief cause, as recent experience has shown, is the growth of the casual and underemployed class, and that is, in my opinion, due primarily to the Circular of 1886 and the policy which has been adopted in consequence of it, of which the Unemployed Workmen Act is the latest development. The first thing necessary is, I believe, to reverse that policy and to return to the principles laid down by the Royal Commission of 1834.

Treatment of
able-bodied
by guardians.

Fact that
better class
do not enter
workhouse or
apply for
employment
relief is a
healthy sign.

Danger of
providing
work.

There are, of course, many other contributory causes, such as charitable doles of work, shelters, free meals, and the like, which supplement the doles of work provided by the State and odd jobs in the labour market, and make casual labour possible. The hard-and-fast rule of a minimum wage which is in operation in so many trades and the Workmen's Compensation Act are driving the less efficient, for whom at one time there was a corner somewhere, out of the labour market altogether. The increasing burden of rates and taxes, industrial unrest and uncertainty as to the future, are preventing the initiation of new enterprises and the extension of old ones. For some of these causes it may be possible to find a remedy. For others there is probably no remedy but the law of reaction.

15. Though I believe that the retention of the workhouse test is absolutely essential as a check upon the growth of the casual class, I believe also that it is the duty of boards of guardians to spare no pains to get any man who has come into the workhouse exceptionally, and who is really able and anxious to work, back into the labour market. The number of those fulfilling these conditions who have come into our workhouse whilst I have been a guardian has been extremely small, but we have almost always been successful in getting them out into the world again. We give everyone a chance, till we have assured ourselves that it is of no use and no one can say that he is "done for," because he has come into our workhouse. I know that many other boards of guardians do the same. The discriminating, and at the same time sympathetic, treatment of the able-bodied who have come into the workhouse appears to me to be a matter of great importance both with a view to the prevention of the pauper habit and to reinstating the more hopeful cases in the labour market. There must be great difference in the methods of guardians in this respect, otherwise it is impossible to account for the fact that whilst in some unions of late the workhouses have been filled to overflowing with able-bodied men, in others there has been no such difficulty. In 1904, when Mr. Long put forward his scheme, we had only about thirty classified as able-bodied in our workhouse and of these not more than six could really be considered as such. In 1905-6 the Report of the Settlement Committee says:—"During the period of distress through 'unemployment' twelve able-bodied men only entered the workhouse. This shows that the policy of the board in dealing with the unemployed did not lead to the breaking up of homes or the driving of men to the workhouse. The numbers of strictly able-bodied men in the workhouse during the winter were as follows:—November 1st, 1905, five; December 1st, eight; January 1st, 1906, eight; February 1st, five; March 1st, six." In former years before we started that committee, we had ourselves great difficulty owing to the number of the able-bodied.

16. I believe it to be a healthy sign that so few of the able-bodied of good industrial and general character come into our workhouse. I am told that in some unions a better class of man is beginning to use the workhouse, which, perhaps, accounts for the difficulty and overcrowding experienced there. This, if it is the case, appears to me to be a deplorable fact which can only be accounted for by methods of administration.

17. So, too, with the relief work provided during the last few winters. There is a tendency to deplore the fact that the best men do not apply for it. I believe that also to be a healthy sign, but I fear that before long their reluctance will be overcome; indeed, there are signs of it already. I am told that in West Ham, where for ten years or more there has been an epidemic of relief of all kinds, the better class of labourer is now applying in considerable numbers to the Distress Committee.

18. The object of the promoters of the Mansion House Fund of 1903-4, and of the legislation which has followed it, was to help the better class of workman "to tide over a bad season and save him from degradation." They were, however, aware that there is "an opposite but not less real form of degradation; the loss of self-reliance and the expectation and desire that similar special work will be provided for them in future" (Report, p. 102). Three years' experience seems to show that the dole of work, even if it lasts for sixteen weeks, is of little permanent benefit and that there is a grave danger of degrading a class of man who has hitherto kept clear of relief of all kinds.

19. Periods of unemployment are incidental to all trades and professions. The only satisfactory solution is that men should be paid such remuneration whilst at work as will enable them to provide against times of slackness, and that they should so provide, and this applies to those who work with their hands quite as much as to those who work with their brains. But State relief-works, if they are to be a normal condition in our social economy, will indefinitely postpone any such solution.

20. The evolution of the question has been rapid and startling. The promoters of the Mansion House scheme expressly intimated in their Report that the scheme was intended for periods of exceptional distress only. Next Mr. Long provided "permanent machinery," still only to be used on exceptional occasions. The Unemployed Workmen Act has given statutory sanction to the scheme, and now no one dreams but that it will be used every winter. Again, the Mansion House scheme was purely voluntary. Mr. Long drew upon the rates "for machinery only"; everything else was to be provided by voluntary subscriptions. The principle of voluntary contributions has now broken down, as it was from the first obvious that it must do, and that of contribution by the Imperial exchequer recognised.

21. Opinion upon the question may be divided into three categories. Some think that the State should never undertake to provide work for the unemployed except in times of undoubted crisis, others that the State should provide such work at all times. The third party believe that there is a half-way house between these opinions and have endeavoured to find it in the "Unemployed Workmen Act." They cannot be said to have been successful.

22. I have no remedy to propose except that we should cease from doing that which I believe to be the chief cause of the evil. I see no object in duplicating our workhouse system by a system of labour colonies adopted from abroad, where the conditions are very different, and where these colonies have been very doubtfully successful. I think, however, that there is room for improvement in our methods of dealing with the able-bodied in workhouses upon the lines I have already indicated. We have already provision under the law for the "detention" or, in other words, the imprisonment of the habitual rogue and vagabond. The main difficulty experienced by boards of guardians hitherto has been to secure the enforcement of the law. I am in agreement with those who have suggested that something might be done in the direction of the better organisation of casual labour upon the lines adopted by the dock companies in 1894, and also with those who urge that the industrial training of the young is a matter of supreme importance. This last question, however, I believe, depends chiefly upon the growth of the sense of responsibility in parents for the future of their children, a sense which can never be highly developed in a pauperised and dependent class. Finally, I believe that the rigidity of our educational methods is a matter for serious consideration. As a manager for many years of a Poor Law school I have come across many cases of children who have had to be kept on at school when they have been doing no good there, and when they would have been far better in the field or the workshop—a very unwholesome condition at a critical age. For palliatives we must look in different directions. Emigration I believe to be the most effective of these. There are also many remedial forces in society which act almost automatically in the mitigation of suffering—the forces of human sympathy and sense of duty which abound on all sides. Finally, at the back of all we have the Poor Law, which provides the necessities of life for everyone who asks for them, which is deterrent, as it is intended to be, but which may always be tempered by the adoption of the "modified workhouse test."

In supplementation of my statement I enclose a table (See Appendix No. LXXXVIII (A)) showing the subsequent applications to the board of guardians made by those, who had received work under Mr. Long's scheme and the Unemployed Workmen Act. The superintendent relieving officer informs me that of 437 cases assisted by the Distress Committee, 234 were already known to the guardians, or about 54 per cent. Of the 234, eighty-one again resorted to the Poor Law. I find that in many cases, the men did not stay their full time at the work, either being returned as un-

State relief of
unemployed.

Remedies.

suitable, or not finding the work to their taste. Several of them had been in prison for various offences.

78705. (*Chairman.*) I understand you have had very considerable experience in Poor Law work as well as in work connected with the unemployed?—In Poor Law work, certainly, but not so much in work connected with the unemployed.

78706. Your experience has been in connection with Bethnal Green?—Yes.

78707. The Bethnal Green Union is one that restricts outdoor relief, I understand?—It restricts it, but it has not done away with it. They still administer a certain amount of outdoor relief in Bethnal Green.

78708. Under the old system, which you describe in your statement, of the attempts made by local authorities to provide work for the unemployed, the result was very unsatisfactory, according to your judgment, and a good deal of pressure, you might almost say intimidation, was from time to time exercised upon the authorities?—That, I think, is true.

78709. The old system, as you, I think, describe it, resulted in the unemployed being shuttle cocked between two authorities?—Yes, that is so.

78710. As regards the scheme of Mr. Long's, your comment on it is that, first, it was put forward to attain a certain object in connection with a certain class of persons, and secondly, that the Act was subject to certain restrictions?—Yes.

78711. I understand your contention is, first, that it has not attained the object in view, and secondly, that the restrictions have, to a large extent, vanished?—That is so.

78712. Your experience is, that the better class of workmen usually in regular employment, but exceptionally unemployed, have not come forward and have not availed themselves in any appreciable numbers of the machinery of the Unemployed Workmen Act?—That is so in Bethnal Green, at all events.

78713. In Bethnal Green, you say?—Yes, and I think also in other places, judging from what I generally read in reports, and so forth.

78714. As regards the restrictions, there was first to be an investigation; that rule, you think, has been relaxed?—Certain questions were struck out of the Record Paper quite early in the day, I think.

78715. The next condition was that the payment should be at a lower wage-rate than that current or regulated or established by the trade unions; and that I understand you to say, has gone also?—I should say that the difficulty has been met by reducing the number of hours per week—or it may be said to have been met in that way.

78716. The pay has not been reduced or augmented, but the hours have been reduced?—Yes. I think I am right in saying that the pay is from 6d. to 7d. per hour, according to the nature of the work.

78717. Then the sum of £200,000 was granted from the Treasury, whereas originally it was intimated that no such help would be given?—That is so.

78718. Lastly, the words "wives and children under fourteen" have been interpreted to include children over fourteen?—If unable to work.

78719. Therefore, you would contend that the restrictions which were associated with the Act, and which rather facilitated its passage, have practically disappeared in practice?—I think that is so; that is my opinion, at any rate.

78720. In Bethnal Green the great majority of the applicants were persons who had been accustomed only to casual work, I think?—That is so.

78721. I gather from your statement that the applicants who came were very little different from those who applied to the Poor Law, though perhaps they were a little higher in the social scale?—I should say, generally speaking, that was so.

78722. That, generally speaking, they were the same?—Yes.

78723. As regards the nature of the work, I understand you find it very difficult to give work which all can perform, and which will not compete with labourers already in ordinary employment?—Yes.

78724. So far as you know, the work given, in your judgment, has been executed at heavy loss as compared with what it would have been done for if effected at contract prices or by the ordinary machinery of the open labour market?—That, I think, is admitted on all hands.

78725. On the other hand, you think that emigration has, so far as it has gone, been a benefit?—I am quite sure of that.

78726. Would you say that those who have emigrated are the pick, so to say, of the unemployed, or not?—I should say they were the pick of the unemployed, but not the pick of the labour market.

78727. Have you superintended the emigration operations at all?—I have had very little to do with them. I have seen a good deal of the emigration cases in another capacity—that is, as chairman of the Bethnal Green Committee of the Charity Organisation Society; but I am not on the Emigration Committee of the Central Unemployed Body or of the East End Body.

78728. Now turning to labour colonies, I see your experience of labour colonies is that they deal more with those who have been socially wrecked than with the unemployed?—That is not my experience; that is only a quotation from Reports of the Board of Trade for 1893 and 1904. The statement was first made in 1893, and was confirmed by the subsequent inquiry of 1904.

78729. Then this applied to foreign colonies, did it?—Yes, in the first instance. I am referring to foreign colonies there in Paragraph 11, and I say that I have known very little personally of the administration of the English colonies; I have had very little to do with the administration of them.

78730. But, so far as your experience goes, they have not been successful in dealing with the able-bodied men who passed out of the Bethnal Green Workhouse?—Well, I have seen of course the workmen on the other side, that is, I have seen a lot of the people who have been dealt with in these colonies and who have come back to the workhouse, and who have not been benefited in my opinion.

78731. The result has not, in your judgment, been ameliorative so far as regards the individual?—Not so far as I can see. That appears to me to be the tendency, though I think I say in my statement that the experience in England has been too short to justify any dogmatic conclusions concerning these colonies.

78732. You are doubtful about the efficacy of the training given in these colonies for agricultural work, I believe?—I am.

78733. On the ground that if you want an agriculturist, you must catch him young?—That is one reason; and also I say that I think the training in the colonies must necessarily be of too artificial a nature to be really of service.

78734. The distress for want of employment, you think, is largely due to the growth of the casual and under-employed class; should you say that that class has rather developed in recent years?—I should think so. It is very difficult to say, of course, but my experience, so far as it goes, would lead me to say so.

78735. Would you say that the condition of the lowest grade of unskilled labour has deteriorated, so far as you know, during the last fifteen or twenty years?—I should think it is very much the same in quality; it is a question of quantity rather than of quality.

78736. Should you say that the quantity has increased?—I should think the quantity has increased, but, of course, it is difficult to prove that.

78737. The numbers of the unemployed may have increased simply because the population has increased; but should you say that this class of work in which there is under-employment has increased proportionately or more than proportionately in comparison with other branches of employment?—It appears to me that mixed up with this question there is a great deal of the question of pauperism. I think that a very large amount of this under-employment is another form of pauperism, which has been created of late years by the policy which has been adopted.

78738. You think then that this tendency to under-employment has been rather encouraged by the policy adopted?—That is my very strong opinion.

Mr. William Amyas Bailward.

Mr. William
Amgas
Bailward.

78739. You are strong upon that point?—Yes, I am very strong upon that point.

78740. Then you think the hard-and-fast rule of a minimum wage and the Workmen's Compensation Act have had a tendency to drive more and more the less efficient out of employment?—I think that that has been the case. I may say with regard to that question that I was at a Poor Law conference in the north last Thursday, and speaker after speaker called attention to this particular point as to the extent to which the Workmen's Compensation Act had driven people on to the Poor Law.

78741. It would tend rather to shorten the age at which people could get employment, would it not?—That is so, of course.

78742. Do you believe in the retention of the workhouse as a test?—Yes, I am strongly of opinion that it should be retained.

78743. You state also that you believe in discriminating and sympathetic treatment of the able-bodied who come into the workhouse?—Yes.

78744. Assuming you have a workhouse test, and assuming you have no labour colonies, what is the nature of the sympathetic and discriminating treatment which you would adopt in connection with the able-bodied?—The first essential of the thing is to have a good workhouse master who must be a judge of character, and who should also be thoroughly sympathetic. He should form an opinion whether a man is really anxious for work or not, and when a man comes into the workhouse he should, at first at all events, give him every opportunity of getting out. In Bethnal Green we have adopted a system whereby we form our opinion of a man. First of all we see him at our Workhouse Examination Committee, which we call the Settlement Committee, and then we probably make some inquiry respecting him. When we find that he is a man who is *prima facie* anxious to get out of the workhouse, we let him out on pass, and we take steps ourselves to try and get him work. Our own master of the workhouse is in touch with a considerable number of employers of labour, and if the man is a likely man, the master writes to some of these gentlemen and they very often can give the man a job.

78745. I suppose the number of such cases is limited?—The number of cases is limited, of course.

78746. Does the number of cases in which you have been successful form any appreciable proportion of the number of able-bodied who come into your workhouse?—Yes, certainly now it does, because we have a very small number, as I think I say in my statement, of able-bodied in our workhouse at any one time.

78747. They have not come back to the workhouse?—I could not answer that off-hand exactly, but certainly a large number of them have not come back. They do not become ins-and-outs.

78748. Coming to the division of opinion on this subject, I think you actually sum it up that one school think the State should never attempt to provide work for the unemployed except in times of undoubted crisis; that there is another party who think that the State should generally make provision for those who are willing to work and are unemployed, and should give them work; and that there is a third party who think there is a half-way house between these two?—Yes.

78749. You say, in Paragraph 21, the half-way house has failed?—I say that the attempt to carry out the policy of the half-way house, so far as I can see, has failed under the Unemployed Workmen Act.

78750. A half-way house between the Poor Law and those who can maintain themselves might operate in two directions; on the one hand, it might tend to prevent people coming to the Poor Law, and on the other hand, it might encourage a tendency to come to the Poor Law. In which direction should you say this half-way house has operated?—I do not recognise any distinction in my mind between the Poor Law and this relief work that has been given of late years, so that I am in a little difficulty in answering that question.

78751. Holding that view, you think probably that this half-way house would rather encourage pauperism?—Yes, I should certainly think so. It seems to me that for the test of destitution the test of inquiry has been substituted, and that that has entirely broken down.

78752. As you say, you have no remedy to propose, but you think that what is now being done rather aggravates the evil?—That is so.

78753. Do you think more might be done in the way of organising casual labour?—There is a report at present of casual which is pending from a committee which my society have labour. appointed to consider the question of casual labour. It is difficult to speak with any precision until that report has been issued. It appears to a good many of us that there is room for organising casual labour more or less on the lines which were adopted by the docks in 1894.

78754. Would that organisation fit in with some system of labour bureaux or exchange bureaux?—That is as it appears to me.

78755. As regards education, I see you are doubtful about our present educational methods; does your educational criticism apply to the education of Poor Law children, or does it apply to our whole system of elementary education?—I have only seen the children in the Poor Law schools, but the same law applies there as applies outside. I certainly have seen a considerable number of cases of children who had to be kept on till the completion of their school age, when they have obviously been doing no good at school.

78756. Do you think it would have been better if they had been working either in the fields, or in a workshop?—I think some people are fitted for intellectual work, and others for manual work, and when the latter class have learnt to read and write, and have attained a certain standard, I do not think it is much good keeping them on at work for which they are not suited.

78757. In other words, I take it, you think that our educational system is too literary for a certain class of children?—I think it is a question for consideration. I do not pronounce any absolute opinion upon it.

78758. We have had some evidence rather in the other direction, that is to say, it has been thought advisable to keep some hold on the children, and to give some support to the children after they have left school, and until they get to an age at which they can support themselves?—It rather depends upon knowing your child, and it also depends upon your interpretation of "education." It appears to me that education in the case of some children is not necessarily intellectual education at all.

78759. You think the system is not always adapted to the particular vocation or occupation by which they will have to get their livelihood?—That is so.

78760. One feature of the unemployed Workmen Act is, that, so far as your experience goes, so many who apply one year come back and apply in subsequent years?—Yes, I have seen a considerable number of cases of that already.

78761. (Bishop of Ross.) You do not regard farm colonies as an efficient remedy for the unemployed, I think?—I have said in my Statement that I know very little about them myself; but I am judging by the analogy of the foreign colonies, so far as one can judge from the official reports we have had upon them, and from my experience, so far as it goes at present, of people who have been dealt with in these farm colonies.

78762. Emigration you would consider to be the best and most effective remedy, I think?—That is so. It relieves the labour market here, and takes people from a bad labour market to a better one.

78763. The unemployed are generally the less efficient workers, I presume?—Yes.

78764. If you could emigrate the less efficient and retain the more efficient in England, what would be the economic gain?—I think there is room for the less efficient in a better labour market. In the English labour market there is room for nobody at the present time except the more efficient.

78765. If emigration really got under way, would you apprehend any danger or any risk of not being able to regulate your emigration as you would fancy?—I do not quite understand your question.

21 Oct. 1907.
Minimum wage and Workmen's Compensation Act as causes of Unemployment.

Desirability of retaining Workhouse test and of discriminating and sympathetic treatment of able-bodied.

Bethnal Green system in regard to able-bodied paupers.

Opinions on State relief of unemployed.

Failure of Unemployed Workmen Act.

Recurrent cases under Unemployed Workmen Act.

Farm colonies.

Emigration.

Question of
efficiency of
emigrants.

78766. It would be desirable to emigrate the less efficient and to keep the more efficient in England; but if emigration set in, would there be a danger that you could not regulate the emigration so as to emigrate the less efficient and keep the more efficient?—Do you mean that there would be a danger of emigrating the more efficient?—Yes.

78767. Yes?—Of course the more efficient will emigrate and we cannot help it. They will emigrate of their own volition no doubt, as things are now.

78768. Suppose a tide of emigration on their own volition set in, and the more efficient workers did emigrate, would that cause any national loss?—It would, no doubt.

78769. Are the wages in the Western Hemisphere higher than the wages in the Eastern Hemisphere—in England say?—Generally speaking, I should think they are, but I have already said that I am not at all an expert in emigration. I am judging entirely of the value of emigration from the individual cases which I have come across.

78770. Where the tide of emigration has set in, it has been found that the efficient go and the inefficient remain at home?—I can hardly say that myself. You are stating that to me, are you?

78771. I am stating that to you. I have before my mind the case of Ireland where we emigrate 40,000 persons per year; they are practically all efficient, and 90 per cent. of them are young people between fifteen and thirty-five; and the inefficient remain at home. So that it is a considerable difficulty, as you can see?—Yes. That has got to be taken into consideration, of course.

78772. If you take the wages of women workers in England and compare them with the wages of women workers in America, I think you will find that wages in America are more than double those in England. Taking that into consideration, might it not be a dangerous thing for public authorities to encourage emigration—in other words, might not the cure be worse than the disease?—Of course, in my Statement I am looking at it rather from the point of view of relieving the distress in England which I have come across.

78773. You are looking at the immediate result, but we have to look not only at the immediate but at the ultimate result?—All I can say is that in the long run, if wages are higher in one part of the world than in another, labour tends, whatever we may do, to gravitate towards that point.

78774. And finally, probably, the most efficient go to that point?—I do not think we can help it anyhow.

78775. Where ignorance is bliss, perhaps if we can give up the ignorance, it would be so much the better?—Yes.

Unemployed
Workmen
Act.

78776. (*Mr. Russell Wakefield.*) Do I rightly gather from your Statement that you do not think there was a general demand for the Unemployed Workmen Act?—I do not know about the demand beforehand.

78777. You say, "the Act was mainly promoted by a small number of distinguished persons who thought they saw in it the means of assisting the better class of workman?"—They may have represented a general desire; I do not know.

78778. There was a general desire for something to be done, was there not—things had become rather critical?—Yes.

78779. Do you think under any circumstances, even if the restrictions which have been relaxed and so on had been kept up, the Act would have been more successful than it has been?—I have very grave doubts, almost amounting to a certainty, as to the possibility of discrimination by public bodies.

78780. May I take it that the Act itself never had your sympathy?—Never. That is perfectly true—because I thought it a very dangerous measure.

Casual
labour in
London.

78781. With regard to the workers who applied under the Act being casual workers, is not work in London becoming increasingly casual every year?—I am afraid it is; but I attribute that, to a great extent, to the operation of the Act, and of the remedies that have preceded it.

78782. What do you refer to when you speak of the remedies that have preceded it?—I think I say in this Statement that I attribute it mainly to the issue of the circular of 1886, which set all this casual labour going.

*Mr. William
Amyas
Bailward.*

21 Oct. 1907.

78783. But it is not very customary here in London for people to have a very long job, is it?—It depends. Of course one knows that in the building trade the jobs are generally short; but I think there are a certain number of trades in which it is the reverse.

Evil effect
of L.G.B.
circular of
1886.

78784. A builder has a certain number of men whom he always employs, but he has to have what we may call a certain number of casuals as well, and they would be the people upon whom the stress would fall the most quickly of any when there was want of employment?—Quite so.

Length of
jobs in build-
ing trade, etc.

78785. You say in Paragraph 8 that work had been provided for 2,911 out of 27,816 registered, but of course that does not include those who had been emigrated?—No. I had overlooked the column relating to emigration. Some 400 to 600 have been emigrated.

Numbers
emigrated
under
Unemployed
Workmen
Act.

78786. Of course, the emigration was going on all the time?—Yes.

78787. The bulk of the cases emigrated were not really down on the list at all, were they?—That is so; but still, adding the number who were emigrated, it does not make it a very large percentage.

78788. I am not saying that it does, I am only putting this for purposes of accuracy?—Quite so; I am obliged to you for correcting me.

78789. With regard to your knowledge of colony work here, I take it that those cases you know of were practically and entirely workhouse cases who were sent to the colonies?—Of course, I cannot say. In Paragraph 11 I quote the statement that in April, 1904, 150 men who had been to Osea Island and elsewhere applied immediately afterwards to the magistrate at Worship Street. I cannot say whether they were workhouse cases or not.

Character of
men sent to
labour
colonies.

78790. Still, the bulk of those that you knew something of were workhouse cases, were they not?—They became workhouse cases afterwards; I am not sure that they were workhouse cases before.

78791. You, like a good many of us, see that an attempt was made which was, in your judgment, unsuccessful, remedy. but you have nothing to suggest to us in the shape of alternative remedies?—In Paragraph 22, you will see what I have to say.

Question of
remedy.

78792. You say there: "I have no remedy to propose except that we should cease from doing that which I believe to be the chief cause of the evil?"—Quite so, I think the first step to doing the right thing is to leave off doing the wrong one.

78793. (*Mr. Lansbury.*) Did I rightly understand you to say that you consider the bulk of the men who registered at Bethnal Green were men who would usually apply to the Poor Law?—Not necessarily to the Poor Law. I should say they were men who applied in former years to the borough council.

Industrial
status of
applicants
to Bethnal
Green
Distress
Committee.

78794. I want it cleared up, because the pauper class as a class are, as a rule, looked upon as something distinct. Do you consider that the men who got work from the borough council belonged to the pauper class?—I think I define them in my Statement. I say that they none of them belonged to trade unions, and none of them at the time to friendly societies. They were possibly not actually of the pauper class at the time, though some of them were of the pauper class. They were not of the highest class of labour.

78795. You consider then that the highest form of labour is represented by those people who belong to trade unions?—Yes, as a rule; I should say most of the best class of labour belong to them.

Merits and
demerits of
trade
unionism.

78796. You support trade unions then?—I think they have their uses.

78797. Still, we cannot have it both ways, not in any world, and certainly not in this. Either the trade unions are good or bad, surely. You are telling me as something against a set of workmen that they did not belong to trade unions; I only suggest to you that, therefore, in your judgment, trade unions are a good organisation?—Does my judgment matter?

Mr. William
Amyas
Bailward.

21 Oct. 1907.

Merits and
demerits of
trade
unionism.

78798. It seems to me we are only getting your judgment this morning; we are getting your opinions, anyhow?—As I said, I think they have their uses. I think they are very good in some ways, and sometimes I think they are rather mischievous. It depends on what they do.

78799. But in judging a man and his character, you bring into consideration whether he is a member of a trade union or not?—Certainly I do—absolutely.

78800. And if he is a member of a trade union, you consider him a more worthy person than if he is not?—I think he probably belongs to the better class of workmen, and to a higher class of industrial efficiency.

78801. And, therefore, he is a better man?—Yes, I admit that—much better, as a rule. I should say on the whole that a trade unionist is a much better man than a man who does not belong to a trade union.

78802. But, referring to your Paragraph 14 and your Paragraph 19, apparently you disagree with the action of the trade unions? First of all, the trade unions are to keep up a certain standard or rate of wages, so that they can provide unemployed benefit, and then, when they do it, apparently they create unemployment?—I have simply said that the trade unionist as a rule, is a better man than the man who is not a trade unionist. I have said nothing as to the combined action of trade unionists.

78803. I am comparing Paragraph 14 with Paragraph 19 of your Statement?—They are quite consistent, I submit.

78804. I submit to you that if the men have combined to get sufficient wages to enable them to provide for unemployment, therefore you cannot blame them if, as a result, only the most efficient, from the point of view of age and strength and ability, are employed; because you are putting it down that one of the causes for unemployment is that these people insist on a minimum rate of wage?—As I say in my Statement, there can be no doubt that the minimum rate of wage is driving a large number of the less efficient people out of the labour market.

78805. I suggest to you that seeing that you wish men to provide against unemployment themselves, they have no option but to insist on that minimum rate of wage?—That is a difficulty, of course.

78806. Have you any figures as to the actual number of able-bodied men you have dealt with in your workhouse?—I have some figures which I submitted at a meeting with the Local Government Board when Mr. Long brought forward his scheme. We had on that day twenty-four in the workhouse who were classified as able-bodied, and of those, I made out nine who could be actually called able-bodied.

78807. So that it really comes to this, does it, that under the Poor Law we touch very few able-bodied men in the workhouse?—Quite true—at any rate, not in our union.

78808. In your union, at any rate, you do not deal with any very large numbers?—No.

78809. So the number of situations that you are able to get for men through this benevolent workhouse master is comparatively few?—That is perfectly true. If we had a large number of the better class men in the house there would no doubt be a great difficulty. It is because they manage to keep themselves outside that we have not that difficulty.

78810. Is it not true that the borough council in the past under Mr. Long's scheme and the Unemployed Workmen Act kept them out?—I should think not, because the same conditions existed long before Mr. Long's scheme was initiated. We have not had many able-bodied men in the workhouse for years.

78811. I know; but you admit that there has been distress through want of employment, I suppose?—Certainly, I admit there has been distress.

78812. And it had to be dealt with in some form or other?—Yes.

78813. Instead of being dealt with by the Poor Law previously, it was dealt with by the borough council, and by Mr. Long's scheme and the Unemployed Workmen Act?—I do not think it has been dealt with by the borough councils. I do not think that one day in three weeks, which was at one time the rate of work that was given in Bethnal Green, was dealing with the question at all; I think it was making it more acute.

78814. It has been attempted to be dealt with—I will put it that way—because, beside that, you are perfectly well aware that there have been huge funds, of which portions have got to Bethnal Green as well as to everywhere else?—I do not think we have had any funds in Bethnal Green, to the best of my recollection, for a great many years—in fact, not since the Mansion House Fund of 1885; I think that was the last time.

78815. Did you not have a portion—a small portion, certainly—of the money raised by the committee of which Canon Barnett was chairman, and Mr. Maynard secretary?—Do you mean the Mansion House Fund?

78816. Yes?—We had, but it was very small.

78817. In fact, there have been a variety of agencies at work to keep people out of the workhouse?—Certainly; and there always are. It is on them, to a certain extent, that one must rely, I think.

78818. In the last resort the people have got to be helped?—First of all, I want to see them help themselves, but then in the last resort they have to be helped. It is a question of how they are to be helped.

78819. That is the whole point, is it not, between you and the other people? You want them helped in a certain way, and the other people want them helped in another way?—Yes.

78820. You start from the same premises that we all do, and say, "Here are certain people that cannot stand alone"?—Yes.

78821. I understand you wish whatever is done to help them to be done by private enterprise or private philanthropy?—Of course, the phrase "people who cannot stand alone" is to some extent rather an ambiguous one.

78822. You may put it as you please?—The question whether people can stand alone or not rather depends upon the means adopted to help them.

78823. All that I am wanting to get from you is that some means have to be adopted?—We always have the Poor Law as a last resort.

78824. Only you have told us that under the Poor Law twenty years ago, or twenty-one years ago, a new arrangement came in under Mr. Chamberlain by which the municipalities and other people helped?—Yes.

78825. You have told us that a great deal of mischief was then done. Do you contend that the administration of the Unemployed Workmen Act has been as bad as the one day dole of work, or the three days dole of work, that you so very much criticise?—I think it is practically the same. It is a question of quantity really. Even if you give sixteen weeks' work, and the man at the end of the sixteen weeks is not re-absorbed into the labour market, it is just as much a dole of work as if you had given him one or two days.

78826. But it would be an effective help to him during that sixteen weeks, would it not?—During that sixteen weeks, but you have got to look further than that, I think.

78827. That only means that of course you have to extend your operations very much further. It is rather an argument for more work?—Of course, if you are prepared to extend the thing to all lengths—

78828. That is what it comes to, does it not—that there is a large number of people for whom there is no employment, and you actually keep a number of them for sixteen weeks and then they are still out of employment?—I think it is not a fixed number.

78829. Perhaps it is not, but still there is a large number, is there not?—Always, in all trades, and in all professions.

78830. Then you quote a case that came back to you in June from Hollesley Bay, I understand?—Yes.

78831. Would you consider that man a low-standard man?—I cannot remember the particulars of his case now excepting as a fact which I have cited here that he came back.

78832. You do not know the facts connected with that individual?—I cannot remember them now.

78833. Would it be asking too much to send in that man's record?—No. I will do so with pleasure.

As to this the witness subsequently wrote as follows:—

The man is a boot finisher by trade, not a member of Club or Trade Union, and had worked for a firm for about two years up to August, 1906, when he was discharged owing to slackness. He then applied to the C.O.S., who

offered to consider his case with a view to emigration which he refused. He was advised to apply to the Distress Committee, and they sent him in December to Hollesley Bay, where he remained till April 22nd, 1907. He applied again to the C.O.S. in June, 1907, being still out of work.

78834. I understood you to say that you thought the Act was helping towards pauperism?—Yes.

78835. Do you mean that it makes more people apply to the Poor Law, or that you consider everybody who gets help under the Act is a pauper?—It appears to me that the Act is only another measure of Poor Law, as you may call it, and that we have created a new form of pauperism. We do not call it pauperism, but it is actually pauperism.

78836. I understood that that was your view about it; only that is rather different, I think, from what we all gathered, at any rate from what I gathered, when you answered a previous question. You think that it is simply another way of pauperising the people?—I am afraid I do.

78837. In your Statement you say there were 234 people who got help of various kinds, and these 234 were people who had previously been known to the relieving officers?—That is the report from our superintendent relieving officer.

78838. I should like to know whether those 234 had actually been to the guardians and got relief and the rest of it?—I looked through most of these cases, and they all had relief in some form or another.

78839. You say there were only eighty-one of them who came back?—Yes.

78840. So that if you take it for granted that 234 out of the 437 which you mention as the number of original cases had had Poor Law relief, at least a large number of them did not come back to you?—I am afraid we shall see them again at some time or other.

78841. That is not fair, is it? If you put certain figures in your Statement as a return, we are bound to take your figures as they stand?—The Statement, of course, only deals with a certain period.

78842. And for that period only eighty-one out of the 234 came back?—Is it your suggestion that because these people have not come back so far, therefore they have been adequately dealt with?

78843. I do not suggest that at all, and I do not want now to suggest anything; I only call your attention to your own figures?—I understood you in that sense, at all events.

78844. To go back to the labour colonies; you say that 150 men applied to the magistrate as coming from Osea Island; that would be under the Mansion House Committee, I believe?—Yes.

78845. You will remember that the Bishop of Stepney issued a very urgent appeal over and over again for money to keep these men going, because of the very bad state of trade in London?—Do you mean these 150?

78846. Not only these 150, but generally to keep the work going at Osea and Hadleigh?—Yes.

78847. What I am suggesting to you is that this application to the magistrate is nothing against these 150, and does not prove that they were bad characters; it only proves that enough work was not found?—I am only quoting it as an illustration of the little good that had been done to them by their stay at Osea Island.

78848. Because there was no work to come to when their time was up?—Quite so. They had received a dole of work; that was my point.

78849. But it was nothing against the men?—Nothing at all, and I know nothing at all about them. As a matter of fact, this was only taken from a newspaper report which I happened to see at the time.

78850. Do you still contend that casual labour is caused, or has been caused, by the issue of Mr. Chamberlain's circular and by municipal doles of work?—I should say it had been accentuated by them, and it had been increased by them. I cannot say it was caused by them, because, of course, one knows there is casual labour in all trades, and that there always must be casual labour.

78851. You think there always must be a time when people will have to go without work, even if they are strong and able and willing to work?—I judge simply from my experience and from everybody's experience. One knows that all trades have periods of slackness.

78852. Therefore we cannot blame the individual man or woman because of the effects on his or her character

of that kind of employment?—I blame nobody. I am only trying to deal with the general tendency which I think is apparent.

78853. That is, that casual labour and intermittent employment is a necessary part of our present arrangements for giving people work?—Yes, I think so, and it always must be I think. It is a question of degree of course. We want to see it minimised as far as possible, but there always must be casual labour, I am afraid.

78854. Then about emigration; I understand you contend, first of all, that the unemployed are not the cream of the working class?—Yes.

78855. But that it is the best of the unemployed who are emigrated?—I should think so.

78856. The inquiries with regard to emigration are much more severe than for giving a man immediate work are they not?—Yes.

78857. Therefore what is really happening is that as the years go by, if this system remains, we shall more and more send the efficient of those who are under-employed, or out of work, and leave the inefficient here to be dealt with by ourselves?—A similar question was put to me at the beginning.

78858. I am only putting it again for my own satisfaction?—I have already said that it is not in my opinion the most efficient who are emigrated.

78859. But it is the most efficient of the unemployed, that is what I am putting to you?—Yes.

78860. I want to make that perfectly clear. Therefore the least efficient of the unemployed are left on our hands?—Yes.

78861. And your proposal for dealing with those is the workhouse?—Emigration.

78862. No; I am thinking of the least efficient—do you want to emigrate them; they are the majority of course?—The least efficient I think in the long run must be dealt with partly by the Poor Law, partly by voluntary agencies and so forth.

78863. Would you tell us what voluntary agency?—They seem to me to abound on all sides if they were properly organised.

78864. Could you tell me one?—In every district I suppose there is some voluntary agency. There is the Charity Organisation Society, my society, for one thing, and then there are the clergy, who all have funds which they administer.

78865. The Charity Organisation Society does not exist to find people employment, does it?—It does not, but it can, and it has dealt with people out of work by tiding them over periods.

78866. My point is that these are people whom tiding-over does not help, because they are the least fortunate, and therefore there is no room for them?—Then I am afraid the only thing is that they must go to the Poor Law, or to some equivalent to the Poor Law.

78867. Would you tell us what that equivalent is?—The equivalent proposed has been the labour colony.

78868. Do you admit that there would be a large number that would have to be dealt with by somebody in some form or other?—Certainly; there always must be. It appears to me that the Poor Law is intended for that purpose.

78869. (Mr. Lock.) Before Sir Henry Fowler's circular there were no large amounts of work given by the borough councils, I think, were there?—My memory hardly goes back so far as that. I think I first began my Poor Law work in 1891, and Sir Henry Fowler's circular was issued in 1892; of course, it was a re-issue, because it had been issued by Mr. Chamberlain in 1886.

78870. Would you say in general terms that the condition of the class about which you have been speaking, the unemployed unskilled class, was not worse, at any rate, in the days before the circulars came—Sir Henry Fowler's and Mr. Chamberlain's?—That is rather a difficult question to answer.

78871. I mean, may we say that the position of things after the borough council arrangements was a position in which a certain new attraction was brought into the field?—I quite think so. It seems to me that this borough council work has done extremely little good to anybody; it is of such a very precarious and temporary nature.

Mr. William
Amyas
Bailward.

Effect of
borough
council
relief, etc.

Mr. William Amyas Bailward. 78872. Therefore in talking of remedies, we have to deal, have we not, with a state of things at a time when there was no remedy such as has been suggested?—Yes.

21 Oct. 1907. 78873. And that state was not worse, at any rate, than the present, when we have all these remedies?—I cannot speak from my personal knowledge, but from what I have read of Poor Law history I should say it was better before these remedies were adopted.

Dangerous tendency of Unemployed Workmen Act.

78874. Another criticism is that the one-day dole of the borough councils was succeeded by the Unemployed Workmen Act, and that the Unemployed Workmen Act was better than the one-day dole, and therefore should be approved. May I ask you whether you think that the fact that the Unemployed Workmen Act brought a permanent system apparently into existence for offering work to the unemployed, does or does not create a new element of extreme danger to the community?—I think I have referred to that in my Statement. Up to the time of the Unemployed Workmen Act distress was always looked upon as exceptional, and all the functions of the State were limited to dealing entirely with exceptional occasions. Now under the Unemployed Workmen Act that duty has been accepted as a matter of ordinary occurrence.

78875. Therefore, in spite of its defects, even the borough council system was better than this permanent acknowledgment?—It was far less serious, I think. Mr. Chamberlain's circular, and the circulars subsequently issued, all contemplated periods of exceptional distress. I may say in passing that at the last meeting of the Central Unemployed Body a protest was raised against the limitation of the benefits of the Act to two years running to any individual. I think that is rather an illustration of the tendency now.

78876. That is to say, the tendency of thought amongst those who wish to push this would be to make it a continuous permanent Act for the employment of the unemployed?—I think the advocates are perfectly frank about it. They look upon it as a means to an end. But I do not think they approve in their hearts of the Unemployed Workmen Act at all.

78877. The end would be to place on the public the obligation of providing employment in all cases where it is asked for?—That is what I say when I refer to the two schools of thought, both of which are I think logical. The one school objects altogether to the provision of work by the State, and the other school says it ought to be provided at all times.

Evil effect of provision of work upon individuals.

78878. Your own personal experience would be that the view which you express in your Statement is correct, that a great deal is being done now to create a dependent class on the plea of there being an unemployed class?—I am afraid so.

78879. With regard to the men who have had their sixteen weeks' work, they have no doubt been maintained during those sixteen weeks?—Yes.

78880. But if they have come to rely upon an authority for the rest of their lives, winter by winter, have they not been weakened greatly?—I think that irreparable damage has been done to them.

78881. And those men would be the unemployed class of the future?—I am afraid so.

78882. Is it not a question really as to your wanting the people helped in one way and the others wanting them helped in another? In other words, is it not the case that it is not merely a difference of point of view as to the relief of a person which divides the camps, but that one party looks upon the ultimate and permanent dependence of anybody on the State as an evil to the community?—Quite so.

78883. And the other party does not?—Yes, I think that is the real distinction.

78884. Then the whole administration of relief in regard to these people would be one which you would approve of if it led to their independence?—That is so.

78885. Therefore, your proposed remedy is a proposal to lead to independence?—That is so.

78886. Therefore, to take your proposal at the end you would have behind you a workhouse of a certain type with a test, because it has been proved to you by cases, I understand, that unless you do have a test there

Workhouse with test as remedy.

will be a general demand, as in former years, for relief on the ground of unemployment?—Yes.

78887. And the result of that would be to create every evil which relief was supposed to diminish?—Yes.

78888. You have very few able-bodied persons dealt with in your workhouse compared with other unions, I think?—Yes. Small number of able-bodied men in Bethnal Green Workhouse.

78889. (*Mr. Lansbury.*) Do you say compared with other unions—I understood you to say you did not know?—I do say as compared with other unions, because I do know something about the conditions of other unions from what I have read.

78890. (*Mr. Loch.*) The ordinary indoor able-bodied pauperism of London runs to about 46,000, as a mean number, according to the Report; it would be a very small proportion of that indoor able-bodied pauperism that you had at Bethnal Green, judging from the figures you have submitted to us?—I do not know anything about those figures, so of course I could not answer.

78891. I understand that your figures ran to very few cases per diem?—Yes.

78892. (*Mr. Lansbury.*) The figures Mr. Loch is quoting include women, but we were talking about men only when I was asking you about this point?—My figures only deal with men.

78893. (*Mr. Loch.*) Supposing, anyway, that even half that figure were men, still the other unions taken together would seem to show a very much larger able-bodied pauperism than Bethnal Green?—There can be no question of it.

78894. I was the other day at a relief committee, and there were able-bodied men coming into the house. On our making the suggestion that a class of very young people was being brought into the workhouse it was said that they had no sufficiently deterrent, or sub-workhouse, to keep them out, and the consequence was that they just came in pretty much as they wished. You have no special deterrent arrangement in Bethnal Green, have you?—None at all.

78895. And yet they do not come to you?—They do not come.

78896. Is that because the inquiry is stricter, or what is the reason?—I think it is because there is a careful inquiry. All cases are brought up before a committee inquiry at at specified times, and people are got out if possible. That is what it comes to. Advantage of careful inquiry at workhouse.

78897. Then you also adopt the plan of going very carefully through your cases in the workhouse?—Yes.

78898. Do you think that could be made a rule in all Poor Law administration?—I think it would be very desirable that it should be. System in vogue at Bethnal Green.

78899. (*Mr. Phelps.*) Do you have the case-paper system for your indoor poor?—Yes, we have. All the figures which I have given in my Appendix are taken from the case-papers.

78900. (*Sir Samuel Provis.*) How often do you go through your indoor cases and revise your list?—The system is that every fresh admission is brought up before the Settlement Committee, which sits fortnightly, and that there are also a certain number of deferred cases.

78901. You are always doing it, then?—We are always doing it. There are always a certain number of deferred cases on which some decision has been made, and we want to see whether it has been carried out. Sometimes possibly a man may be with us for a long time, and we see him again and again and ask him why he is still there. Eventually I suppose he prefers to go out rather than be seen by the Settlement Committee again.

78902. (*Mr. Loch.*) Then practically you are able to accomplish what you want in regard to the able-bodied without a new organisation for able-bodied relief in the shape of a sub-workhouse with harder work and so on?—That is so. The difficulty with us has disappeared. As I say in my Statement, we had a similar difficulty years ago. I, of course, have seen both sorts of administration. When I first became a guardian our administration at Bethnal Green was what was known as of a lax nature, and then we had our workhouse as practically a lodging-house for anybody who liked to come in and out. We had no revision committee to examine the cases, and

naturally in time we became crowded with able-bodied men. But all that difficulty has disappeared since we have formed our committee and dealt with cases regularly on a certain system.

78903. In this process of change has there, to your knowledge, been any greater distress in the neighbourhood, that is to say, have the people who hypothetically were excluded suffered in consequence?—I should think not more than any others. I think the fact that we have so few able-bodied men in the workhouse is some proof at least that we have not the worst form of destitution in the district. If the worst form of poverty prevailed to a great extent in the district people must come into our workhouse, but they do not.

78904. Do you think in the circumstances it would be wise to exclude from the Act of Queen Elizabeth the clauses referring to giving employment, and to take the whole question of employment out of the Poor Law, and to leave the Poor Law simply to deal with destitute persons?—I think the suggestion that it is the duty of the Poor Law to find work for people has been proved by experience to be absolutely an impossible one, and it has led to a good deal of misinterpretation of its duties.

78905. With regard to the colonies to which you have referred, do you think that the evidence about Hadleigh is sufficient to back your assertion that on the whole the colonies do not make unemployed workmen into independent workmen?—I have spoken rather guardedly as to Hadleigh. I ought to add that I was not only dealing with Hadleigh in what I have said about the Salvation Army, but that I was also dealing with the other labour homes of the Salvation Army, chiefly, I find now, with the others and not with Hadleigh. I have here some memoranda by the master of our workhouse as to about forty-one men who were sent to the Salvation Army workshops, and some to Hadleigh in 1897. I asked him yesterday to make memoranda as to what had happened to them, and if any member of the Commission would like to see the results I shall be happy to hand this paper in. (See Appendix No. LXXXVIII. (B)).

78906. With regard to the present position of things about the minimum wage, and the Workmen's Compensation Act, to which you refer in Paragraph 14, would you say that assistance by way of protection for the strong re-acts to the destruction of the weak?—I think that is very much the case.

78907. So that practically what we are doing to back one group of men who are strong and can fend for themselves tends to re-act upon another group of men and to bring them closer to pauperism?—It seems to me that the tendency nowadays is that there is a new social cleavage going on by which we shall have a class of privileged workmen and the rest of the community will have to be kept in some form of workhouse or labour colony, whatever it may be.

78908. In Section 19 you have referred to the remuneration; would you say that what is wanted is as far as possible a better use of that remuneration, because we have from year to year had the seasonal unemployed persons, who may at times, at any rate, if not often, earn enough for their support if they spread it over the year?—I was half afraid to mention the question of thrift; but still I am very strongly of the opinion that in many cases, at least, provision of some kind might be made for times of unemployment, whereas it is not made now.

78909. Do you think that anything could be done to foster the promotion of organisations for thrift by way of something like an unemployment fund, such as trade unions have? Would it be, within your view, right if all large employers of labour were required to pay into a common fund for the men—the men themselves paying too—but on a much larger scale than the common shop funds at the present date?—The suggestion is quite new to me, and I should not like to express an opinion upon it.

78910. In view of the possibility of more steady employment being adopted in the docks on the lines you refer to, do you think that that occasion should be taken advantage of for forming a centre for unemployment funds, as the unemployment fund of trade unions has in its way been a centre, round which other funds were collected?—Is that following on your previous question?

78911. Yes?—I must say it is a new question to me so I should hardly like to speak about it.

78912. (Mr. Benthams.) In Paragraph 8 you make use of some words which I do not quite understand. Speaking of the economic value of the work done by the people who are put on relief work you say that it: "Would have been better done by the ordinary labourer and would have been equally effective as relief work." I do not quite understand what is meant by that?—What I mean to say is that if the ordinary labourer had been put on to this work the pressure would have been relieved. As things are now my contention is that a good deal of this work which ought to be done by the ordinary labourer is being done through the Central Unemployed Body, and that to that extent the ordinary labourer is thrown out of work, so that you are creating another form of unemployment.

78913. The employment of the ordinary labourer for the same work would have been more economical and more effective, and would at the same time have relieved the labour market to an equal extent; is that your point?—It would have relieved the pressure generally; that is my point.

78914. A little lower down you say: "I believe that the attempt by the State to provide work in ordinary times is a fatal expedient, but I also believe that, if it is to be done at all, it had better be done through the ordinary labour market." I do not quite understand the connection of the words, "if it is to be done at all"; do you mean if it is to be done at all by a public body?—If we are to accept the principle of State relief work, which of course I strongly demur to. If we are to have that at all, I think it is far better that it should be done without this inquiry.

78915. But it could not be done through the ordinary labour market if it is to be done through the State could it?—I think so. Why not? We hear a good deal about the reclamation of foreshores, and afforestation and so on; why should not all that be done through the ordinary labour market? I cannot see any reason why not.

78916. I see your point now; if the State is to do anything in the way of providing work, it should provide this work and the workmen should be employed on their merits and drawn from the ordinary labour market?—They should be employed on their merits without this test of industrial efficiency, for the inquiry is supposed to be a test of industrial efficiency, as I understand it.

78917. That would get rid of all the inquiries as to character, as to fitness, and so on?—Quite so.

78918. And the men would be drawn in the ordinary way from the ordinary labour market?—That is so.

78919. And the less efficient workmen who then did not find employment would be left on the Poor Law?—Yes.

78920. I suppose you could suggest no other expedient?—I think not. Of course they would have the help of all the ordinary agencies—of that human sympathy and sense of duty which abound on all sides. I believe every man who is worth much has friends who are willing to come forward and help him in times of difficulty. We come across the "friendly lead" constantly in the workshop, and, as I have already said to Mr. Lansbury, there are various agencies for dealing with distress outside the Poor Law.

78921. Would not the employment by the State of men of that kind, drawn from the unemployed labour market with the object of tiding them over a distress period, have the tendency that you do not want, that is, that the men might come to rely on expedients of that kind being formed by the State?—You see I deprecate it altogether, and I say that to me it is a fatal expedient that the State should undertake the principle of finding work at all; but I say if it is done at all, then I think it is better to be done through the ordinary labour market.

78922. In Paragraph 10 you speak of labour bureaux, and you make use of these words: "I have wished to see the experiment made, and it has my cordial sympathy as a step in the direction of the better organisation of labour." I do not quite understand what you mean by "the better organisation of labour"?—It seemed to me that by the organisation of telephonic communication you might concentrate your labour at the point where it is needed. I confess I am very ignorant of labour bureaux, because I am not on the labour exchange committee of the Central Unemployed Body, and I only have general views as to

employment.

- Mr. William Amyas Bailward.
- 21 Oct. 1907.
- Labour exchanges.
- Changes of labour conditions.
- Unemployed Workmen Act should not be renewed.
- Substitution of hand labour for machinery in Bethnal Green.
- Effect of doles of relief work.
- Question of policy in administration of Unemployed Workmen Act.
- Cause of hostility to investigation by Distress Committees.
- them. I do not think my views are of much value therefore.
78923. The words, "the better organisation of labour" mean, so far as I understand you, that the labour exchanges and that kind of thing would be used for offering facilities to men seeking employment?—Yes.
78924. That is the extent of your meaning, is it?—"The organisation of labour," of course, is an ambiguous term; I meant it simply in the sense of organising work.
78925. Really it does not mean the organisation of labour, does it?—I am not sure. It does not mean the organisation of labour in the sense of the trade union organisation of labour. It means the organisation of work, I think.
78926. In Paragraph 14 you speak of the growth of the casual and unemployed class, and you say that that is primarily due to the Circular of 1886. Do you think there is no change in the conditions of labour now which has caused a larger number of casual labourers to exist than existed formerly, apart altogether from the means of work that have been offered by the various local authorities?—I really do not know. It is a question I can hardly answer. It seems to me that the changes in the conditions of labour had been going on for a very long period anterior to 1886. We hear a good deal of the changes in modern industry which have been going on, as far as I can make out, for a very long time. We know that more than 100 years ago handlooms were superseded in the north by machinery, and we have had various crises of that kind, by which labour is always changing on the introduction of machinery. It is a process which has been going on for years; it has been gradual, but it has been done all through.
78927. Has that been going on to a greater extent since 1886?—I should have thought not, but I do not know.
78928. I understand from what you say that you would not renew the Unemployed Workmen Act?—I should not renew it.
78929. (*Professor Smart.*) In Paragraph 2 you say that the horse-brooms were taken off; were the horse-brooms taken off for the purpose of making the work longer and more expensive?—For the purpose of making four men do the work of one, that was the idea—dividing the work into smaller fractions. I think that was very general throughout London at that time.
78930. The consequence was that the ratepayers were paying a second poor rate in this new form?—Yes, that is so.
78931. You agree, I think, that no good can come of giving men a few days' work now and then?—Yes.
78932. That is only another form of outdoor relief?—Yes; I am strongly of that opinion.
78933. In Paragraphs 3 and 5 you are very emphatic in pointing out that the various safeguards of the Unemployed Workmen Act have been removed one by one; but is it not the case that the Act was passed by one Government and carried out by another, so that Mr. Long is not to blame?—I think the conditions would have been the same if the same Government had stayed in. That is my opinion.
78934. Mr. Long was very emphatic that under no conditions would money be granted from the Imperial Exchequer?—Yes.
78935. He might possibly have held to that?—But the pressure was very strong. The Central Unemployed Body found themselves with no money at all, and something had to be done.
78936. (*Sir Samuel Provis.*) Mr. Long's statement was not made in connection with the Unemployed Workmen Act at all, was it?—No, it was in connection with his scheme.
78937. And that was before the Act?—Yes.
78938. (*Professor Smart.*) In reference to Paragraph 6, what would you say was the ground to the hostility to investigation on the part of members of distress committees?—I think to a great extent, it is the democratic feeling that is in the air that Jack is as good as his master. I know in my early days, in the joint committee, objections were made to inquiries of employers on the ground that the workmen had as good a right to give a character to an employer as an employer had to give a character to a workman. I think that there is that general spirit which is antagonistic to investigation.
78939. Do not a good many men go on these distress committees without the slightest intention of carrying out the letter of the Act, but principally to show that the Act is a failure?—I do not think that they did at first, but I think that now gradually there may be some growth of that kind of feeling.
78940. Have you not heard men saying they meant to show that the Act was not workable?—Yes, I have; but I do not think I have heard that said in my committee.
78941. In the last sentence of Paragraph 7 you say that "the number of regular workers had to be reduced;" do you mean the regular municipal staff?—Yes.
78942. You are quite certain of that, are you?—That is a quotation from the report of our distress committee of 1906, I think. Everything in Paragraph 7 is taken the reports of our distress committees of 1904–1905 and 1905–1906.
78943. Do you know where we can get particulars of the reclamation work at Farnbridge?—Yes; I think Mr. Lansbury will be able to tell you.
78944. You make a strong point there that the land reclaimed is valued at only £800?—That is so.
78945. Land might be worth nothing till the final touches of reclamation were given, of course?—Yes.
78946. So the present value is no indication whatever of what the value will be at the end of the period?—No. But Mr. Lansbury perhaps could tell you.
78947. (*Mr. Lansbury.*) It is perfectly true, is it not, that it was not only to reclaim a piece of land, but it was also to assist the whole district that that work was undertaken?—Certainly.
78948. So that the value of the work is not to be gauged by the amount of land that remains in the possession of the Central Unemployed Body but by the benefit that accrued to the whole district because of the prevention of privation?—Yes. As a commercial enterprise it would spell bankruptcy to anybody who had spent £20,000 in order to reclaim land valued at £800.
78949. And so no private people could have built this embankment, but it was done as a public improvement for the benefit of the whole of London; just as the Farnbridge reclamation has been done for the benefit of that part of Essex?—That is so.
78950. (*Miss Hill.*) What is the defence against the allegation that it was not built in the most economical and satisfactory way?—
78951. (*Mr. Lansbury.*) Is it not the fact that in connection with the Farnbridge work the committee, of which you were a member, relied upon the advice of a well-known expert all the way through?—Certainly; that is absolutely true; but they undertook the work in the first place without consulting an expert, I think.
78952. No?—Was that so? Of course it was undertaken before I became a member of the committee.
78953. (*Professor Smart.*) In Paragraph 9 you say that in Norway emigration is "almost automatic"; what do you mean by that?—I meant that those who go out first from Norway send for their friends, as a matter of course—I think that is done in Ireland, too—and that there is no State or charitable aid required there at all. It appears to me that the difficulty of raising funds in England now for emigration is so great that unless we initiate, somehow or other, an automatic system, it will break down altogether.
78954. You speak very favourably of labour exchanges; of course you know Mr. Beveridge's opinion of them?—Yes.
78955. Do you share his opinion?—I do not know enough to say that I share all his opinions. But generally speaking I think I should like to see them tried as an experiment. I am afraid I cannot speak with much authority upon them.
78956. What do you mean by these words in Paragraph 10: "The dangers to be avoided are congestion at certain points and a suggestion that registration implies the provision of work?"—What I had in my mind there was that we should have large crowds of people collected round these labour exchanges expecting to be provided with work, and that the old difficulties would reappear

Reduction of regular municipal employees through unemployed relief work.

Value of land reclaimed at Farnbridge.

Question of Norwegian emigrants.

Labour exchanges.

Dangers to be avoided by labour exchanges.

which already have been so very much to the fore in connection with labour bureaux in various parts of London.

78957. Do you mean that they would tend to immobilise labour?—Yes.

78958. Of course, that would be quite in contradiction to the whole idea?—Yes.

78959. And it would get no encouragement from labour exchanges themselves?—No. I think the labour exchanges are quite alive to that difficulty, but it is a question whether in practice it will not be found to be a real difficulty.

78960. In Paragraph 12 you speak of a new danger; I suppose you mean that a professional loafer finds the labour colony an agreeable variation on the workhouse and casual ward?—I think so. That is my point, rather, there.

78961. Is that an *a priori* opinion, or have you seen any evidence of it?—I say in my statement that I have observed lately that the people appear to be satisfied with their colony treatment. Of course, that is merely a straw showing which way the wind blows. Then I have read, to a certain extent, about the German labour colonies; apparently they have created a new class of vagrant or a special class of vagrant, I should say.

78962. In Paragraph 14 you seem to agree that there is a growing proportion of unemployed to population, but you look upon that, I understand, not as a proof of the increasing difficulty of finding work but as rather a proof of increasing disinclination to work, or at least to work steadily?—As I have said before, I believe that this new policy is really a Poor Law policy and that it has created a new form of pauperism.

78963. You think it is the policy that is increasing the number of casuals and not any real economic reason?—Of course there are various causes—a complexity of causes, no doubt; but I think the policy is creating a new form of pauperism, and that that is at least one considerable cause.

78964. In docking, I suppose you would agree that this reserve of labour always waiting to be taken on is in the interests of the employer; might that not be extended to other trades as well, do you think?—It may be in the interests of the employer, but I think it is open to doubt whether this cheap casual labour is in the interests of the employer always.

78965. A reserve of labour is necessary for the working of the present system in some trades, is it not?—I believe it is in some trades, certainly more so in some trades than in others.

78966. So the casual labourer might be increasing owing to new inducements being given to him to increase?—Yes; but on the other hand, since they have reorganised their labour at the docks I believe that they find that it has paid the dock companies to do so. They used always to have an enormous reserve of casual labour waiting, as I understand; but now they have a much smaller reserve and they have found that satisfactory.

78967. If it has paid those dock companies to whom you refer, why has the example not been followed?—That is certainly a question which has to be inquired into, I think.

78968. Does it not look as if your dock employers require a considerable amount of philanthropy in their ideas before they try to decasualise their labour?—I suppose in a great many things people go on in the way in which they have been going on for a great number of years, and new ideas do not strike them. It does seem that there is room for the reorganisation of casual labour in a great many other industries outside the docks, notably in the wharves, where there is no kind of organisation at present.

78969. In Paragraph 19 you say: "The only satisfactory solution is that men should be paid such remuneration while at work as will enable them to provide against times of slackness." Do you find that workers in the seasonal trades are paid high wages?—As a rule, I understand that they are. They ought to be paid such wages whilst they are at work as will enable them to provide for their slack times.

78970. Is that not theoretical entirely?—Is it not so, then?

78971. What about women seasonal workers, for example?—That I could not tell you.

78972. (*Mr. Lansbury.*) Or painters?—I am only saying it ought to be; I am not saying what is. That is what I should like to see. *Mr. William Amyas Bailward.*

78973. (*Professor Smart.*) In the jam trade and the soda water trade, for example, I think you have the lowest paid wages of any in women's labour. In Paragraph 22 you speak of the children "who have had to be kept on at school"; do you mean the children under fourteen who are practically unteachable?—Yes. 21 Oct. 1907.

78974. What is their "unwholesome condition" that you refer to?—They are being kept on at school when they ought to be out at work. Question of keeping backward children at school.

78975. What really is the unwholesome condition that you refer to; is it their being kept at school, or their not being allowed to work, or that there should be such children?—I only throw out that last suggestion rather tentatively. I say, in my own experience, I have known children, who, I think, were doing no good at school kept on at school because they were under fourteen, and I think it is better that such children should be sent out to work.

78976. Generally, I think you adopt a negative attitude towards the whole Act, but you speak with approval of four things, namely, labour exchanges, emigration, decasualisation, and industrial training for the young?—Yes. Certain good elements in Unemployed Workmen Act.

78977. (*Mr. Phelps.*) When you speak as you do of emigration, I gather that what you have in your mind is the men who benefit by being emigrated?—Yes.

78978. Do I understand you to suggest that the labouring population of England is superfluously large?—I should think most of the labour markets are over-crowded at present. Overcrowded labour markets.

78979. Do you think that is mainly due to want of adjustment, or to its being superfluous?—I am afraid I cannot answer that; it is too difficult a question for me to answer.

78980. I wanted to go on to ask whether you think the existing administration puts much difficulty in the way of the migration of labour?—The existing administration or the Poor Law? Immobility of labour, how far affected by Poor Law, by charities and Unemployed Workmen Act.

78981. Take the Poor Law, first of all. You have sat on your settlement committee, I think you say, for several years?—Yes.

78982. Do you find the Act of Settlement is an impediment in the way of people moving about?—It is rather difficult to answer that question now. I should not think it was a really serious grievance nowadays; it has been mitigated to a great extent.

78983. Do you think that the existing administration of charities tends to keep population on a given area?—I think some of the more highly centralised charities in London do no doubt attract and keep people on a given area.

78984. Do you think the differences in workhouse administration or Poor Law administration have much effect upon the movements of population?—I should think not, as a rule, but possibly such special legislation as the Unemployed Workmen Act would have an effect.

78985. Do you think that Act has attracted people into London?—The twelve months' qualification, I suppose, would to some extent be a check upon that.

78986. What I want really to ask you is whether your experience has suggested any way in which we could diminish the pressure of population on given areas and improve its mobility?—If we could keep people in the country a great step would be gained. We have now the new Small Holdings Act which may have some effect in that direction—I do not know, but I hope it may. Desirability of keeping people in country.

78987. With regard to remedial treatment in the workhouses, have you any experience of the employment of teachers, technical or general?—Only by hearsay.

78988-9. You have not any experience in your own workhouse?—We have never employed one in the workhouses I know. There is the chaplain, of course. If you have got a good master and good officers I think they supply the place. Possibility of remedial treatment in workhouse.

Danger of labour colonies becoming too attractive.

New policy of relief creating new form of pauperism.

Question of casual labour and the employers.

Wages in seasonal trades.

Mr. William
Amyas
Bailward.

21 Oct. 1907.

Possibility
of remedial
treatment in
workhouse.

78990. Is not your difficulty in mixing up the classes to find any sphere in which you could employ the people and so forth?—The great difficulty is the employment of people in workhouse. Poor Law guardians have been trying it for the last I do not know how many years, and I do not think they have been at all successful.

78991. Do you not think the atmosphere of a workhouse rather militates against any remedial treatment?—It may, but I think if a man is really keen about getting work outside he may, for a time at all events, be let out on pass to look for work himself, leaving his wife and family chargeable. You have got to be very careful in doing that sort of thing, as it is open to great abuses. We have been doing it now for a good many years in Bethnal Green. At one time we discovered that we had, I think, 100 of what are known as "ghosts" in the workhouse, that is to say, people were let out on pass, they had not been marked out as discharged, but they disappeared and rations were being drawn for them all the time.

Possibility of
combination
of workhouses
for establish-
ing labour
colonies.

78992. Do you think it would be possible to have anything in the way of a combination of workhouses, or a combination of unions for the purpose of establishing colonies?—Yes, I think there probably might be something of that sort. There may be reforms of workhouse administration which are desirable in that direction, but I have never thought about the question myself from that point of view.

Hopelessness
of training
after certain
age.

78993. Do you think that the labour colony has any place as such in the building up of character, or in any remedial process?—I am afraid I am rather hopeless about training people after a certain period of life. In regard to Hollesley Bay, I have observed in our reports that a good number of the men were over forty, and several of them were between fifty and sixty; I think when you are past forty it is rather difficult to train anybody to a new form of life.

Average age
of applicants
for employ-
ment.

78994. The experience is, is it not, that the great majority of applicants for employment are under forty?—Yes, I suppose they are, but I could not answer straight off.

78995. (*Bishop of Ross.*) In the Return the average is given as thirty-five and three-quarters?—But that would mean that there would be men between fifty and sixty in all probability.

Workhouse
classification.

78996. (*Dr. Downes.*) In Paragraph 22 you say: "I see no object in duplicating our workhouse system by a system of labour colonies adopted from abroad"; would that view of yours extend to the classification of workhouses?—No, I do not think it would.

78997. I only want to be quite clear on the point. You do not object to a classification of the various inmates we have in our present workhouses, by means of various institutions, do you?—No.

78998. Or to the provision of means of employment by the provision of various institutions, or in the one institution?—No, I do not object to that.

Emigration.

78999. You say with regard to palliatives you believe emigration to be one of the most effective?—Yes.

79000. From your experience should you expect that the more a man is provided for here, without any effort of his own, the less likely he would be to emigrate?—I should think so, certainly; it seems to me to be an obvious conclusion.

79001. (*Mr. Chandler.*) I think your opinion, if I understand your Statement aright, is that the grants in Bethnal Green, following 1902, were not beneficial to the unemployed?—That is so.

Boards of
guardians
and relief of
unemployed.

79002. You say in Paragraph 2: "Speaking generally, the guardians referred the men to the vestry and the vestry referred them to the guardians, and the unemployed were shuttle-cocked between the two authorities, which was the natural result of having two public bodies to deal with the same question." I understand that in your judgment the board of guardians would be the most suitable people to have to deal with those Bethnal Green unemployed?—I think so, certainly; I think it is a question for the Poor Law. In any case I think one body ought to deal with them, and I think a multiplication of bodies dealing with the same question is a very serious evil.

79003. In Paragraph 15 you express the opinion that Boards of boards of guardians should "spare no pains to get any man who has come into the workhouse exceptionally, and who is really able and anxious to work, back into the labour market." In your experience have you found boards of guardians exert themselves much in that direction, and has your experience led you to believe that as a rule boards of guardians really exert themselves very much in that direction?—I believe a good many boards of guardians do, but I am entirely unable to say what there is in the minds of various boards of guardians. I believe they do very much the same, but I believe the practice might probably be made much more general.

79004. Your experience of your own board may perhaps confirm your view, but of your own personal knowledge you do not know what other boards do?—No, and I could not speak about other boards on that. It is so obvious a thing to do, that I think other boards would do it simply for their own sakes, because they do not want to keep more people in the workhouse than they can help.

79005. I am afraid that that duty is performed in such a perfunctory manner, as a rule, that the question of seeking to get men back into the labour market seldom enters the mind of the average board of guardians?—That may be so.

79006. (*Miss Hill.*) I suppose you think that the more people are placed in a position to help themselves the less likely are we to have a large permanently unemployed class?—Quite so.

79007. And you think that the system set up by the Unemployed Workmen Act are not such as to encourage energy, intelligence and thrift?—I am very strongly of the contrary opinion.

79008. But on the development of such qualities the prosperity of families must in the long run depend?—Yes.

79009. Then you would look upon the people who avail themselves of that abnormal work, or made work, as paupers quite as much as those who come on the rates in any other way?—I have said I look upon it as another form of pauperism?

79010. As regards the seasonal trades, would you consider that if you provide a man with sixteen weeks' work in the winter at a colony, the tendency will be for his master to give him lower wages in the summer, in fact, that such provision of work will really keep a body of casual people able to take ordinary work for a very limited time in the year?—I think it will inevitably re-act upon wages.

79011. In fact, in a sense it is relief in aid of wages?—It seems to me to come to the same thing.

79012. Just as the old Poor Law was?—Yes.

79013. If you get a large class who are expected to return periodically to be supported by the rates, it will mean that their wages outside in the long run will be less and not more?—I think it will be precisely the same.

79014. (*Sir Samuel Provis.*) Referring to Paragraph 5 of your Statement, I am not sure that it does not go a little further than you intend. The restriction as to the receipt of Poor Law relief applies at the present time, does it not?—It was done away with, I think, for a period.

79015. What was provided was this, was it not—that the receipt of relief during a period prior to January 1st 1906, should not disqualify?—Then I think that period was extended, but I am a little hazy in my recollection of what actually did occur. I am only pointing to the fact that that was the case.

79016. This paragraph rather implies that now the restriction as to the receipt of Poor Law relief is abolished altogether, but that is not what you intend to say, I gather?—No; I imagine that comes on again now.

79017. Anybody who has been in receipt of Poor Law relief since January 1st, 1906, is disqualified, and consequently all the persons who have received this unemployed assistance during the present year, could not have been in receipt of Poor Law relief during the past year?—That is so.

79018. Then I do not think any alteration has been made, has it, as to the condition of the payment of a lower wage, which you also refer to in Paragraph 5?—That was a point that was very much insisted on; I do not know that it was actually embodied in the Act, but it was very much insisted on in the first instance by all who urged the adoption of the Act.

79019. It is in the regulations, is it not?—Yes. It was very much insisted upon, for instance, if I remember rightly, in the Report of the London Unemployed Fund; in fact, all the people who were primarily favourable to the passing of this Act insisted on that as a very important restriction.

79020. You do not intend to convey that there has been a relaxation of that since the Act was brought into operation, do you?—No. I ought to have said it never was adopted; it was a relaxation of the original ideas.

79021. The regulations provide that the wage shall be less than that which would under ordinary circumstances be earned by an unskilled labourer in continuous work during the same period in the place at which the work is provided?—That is met now by limiting the hours of work in the week.

79022. That is a mode of carrying it out?—Yes, but if I am right—I may be wrong—I imagine that the ordinary trade union rate, or whatever it is, is paid in this 7d. an hour for one class of labour, and 6d. for another.

79023. (*Mr. Russell Wakefield.*) But for fewer hours a week?—Yes. The point is that the same rate is paid; that is the point I would like to make.

79024. (*Sir Samuel Provis.*) But the actual remuneration received will be less?—Yes. Everybody at first talked about the rate of wages being a lower rate in order to deter people. I do not think it is the fact that the rate of remuneration is less. The hours of work are less, and that appears to me to be rather an attractive thing than otherwise to a great many casual labourers.

79025. I gather that your view is that the Act should not be renewed; supposing it were renewed, have you any

suggestions for its amendment?—I have nothing outside my Statement. It appears to me that possibly you might retain the labour exchanges part and the emigration part of it, but I should like to see all the rest of it swept away.

79026. (*Mr. Russell Wakefield.*) One reason for the number of hours being less was not only that the total remuneration should be less, but that the man should have an opportunity of going to seek for his regular work on one day a week; was that not so?—Yes.

79027. (*Mr. Gardiner.*) Supposing the Act was not renewed, what do you think would happen in certain parts of London?—Of course we have created a great difficulty, and special steps, temporary steps, would have to be taken to meet that, in all probability; but I should like to see the principle done away with altogether. It might be necessary to have special measures to deal with special occasions.

79028. Could you indicate what those special measures should be, other than the appointment of municipal or unemployed bodies?—I have had nothing to do with the creation of the Act, so I do not feel responsible for suggesting any way out of the difficulty. Roughly speaking, we should have to go back and rely upon the Poor Law and charity.

79029. That is practically going back to the old stone-yard, and the Mansion House Relief Fund of twenty-five years ago?—I do not know about going back to the Mansion House Relief Fund of twenty-five years ago. That is not the only alternative.

79030. There is the stone-yard?—We have never set up a stone-yard. We really have not thought about that side of it.

79031. You have not thought what you would do if you were to do away with the present Act, things remaining as they are?—I do not think it is beyond the wit of man to devise some means of dealing with that position.

79032. Have you got a suggestion; that is all I ask?—No, I have not got a suggestion. If you gave me time perhaps I could suggest something.

Mr. FRANCIS MORRIS, recalled; and further Examined.

79033. (*Bishop of Ross.*) You are a member of the Marylebone Distress Committee and a member of the Central Unemployed Body?—Yes.

79034. You have been kind enough to prepare a paper which, with your permission, shall be printed as the gist of your evidence?—Yes. (*The Witness handed in the following Statement.*)

I.—EXTENT OF DISTRESS DUE TO UNEMPLOYMENT.

1. I have been more especially connected with Marylebone. The numbers there registering under the Act were in 1906, 756; 1907, 412.

2. It is obvious that only a proportion of those out of employment registered, but I have no means of correctly estimating what proportion.

3. The class affected was mainly that of the unskilled labourer.

4. In 1906 between one-third and one-fourth were disqualified from want of good character or capacity, and in 1907 nearly half were set aside either from faults of character or through refusal to accept colony work.*

5. Generally there was a very small proportion belonging to any kind of organisation or making any kind of provision for want of work or for sickness.

6. A very considerable proportion of applicants belonged to the building trade, the cause of distress being

* *The Witness subsequently sent the following note:—*

I find in 1905–6 the total number applying was 756—of these 81 were deferred—mostly single and not adjudicated upon. Of the balance, 675, I find 236 were marked ineligible from want of good character or capacity; my statement should have been a little over one-third—I see that when I said between one-third and one-fourth I was taking the proportion between the ineligible and the total applications.

In 1906–7 the total number of applications was 483, of which 102 were deferred and 20 not considered, leaving 361 adjudicated upon from the point of view of character and need. Of these 361, 188 were considered preference and eligible cases, and 173 were marked ineligible. Of these a considerable number were so marked because they refused to consider colony work, and were therefore thought to be in no urgent need.

the seasonal nature of their work, accentuated, no doubt, by general depression.

II.—CAUSES OF DISTRESS DUE TO UNEMPLOYMENT.

7. I think the seasonal nature of certain trades coupled with a lack of effort to adopt complementary callings may be partly responsible.

8. Distress is clearly much increased where there is no kind of provision such as is afforded by trades' union out-of-work pay or any similar form of insurance.

III.—EFFECTS OF DISTRESS DUE TO UNEMPLOYMENT.

9. Enforced idleness for a long period accompanied by privation must, I think, be very demoralising.

IV.—REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

10. *Municipal Employment.*—The special work provided by municipalities prior to the Act was, in my judgment, no remedy. It frequently took the form of a very inadequate dole of work, welcome only to the very casual worker.

11. *Distress Committees.* (i) *Inquiry.*—The Act introduced enquiry and selection, and an attempt at adequate treatment. I believe accuracy in enquiry and selection has varied very considerably in different districts.

(ii) *Labour Bureaux.*—I think a fair trial should be given to this scheme. There is great variety of result at present in different districts. I note that for the four weeks ending July 26th, situations were found in twenty-five districts for 671 men, 260 boys, 209 women and 197 girls. The average for men would be twenty-seven per district, the variation being Greenwich, ninety-four, to Wandsworth, four. The establishment of bureaux should be a convenience to employers and employed, but I do not see how it can be a remedy for a shortage of work.

(iii) *Provided Work.*—The work provided under the Act has been, with the exception of that at Hollesley Bay, almost entirely spade and shovel work. The amount provided has been too small to affect the position materially, and even this was provided late in the winter.

The creation of work not otherwise required in order to provide employment on a large scale would, I think, be impracticable and economically impossible.

Mr. William
Amyas
Bailward.

Provision of
relief work.

Mr. Francis
Morris.

21 Oct. 1907.

The standard of efficiency required where only a proportion of men was fitted for the work was necessarily low, but the trade union rate of wage was paid.

The Central Unemployed Body frequently laid emphasis on the fact that their object was to provide work, the question of its commercial value when done being of quite secondary importance.

If any considerable government or municipal work of a more or less unskilled character could be postponed from times of prosperity to times of distress and then carried out in the ordinary way of business I think it might be the most legitimate method of provision of work. Then the trades union rate of wages might be given and a corresponding standard of efficiency demanded.

Emigration
and
Migration.

(iv) *Emigration and Migration.*—In the cases affected this has certainly been the most adequate and effective method of dealing with distress due to unemployment.

In 1905–6 the number of individuals emigrated was 2,216 and in 1906–7 it was 5,385.

A considerable amount of money, I believe about £20,000, more than half the cost, has been given by way of loan and the sum already re-paid promises a fair return of this debt.

The reports as to work and emigrants in Canada have been satisfactory. The problem of unemployment for these families is, we may fairly hope, finally settled and is not as with so many of those applicants left in London a recurrent matter year by year.

Emigration is, however, limited (a) by the willingness of applicants to emigrate and (b) by the continuance of good conditions in the colonies and cannot I think, be regarded as a solution of the question.

Migration has been carried out to a small extent and may probably grow if a system of linking labour exchanges in London with those in the provinces is adopted, but this again does not appear to me more than a very partial remedy.

Labour
colonies.

12. *Labour Farms or Colonies.*—I think the attempt to place London families on the land extremely costly and, on a large scale, impracticable. In times of very exceptional distress, if some form of relief other than that of the Poor Law should become necessary, I should prefer the provision of work on a farm colony to any other form (i) because in practice I find it a more efficient test than any other offer of work and (ii) because I understand the effect upon the physique of the men employed is very good.

Insurance.

13. I have no special knowledge respecting trades union unemployed benefit or municipal insurance but my hope is that some development upon the lines of either or both may be possible; and that any relief required outside such development may be left to the Poor Law or any other institutions dealing with general distress.

79035. (*Bishop of Ross.*) You have already given evidence before the Commission on the Poor Law side of the work, have you not?—Yes.

79036. Therefore, we may confine ourselves to-day strictly to the question of unemployment?—Yes.

Numbers of
unemployed
in Maryle-
bone.

79037. If there is any paragraph in your Statement which you would wish particularly to develop, we should be very glad if you would do so. I see that the numbers registered in Marylebone under the Unemployed Workmen Act were not large?—No, they were not.

79038. But you do not think the numbers registered were any real indication of the number that might or might not be unemployed?—No, I do not think they were.

Status of
applicants to
Marylebone
Distress
Committee.

79039. The Unemployed Workmen Act was passed, I understand, principally for the assistance of the better class of workmen?—Yes.

79040. The object being to keep them off the Poor Law?—Yes.

79041. According to your statement, it has hardly had that result, has it?—Practically, I should say that none of the better class of workmen came to us or almost an insignificant number.

79042. Have you any information as to whether many of the better class of workmen were unemployed?—No, I have no means of arriving at that. Certainly there was no application to the Poor Law.

79043. Those that did apply were principally unskilled workmen?—Yes. Out of the 412, which I think was the total number this last year, 238 were builders' labourers.

79044. There was a great slump in the building trade, was there not?—Yes, and it was the time of the year

when there always is a certain amount of unemployment in the building trade. Effect of unemployment

79045. It was in the winter time?—Yes.

79046. You would regard the privation arising from idleness, naturally, as demoralising?—Certainly.

79047. And consequently, if anything could be done to prevent that privation, it would have a very good social effect?—Certainly.

79048. The difficulty is what to do?—Certainly.

79049. You do not regard municipal employment as a remedy?—No. Municipal relief.

79050. Would you develop that point, please?—I think the municipal employment, as far as I have understood it, was very casual, and it was given under no system. I understand that large numbers were apparently relieved, but they were relieved by small doles of work. I think the general result would be quite as demoralising as being left alone, in fact, more so, because the men would tend to rely upon some work being given to them, and the amount that was given was absolutely inadequate and ineffective.

79051. Comparatively, at least, you think the distress committee a better remedy?—Yes, better than that.

79052. What element do you find in the distress committee that is an improvement upon the old municipal employment?—The work that was given was, for the time, adequate; it was given to fewer people but it was continuous work. I think that was a definite improvement. It has been made perfectly clear, I think, that the attempt to cope with the difficulty by the provision of work has broken down; but that difficulty did not appear as long as a large number of men were apparently relieved. Superiority of Distress Committee relief.

79053. Do you think that the inquiry made by the distress committee was also useful?—Yes. Inquiries by Distress Committee

79054. It helped to sift out the men of better character?—Yes.

79055. Do you think the inquiries were carried out as originally intended by the Act, or was there any relaxation in the inquiries as some seemed to think?—I think the inquiries varied very much in different parts of London. In the emigration work I saw papers from various parts of London, and I think in some cases the evidence was very much more thorough than in others. It is very difficult to tell definitely except for one's own district, of course, but in Marylebone I believe the inquiry was very fairly complete, quite complete enough for the purpose of the inquiry.

79056. You have rather a good opinion, I think, of the labour bureaux, as far as you know them?—Yes. I have a good deal of hope in them, but I do not think one has got further than that. It appears to me that the hopeful side is more in connection with the possibility of migration from one part of England to another. If the exchanges could be linked and people migrated from a district that was over full of labourers to a district where they were needed, I think that would be undoubtedly the most economical method of dealing with the difficulties, and it would be healthy. Labour exchanges.

79057. Your opinion is that you may have pressure and a great mass of unemployed in one place when those people might be required in another part of the country?—I think that is quite probable. As I say, I have no special knowledge, and it is more a hope than anything else that I express.

79058. As a consequence, if there was mobility of labour, the market would, to some extent, at least, regulate itself?—Exactly.

79059. So that the work would not be left undone, and employment would be found for the workers as far as the work was there?—Exactly, and under the ordinary conditions of labour.

79060. But if it comes to a question of shortage of work, that is, if the total amount of work included in the whole of the country be too little for the total number of workers, then your view is that the labour bureau is no remedy for the shortage of work?—Yes, that is as it appears to me.

79061. The labour bureau would not create work in your opinion?—Exactly.

79062. But they would help to regulate work?—Yes.

79063. And you think that that regulation would be in itself of great advantage?—Yes.

How to deal
with rural
population.

79064. It was suggested to the Commission in their peregrinations that the flocking of the agricultural people into the cities and towns had a bad effect, in that it created a congestion of labour or a pressure in various districts, particularly in the ports; do you see any means of relieving that influx and keeping back that influx?—I am afraid I have no special knowledge on that point. One would imagine that the possibility of making the country more attractive to the people who are already there, whether by encouraging holdings, or in any other way, is the only means of doing it. I certainly think it is very much more hopeful to try and keep the people who are in the country there, than to try and get the people who have become Londoners back into the country.

79065. Can you say, from your own knowledge, whether that influx from the country into the cities and towns continues?—I do not think I can.

79066. No doubt it went on some years ago, but some of our witnesses seem to think that it has not continued, at least in any large proportions, up to the present?—I am afraid I have not sufficient knowledge to say.

79067. You have no information upon that point?—No.

79068. But you are distinctly of opinion that if the influx is going on it would be much more valuable to the nation to keep the rural people in the country than to migrate the citizens out to it?—Certainly.

Hollesley
Bay, its
results and
possibilities.

79069. You think the Hollesley Bay experiment has not been quite successful, but you find excusing causes?—I think the Hollesley Bay experiment has not been successful from the point of view of dealing with unemployment. As I have said in my Statement, if there is to be any special method of dealing with very exceptional distress, I should prefer the offer of a test of work at Hollesley Bay to any other form of offered work, for distinct reasons.

79070. The reasons, I think most people would agree with. You find an improvement in the physique of the people, and of course you consider that a reason?—Yes.

79071. And possibly there is some improvement in their mental and moral attitude?—That I have had no means of judging. One of the great advantages to my mind is that it is some considerable test of a man's desire to work. It is a much greater test, I think, to ask him if he is ready to go to a colony and work than it is to offer him more or less easy work in his own borough or anything of that sort.

79072. Assuming that the Hollesley Bay treatment is successful, when you come to deal with a man's future, do you think that he is likely to turn out an efficient agricultural labourer?—I do not think there is anything like enough experience to enable one to judge. My general feeling is that it would be the most expensive means of getting agricultural labourers that we could very well devise. The number that go back upon the land permanently would be, I think, so small in comparison with the expenditure that I would rather look upon it as a means of dealing with a very exceptional condition of the labour market than as anything else.

79073. So it would only be in a period of acute distress that you would carry on the experiment at all, I take it?—Yes.

79074. And when the acute period of distress has passed away, you do not think that the experiment ought to be continued?—No.

Emigration.

79075. At least not beyond the periods when the distress exists?—I think so. You asked me to call your attention to any part of my Statement that I would like to develop. The work that I have been most interested in has been the emigration work. That has been the work to which I have given most of my time at the Central Unemployed Body. I think all the evidence that we have is extremely encouraging as to the results of the work so far as the selected people are concerned. The Chairman of the Emigration Committee has just come back to England, and he brings very encouraging reports. I think it is interesting to note that the cost, after including the cost of working expenses and the providing of money on landing, works out at an average of about £9 per adult. So that in estimating any effective way of dealing with a family, I think one may say that, at the rate of £9 per adult, one can at the present time quite effectively and adequately deal with a family in distress. For the purpose of comparison

of the cost of one treatment with another I think that is an interesting point. *Mr. Francis Morris.*

79076. I presume the cost would vary if a very large number of families were emigrated, and very few single unmarried adults?—When emigrating a family, two children would count as an adult. The main cost is the cost of the passage. In estimating, I have taken an average of £9, based upon something like £15,000 of expenditure, so that it deals with a very considerable number of people. It includes people sent right to the Far West as well as those who remained in the nearer provinces. *21 Oct. 1907.*

Cost of
emigration.

79077. It includes those sent away out to Alberta?—Yes, right out to British Columbia. There are a certain number who are sent right across, but it works out to an average cost of £9.

79078. I presume you would hold that there is plenty of room for them in Canada?—There is at the present time abundant room. *Advantages of emigration.*

79079. And for many years to come?—Yes, I imagine so.

79080. The fertile land in Canada is counted by square miles, I presume, whereas in most countries it is counted by acres?—Yes. In the North-West, of course, the demand for labour is very great indeed.

79081. You look upon emigration principally from the point of view of the emigrants themselves; I presume they were provided for?—Yes, permanently.

79082. You mean their position was permanently improved?—Yes.

79083. And therefore they will not become a burden on the rates in England, or any other parts of the Kingdom?—That is so. Apart from that, they become of distinct use to the Empire.

79084. The Empire in Canada?—Yes.

79085. Would you have any apprehension that the encouragement of emigration would do any harm at home? If a great tide of emigration set in from England to Canada, while it would develop the Empire in Canada, would there be any danger of it doing harm to the home country?—I do not think there would be any danger so far as the application of this Act is concerned, because care is taken only to emigrate those who are out of work. I think it is the fact that those whom we have emigrated would probably have become more demoralised if they had remained in England. We do not send out the men who throw up their employment in order to go. I think the only danger would come when men who were really needed in England threw up their work here for the purpose of going to Canada; but under the provisions of the Act, of course those men could not be dealt with. *How emigration may affect the home country.*

79086. Quite so, but having set the fashion of emigration, do you foresee any danger of men emigrating on their own account?—I think that is rather far off. The conditions in Canada are, to some extent, hard, I mean the work is hard, and I think that a man who is doing well over here would not be likely to be tempted to go out there, except from the point of view possibly of taking capital with him and trying to improve his position on a large scale. I do not think the ordinary man who is doing well here would be likely to go, but of course it is impossible to say that with any certainty.

79087. The natural resources on the other side of the Atlantic are very great, are they not?—Yes. But I think the men have to work very hard, and although the wages are higher, the cost of certain things is higher too. I think there can be no comparison between the position of the man who is in danger of going to pieces over here from want of work, and his position directly he gets over there; but I doubt whether the difference is so great as to tempt men who are doing well over here to embark. Amongst the ordinary people there is a great fear of the unknown, I think; a good many people refuse to emigrate, although one fails to see how they can possibly live here.

79088. But amongst the working classes, is there not also a great tendency to neglect all the conditions except the question of wages? If a working man hears that a comrade on the other side of the Atlantic is earning 20s. a day, and he is earning only 6s. or 8s., will he not have a great desire to look merely at the wage and to

Mr. Francis Morris. forget all the conditions around it?—Presumably, but I have not experienced that.

21 Oct. 1907.

79089. I am putting it to you in the future; I know there is no experience of it up to this?—Of course, there has been a great deal of self-help emigration up to this, and indeed the danger that is hinted at by the provision of State emigration is that self-help emigration will be crowded out. But I confess it has not occurred to me that self-help emigration would be on such a scale as to cause any difficulty in England.

Migration under Unemployed Workmen Act.

79090. Is there any other paragraph in your statement that you would wish to expand?—I might just mention perhaps what happened in the last year with respect to migration. It was quite late in the season that any attempt was made to deal with migration, but just in the last months before the holidays some forty-four families, comprising some 215 individuals, were migrated, the cost being £230. They were mostly migrated from London to Wales. That was a beginning in migration work which seemed satisfactory. My feeling about the whole provision of work is that it is not given under what I should call healthy conditions. It is really relief work, as I believe, and none of the conditions under which it is given are those of ordinary industrial labour. I believe that if there is work which ought to be done, it is very much better done under the ordinary conditions of labour where the ordinary task of work is required and the ordinary standard of efficiency demanded. That seems to me to be the great weakness of the whole attempt to create labour for people. You put a man who is used to a spade alongside a man who is not, and you pay them both the rate of wage which is paid to a man who is used to a spade; but the standard of labour in such a case is almost necessarily low, and I think that that is demoralising.

Effects of provision of work.

79091. Because, you mean, a very low standard of labour to the ordinary agricultural labourer would be an impossible standard for the man unaccustomed to the spade?—Exactly. As you cannot expect more of a French polisher, we will say, than a low standard of spade labour, the skilled man who works alongside of him almost necessarily is not inclined to do more.

79092. And so his standard must drop too?—Yes, I think that is so.

79093. In other words, the french polisher would set the pace?—I think so.

Insurance as remedy for unemployment.

79094. In Paragraph 13, you say that you think municipal insurance might be developed to help to relieve the unemployed?—Yes, or the Trade Union Unemployed Benefit. But I ought to say that my special knowledge on that head is *nil*. Seeing no other way out of it, this appears to me to be the most likely remedy, supplemented by all the organisations that deal with distress.

Proper principles of work provided by State or municipalities

79095. (*Miss Hill*.) I was interested to see that you say you consider if any government or municipal work is put in hand, it ought to be carried out in the ordinary way of business?—Yes.

79096. You think that would stimulate the work and develop the character very much more than the present plan?—I think so, certainly.

79097. And ought to relieve the market in a very much more healthy way?—Yes; my feeling is that whatever work is now supplied, if it is necessary work, should be supplied under the ordinary conditions of labour which are healthy.

Migration.

79098. With regard to the migration, you say you migrated forty-four families?—Yes.

79099. Did they go away to the manufacturing districts?—They went mainly to Wales.

79100. They were men?—No, families.

79101. They went to South Wales mainly?—Yes.

79102. Have they been away long enough ago to judge at all of the success of it?—I think so. I think if most of them had come back we should know it. I think if a family has been transplanted and has remained for a month or two it is a quite hopeful case.

79103. You had no difficulty in doing that; there were no trade disputes, or any other difficulties of that kind?—No.

79104. Have you migrated any widows with children?—No.

79105. Has that been considered at all?—We can only take cases that have been referred to us, of course. We have not, as far as my memory goes, had cases of widows with children referred to us. The cases referred would be cases which in the ordinary way would come before the distress committee, and probably be men out of work with families.

79106. With regard to the labour bureaux, I suppose your view is that they would much more quickly and economically sort the people to places where there was a demand for labour?—Yes. Advantages of labour exchanges.

79107. And abolish the ridiculous plan of walking round to look for work?—Yes, I was hoping if they could be linked with labour exchanges all over the country there would be some possibility of sending a really considerable number of people to a district where they were wanted.

79108. At any rate, they could do no harm?—They could do no harm.

79109. They would forward information which would then be available for all?—Yes.

79110. Have you any idea that the labour bureau should be dissociated from any body receiving applications for what is practically relief?—I think so, certainly. Proper authority to manage labour exchanges.

79111. What body would you propose to put them under?—That I have not thought of. I suppose the Board of Trade could deal with them. At the present time I think they are not very much associated in London with the idea of relief; they are held in separate establishments, and every effort is made to dissociate them in every way from the ordinary distress committee work.

79112. I suppose the real difficulty about them is that the people whom one is wanting to move are not primarily wanted anywhere? It would be the skilled labourers that would be in great request?—The families that were migrated to Wales were unskilled; they wanted a certain amount of unskilled labour there.

79113. With regard to the trade unions and unemployed benefit or unemployed insurance, has that taken any particular shape in your mind, as to whether it should be wholly voluntary or at all compulsory?—My hope is that the condition of the people will gradually improve to the extent that they will be able themselves to create some system of insurance. I have not sufficient knowledge of the whole subject to be able to speak with any authority upon it. Insurance against unemployment

79114. The difficulty is not so much the question of method, is it, as of self-control, because the price of a single pot of beer would do something, or some of the sweets. There is a great deal of money wasted which, with people who had any great motive for saving, would be saved, would it not?—Yes, undoubtedly. On the other hand, with the very casual labourer, who very often has a very large family, the conditions make it rather difficult, I think.

79115. It might make it difficult for him, but it is more imperative on him to equalise his earnings; but he does not see all that because of the pillows which are put all round him to prop him up when he falls?—There is truth in that.

79116. One sees people with much lower wages and quite as irregular work providing for themselves in the winter months, does not one? I think the motive seems the great thing?—Generally, no doubt, it would be infinitely better if the men could by themselves and from themselves create an organisation dealing with unemployed times.

79117. You had no special scheme? It was only general?—No; I said I had no special knowledge.

79118. (*Mr. Lock*.) With regard to your suggestion in Paragraph 12, do you think that the farm colony which you thought might be relied upon should be in connection with the Poor Law?—I was not thinking of a Poor Law colony at the time. I was thinking rather of a means of dealing with a very exceptional condition of things, such as was supposed to have arisen when these colonies were established. I think the Poor Law colony with powers of detention is rather a different idea. Labour colonies and Poor Law farm colonies

79119. I wanted to get at that?—I certainly would like to see some Poor Law colony, or workhouse practically, in the country with powers of detention, with

conditions for dealing with paupers. I was not thinking of paupers at all when I wrote this paragraph. I was thinking rather of exceptional conditions in the labour market.

79120. Do you think that your suggestion would be that there should be some such provision available for a farm colony to meet depression?—I might if some form of help other than that of the Poor Law should be necessary. I had hardly got to the point of actually advocating it. I felt if one has a very exceptional condition of things, and has to provide work, I would rather provide it in that way than by any other that has come before me yet.

79121. Still it might not be wanted?—It might not be wanted.

Question whether Poor Law should provide employment. 79122. Might I put it to you from the Poor Law point of view; do you think it is right that the Poor Law should be looked upon as an employment authority?—No, I think the Poor Law is a body dealing with destitution.

79123. Would you be prepared to admit into the Act of Queen Elizabeth sections referring to the employment of people?—I am not sure that I should not like to have some power of relieving distress by a condition of forced employment.

79124. Might not you retain the power of relieving distress in any way you please without specifically stating in the statute that one of the objects of the Poor Law was to provide employment?—Certainly.

79125. It would be better for you to have the power of dealing with the case on lines of general destitution with a free hand?—Yes; I think it is quite impossible for the Poor Law at present to provide employment.

Effects of labour colonies. 79126. With regard to these various colonies and proposals of recent date, do you think that there is any ground for believing they can be used in such a way as to regenerate those that are sent to them so that they can come back in a better position to the economic world?—I think they can improve certain families from the point of view of general health and spirits; but except with a few cases, which may possibly be placed on the land, I do not see any other outlet. As I said before, I think the difficulty there is the cost. I think the cost is prohibitive altogether.

79127. But granted you spent a great deal in teachers, and all the rest, do you think you would get results which socially would make good what you had done in the way of energy, action and all the rest?—No; because I think that the difficulty would be to train these people so as to place them on the land. As I said before, I should concentrate all my efforts to keep those who are on the land there, rather than attempt to place Londoners back on the land.

79128. Therefore the colony would be in the wrong direction?—I think it would be ineffective.

Unemployed Workmen Act, certain good provisions in it. 79129. Have you in mind at all the abolition of the system which has come into force under the recent Act for the unemployed workmen? Would you acquiesce in that?—Yes, with certain exceptions. I should like to see a distinct chance given to the labour exchanges, and while the conditions remain as they are, and the demand in Canada is as it is, I should like to see some further facilities for emigration.

79130. Those two allowed, the rest of the Act may vanish?—I should think so.

Results of Unemployed Workmen Act in Marylebone and elsewhere. 79131. And you would be prepared to deal with future difficulties and depressions as they arose?—Yes. My feeling is confined to some extent to the parish I know, and my strong belief is that so far as Marylebone is concerned the Act has had very little influence on us at all; the numbers allowed to us have been very small and insignificant as compared with our population, therefore it does not appear to me that it would really affect our conditions very much whether the Act were continued or not.

79132. You are on the central committee, are you not?—Yes.

79133. Judging from your survey of different parts of London, would you apply that criticism to other parts, or have they been very largely assisted?—Some very largely as compared with Marylebone.

79134. What were the figures?—Marylebone had 1½ per cent. allotment of vacancies and Poplar I think had 7 per cent. (Mr. Lansbury will correct me if I am wrong), and I think Woolwich had about 7. The emigration work was not on the percentage system, but the provision of work was about in that proportion.

79135. But even on those percentages the greatest amount received for a poor district was very small?—Yes, it would be 7 per cent. of the number of places that could be found.

79136. That would amount about to how much?—I do not think I can quite say off-hand how many. Perhaps Mr. Lansbury would know how many places were allowed to Poplar.

79137. It is a matter of small numbers?—Yes.

79138. Therefore, with all this new machinery with regard to test and enquiry, the net result is a very small thing?—Very small.

79139. So that on the face of it the removal of the machinery would not do much one way or the other?—I think not.

79140. (Mr. Lansbury.) Supposing the machinery were all removed, do you think we should go back to the borough council business that you deplore?—I do not think so, because I think the borough councils have rather got to the end of their tether. I know the borough council of Marylebone has no idea where it could provide any work, and the only opening it appears to me would be that which was adopted by one of the borough councils, of doing away with machinery and employing hand labour. I hardly think they would attempt again to apply that method.

79141. That was done after the Act came into operation?—It was the doing away with the horse broom and doing the work by hand. I think that was at Stepney after the London Unemployed Fund had started.

79142. The question I want to get settled is this: you deplore what was done before the passing of the Act, is not it the fact that the borough councils when they waited upon Mr. Long pointed out to him that they had reached the end of their tether both from the point of view of finding work and finding money, and something had to be done to take the place of what had been going on for nearly twenty years, namely, work each winter by the borough councils?—I do not remember, but I have no doubt that is so. At the same time the net result, as I said just now, I think has been comparatively insignificant.

79143. In the figures that Mr. Loch and you agreed upon just now, you left out of account any work that was done by bodies other than the Central Unemployed Body?—That is so: the first year the other bodies did do a certain amount of work, but I think I am right in the belief that latterly the other bodies have provided next to nothing.

79144. That remains to be seen, does it not, rather?—For this year. Certainly in my own district the borough Council not only say they have no special work, but they say they have anticipated everything they could anticipate.

79145. Do you say there has been or has not been acute distress in London through want of employment?—I have no doubt there has been a certain amount of acute distress, but I do not think the result of the Unemployed Workmen Act has been significant. I think if it were abolished the net result on London would be hardly felt.

79146. That is viewing it for Marylebone, is it not?—No, I should say in viewing it as a whole the total number of places allotted for work demanded has been insignificant.

79147. It has been very small?—So small that in comparison with the numbers who have registered I should have thought the result would have been almost negligible.

79148. Cannot that answer be used for an extension of the Act as well as the abolition of the Act provided there has been, as you say, acute distress in London?—I hold that the attempt to provide work has failed, and that any attempt to increase the provision of work must also fail.

Mr. Francis Morris.
21 Oct. 1907.

Results of Unemployed Workmen Act in Marylebone and elsewhere.

Question of possibility of Borough Councils providing work.

Results of Unemployed Workmen Act in London.

r. Francis
Morris.

21 Oct. 1907.

Difficulties of
Central (Un-
employed)
Body.

Question of
relief work as
a remedy for
unemploy-
ment.

Assistance
by charitable
agencies.

79149. The attempt only failed through lack of money surely?—I think not. I think at the present time the Central Unemployed Body is labouring under the difficulty that it cannot get the schemes.

79150. It cannot get work?—It cannot get schemes of work; the money is available for the provision of it.

79151. Is not the Central Unemployed Body limited in its power to obtain work?—Only by the fact that it must not obtain work which would be done in the ordinary course of things by the borough councils.

79152. Does that not rather point to this, instead of that limitation being put on the central body they, or whoever has this power in hand, should have wider power of providing employment?—I should have thought not. I should have thought the contention was perfectly right that if the work was required to be done by the borough council they should do it.

79153. Apart from the borough council and apart from London altogether?—Then what bodies do you suggest?

79154. I have not got to say what I suggest?—I think the same argument applies that if work is really required to be done it should be done in the ordinary course of things.

79155. I am trying to find this out from you: you acknowledge that there is acute distress in London through lack of employment, you go on to say that this Act has failed because it has only employed so very few people, and therefore it has not relieved acute distress. That is, as I understand, your argument. I am putting it to you that if that is so then we want some machinery which would relieve the acute distress by actually providing employment?—I can only say that in my judgment the provision of work as a means of relieving that distress has proved to be a failure.

79156. The provision of certain kinds of work and in certain ways?—I cannot think of any kind of work which should be done that should not be done in the ordinary course of things under the ordinary conditions of labour.

79157. You mean by private people?—By whatever body, private or otherwise, the work should be done.

79158. So you would not have any objection on principle to the State organising afforestation or agriculture purely to keep people in the country?—I know very little of the subject, but I suppose if afforestation was a desirable thing on its own account it would be quite right for the State to undertake it, but I should not think it would be advisable for the State to undertake afforestation for the purpose of providing employment apart from the question as to whether the work should be done or not.

79159. Then the sum and substance of it all is that the people who are out of work in London and in other centres—I suppose you admit that some of them are out of work through no fault of their own?—Yes.

79160. That these people have either to put up with it or clear out to Canada; that is really your final word on the subject?—I do not think I have got farther than saying that I do not think certain ways are the ways out.

79161. I suggest to you that as a social student it is not enough to tell a man who is out of employment that the way he is being helped is a very bad way, unless you have another way to show him how he should be helped?—The only suggestions that I could think of, and I admit upon this I have no very great amount of information, were the suggestions that some form of insurance when in work against the risk of being out of work might be possible; that it might be possible for men who have seasonal work to try and adopt during the slack season some other form of employment; It might also be possible in certain cases of distress to relieve them by existing agencies, because after all this work provided is relief, and there are, quite apart from the Poor Law, existing agencies which are doing a very great deal of relief in certain cases of individual distress.

79162. What are those agencies?—There are charitable agencies of various sorts.

79163. Can you tell me one of them in the East End?—I should have thought all the charitable agencies that cluster round a parish, there must be many in the East End.

79164. You mean the clergy and vicars of parishes?— Assistance Yes, the clergy in part: in certain individual cases of by charitable distress, there are charitable agencies that help them. agencies.

79165. You have not any very definite knowledge of them?—Of course, in my own district I have. In my own district in certain cases where men are out of work they get help through the Charity Organisation Society under certain conditions.

79166. The conditions being that there is a hope for them at the finish to get work?—Yes.

79167. And that must be there?—Yes, but efforts are very frequently made to secure it.

79168. You do not consider that help in that sort of way demoralises a man?—I do not think it demoralises him more than work that is found which is relief work.

79169. I did not say it was; all I want to find out is whether the one is as bad as the other, that you are making him lean on something?—If a man is in distress, not through his own fault, I do not think his being helped out of distress is demoralising.

79170. Whichever way he is helped?—Whichever way he is helped. If you find that he could not have made any provision for himself, there is no demoralisation. I think there is demoralisation in this work which is provided where a man is tempted not to put in his full capacity for work.

79171. Would you say that the work which has been given by the Central Body has not brought out in the men the best that is in the men?—I do not think I could tell. One has heard a good deal on one side and on the other. Effects of work given by Central (Unemployed) Body.

79172. Have you seen any of it yourself?—I think it is disquieting when one sees the value that is put upon the work that is done. I notice that the value that has quite recently been put by the London County Council upon the work that was done last year, is extremely low, even considering that most of the men put on were men very largely of the unskilled workmen type. In spite of the fact that they were not particularly well qualified, I think it is disquieting that their work is valued at so little.

79173. You understand that the London County Council depreciates the value (I forget the percentage), from the fact that the work was anticipated, and in the case of the asylum at Epsom, they depreciated the work because they said it might have been done by the inmates?—The value it has just fixed on. Work costing £12,000 in wages has been £3,000.

79174. If they depreciated the value of the work by knocking off a heavy percentage because the work was anticipated, you cannot put that against the men surely?—No, but it is universally calculated, is it not, that the value of the work is considerably below the value in the ordinary open market. Value of work done.

79175. But it is also conceded, is it not, that the men are not in a fit condition to do the work?—Yes, that Condition of men assisted. illustrates my point that you get necessarily a very low standard which must be demoralising to the men who can do better work.

79176. What are you to do with these men, it seems to me it is a vicious circle we go round in and at the end there is nothing for it but to kill them. They must not be emigrated, they are too weak; they must not be put to work because that lowers the standard. I do not know what it is you propose to do with them?—I did not say they must not be emigrated.

79177. But the Canadian Government says so?—The Canadian Government has not refused any we have emigrated except one man who had had rheumatic fever very badly, and who had concealed it from us. Condition of men emigrated to Canada.

79178. Is not that because you take the most efficient, and those of the best physique? Is it not true that all have to pass a doctor?—They have to pass a doctor, but the number that is refused by the doctor is extremely small. I hardly remember a case that the doctor has refused.

79179. You think a physically weak person is not a person likely to have the enterprise to face the unknown, which you told us had certain terrors?—I think the man who is weak because he has had a period of hardship,

who was not constitutionally weakly, but is run down, is not a man that would be refused at all. On his voyage he gets ample food, and by the time he arrives in Canada he would probably be quite sufficiently able to meet the needs.

79180. So you think we do send inefficient to Canada ?—No, we send men who are in danger of becoming inefficient if they stayed over here. If they are run down by reason of hardship, I should not call them inefficient, because they can recover.

79181. I understood you to say that you are in favour of the migratory portion of the work that you are doing ?—Yes.

79182. A number of those men that you sent to South Wales were men who had been to Hollesley Bay, were they not ?—I do not know. I think that is a very healthy method of dealing with them.

79183. It is true, is it not, that some of the men from Hollesley Bay have gone to situations as gardeners ?—Yes, but very few.

79184. Very few because there were very few situations ?—Exactly.

79185. To go back to their making their own provision by insurance, would you say it is possible for an average person in a seasonal trade to make provision for two or three months out of employment ?—Perhaps I ought not to have put that last paragraph in my Statement, because I cannot pretend to know much about it, but I should have thought it would be possible to have some sort of combination, as does exist, I understand, in Germany, by which the employers and the employed should combine to provide against periods of unemployment, even with the man who is a seasonal hand. If the man who is a seasonal hand is of so poor a type that he is more often out of employment than in, then I am afraid I should feel that he could reasonably be left to existing agencies to deal with, he would be the exception.

79186. You mean the Poor Law ?—Yes.

79187. Do you think the ordinary unskilled labourer is able to make provision out of his wages for periods of unemployment ?—My experience is this, that in Marylebone where we have no able-bodied outdoor relief at all, and where our trading industry is very largely the building trade, as a matter of fact we have not had any very large influx into our workhouse, and one way or another they have managed to pull through, even under existing conditions.

79188. They may have had tremendous sufferings, and a good many people may have died natural deaths for want of food, and that sort of thing ?—One has no evidence of that.

79189. You have a high death rate amongst children during periods of great depression. Marylebone is a very awkward place to be thrown at me all the time, because some portions of it are extremely wealthy and so very healthy that it brings down your average considerably ?—I can only speak intimately of Marylebone ; I know it fairly intimately.

79190. I suggest that Marylebone cannot be compared with a place like Stepney, Poplar, or West Ham ?—On the other hand we have a very large district in Marylebone that is extremely poor and not very self-reliant, it is largely occupied by unskilled men in the building trade.

79191. And on the other hand there are plenty of rich people to subscribe to the charities in the churches, or those agencies you are continually telling me about, to keep them going ?—There are some rich people.

79192. (Mr. Lock.) Do you account for them being able to get through to the fact that there are charities in that place ?—No.

79193. Would you say these unskilled people are kept alive by the charities in the place ?—No. I think instead of insurance at the present time there is a system of credit which practically carries them through.

79194. (Mr. Lansbury.) Therefore you would not say that the system of Poor Law relief carries them through either ?—No.

79195. I do not mean in Marylebone, but in any other district ?—I was only hoping as they pulled through in Marylebone by this system of credit, it might be possible

to have some system of insurance which they could join, by which to a very large extent they might provide in that way. *Mr. Francis Morris.*

79196. Have you discussed this matter with any trade union leaders, or trade union members ?—No, I have not.

79197. Are you aware that no unskilled trade union is able, because of the difficulties of the employment, to have out-of-work pay ?—No, in fact I was under the impression that one of the labourers' unions had out-of-work pay ; but I understand from what you say that I am mistaken in that.

79198. (Mr. Russell Wakefield.) In Paragraph 11, Difficulty of Section 3, you say : "The amount of work provided finding work has been too small to affect the position materially, and for relief even this was provided late in the winter." Would you under Unem- mind saying what date you mean by "late in the winter" ? employed Work- men Act.

79199. Has not the whole question been rendered extremely difficult by the fact that work is so hard to get that you may have a great deal of money and plenty of people ready to work, and yet the actual work itself is so extremely difficult to find ?—Yes, work which will satisfy the conditions of the Local Government Board.

79200. I see a little further on you say : "If any con- Anticipated siderable government or municipal work of a more or and post- less unskilled character could be postponed from times of poned work. prosperity to times of distress, and then carried out," and so on. Has not that been done to a great extent by municipalities in London ? Has not there been antici- pated work ?—There has been anticipated work which is the converse of postponed work.—Municipalities have been pressed to find work, and anything that could be pushed ahead they have done in advance, until now they cannot find any.

79201. Your distress committee was discussing that question the other day ?—It was.

79202. There was absolutely nothing in Marylebone that the distress committee could anticipate ?—That is so.

79203. The immense size of London and the difficulty Failure of of finding work in the centre has greatly increased the attempt to work of the unemployed body ?—Yes, I think the idea of providework. the provision of work has broken down altogether. Work that is not really needed cannot be created.

79204. (Mr. Lock.) Do you think it would be possible Question of taking Marylebone as an area, with a certain number of Local Fund unemployed men in it, who are now living on credit and for insurance have to pay back what they earn in the form of debts, to against un- employment. establish any kind of common fund for the district which would be in the nature of an unemployed fund ?—Do you mean in which the men themselves would combine for the purpose of providing ?

79205. Yes ?—I have had no experience to guide me as to how far it would be possible.

79206. It has never occurred to you that it might be possible to have for that area, for instance, a collector, and people being joined into one body for this purpose, the collections being brought in, as they would say in the Prudential, to lay by money in the summer for use in the winter, or at any rate against seasonal depression ?—I think it is possible. I should have hoped if anything of the kind had been done that the employers might have joined in some such scheme. I think the men would require a good deal of encouragement to make such a scheme a success.

79207. Are the employers sufficiently local to make that possible ?—In seasonal trades very largely. A good many of the builders who employ men are local.

79208. If any scheme of that sort could be adopted, you think that would provide against want in times of unemployment ?—I have not got further than hoping. I do feel in answering any questions upon this matter I cannot claim any experience. I hope that it would be so.

79209. In principle, would you be against any proposal in which in the contract for wages the employer undertook to deduct from the wages a certain sum that would be laid by for times of unemployment ?—That would be on the lines that I suggest.

79210. You would not object to it on the ground that it was made compulsory ?—No.

21 Oct. 1907.

Mr. CHARLES PROCTOR LARNER, called ; and Examined.

Mr. Charles P. Larner
21 Oct. 1907. 79211. (Chairman.) You are the Chairman of the Woolwich Distress Committee and District Secretary of the Charity Organisation Society for the Borough of Woolwich?—I am.

79212. You have prepared a statement, which we will treat as your evidence-in-chief if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. For some years past I have been engaged in work in Woolwich which has enabled me to follow fairly closely the conditions which have been set up in the borough through lack of employment. I propose briefly to state what these conditions are, and what steps have been and are being taken to meet the difficulties involved, following the lines suggested in the Syllabus.

Borough of Woolwich ; population, etc.
2. The borough of Woolwich, formed in 1899, consists of the parishes of Woolwich, Plumstead, and Eltham. It is not co-terminous with the Poor Law Union of Woolwich, which excludes Eltham, but takes in the parish of Charlton in the borough of Greenwich. The population of the borough of Woolwich in 1901 was 117,165; the estimated population in 1904 was 125,791; and in 1907, 129,336.

Labour conditions in Woolwich.
3. A large part of Woolwich parish, most of Plumstead and a large portion of Eltham, are entirely working-class districts. The Government is emphatically the chief employer of labour, though there are several large firms with their factories in the district. The development of Plumstead and Eltham caused a small boom in the building trades, and many bricklayers, carpenters, painters and labourers live in the district, but Arsenal and dockyard men have greatly predominated.

4. As might be expected, very many of the men working in the Arsenal and dockyard have been in the Army, and a few in the Navy. A considerable number are in the reserve or in receipt of pensions. In fact, so far as my observation goes, the proportion of weekly wage-earners living in Woolwich who have been in one of the services is very great. Very few of them have learnt any trade, but understanding that preference is given in the Arsenal and dockyard to soldiers and sailors, they not unnaturally, on getting their discharge, make for Woolwich in the hope of being taken on.

5. Two facts lead me to judge that, as a working-class district, Woolwich compares very favourably with other parts of London. The Royal Arsenal Co-Operative Society, founded in 1869 with forty-seven members and a capital of £27, has now 26,193 members and a capital of £312,639. I am informed on good authority that 25 per cent. of the houses in the borough have been or are being purchased by the occupiers, a higher percentage than in any other part of the Metropolis. A large proportion is small house property.

Cyclical depressions in Woolwich.
6. There have been, I understand, during the past forty years, three very serious depressions and lack of employment in Woolwich—the first in 1869, on the closing of the dockyard (it is now used for storage purposes mainly). In 1886 the district again suffered. Woolwich is now going through the third. Of the first two I know nothing, except by report, but there is little doubt that the effects of the dockyard closing were felt for a long time. With respect to the present position, the following figures will tend to show that the position at Woolwich is chiefly caused by Arsenal and dockyard reductions. On November 12th, 1906, the Secretary of State for War stated that the number of men employed in the Royal Arsenal was:—In the year 1901-2: minimum, 21,959; maximum, 24,616. In the year 1903-4: minimum, 18,474; maximum, 19,731. In the year 1905-6: minimum, 17,506; maximum, 18,213. On July 23rd, 1907, the number given of men employed in the Arsenal was 12,311, and discharges continued up to September 28th, 1907. In the dockyard the maximum number was 1,705 in the year 1901-2. This fell to a maximum of 579 in the year 1905-6. I do not say that Woolwich had to bear all the loss and to meet all the difficulty which such a dislocation of industrial energy would suggest. Men came and went, night and morning, from all parts of London and outside London, attracted by the work and wages which the Arsenal offered,

but when all allowances are made, it is on the Woolwich district that the chief loss has fallen. As the building trade flourished with the Arsenal boom, so, the boom having died away, it has likewise suffered, and building operations have practically stopped.

7. The causes may, I think, be reduced to two in number. First and foremost, the Arsenal discharges. In a minor degree, the depression in the building trade. Causes of distress in Woolwich.

8. The effects of the lack of employment are evident in various ways:—e.g., take the number of empty houses in the borough. In 1901 these were given as 180. In 1904 they had mounted up to 400. The latest return—this year—gives the number 1,200. This increase is brought about mainly in two ways:—(1) Many have left the district altogether; (2) a considerable number of people have given up their homes and taken rooms through the reduction in their incomes. Rents have also been lowered. A large building estate which was being developed by the Co-operative Society are letting houses at 10s. a week which formerly fetched 14s., and further building operations have been stopped. Many of the Woolwich working men buy the houses in which they live through a building society. One of the largest of these societies working in this district has, during the past two or three years, had to revise its agreements and to capitalise a great deal of arrears. On all sides there are complaints of private traders, and quite a number of old-established firms have closed. The recent revision of the voting lists shows a large reduction of voters. Results of unemployment in Woolwich.

9. In February, 1903, the Borough Council appointed a special Committee on Unemployment, and on the latter's recommendation various conferences were held on the subject. In November, 1904, a Joint Committee, consisting largely of those who had attended the conferences, was formed in accordance with Mr. Long's scheme. The register was opened on the 24th of that month. The Borough Council voted £50 for initial expenses, and placed the Old Town Hall at the disposal of the Committee. The Board of Guardians engaged an extra relieving officer to work under the Committee. The number of applications was 1,001, and of this number 553 was considered to come within the scope of Mr. Long's scheme. It may be noted that 444 of the applicants described themselves as labourers. The Borough Council, in a supplementary estimate, voted £4,000 for schemes of work drawn up by their Works Committee. The Joint Committee took advantage, in conjunction with the Works Committee, of an offer of £400, representing 25 per cent. of the cost of labour of the Central Unemployed Committee, to enable the Borough Council to carry on special work. The 25 per cent. was designed to meet the extra cost entailed by the season when the work was done, and the lower degree of efficiency of the men employed. The surveyor gave it as his opinion that the grant fully recouped the Council. A great deal of time and labour was given by members of the Committee and others, during the winter, in endeavouring to make the Woolwich portion of the scheme a success. Through the Borough Council and the Central Unemployed Committee work was found for 318 men and in other ways for 121 more. Regarding the character of the men the reports of the superintendents at the Central Unemployed Committee's works gave the Woolwich men the second highest percentage in the "good" division, being nearly twice as high as the whole of London. This would suggest a considerable amount of care on the part of the Committee who sent them. Operation of Mr. Long's Scheme at Woolwich.

10. The first report of the Woolwich Distress Committee Unemployed Workmen Act; Woolwich Distress Committee, etc.
for the year 1905-6 shows that they had to deal with 1,553 applications from men, and with forty-three from women. Of the men, fifty-two were sent to the Central Body's working colonies for various periods; 128 had work given to them by the Central Body, in and near London, and the Borough Council found work for 227. Thirty married men with their families, and thirty-three single men—a total of 152 persons—were emigrated. In the late summer of 1906 an inquiry was made into the then condition of the applicants. Apart from those who had left the district, or about whom no information could be gained, 499 were found to be in work, but no less than 483 were out of work. The report for last year (1906-7)

has just been issued, and shows that 1,726 men and thirty-two women applied for work. The Central Body found work for 135 men for an average of seven to eight weeks, and sent to their working colonies a further forty-six men for about fifteen weeks each. The Borough Council gave no work, but employment for varying periods was obtained for sixteen men. The Committee did a good deal of emigration and migration work; 301 men, representing 987 persons, were emigrated, and forty men, representing 220 persons, were migrated, chiefly to the North of England. Of the men who applied for work in 1906-7, it was found that 483 had registered in the preceding year, and of those who applied in 1905-6, 327 had been registered at the old Joint Committee.

11. A labour bureau has been established under the Unemployed Workmen Act, and has been working a year; 2,257 names have been registered. The bureau has been supplied with lists of the names of men about to be discharged from the Arsenal, but otherwise employers do not appear to have made an extensive use of it, nor do the trade unions support it. I am unable to see what substantial benefit the bureaux are likely to bring, either to masters or men. If there is a demand for any particular form of labour in any district, the news quickly spreads by means of the ordinary channels—trade societies, and the Press, etc., and the supply follows that demand. At any rate, I have not yet seen it fail.

12. The labour colonies, as at present constituted, seem to offer little help in the way of solving the question of the unemployed. The Woolwich men sent to the colonies were carefully picked; with few exceptions they both worked and behaved well. They stayed there four months, and then returned to London generally much better physically for their regular life under healthy conditions, but beyond this benefit and keeping the home together during the time, one asks: What good was served?

13. The Act of 1905 has, in my opinion, been of distinct use to the Woolwich district, but it must not be forgotten that the condition of things there has been quite abnormal. Complaints were made that the Distress Committee did so little in giving work. The empty houses in the borough show that there has been a large exodus, and to that extent the future difficulty is less. Can one believe that this would be the case if the Distress Committee during the past two winters had been able to give work practically to all who asked? I think, too, that the comparative security of work had some effect in making the emigration and migration side of the Committee's efforts easier, and the reports from Canada from many of the emigrants themselves have been such as to justify this part of the Act. Should it be continued, I should like to see the emigration clauses recognised as its most valuable powers. Personally, after having had some experience of the work of the Joint Committee and the Distress Committee under the 1905 Act, I am entirely in favour of the former. It called forth more local interests. The numbers showed more enthusiasm. Unlike the Distress Committee, there was an absence of party politics, and, apart from emigration and migration, it did much to meet the local difficulty. Provided that a satisfactory arrangement could be arrived at with regard to emigration, I think that Committees, similar in constitution to the Joint Committee, would in many ways, such as elasticity of treatment, freedom from party politics, local interest, serve districts better than the present Distress Committees.

79213. (*Chairman.*) Have you any knowledge of Poor Law administration in Woolwich?—Only in connection with a good deal of intimate work with the Charity Organisation Society. We have been on excellent terms.

79214. You give in your statement an account of Woolwich. Under normal conditions is there a considerable number of persons who are unemployed?—I should say not more than an ordinary fairly prosperous industrial district in London. I speak prior to the time of 1899, when of course the work at the Arsenal became quite abnormal.

79215. There seems to be a great distinction between Woolwich and other parts of London. You have there a vast highly-organised industry under the Government which I understand gives the very large mass of employment?—That is so.

79216. And there is not much besides, is there?—I should not like to say there is not much besides. The population of Woolwich is nearly 130,000, and as to Arsenal employment, I believe Mr. Haldane's last figures were 8,000, being the minimum number to be employed in the Ordnance factories.

79217. But there were 24,000 employed in 1901-2, I notice?—I am taking the latest return of the estimated population of the town clerk this year, but still I should not like to mislead the Commission; by far the chief employer at Woolwich, as I have said, is the Government.

79218. The Government avail themselves of a number of men who are in receipt of pensions from the Army and the Navy?—That is so.

79219. They therefore have these pensions in addition to anything they may earn?—That is so.

79220. The figures you give are rather remarkable. The maximum in 1901 employed at the Arsenal was 24,600, and the maximum number on July 23rd, 1907, was only 12,300, a reduction of 12,300 in that period. Were these men taken on, do you know, unconditionally, or were any proportion of the men who were taken on during that time taken on for a limited time?—I think they were taken on quite unconditionally. I have never heard that there was any condition laid down at all.

79221. So they came to the district with their families?—They did.

79222. And settled there?—Many of them.

79223. In addition to the contraction of Government employ there has been a depression in the building trade?—There has.

79224. Did the two go together: did the expansion of the factory establishments lead to an increased demand for houses?—Yes, to a large extent they did run together.

79225. So that these two sources of employment expanded and have now contracted?—That is so.

79226. The result seems to be that the persons who applied for assistance under the Unemployed Act seem to have been rather of a higher stamp than in other parts of London, judging by results?—Yes, I believe that has been stated. I do not know what the exact standard is in the other parts, so I cannot say.

79227. On the work the Woolwich men come out with the second highest percentage?—Yes.

79228. Being nearly twice as high as the whole of London?—Yes.

79229. Were any considerable number of the persons who applied persons who had been discharged from the Arsenal?—A very large percentage.

79230. And they would be more or less respectable persons in ordinary circumstances in permanent employ?—That is so.

79231. Therefore the object of the Act so far as Woolwich was concerned to a certain extent was fulfilled?—I think it was. In my last paragraph I have noted that it was of great service to Woolwich. I think there is no doubt about that.

79232. Turn to Paragraph 10, the Woolwich Distress Committee's Report was of course previous to the Act?—Yes, the Joint Unemployed Committee.

79233. And I suppose the distress in Woolwich had begun to be felt before the Act came into operation?—Quite so.

79234. Would you look at Paragraph 10? I want to see what the result was. You had to deal with 1,553 applications from men, fifty-two were sent to the central body's working colonies, 128 had work given to them by the central body, and the borough council found work for 227. Thirty married men and their families, and thirty-three single men, a total of 152, were emigrated. Do you know what happened to those who got work given to them by the central body or the borough council; have they been able since to get employment?—We made an inquiry in the late summer of last year, and we were able to visit nearly 1,000, and as a result we found that 499 were in work and 483 were out of work. We were able to trace those.

Mr. Charles P. Larnier.
21 Oct. 1907.
Employment in Woolwich.

Status of applicants to Woolwich Distress Committee.

Results of relief under Unemployed Workmen Act in Woolwich.

Mr. Charles
P. Larnner.

79235. Almost half had got work?—Yes.

21 Oct. 1907.

79236. For the next year you had 1,726 men and thirty-two women. You found work for 135 men for an average of from seven to eight weeks. The borough council gave no work, but employment was obtained for sixteen men. Then 301 men, representing 987 persons, were emigrated, and forty men, representing 220 persons, were migrated. Would you contend that a fair amount of success had attended your operations?—I think that the Act, as I mentioned, was a distinct help to Woolwich, because the conditions of Woolwich were quite abnormal and we found both in emigration and in migration, and also in the work that was given, that it greatly helped to modify the distress in the district.

79237. It seems to me also that you came more into contact with the class of person for whom the Act was intended than in other parts of London?—It may be the case that that was so.

79238. You do not believe much in the labour bureaux?—I do not think I do. I rather fail to see that there has been any great advantage in connection with the one at Woolwich. I have given one or two figures in my statement which have brought the matter quite up to date. Certainly the trade unions stand aloof; I see no chance up to the present of the employers taking it up very warmly, in fact, the manager of one of the largest employers there, who was on the committee, seemed to intimate that he could get his men more easily than having to send round to the labour bureau for them.

79239. Are not you looking at it a little locally; might not an effective system of bureaux established all over England in centres of industry have the effect of making it known where employment was going and where workmen were wanted?—I see no reason to suppose that the ordinary channels do not provide that information. Certainly in all the skilled trades it is known, and in the unskilled trades I think it is known. So far as the migration work we have done is concerned, we have known the work was there, and we have been able to use the Act to get families to it; it was not that we did not know there was work in the North of England, or there was work in Wales and also in Cornwall.

79240. Then as regards labour colonies, you apparently are a little doubtful if they justify their cost, to put it plainly?—I think so.

79241. The people come back better?—They come back better physically, undoubtedly, and the homes of the men when they were working were quite regularly visited, and I think the effect on them, perhaps, for the six months or four months, was an advantage, but the men had practically nothing to come back to, and in some cases they came back even at the end of the summer, in October or November, and their position was practically no better than when they went away.

79242. Do you know what has happened to those persons who came back?—We shall have a good many of them, I have no doubt, up during the next week or two.

79243. Owing to the very abnormal conditions that existed in Woolwich, you think the Act has been beneficial?—I think it certainly has for the district of Woolwich.

79244. You prefer the old system to the Act?—Yes.

79245. Should you say there were more party politics on the distress committee than under the old joint committee?—Yes, undoubtedly.

79246. (*Sir Samuel Provis.*) They were constituted in the same way, were they not?—No. As to the joint unemployed committee, really, as I think I have mentioned, the members were put on to the committee because most of them had shown more or less interest in attending a number of conferences and considering the question of the unemployed. One got to know within a little the men in the borough who were interested in the subject, and to a large extent the committee was formed out of those men.

79247. You mean the joint committee formed under Mr. Long's scheme?—Yes.

79248. That joint committee was composed of members of the board of guardians and the borough council?—Yes.

79249. So is the distress committee?—I think the men who came on that committee were certainly men who showed considerably more interest in the work. I think they came on the committee largely because they were interested in it; to a large extent they have been nominated and sent on to the committee now because their party nominated them and they have accepted the work.

79250. The committee was constituted precisely in the same manner, was it not?—Not in the same proportions at all.

79251. In different proportions, but by the same bodies?—I can hardly say that, I think; because, after all, the non-official members, if one may call them so, who were nominated by the borough council are nominated by the majority of the borough council whereas the men who came on to the joint unemployed committee did not accept the nomination of any elected body at all.

79252. But they were, were they not, appointed by the board of guardians or the borough council?—Their names were submitted, I understood, under Mr. Long's scheme.

79253. Mr. Long's scheme suggested, I think, that the guardians should nominate a certain number and the borough council a certain number?—All I can say is that the men who were nominated under Mr. Long's scheme were distinctly people who had shown interest, and it seems to me, judging from the work of the committee, that they were men who did show much more interest in the joint unemployed committee than the majority of the present members do in the work of the distress committee.

79254. The point is that the guardians and the borough council chose different men under the scheme than the new ones?—Yes.

79255. (*Chairman.*) Then you prefer the machinery of the joint committee?—Yes.

79256. Has Woolwich gone back to normal conditions?—I should hardly say it had gone back to normal conditions. It probably will not reach normal conditions for three or four years, but the discharges have now finished.

79257. Do you consider it necessary that there should be a joint committee in Woolwich, say, for the next three or four years?—Certainly, I should say for the next two winters.

79258. Are you in favour of the machinery of the joint committee; it practically has not any spending power?—It has none at all.

79259. Do you wish to give it any authority to raise a rate?—I do not see why, on the application of a body, that could command public confidence, say the joint application of the guardians and the borough council, there should not be some power in the hands of the President of the Local Government Board to make some grant.

79260. Is there much casual labour at Woolwich?—Yes, a considerable amount, because we are near the docks. The free ferry makes a good deal of casual labour in the whole district round about.

79261. The docks are the other side of the Thames?—Yes.

79262. The people go over by the free ferry?—Yes.

79263. Has that amount of casual labour increased in recent years?—I am told it has decreased, because I believe an effort has been made to classify the men who go there, but I really do not know the exact methods of employment.

79264. Did the discharges at Woolwich recently tend to throw more people on to casual labour at the docks?—Undoubtedly it did.

79265. (*Mr. Russell Wakefield.*) With regard to the distinction you draw between the joint committee and the distress committee, it was the personnel of the joint committee that you preferred to that of the distress committee?—That is so.

79266. It was the individuals?—Yes. I think they were more representative of the whole community than the present.

79267. Should you say your present distress committee does not take an active part in trying to get work for the unemployed?—I do not think I said that. What I said was that relatively I thought the others showed more interest.

79268. Our experience of the central body is that Woolwich is fairly consistent in its efforts to get what it can out of us; there is not any slackness?—I believe we are.

Present condition of employment in Woolwich. 79269. Things are improving with you now, are they not, a little bit?—In so far as the discharges have ceased, I think we are tending more to the normal, but that will not be reached for years.

79270. You are aware that you sent up from Woolwich to the central body asking for still more of the work, and so on, from us, because of the abnormal distress this year?—I think that is quite possible.

79271. (*Mr. Lansbury.*) You are chairman of the Woolwich Distress Committee?—Yes.

79272. You would therefore be cognisant of the letter which came to us?—Yes.

79273. Do you agree that is necessary?—For the increase?

79274. Do you agree that Woolwich does need some work found for it just now?—I think work found for Woolwich will help it in the same way that it has helped it for the last two years.

Effects of provision of work on Woolwich men. 79275. You do not consider that the work which has been found for you has been vicious in its effect?—I should think not.

79276. You think that the men have been really helped in a decent manner?—I think they have been fairly well helped.

79277. So far, it has been good for Woolwich that there was an Unemployed Workmen Act?—Certainly it is good for Woolwich that there has been a means of helping them in this abnormal time.

79278. And it really was necessary to get some help for them?—Of some kind, I think it was necessary that it should be given.

Distress in Woolwich. 79279. The discharges have not commenced, had they, to have so great an effect the year preceding the establishment of Mr. Long's scheme?—Yes, they were beginning; the discharges began in 1902.

79280. But I thought they had not reached any appreciable numbers until within the last two years?—Yes, they had reached considerable numbers in 1905 and 1904.

79281. But Mr. Long's scheme came in in 1904–1905?—1905, it came in.

79282. It was the autumn of 1904. All the agitation had gone on previously?—Yes.

79283. What I am putting is that things had not got to their worst in Woolwich when the Act came in or when Mr. Long's scheme came in?—No, they had not.

79284. Therefore, when the Act was first applied there your conditions were not so abnormal as they were by last year?—No, I am not prepared to say that; though we found rather more applications to the distress committee last winter than the winter before, the conditions were very much worse last winter than they were the preceding winter?

79285. And you do not think they are this winter either?—Up to the present I should not say so.

79286. Something definitely had to be done at least for Woolwich, under those circumstances?—I think undoubtedly something would have been done if the Act had not stepped in.

79287. By private subscription?—A local committee would undoubtedly have been formed.

79288. You might have got sufficient money to get you over it?—It is possible; I do not know.

79289. You are aware, are you not, that there had been a Mansion House Committee sitting?—Yes.

79290. And that had failed for lack of funds?—Yes.

79291. You are aware of that?—Yes.

79292. You still think that Woolwich would have been more successful?—I do not say it would at all.

79293. I understood you to say you thought so?—I said that something undoubtedly would have been done for Woolwich, if Mr. Long's scheme or the Unemployed Act had not come into operation. *Mr. Charles P. Larnier.*

21 Oct. 1907.

79294. That something, I suggest to you, would have had to be something from the Government?—Not necessarily from the Government. Question whether relief could have been provided for Woolwich by voluntary funds.

79295. From where do you think it would have come?—A special appeal for Woolwich might have been made to the metropolis.

79296. But seeing that a special appeal was being made, and had been made in the winter of 1904, and had failed; the Bishop of Stepney and other well-known men had failed to get the money to carry out quite a tiny scheme; do you think there would have been any likelihood of Woolwich doing what they wanted to do?—It is quite possible the exceptional position of Woolwich would have resulted in some money being raised, whereas a general application to the metropolis would not have raised it.

79297. You think that Woolwich, the home of skilled employment, where men might be expected to make provision if any were made, would be more likely to get a response from philanthropists than the unhappy people in the East End or North-East End of London?—I do not think you should say it was the home of skilled labour entirely.

79298. I do not say skilled labour entirely?—You spoke of the home of skilled employment.

79299. The home so far as the metropolis is concerned, certainly?—Of the men who applied last winter at the distress committee I noticed that of the 1,700 who gave their names in, over 1,000 gave them in as labourers; there are many that are called machinists, but one knows as soon as they leave the particular form of work they are on they are not perhaps equal in skill to an ordinary carman.

79300. Do you think you would have got sufficient funds from the general public to have dealt with the distress in Woolwich?—I do not know that we should. We might not have done, but we might also have done.

79301. You might have got it, each of the three years you have been at work?—We might.

79302. On the other hand you might not?—We might not.

79303. Apart altogether from that, the Act has done you some good in Woolwich?—I agree.

79304. It has not done mischief to the men it dealt with?—I think not.

79305. (*Chairman.*) You mention in your statement that there is a large co-operative society in Woolwich. Did any considerable portion of the persons who came to you for relief belong to that society?—A small proportion. I rather regret that on the form issued by the central unemployed body the question of thrift or membership of trade unions or friendly societies is not more clearly brought out, because personally I think it would be a very interesting point to have had exact details about. Desirability of showing membership of trade or friendly society in "record paper."

79306. To see what proportion who applied did belong, or had belonged, to those societies?—Yes.

79307. (*Mrs. Webb.*) I gather you think that, broadly speaking, if this unemployed legislation had not intervened, you would have got sufficient funds to deal with the unemployed?—No, I should not like to say that at all. What I distinctly say is that had the Unemployed Act not been passed, that the district of Woolwich or the Borough of Woolwich would have taken steps, I think, to have raised a fund sufficient to have, in a manner, met the distress. Question of voluntary fund at Woolwich.

79308. How would you have spent that fund do you suppose, as a matter of prophecy?—I think we should have entered into relations with the county council in very much the same way as the central body has done.

79309. You would have given relief works?—I think we should probably have tried for some work of that kind.

79310. Should we be right in assuming that if you went to private charity, and if private charity responded, you think the most part of that money would be spent in relief works?—I should not think the most part of it; I think that would be one feature in a big scheme.

Mr. Charles P. Larnier. 79311. It has hitherto been largely spent in either doles or relief works ?—A good deal has.

21 Oct. 1907. 79312. That is a matter of history, is it not ?—I think it is.

Comparison of relief works and doles. 79313. Which do you regard as worse, doles or relief work ?—If it is made quite clear that the work is relief work I prefer relief work ; only I think it is a mistake to let the men suppose that they are earning their money when it is relief work.

79314. You would, on the whole, prefer that relief work was extended rather than doles ?—I should not like to make a sweeping assertion about it. In many instances you might find the better thing was to meet the case with a dole.

79315. What other alternative is there in giving relief from private charity than relief work and doles ?—I do not know that there is anything.

79316. When the thing is left to private charity they do, as a matter of fact, give doles and relief work ?—Yes, but they do not quite leave it there ; one hopes they also see whether anything else can be done in the way of finding work, or anything of that kind.

79317. Supposing we were to come to the conclusion that both relief works and doles were thoroughly bad, what should we gain by leaving it to private charity ?—If we came to the conclusion that relief works and doles were thoroughly bad, I do not know that you would gain very much except in trying to find work for the people in other directions.

79318. As a legislative body, supposing we are assured that the only result of charitable funds is either to give doles or to give relief works, why should we recommend that it should be left to private charity ?—Perhaps you will not come to that conclusion.

79319. But supposing we did. Supposing we agreed with the strict view that both doles and relief works (and that is my view by the way) are utterly vicious, what should we gain by leaving it to private charity ?—I do not know that you would gain very much then.

Unemployed problem at Woolwich. 79320. (Professor Smart.) I suppose the main problem of Woolwich is not depression of trade, but the carrying out of a definite Government policy, namely, of reducing the staff ?—That is so.

79321. There is no chance of that policy being overturned, I suppose ?—I should think not.

79322. Would it not be as well to recognise that the only real remedy is either emigration or migration ?—I think it would be a most excellent thing to recognise it.

Cause and results of workmen owning their houses in Woolwich. 79323. In that case does not a phenomenon, which otherwise is a very pleasing one, namely, the owning by working men of their own houses (I see you give 25 per cent. as the figure for that) become an element in their own undoing ; it prevents the mobility which at the present time is necessary. Have you ever had that brought before you at all ?—I think that perhaps the reason why the percentage in Woolwich is comparatively higher than in London is that when men get Government work they look at it as a stable form of employment, and they are more inclined to invest their savings in houses than men working in other occupations would be.

79324. It makes the position of Woolwich peculiarly hard, you think ?—We think it does.

79325. I presume this likewise has hurt the Co-operative Society ?—Yes.

79326. It seems to hold a good deal of house property ?—It does.

Labour exchanges. 79327. I notice you do not approve of the labour bureau as a means of finding employment ; but do not you think it has a function in showing where there is not employment. Supposing it never found a situation at all, but showed definitely to the working man there was no room for him in that district, is not that a very large piece of work ?—It seems to me a very costly way of announcing that there is no work in any particular industry.

79328. Is there any other way of proving it statistically ?—I thought the *Labour Journal* did it.

79329. That is only for organised labour ?—That might be extended.

79330. That is your proposition ?—That is a suggestion.

79331. Can you tell us why politics plays such a large part in the distress committees ? I do not think it does in Scotland. I am astonished that it does in England ? —It was a very warmly contested election last November ; and there was a reversal of the policy of the borough council ; and I think following the reversal of the council, the nominations followed the majority on the council.

79332. Do you mean political parties or other parties —Political parties.

79333. Do you not mean rather the socialistic element as against all other parties ?—I do not know ; the minority is now the Labour Party, and the majority are the Municipal Reformers. Whether all the members of the Labour Party would call themselves Socialists, I am not prepared to say.

79334. Is it not the case that the distress committee in Woolwich as a body recommends the continuance of the present Act ?—Yes, with certain amendments.

79335. And you, as chairman, rather go the other way ? —No, I think you ought to have your attention drawn to the fact that in the report that was sent to this Commission that very question is put ; and the point on which they were all agreed was that they found the emigration and the migration clauses the most useful in their work.

79336. But did they not recommend that the Act should be continued in some form ?—Yes, they did.

79337. You might enlighten my ignorance on one point. What is exactly the work done at Woolwich under the name of the Arsenal ? Does it include shipbuilding ? —No, the dockyard was closed many years ago ; it is guns, ammunition and ordnance.

79338. Nothing but that ?—Nothing but that, practically.

79339. (Dr. Downes.) In Paragraph 6 you speak of previous serious depressions at Woolwich. Do you know what was done in 1869 on the occasion of that depression ? —I believe very little was done. I had a conversation with a man who has got a very good position in Woolwich now who suffered at the time through it, and he says the distress at that time was very severe indeed, and there was very little help given to any one who was thrown out.

79340. What was the cause of the depression in 1886 ? —I think it was not the Arsenal ; there had been a slight diminution in the employment at the Arsenal, but it was the general diminution of all employment outside the Arsenal, that was, the building trade and such men as found employment in the docks.

79341. Was that peculiar to Woolwich in 1886 ?—No, I think it affected the whole of the East End very strongly.

79342. Were any special means taken in Woolwich in 1886 ?—I could not say.

79343. Have you followed the effect of the late depression upon the statistics of pauperism in Woolwich ?—Yes.

79344. What has been the effect on your pauperism ? —There has been a slight increase last winter, but it is going on now. I think it is largely due to slight alterations in the policy of the board, because up to 1906 the Poor Law returns really had not been affected, that is the people had not gone to the relieving officer.

79345. I notice that in the last return the figures for Woolwich are remarkably low ?—Yes, but now they are larger than a year ago.

79346. The actual figures are : indoor paupers, 1,690 ; outdoor paupers, 714 ; total 2,404 ; an increase of 179 on the corresponding period of last year ?—Yes.

79347. That I think you will see is the lowest of all the South of London ?—Yes.

79348. (Mrs. Bosanquet.) Do you think that the Unemployed Act would have been useful in Woolwich if it had not been for this exceptional condition at the Arsenal ? —I do not think the conditions were exceptional in, say, 1898, and I think any difficulty would have been met by local effort there.

79349. So that it is really owing only to special conditions in the Arsenal that the Unemployed Act has been useful and you approve of its continuing ?—That is the reason I approve of it, because of the abnormal conditions in Woolwich and the district.

Opinion of Woolwich Distress Committee as to Unemployed Workmen Act.

Nature of work at the Arsenal.

Depression of 1869.

Depression of 1886.

Pauperism in Woolwich.

Unemployed Workmen Act dealt with conditions in Woolwich.

79350. It is really only in the district of Woolwich that the Act was applied as it was intended to be applied by its devisers?—I could not say that.

79351. At any rate there it met what it was intended to meet?—Yes.

79352. (*Mr. Loch.*) With regard to the question of relief, in some winters you have had more out-of-works owing to seasonal causes, have you not?—Yes.

79353. Have those in any case been dealt with by the Charity Organisation Committee?—Yes.

79354. Were they dealt with by relief?—They were dealt with by relief when there was a prospect of work later on.

79355. What kind of work did you give?—They have been dealt with by weekly allowances.

79356. Would you call those weekly allowances doles?—I should not call them a dole in the sense in which the term is ordinarily used.

79357. It was an allowance given for a purpose?—Yes.

79358. And that would be a useful method of relief?—I think it would.

79359. Therefore, apart from the question of doles altogether, you have a system of relief which is of service in dealing with the unemployed?—That is so.

79360. With regard to the cases which came before you these last few years, were there not also cases which could be dealt with by relief apart from giving them employment?—Yes, I think there were, but naturally if a man was out of work he applied or was referred at once by whosoever he applied to, to the distress committee because of the possibility of his getting work there.

79361. That is to say there being a machinery and a fund for giving employment, they were referred to it?—Yes.

79362. And the treatment of the case from the point of view of relief generally was to that extent satisfactory?—Yes, it was.

79363. Do you think that, taking the cases which have been dealt with by way of relief, that is to say, employment and emigration and otherwise, they have been a success?—Yes, I think one may say distinctly they have been a success. The emigration, so far as one is able to judge from the reports they have had, has been a very distinct success. The migration has also been a success, and the term of work has been sufficient to keep many of the men and their families through the worst times of the winter.

79364. Supposing you have a relief committee with these various alternatives before you, which would be the natural alternatives, do you think you could do better by helping in that way than if you had an unemployment committee only?—Yes, if you had the funds behind them, that is, if you had sufficient funds to deal with your emigration cases quite satisfactorily, as we have had under the distress committee, and the same in reference to migration.

79365. Do you think the funds would be very much larger on that plan than they would be on the plan of employment, taking all these phases into account?—Yes, I should think they would be rather larger.

79366. Then practically if you could bring into the funds in connection with the out-of-works the relief fund available from many sources, it is the best thing you could do?—Yes, I think under normal conditions it would quite meet the case.

79367. And an abnormal condition would have to be met by employment officially, or what else?—That would have to be met by relief in some way.

79368. Would you be in favour of the Poor Law remaining as the final element in these matters?—Distinctly.

79369. Were any cases referred to the Poor Law by the distress committee?—Only those who applied who had received Poor Law relief within the preceding twelve months, or where the reports of the inquiry agents were so unsatisfactory that they were at once sent to the relieving officer.

79370. Did that cover many cases?—I do not think it covered as many cases as it would have if we had employed a skilled investigator. We had to employ people quite new to the work.

79371. That is to say you would have to have a set of trained investigators?—Yes. *Mr. Charles P. Larnier.*

79372. With regard to seasonal out-of-work, have you any suggestion to make by which it could be prevented by any form of insurance against unemployment?—With some Trade Union trades one knows it is provided or insured against. The insurance Amalgamated Society of Engineers make an allowance; I funds. think it runs up to 10s. a week, and I believe one of the unskilled trades unions makes an allowance of 5s. a week for either six or eight weeks. Of course, these sums are quite small, but, after all, it seems to me that we are almost at the opening stages of insurance against lack of employment.

79373. What society is that to which you allude?—We have had it mentioned once or twice at the Distress Committee. I heard it mentioned the other day. It is a labourers' union, not a skilled workers' union at all.

79374. (*Mr. Lansbury.*) May we have the name?—I will supply it if I can.

The witness subsequently sent the following note:—"The trade union I had in mind was the Labour Protection League which has four branches in Woolwich. In three of the branches the members pay 2d. a week, and can draw 5s. a week out-of-work pay for six weeks. In one branch the members are of a rather higher grade, and pay 3d. a week and have a few advantages."

79375. (*Mr. Loch.*) Do you think anything can be done to foster a movement in that direction which would be preventive in the manner I have just stated?—I should like to see a conference of the various representatives of the trades unions called together to see if they could not find out a line something similar to that which is now followed in the Amalgamated Society of Engineers.

79376. We are now dealing with unskilled men, who have not the centre of a union to rally round?—I think you have plenty of representatives of the unskilled men in a place like Woolwich; you could get one or two men, say the machinists working in a certain shop where there may be 200 or 300 of them, and they would represent the class.

79377. You think you could get in Woolwich a local combination of unskilled men who would pay in the better months of the year what might supply them with a fund in the worst?—I think the whole tendency would be to make it rather a strong incentive for the men to try to get a little more wages to pay this extra amount which they would have to pay every week.

79378. Do you think there would be any harm in that, if the money really found its way into a reserve?—I should like to see it.

79379. Do you think the employers would improve and foster anything of that kind?—I think they would; I do not know of anyone who would not.

79380. Therefore it does not seem to be an impossible scheme?—Not at all.

79381. Pushing it one step further, do you think it would be of any service, or possible, if in contracts for labour under a certain wage a deduction were made compulsorily and the money set aside in the name of the individual to be available for winter needs?—I am not enamoured of the principle of compulsion.

79382. You would prefer of course the other plan?—Yes.

79383. (*Mr. Lansbury.*) Have you thought how much would be necessary to set apart for an unskilled builder's labourer, to provide him against unemployment?—No, but I imagine the sum would not be so very immense. It might tend to raise the standard of wages paid to him.

79384. You think if it did tend that way the employers would be likely to foster it?—I think many employers would foster it rather than have a great many men out of work during the winter with the possibility of them coming on the rates and the rates going up in consequence.

79385. They might not live in the district where they were employed?—To a large extent they do.

79386. If they did not, the rates would not affect them?—It would affect London generally.

79387. In all these cases of the unemployed men, or very many of them, they are not absolutely out of employment, they often get jobs in the course of the winter?—Yes, they get jobs at the docks and that kind of thing;

21 Oct. 1907.

Mr. Charles P. Larner. it does not follow they would want the full week's wage at all.

21 Oct. 1907.

79388. (*Miss Hill.*) And anything subscribed would to that extent equalise their earnings; they would have something coming in which need not be full wages or half wages, but they would have something coming in if they put by in the summer for the winter's slack trade?—That is so.

79389. (*Mr. Lansbury.*) The skilled trades only give a very small allowance, it is not anything like a full rate of pay?—It is sufficient. I feel quite sure that a union like the Amalgamated Society of Engineers would arrange a scale which they considered sufficient to meet the difficulty.

Trade Unions and out-of-work pay.

79390. You are aware that all the unions are now complaining because of the very heavy burden that out-of-work pay involves?—It seems to me only natural for unions to complain of out-of-work pay; they complain of anything which they have to pay out.

79391. They are complaining because the rates they set out as being sufficient to cover that pay have proved insufficient, and their members are having to pay extra levies for the purpose of paying it. That is what is making them complain?—The tendency, I imagine, for them would be to somewhat raise their scale of subscription, and to that extent they would try to raise their rate of wages.

Question of management of unskilled labourers' union giving out-of-work pay.

79392. (*Mr. Gardiner.*) Have you thought how a union such as you suggest for unskilled labourers could be managed. In answering Miss Hill I understood you to say that a man who gets work two days in the week would also get some sort of out-of-work benefit to make up the deficiency. How are you to prove when an unskilled labourer is in work?—I think they are largely known to their members. In a union like that of the riverside men they work in branches, and a member of each branch is known to his fellow members, or I imagine he is.

79393. Would that be so even with unskilled bricklayers' labourers who work all over London?—I think they are known.

79394. You do not think there would be any danger?—I think it might be met. It would have to be done with care, but I do not think the difficulty is insuperable.

79395. (*Miss Hill.*) Have you thought of an insurance which would promise a particular amount to a man when he was out of work, or have you thought of the very much simpler plan of practically encouraging him to save, so that what he put by at one time he could draw out at another. That would seem to me the first step in the process. There should be much more incentive and trouble taken about collecting the savings of the less disciplined classes; it would not be so complete as an insurance, but a good deal of better collection might be done as is done by the Prudential for the burial clubs?—Yes.

Desirability of continuing local distress committee in Woolwich.

79396. (*Sir Samuel Provis.*) Supposing that the Unemployed Workmen Act were continued, would you be in favour of continuing some local organisation of

the nature of a distress committee?—Yes, as I said, I think that the condition of Woolwich is such that it would be desirable to continue it for at least two winters.

79397. What I rather meant was this, supposing the Act to be continued, would you continue the local organisation or would you say it was better to have only one organisation for the whole of London?—I am hardly in a position to judge what is best outside Woolwich.

79398. You think the existence of a local body in Woolwich is useful, do you?—That is my view.

79399. Taking the point you were mentioning just now about the constitution of the committee, would you alter its constitution?—It would be very difficult to alter it by any rules or regulations from the Local Government Board for instance, but I know that the joint committee would seem to be the natural result. The people who attended the conferences and were really interested in the subject of the condition of the unemployed about Woolwich, so far as I have been able to judge, were more interested, and more enthusiastic in their work, than the members of the distress committee itself.

Superiority of Joint Committee in 1904-5 to Distress Committee.

79400. How did that come about, do you think?—When I was on the joint unemployed committee one always had quite a number of persons leaving their businesses and coming down to the Town Hall to do the work of classification and the ordinary routine work of the committee: last year, not this summer but the year before, I was continually left with only one member of the classification sub-committee, which was practically the executive committee, because no one else seemed to have sufficient interest in the work to appear.

79401. Did the joint committee do the work themselves without the assistance of a staff?—We employed one during the winter. We have one clerk and two inquiry agents, and practically any other help we want in the way of writing letters from the Town Council.

79402. Did the members of the Joint committee make the investigations themselves originally?—Yes, partly by the members of the committee and partly by the inquiry agent.

79403. Were the visits to the homes made by the inquiry agent?—Partly one and partly the other.

79404. Do the members of the committee now make these personal investigations?—No, very few.

79405. They are entirely done by the staff?—They are entirely done by the staff, except visits made to the homes when men are away at the colonies, or anything of that kind.

79406. Do you think that is partly owing to the fact that there is more enthusiasm when a thing is new, which is apt to die out as the thing goes on?—No, I think the people felt rather that the responsibility lay upon them to make the joint unemployed committee a success more than they feel that it lies upon them to make the distress committee a success.

Mr. Horace Leonard Humphreys.

MR. HORACE LEONARD HUMPHREYS, called; and Examined.

21 Oct. 1907.

79407. (*Chairman.*) You are Secretary of the West Ham Distress Committee?—Yee.

79408. You have prepared a Statement which we will treat as your Evidence-in-chief if you will kindly hand it in?—(*The Witness handed in the following Statement.*)

EXTENT.

Numbers of unemployed in West Ham.

1. *Numbers.*—In West Ham unemployment has been increasingly chronic for the past ten to fourteen years. The first actual official testing of the extent of trouble was carried out by the town council through a "house-to-house" census during November and December, 1902, and showed a total of 5,382, or 5,877, as including

495 actually at work upon canvasser's call, but whose employment was of a temporary character only. West Ham's general statistics are attached for the period October 1st, 1906, to March 31st, 1907. Of the total of 4,825 registered 1906-7, 2,310 were re-registered applicants of the previous year and 2,515 new applications.

2. The striking disproportions in the numbers indicated by registers of Distress Committees outside London is evidenced in the following comparison of the total registrations under the Act to March 31st in each year, of ten county boroughs north of and inclusive of Birmingham, and ten south of that centre, respectively, in order of population:—

Disparity in numbers of unemployed in various towns.

Mr. Horace
Leonard
Humphreys.
21 Oct. 1907.

County Boroughs.	Estimated Population, 1906.	Registered Applicants.		No. of Registered Applicants per 1,000 of Population.	
		1905-6.	1906-7.	1905-6.	1906-7.

Causes of
greater
distress in
London.

3. The remarkably heavy registrations upon certain London and extra metropolitan areas, compared with the small extent or absence † of such in midland and northern centres, appear to include the following among other reasons:—

(a) Better trade generally in the midland and northern towns, probably influenced by the greater facilities for, and output in those districts of several of the country's staple industries.

(b) The common gravitation of provincial workers to the Metropolis and its suburbs.

(c) The large increases of unskilled unemployed thrown upon the London and bordering Distress Committees' registers through recent completions of tube railways, tramway systems, outfall sewers, etc.

(d) The halt in the remarkably rapid development within the past two decades of suburban London, and consequent extensive unemployment among the building trades.

(e) The wider extent of trade union membership among workmen of the midland and northern counties, and the probable greater efficiency and calibre, on the whole, of the workers.

How far
numbers
registered
under Unem-
ployed
Workmen
Act
approximate
to total
number of
unemployed.

4. The degree of the approximation that the total registrations given bear to the actual numbers of unemployed in the various centres is directly proportional, in my opinion, to:—

(a) The character of the local organisation and administration under the Act.

(b) The prejudices still ruling among the better class of the workless to be associated by registration or otherwise with those usually the first to flock to a "distress committee."

(c) The preference with numbers of the latter to tramp and struggle on in seeking work in their own trades rather than take to the pick and shovel in relief works; questions of physical strength have weight with such.

(d) The numbers of unemployed trade unionist in any particular area directly affects registration under the Act.

(e) The non-registration of a certain number of able-bodied who recognise the uselessness of their registering on the ground of past receipt of parish relief—in West Ham chiefly through stone-yard, assistance in the feeding of children, or some form of "out-relief."

(f) The refusal to re-register by a large number who either object to the investigation procedure or received no benefit from the first year's operations.

5. *Classes.*—The detailed registration sheet attached show the following summaries in trades classifications:—

(a) More or less skilled:—

Building trades - - - -	592	or	12.3	per cent.
Engineering and metal workers -	480	"	10	"
Locomotion and transport - -	204	"	4.2	"
Workers in food, drink, tobacco, etc. - - - -	120	"	2.5	"
Wood workers - - - -	59	"	1.2	"
Mine product dealers - - -	55	"	1.1	"
Gas, water, and electric service -	53	"	1.1	"
Dress workers - - - -	50	"	1.1	"
Domestic service - - - -	45	"	.9	"
Commercial occupations - - -	44	"	.9	"
Printing and paper trades - -	22	"	.4	"
Agricultural and horticultural -	21	"	.4	"
Workers in chemicals and oils -	19	"	.4	"
Workers in skins and feathers -	14	"	.3	"
Brick, cement and glass workers	13	"	.2	"
Textile workers - - - -	12	"	.2	"
Professional - - - -	10	"	.2	"
Precious metal and instrument workers - - - -	5	"	.1	"
State and municipal - - -	2	"		
Total - - - -	1,820	or	37.7	per cent.

Occupations
of
unemployed
in West
Ham.

* See answer to question 79545.

† In addition to this number 472 registered on the Employment Exchange lists to 31st May.

‡ Aston Manor, Coventry, Gateshead, Huddersfield, North Shields, St. Helens, Walsall, West Bromwich and West Hartlepool report no registration during the past winter.

Mr. Horace Leonard Humphreys. 21 Oct. 1907. Occupations of unemployed in West Ham.	(b) Unskilled, more or less :—	
	General labourers	- - - 802 or 16·6 per cent.
	Trades' labourers	- - - 658 „ 13·7 „
	Dock labourers	- - - 568 „ 11·8 „
	Factory labourers	- - - 515 „ 10·7 „
	Carmen labourers	- - - 230 „ 4·8 „
	Charwomen	- - - 90 „ 1·9 „
	Watchmen	- - - 80 or 1·6 per cent.
	Hawkers, etc.	- - - 62 „ 1·3 „

3,005 or 62·3 per cent.

Gross Total 4,825 or 100 per cent.

6. As a result of somewhat searching investigation in respect to combined industrial and private character of the applicants, the above classification is further modified thus :—

Class 1.—Skilled and regular artisans	59 or 1·2 per cent.
„ 2.—Irregular artisans and regular labourers	788 or 16·4 per cent.
„ 3.—Casual labourers	- - 2,346 or 48·7 per cent.
„ 4.—The physically or mentally incapable, about one-third ; and the remainder as chronically bad—industrially or privately, or both	- - 427 or 8·7 per cent.

Unclassed.—Approximately 75 per cent. of these were engaged in work at the times of enquiry, and the rest as in workhouse, not independent wage-earners, removals and no trace found, refusing information, and dead 1,205 or 25 per cent.

Total - - - 4,825 or 100 per cent.

Of the above, the number of cases “recommended for assistance,” i.e., considered suitable upon combined industrial and private records, totalled 3,152; and “not so recommended,” 530; number upon which no definite action was decided upon (unclassified cases), 1,143; total, 4,825. Hence, of the cases decided upon, 85·6 per cent. were adjudged suitable; the question of receipt or non-receipt of parish relief was not considered in such decisions. The professional loafing and sponging class have largely avoided registration owing to their distaste for the methods of investigation adopted.

7. Testing the total registration in respect to the condition (married or single) of the applicants, the figures for the two years in West Ham are :—

Operation of Unemployed Workmen Act in West Ham.

Numbers of married and single applicants.

	1905-6.	1906-7.	Percentage.		Totals.
			1905-6.	1906-7.	
Married men - - -	3,358	3,492	70·1	72·4	Men 97·1
Widowers - - -	266	282	5·5	5·9	
Single men - - -	925	905	19·4	18·8	
Married women - - -	65	9	1·4	·2	Women 2·9
Widows - - -	127	114	2·7	2·3	
Single women - - -	44	18	1·9	·4	

Seasonal and chronic unemployment in West Ham. 8. Period.—In West Ham unemployment is both periodic and chronic :—

(a) Periodic, chiefly among :—

- (i) Certain sections of the building trades ;
- (ii) Docks labour ;
- (iii) Women workers in jams and other factories.

(b) Chronic :—

- (i) Among the masses of casual labour in the borough re docks and shipping activities ;
- (ii) With a large number of those belonging to the building trades affected by the practical stoppage of building operations, (widespread in near neighbourhoods to within the past five to ten years), and including those who have not yet recognised or adapted themselves to certain changed forms of constructive works ;
- (iii) A proportionately large number of men discharged during the past three years through the decreased output in the Thames Iron-works and Yarrow's shipbuilding yards and a few from Woolwich Arsenal.

9. The following table (included in statistics sheet, (see Appendix LXXXIX) shows our applicants' total unemployment during the twelve months prior to their registration in the period October 1st, 1906, to March 31st, 1907 :—

Number who have had no employment	- - -	*253 or 5·3 per cent.
Number who have had under one month's employment	- - 434 „	9 „
Number who have had one and under two months' employment	504 „	10·4 „
Number who have had two and under three months' employment	- - 650 „	13·5 „
Number who have had three and under four months' employment	619 „	12·8 „
Number who have had four and under six months' employment	952 „	19·7 „
Number who have had six and under nine months' employment	879 „	18·2 „
Number who have had nine to twelve months' employment	534 „	11·1 „

Total - - - 100 per cent.

* Including 35 ex-service men and 18 not previously employed.

CAUSES.

10. Immediate causes in West Ham, as given by applicants' and employers' replies :—

Causes of unemployment in West Ham.

	1905-6.	1906-7.
(a) Industrial.—General work depression (slackness, job finished and casual labour) including seasonal and other fluctuations.	87·6	88·2
(b) Personal.		
(1) Avoidable—(attempting to improve position, violation of rules, personal disputes, incompetency, insubordination, laziness and negligence, drunkenness, general bad character, and not stated).	7·3	5·2
(2) Unavoidable—(Illness, age, not previously employed).	4·4	3·9
(c) Economic.		
(Discharges from Army and Navy, failed in business, firm removed).	·7	2·7
	100·0	100·0

11. Underlying causes as evidenced upon investigation :—

(a) Industrial :

- (i) The halt in the widespread building operations in east suburban areas during past decade or two—(38 per cent. of applicants, 1905-6; 30 per cent. in 1906-7).

Duration of unemployment of applicants in West Ham.

(ii) The full or near completion of several large excavation and other works in the borough and London *re*: Tube railways, trams, outfall sewer, etc., and the great proportion of casual labour common to dock and factory districts, throwing out of employment a weight of general unskilled labour, exclusive of trades labourers of 42 per cent. of applicants 1905-6; 4.3 per cent. in 1906-7.

(iii) The decline of trade in the Thames ship-building yards,† the closing of jute works, reductions at Yarrow's yards, discharges from Woolwich Arsenal. (27 per cent. engineering and metal workers 1905-6; 14.1 per cent. in 1906-7.)

(b) *Personal.*
Avoidable.

(i) Drink as an indirect cause far more widely evident.

(ii) Widespread thriftlessness.

(iii) Laziness and incompetency in larger proportion.

(c) *Economic.*

(i) Changed and changing industries, chiefly by increased use of machinery displacing hand labour (*re*: grain elevators, iron man at gas-works, electric and pneumatic drilling), and in some methods of manufacture (chemical and engineering).

(ii) The overwhelming preponderance of the inefficient, arousing consideration *re*: present-day lack of apprenticeship and mistaken educational ideals, and failure to recognise the equal national need of the *manually* as well as the mentally dexterous.

(iii) The influx into towns of rural workers as indirect cause (a very small *direct* cause, *viz.*, under .2 per cent., 1905-6, and .4 per cent. 1906-7).

(iv) Military discharges of young men after the expiry of some of their best years for trade training. (As an immediate cause .7 per cent. 1905-6, and .7 per cent. 1906-7. As an indirect cause, 14.2 per cent.)

(v) Employment of youths and young women in place of men.

(vi) Absence of proper facilities for the easy flow of labour from one district to others.

(vii) Shifting industries partly due to incidence of local rate burdens.

(viii) Alien immigration.

(ix) Increasing pains and penalties upon employers *re* compensation, etc. (Employers' Liability Act, Workmen's Compensation Acts, etc.), tending to the displacement of the older though still able men, and to throw controlling powers into the hands of the largest employers and syndicates—thus probably lessening the personal interest of smaller employers in the individual worker.

(x) Lack of recognition that a country's industrial welfare is closely bound up with its aims and methods in national education, and directly with its commercial policy and local government; with facilities of transport, and the close relation of latter to the nation's business, commerce, and housing of its people. Probably the current trend to imperial consolidation is likely to raise and solve some of these questions.

EFFECTS.

12. *Personal.*—Deterioration in the industrial efficiency and moral calibre of the worker, leading to more or less complete loss of industrial status, to drink, active vice, laziness, and "sponging."

13. *Social.*—A sore within and danger to the social life, especially in certain communities, which by the accident of geographical position have been called upon

† These yards now employ a total of 1,079 hands, compared with 3,118 in 1905.

in the past to meet, more or less spasmodically and single-handed, the conditions produced—one direct effect of which has been to greatly increase indiscriminate charity, and thus to aggravate the evil it sought to lessen.

14. *Municipal.*—To increase largely in some areas local rates' burdens for meeting Poor Law (indoor and outdoor) and education demands; to arouse sentiment and influences tending to exaggeration of the actual extent of the evil, leading sometimes to panic-stricken expenditure upon works, initiated more as excuses for paying over doles from public funds than as opportunities for and organised to secure reasonable value for payments made. The immediate effect has been increasingly disastrous to the workers, to the ratepayers, and generally to the municipalities.

15. *National.*—Increase of vagrancy, and of general Poor Law incidence; loss of time and efficiency of the nation's workers; and the gradual aggregation of the effects obvious in the individual workman.

REMEDIES.

16. *Special Work provided by Municipalities prior to the Unemployed Workmen Act.*—About the first tangible effort by the corporation to meet the increasing unemployment in West Ham was undertaken in 1892-3, when the borough engineer's report states:—"The labour question has taken a more acute form during the past winter. An expenditure of £617 was incurred in employing a large number of men in excavating a pond on Wanstead Flats, but, due to the inefficiency of the class of men employed, the cost was largely in excess."

17. Similar efforts were initiated winter by winter from that date onward, in the construction of cricket pitches, tree-planting, pitching, paving and channeling roads, painting works, road making and cleaning; and entailing increase of local rate burdens ranging (with fluctuations proportionate to the severity of the weather), from £122 5s. 4d. to £25,488 2s. 9d. in 1904-5, the previous heaviest cost of such works occurring in 1902-3, when the rates were burdened with an "Unemployed" expenditure of £21,009 14s. 8d. These figures appear to exclude any proportion of establishment and administrative charges *re*: services of borough officials and staff, nor costs of plant and materials.

18. The men employed were, in general, married men only, and were offered from four days a week, six hours a day, at 6d. per hour, in 1893-4, to three consecutive days' work, eight hours per day, at 7d. per hour, in 1902-3.

19. Upon the labour register opened in 1902-3 there were 7,788 separate entries; 6,263 accepted the work offered, and 4,115 declined.

20. The borough engineer's report, 1893-4, states:—"The question of the 'Unemployed' has become chronic, and schemes are devised winter by winter to alleviate the yearly increasing demands for work, but each year the work becomes more limited in range."

"A large part of the expenditure was but a concession to the demand for relief-labour."

"Many of the men from their previous pursuits were unfitted for the work of digging and wheeling; to many it was really "hard labour," and although in expenditure of strength, hand and foot-sore, they earned their small pittance of 12s. for four days' work, they could not commercially render its equivalent."

"Among those employed were occasionally some loafers and idlers, rather more 'hard-up' than usual: some such, however, were not able to stand four successive days' work and fell out or were dismissed."

"Under the present condition of things, the matter of relief for the unemployed is recurring with greater intensity each winter. Some means should be devised more real and lasting in its results than the spasmodic and improvised action now taken. The tendency of local effort is to attract the needy to the place, and while the relief given is not nearly equal to the demand, the permanent ratepayer is heavily weighted, and the results quite incommensurate with the expenditure. The question requires national rather than local treatment."

21. *The Unemployed Workmen Act, 1905.*—The West Ham Distress Committee was the first authority formed under the new Act, and has attempted, within its financial limits, all forms of effort permitted.

Mr. Horace Leonard Humphreys.

21 Oct. 1907.

Effects of unemployment.

Municipal relief work in West Ham before Unemployed Workmen Act.

Report on relief of unemployed in West Ham in 1893-4.

Mr. Horace
Leonard
Humphreys.

21 Oct. 1907.

22. To the extent that that Act has set up the machinery whereby at least approximately reliable statistics could be obtained as to the numbers, calibre of the workless and causes of the problem; by granting certain limited powers of operations to distress committees in dealing with the conditions as thus determined; and by governing somewhat the proceedings of the new committees in the provision of work and the administration of funds, the measure has proved a reasonable first step in national treatment of an industrial and social sore, the real extent and character of which in different localities had previously been variously reported, and its causes as variously assigned.

Com-
paratively
small
number
assisted
through the
Act.

23. The degree of approximation to actual conditions is modified by the influences pointed out in paragraph 4 of this statement. Those considerations notwithstanding, no merely local measures could have secured the very necessary statistics now provided.

Failure of
voluntary
funds to
provide work
under
Unemployed
Workmen
Act.

24. The failure of dependence upon the vagaries of charitable donations for the actual provision of work, as imposed by the Act, was doomed to speedy demonstration. But for the Government grants during the recent winter, West Ham's conditions would have been little if at all less disastrous to local municipal burdens than in previous winters.

Advantage of
the Act as an
experiment.

25. Generally the Act as modified during the past year in its financial aspects is, I suggest, rightly serving the necessary experimental period in treatment of the problem, and national and local expenditure will be more beneficially employed, industrially and socially, in seeking to strengthen and develop the departments of effort made possible by this measure, and unprejudiced initiation of measures of prevention suggested in statement of "Causes," than in treatment of the able-bodied under current Poor Law administration.

Labour
exchanges.

26. *Employment Exchanges.*—This direction of effort, organised upon a national basis, offers a field for widespread benefit in which little enterprise has yet been attempted in this country. The success that has already followed its organisation throughout London, and the remarkable results, reported by Mr. D. F. Schloss, as attendant upon the labour registries throughout Germany, and in less degree in other continental countries, suggests possibilities of substantial remedy of some of our unemployed difficulties in this direction. Any organisation for facilitating a flow of labour from centres glutted to centres seeking must be accompanied by means securing very frequent and up-to-date particulars of demands.

Question of
financing
labour
exchanges.

27. Most industrial centres can probably well meet from the $\frac{1}{2}$ d. rate the comparatively small expenses necessary for efficient working, in conjunction with a linked-up system, in this section; the districts, however, most heavily weighted with the unemployed problem find that the limit of rate contribution under the Act, consistent with thorough efficiency in general organisation and administration, hardly permits of sufficient margin to meet such necessary expenditure; and in one or two areas little, if any, of the distinct action advisable under this department of the Act can be attempted on that ground. Yet any increase of rate contribution tends to aggravate in such burdened districts the very trouble it is intended to relieve.

Work
provided
under Unem-
ployed
Workmen
Act.

28. *Provided Works.*—The works recognised under the Act as legitimate forms of assistance may partake of one or more of three forms:—

(i) Work wholly provided, controlled and financed by a Distress Committee or Central Body.

(ii) Work directly provided and controlled by a local authority or public body and contributed to by a Distress Committee or Central Body.

(iii) Work provided by a Distress Committee or Central Body (*i.e.*, in respect of which the Distress Committee or Central Body are the employers and responsible for general conditions), but wholly financed by a private person or firm.

29. According to reports of the first year's operations to hand, about half of the distress committees outside London provided relief works through their local authorities and other agencies rather than by direct provision.

30. A great difficulty in such provision, apart from Difficulty of finance, is to find sufficient scope for the varied forms finding of unemployed labour that shall satisfy the terms of the suitable Act, and at the same time avoid the creation of a new work, evil, viz., an interference with the *ordinary* employment of labour, and thus to increase rather than mitigate the unemployed problem.

31. In West Ham the very heavy financial burdens Special resulting from the relief works carried out by the difficulties in borough council in previous winters (*see* paragraphs 16 West Ham and 17) and the lack of any local works pressing for treatment have combined to hinder the Corporation rendering the Distress Committee much direct assistance other than by the loan of tools and plant and certain services of borough officials. Efforts have been unsuccessfully made to get borough firms and companies to initiate work of the kind suggested in paragraph 28 (iii) above.

32. Fortunately for West Ham, large scope existed Work for engaging unskilled labour on an extensive scale upon provided in Wanstead Flats and in Wanstead Park; and that at West Ham the same time offered some facilities for engaging a moderate number of carpenters and a few other skilled men at more or less rough forms of work in their own trades. An efficient works manager was engaged from an outside area, given powers of choosing his own gangers and "leading hands" from the men employed, and the power and duty, where necessary, of immediate discharge and stoppage of further assistance. The latter power was exercised in 247 cases.

33. Poorer quality and quantity, man for man, upon Quality and such works generally is but what most reasonable authorities amount of would expect in view of the previous varied occupa- work done, tions and large physical deterioration in most cases of the workers (*see* paragraph 20). Diligent effort, however, from every applicant so assisted, or lacking such, prompt dismissal, is a matter directly proportional to the degree of efficient and fearless supervision provided.

34. It has been widely urged that schemes of relief Superiority works are but mere palliatives and no solution of the of Distress trouble. That may be so, the latter especially, but they Committee are infinitely to be preferred—if carried out in the spirit of the regulations imposed—to mere stoneyard or other Law relief, indoor or outdoor relief under Poor Law provision, and the resultant sapping of independence and self-respect incident thereupon. The opinion expressed has probably its origin in some past features of local relief works (*see* paragraph 14).

35. Undoubtedly the decrease reported in West Ham's pauper statistics is largely due to the healthier forms of provision made possible here through the Government grants during the past season.

36. *Emigration.*—In my opinion the most beneficial Emigration, form of assistance rendered under the Act, both in the relief to the locality as well as to the emigrants. The objection raised to such form of assistance under the Act on the ground that it is robbing the country of some of its best workers is greatly discounted in the fact of the small percentage of the best workers that register under the Act, and the small number of these who seek emigration aid. Of over 250 married and single applicants assisted out by the West Ham Distress Committee four only were of Class I. and sixty of Class II (*see* paragraph 5). Apart from the latter evidence, too, it is well to recognise the fact that while "remedies" by the only true method of striking at "causes" are being applied, and before substantial effect from such action results, hundreds of these good workers of to-day are rapidly sinking to lower levels; and that it is surely the better course for those assisted and to prevent their early addition to local Poor Law burdens, to help them to spheres where abundant labour and fresh opportunities to re-establish their industrial independence await them.

37. To counteract degeneration of this or any other Desirability form of assistance to the distressed unemployed into an of increasing attractive force drawing more of the needy into localities period of rendering such assistance, I would increase, especially in residential rendering the more necessitous districts, the minimum residential qualification for relief.

38. *Removals to other Areas.*—Success in this department of assistance is directly proportional to the degree of frequent, sufficient, reliable, and up-to-date information as to labour demands throughout the country—facilities for which do not at present exist. A great aid to the resulting flow of labour possible under improved organisation would be a general reduction of railway fares in all such cases—secured either by co-operation from the companies or State grants. The West Ham authority has assisted fourteen such cases, all but one successfully.

39. *Labour Farms or Colonies.*—The general consideration aroused in respect to this form of remedy, as established under the West Ham authority, may be summed up as below:—

(i) The physical benefits to the colonists and maintenance of their powers as workers are, in practically every case, speedily evident; and the advantages to their wives and families in the regular weekly payments equally beneficial.

(ii) The colony offers a greater variety of occupation—engaging many of the workers in some form of their own trades—than simple excavation works.

(iii) The colony provides a chance to some of the men to seek that change of occupation (*e.g.*, in land cultivation) made incumbent upon many through the changed and changing forms of many industries; and provides good introduction into the general outlines of agricultural operations and nomenclature, helpful to intending emigrants even though the detailed conditions in the colonies may be different to our own.

(iv) The men are on the whole eager to remain on the colony if unsuccessful in obtaining work elsewhere. In some cases, however, especially of the chronically casual though deserving workers, the social attractions of the colony tend, it is thought, to dwarf honest effort in seeking ordinary employment.

(v) It is a truism that it is impossible to evolve contented agricultural workers out of town labourers in sixteen weeks, and perhaps not in sixteen months, if longer. Practically no evidence is forthcoming that any of the men after their sixteen weeks have sought regular employment on the land.

(vi) The weekly wage equivalent made to the colonist and his family is decidedly higher than that obtained by the ordinary agricultural labourer for more skilled work; and this fact, under present farming conditions in England, makes it impossible for farm colonies to meet working expenses, much less make *bona fide* profits. The latter fact notwithstanding, the equivalent of monetary profits is secured to the country in the improved stamina of the workers thus assisted—the number benefited, though, is very small, and the cost very great.

(vii) The successful control of and training in such establishments demands a combination of qualities most difficult to discover on one general officer, and not easily found between two; and calls for a special training for such officers, for the introduction of improved methods of tillage, the initiation of co-operative production and distribution, and close consideration given to the general social arrangements of such centres.

(viii) Should farm colonies, as under the Unemployed Workmen Act, be discontinued, such establishments would form splendid centres for part-time skilled training of prospective small holders and allotment workers, and whole time of some of the applicants on borough registers having strong desire and aptitude for agricultural work. The additional facilities offered to such workers in the proposed legislation now before Parliament would make farm colonies an invaluable adjunct to such reform.

(ix) The discharges of men from the colony since establishment have been on the following grounds:—

(a) Time expired under the terms of the Unemployed Workmen Act - 195 or 38·3 per cent.		
(b) To start work in own trade - - - - -	111	21·8
(c) Insubordination* - - - - -	65	12·7
(d) Illness - - - - -	26	5·1
(e) Violation of colony rules - - - - -	24	4·7
(f) Completion of special work - - - - -	22	4·3
(g) Dislike of colony conditions - - - - -	15	3·0
(h) Drink - - - - -	14	2·7
(i) No cause given - - - - -	11	2·2
(j) To emigrate to Canada - - - - -	9	1·7
(k) Transferred to local relief works - - - - -	6	1·1
(l) Personal uncleanness - - - - -	4	·8
(m) Quarrelsomeness - - - - -	4	·8
(n) False records, etc. - - - - -	4	·8

Total discharges - 510 „ 100·0 „
Number at colony May 31st, 1907 - - - 60

Total assisted at colony to May 31st, 1907 - 570

(x) As a means of effectually dealing with the unemployed under the regulations of the Act, it is doubtful, upon the limited experience secured to date, whether farm colonies have justified their establishment. Physical benefit and saving of working capacity rapidly accrue, and on this ground alone they demand appreciation. At the end, however, of the period of stay allowed, most of the men rapidly sink to former conditions, the fairly large proportion shown in cases of discharge, *i.e.*, Section (b) above, notwithstanding. Almost double the latter number, as will be seen by (ix) (a) stayed the full time allowed, and except for those emigrated, are now in the majority of cases as bad off as ever.

(xi) The two farm or labour colonies established under the Unemployed Workmen Act cannot be compared to the German system. The former are open only to recommended cases of honest unemployed, not to criminals, as in the latter. The general organisation and discipline cannot therefore be of the same strict order, and the independence of the colonists and circumstances of their separation from families create difficulties not incident, it appears, to the German or Belgian establishments. The fact of residence at the colony has not, however, in West Ham's case, militated against the re-engagement by ordinary employers.

40. *General.*—Attempted remedies for distress due to unemployment or other causes have a strong tendency to overlap and thus aggravate the trouble, develop “sponge-relief,” and increase indiscriminate charity. West Ham in particular has suffered greatly from this cause, one feature of which, three years since, has seriously harmed the borough in more ways than increasing its unemployed and Poor Law burdens. There is unfortunately widespread distress, especially in the southern wards, but it would be well if those advertising such conditions in the daily Press attempted greater co-operation in a methodical and wise treatment. Ready access to Poor Law relieving officers' books by such agencies would also prevent much of this overlapping.

41. With the above end in view, so far as it concerned the operations of the West Ham Distress Committee and the Charity Organisation Society, a South-West Ham Joint Committee, formed of members of these two bodies, was appointed in June last, and from that date has been the means of considerable help to our applicants, based upon the combined investigation of the two bodies for

Mr. Horace Leo and Humphreys.
21 Oct. 1907.
Discharges from West Ham farm colony.

* 48 of these were dismissed *en bloc* at Easter last.

Mr. Horace Leonard Humphreys. cases the features of which made the applicant unsuitable for the necessarily massed treatment upon relief works or other operations under the Unemployed Workmen Act. As typical of the help rendered, the following is the action of the Joint Committee to date :—

Co-operation of Distress Committee with C. O. S. in West Ham.	Applicants medically assisted - - -	4
	Applicants assisted through other charitable agencies - - -	7
	Applicants whose club or trade union benefits have been saved by payment of arrears of fees - - -	8
	Applicants placed in permanent work by personal introduction or advertisement -	7
	Applicants assisted to emigrate - - -	5
	Applicants offered emigration and refused -	7
	Applicants assisted with clothes or money gifts, or work through other bodies -	11
	Applicants recommended to infirmary or guardians - - -	6
	Applicants for whom suggested assistance found to be not necessary or impracticable - - -	12
	Applicants not traced - - -	2
	Applicants' tools released and fares paid -	5
		74

Relief of unemployment, certain general aspects.

42. Other remedies upon which I hold convictions are suggested in paragraphs 10 and 11, 26 and 27, 36 and 38. Worklessness and worthlessness will always account for a proportion of the unemployed difficulty. Remedies for character reformation touch, though, questions of ethics and religion outside the scope, perhaps, of this enquiry. While drink and thriftlessness, however, continue to underlie so much of the existing conditions, and recognising that to the extent laziness and vice operate, they are themselves but the effect largely of past long spells of enforced worklessness, of indiscriminate charity, and of certain features of current Poor Law practice, it behoves the State to recognise these sores in the national organism and to adopt every possible means to reduce. Such effort would, I presume, strike at causes while dealing with existing products of such causes. Utopia can hardly be reached, whatever the means adopted. The causes of unemployment noted in paragraphs 10 and 11 will continue, contemporary with work and workmen, and as affecting varying localities and trades. To the extent, however, that whether by social, industrial or economic legislation the nation can arrest and reduce the circumstances favouring their continuance and increase, the unemployment problem should be made a matter of national concern.

Need of larger national policy in dealing with causes of unemployment.

43. The underlying causes, both direct and indirect, as suggested in paragraph 11, need in several instances a new and consistent national outlook and policy in the educational, commercial and military departments of the State, remedial action in which, to produce tangible effects, must necessarily take some years. In both industrial and educational, as in general national treatment of the unemployed problem, England appears to be decades behind several other countries, and every effort should be made to lift the necessary legislation above the "party" jealousies and the spasmodic treatment, produced solely for immediate effect, that has marked much of the educational and industrial legislation of the past.

Measures desirable for unemployed.

44. The products of these causes as they exist have, however, to be dealt with, and to this purpose more energetic and co-ordinated labour exchange effort; retention of the rural labourers on the land by the development of small holdings, and facilities for skilled training and experimenting in improved agricultural methods, together with active encouragement of co-operation in production and marketing among such holders; speedy initiation of efforts to replenish the country's timber supplies by the planting of new forests; the reclaiming of waste lands and foreshores; and emigration would, in my conviction, greatly aid.

Difficulties of local relief works.

45. Experience under the Act has demonstrated the hindrances in most districts to profitable use of the unemployed by local relief works, owing mainly to limits of local needs, the difficulties of agreement between bordering authorities, and the necessity to avoid the error of attempting to find work for one set of men by making others idle. Hence the calls for some such form of national treatment of the nature outlined.

46. Re-organisation both as to aims and practices, Important whether local or national, generally entails some amount to community of dislocation, and frequently affects certain interests. The good of the community at large has often to be secured only at such risk and sacrifice. The former, however, is the purpose set before municipal and national legislators, and in the matter of the land question at least should not be allowed to hinder an honest attempt to deal with this problem. Whatever form national treatment of the unemployed problem may take, constant recognition of the need of measures exciting to, and not destroying, self-reliance and initiative in the workers must be vital to success.

47. In this direction the methods adopted and measure Insurance of success achieved by the system of unemployed insurance against unemployment in certain foreign countries is attractive, and might form the basis for attempting some realisation of the purpose noted.

48. The evidence in the hands of the Local Government Board of the direct beneficial influence upon local Poor Law burdens of the efforts of the West Ham Distress Committee, justifies the plea that it is healthier for the national life to spend a few thousands in the directions of effort suggested above than the large sums now distributed in palliation and apparent increase of the problem under current Poor Law practice. Superiority of relief works to Poor Law relief, etc.

79409. (*Chairman.*) Have you had any experience of Poor Law and social questions other than those connected with this distress committee?—None officially of the Poor Law, and social only in the direction of ordinary religious and social efforts, service upon public education authorities and participation in conferences upon and study of sociology.

79410. I assume from your statement that you have a considerable personal knowledge of the district of West Ham?—That is so.

79411. You give us some statistics which are very interesting, and you draw a contrast between the registration in certain London and extra-Metropolitan areas compared with areas outside, but you only give us as regards the Metropolitan areas the figures of East and West Ham. How do they contrast with the boroughs inside London, do you recollect?—I had in view, in my Statement only areas exclusive of London: I purposely left out of my comments the London areas. I have only the general knowledge of reading the London reports with respect to those areas. Distress in West Ham compared with that in London Boroughs.

79412. You could not say whether West Ham would be the highest?—Yes, to that extent I can. I have looked at the total registrations and compared them with the populations of the respective boroughs, and the nearest to West Ham in volume of trouble is Poplar, and Camberwell, I believe, comes next.

79413. Do they approximate at all to the figures here?—No, fortunately they do not, I think.

79414. They are considerably less?—Yes.

79415. You give a variety of reasons for this much higher registration of unemployment in London, and I think you attribute it to the large increase of unskilled labour thrown upon the London market, and also to the wider extent of trade union membership, and the probably greater efficiency of the workers in districts north of London?—Yes. Causes of high rate of unemployment in London.

79416. I assume that a great part of West Ham is, I may almost say, a congested district of low grade labour?—Very so. Industrial conditions West Ham

79417. That I assume would aptly describe a very large part of the population?—Yes, it does.

79418. In Paragraph 6 you give us some figures which are interesting as showing both the class of persons who apply for relief and also the period during which they have been in employment prior to their application. That is a classification of those who were recommended, is it not?—That is a complete classification. That covers the whole of the 4,825 cases. Those who were passed, that is, were considered suitable for assistance, were generally Classes 1, 2, and 3, subject at all times to their not being disqualified by recent receipt of parish relief. Status of applicants for relief in West Ham

79419. What proportion should you say of Class 2, irregular artisans, would you put in the upper grade of unskilled labour?—The larger proportion of Class 2 would be of the upper grade of unskilled labour.

79420. And No. 3 would be the lower grade, I suppose ?
—Yes, that is so, the lower grade but deserving workers.

79421. Casual labourers were 48 per cent. of those who applied ?—Yes.

Employment
applicants
in West Ham
previous to
registration.

79422. There is a very interesting table which gives the amount of employment which the applicant had had in the preceding year previous to applying. I see 5 per cent. had no employment; 9 per cent. had one month's employment in the year; 10 per cent. had under two months; 13 per cent. had under three months; and 12 per cent. had under four months, so that 50 per cent. of those who applied had practically under two days' work a week ?—Yes, that evidences the very large mass of the casual labour we get that is of the lower grade.

79423. Should you say that was an abnormally low proportion of work, or should you think that is the normal condition ?—Amongst the casual labouring class that is normal or very nearly so.

Deterioration
casual
class.

79424. What is your experience, do you think that the condition of this class has deteriorated during the last few years; and has the business increased ?—I personally think it has deteriorated on account of other influences at the docks, the dislocation of shipping, and in connection with the work at the docks generally, and the influx from country districts. The latter, as I explain later, has indirectly added to the numbers of those pressing for work; hence the same amount, or less work even, is distributed over a bigger number and will gradually tend to lessen the proportion per week that each one employed gets.

79425. I think I may assume that even in normal times a large proportion of the people in West Ham suffer from what I term under-employment ?—Under-employment is a very large part of the trouble.

79426. You are speaking, of course, of your own district ?—That is so.

Immigration
lower
grade of
labourers
into West
Ham.

79427. There has been a tendency, I suppose, there for the classes who are slipping down in the social scale to go to certain parts of West Ham from other parts ?—That is so. As they get lower in the social scale they tend to migrate to the poorer districts where they are able to take advantage of some of the lamentable conditions of part house accommodation, and even part day and part night accommodation, that in the lower parts of the borough is current to some extent.

Need of more
technical
education.

79428. Passing on, you give a list of the causes which you think produce this state of things. There are a good many of them causes with which we are familiar. Under the head of "Economic," Section (ii.), you call attention to "the overwhelming preponderance of the inefficient, arousing consideration *re*: present-day lack of apprenticeship and mistaken educational ideals, and failure to recognise the equal national need of the manually as well as the mentally dexterous." By that, I assume that you do not approve altogether of the system of elementary education ?—Not as we have had it, hardly yet as we have it; but still I know that things are considerably improving. That is, of late we are realising more the need of the development of the whole boy in all parts of his being, physically and mentally, as well as the mere mental capacity and, to that extent, our educational ideals, in my opinion, are being levelled up somewhat. I still feel that there is a great deal of leeway for us to make up in the matter of recognising that the child has the manual side of his latent capacity to develop more than we have done.

79429. To put it plainly, our elementary education is purely literary ?—It has been so. I have had twenty to twenty-five years' experience in the elementary and secondary spheres, so that I have had rather close touch with it.

Employment
boys and
young
women, cause
its increase.

79430. You give the employment of boys and young women as a reason. Do you think that tendency has increased ?—I do not know that it has increased to any great degree, except to this extent. In view of the specialisation of the processes of manufacture that are so largely current to-day, specialisation has divided the work up to such an extent that several of the stages can be attended to, in the opinion of the employers, by youths or young women in lieu of men.

Where a large part of the whole of the processes has had to be done by one worker it was the man who was engaged. This tendency to specialisation in manufactures, in my opinion, tends therefore to the employment of youths and young women in place of the men previously engaged.

Mr. Horace
Leonard
Humphreys.

21 Oct. 1907.

Question of
unskilled
boy-labour.

79431. It has been represented to us by several witnesses that there is such a demand for boy labour of a certain age that there is very little difficulty when boys leave school in getting that employment, though it afterwards leads to nothing, and they are very often discharged just at the time they become adult. Is that your experience ?—I think there is a great deal of truth in that; but it is very difficult to get at the facts about it. I have been endeavouring to get at those by having the whole of the record papers of last year gone through. For the purpose of Mr. Cyril Jackson's enquiries, I am also taking detailed particulars of the youths up to twenty-one that are registering this year. I must confess they do not give one much definite information as to the extent of the practice.

79432. I think you give the ages of all the persons who applied ?—Yes, it is in the Appendix.

Ages of
unemployed
in West
Ham.

79433. They have the same characteristics as those we have already had, namely that a great proportion are under forty-five ?—Yes, that is so.

79434. A very considerable proportion were what is usually considered, from an age point of view, in the prime of life ?—That is so.

79435. Let us see what you were able to do under this Act. What are the parts of the Act which you would say have been most successful in dealing with this very difficult problem ?—The most successful in my opinion have been the farm colony establishment, the emigration proceedings, the employment exchange facilities, and (especially under the definite practical assistance we had from the Local Government Board during the last year) the local relief work. The relief works have certainly shown a much higher level of work than any of the kind that we previously had.

The most
successful
parts of
Unemployed
Workmen
Act.

79436. What is your opinion of the labour bureaux or labour exchanges ?—Do you think they are capable of great development if they are perfected and make part of a general system all over the country ?—Yes, I am very strongly in favour of the suggestion that Mr. Beveridge has made on that point. I am strongly convinced of the large possibilities for beneficial effort in that direction, particularly in respect of the fact that it provides better means for the men maintaining their own independence compared with the relief work assistance, whether it is by migration within the locality or to another part of the country.

Advantages
of labour
exchanges.

79437. I assume you would like those labour bureaux or exchanges not to be confined to the unemployed, but to comprise all ranks of labour ?—I think they should be so. I do not think limiting their scope to the actually unemployed would realize their fullest use. One period will balance another, and one locality will balance another in the assistance that those employment exchanges can be; but their main use would be to meet unemployment needs of the men who sought assistance by their aid.

Scope of
labour
exchanges.

79438. With regard to the local works you had some considerable operations, had you not, on the Wanstead Flats ?—Yes.

Relief works
on Wanstead
Flats.

79439. How many persons were you able to employ there ?—We employed in the first year a total of 1,130 altogether, and in the second year, in the construction of the large lake, a total of 2,022.

79440. Was there any limit employed as to the duration of work given to the individual ?—In the first place in view of the large numbers we were trying to assist the general plan was to give them work in four-day shifts. That was afterwards increased to a weekly shift every other week. Last year the same practice was adopted as to the period. The shorter shifts were given at first for the purpose of weeding out. That weeding out was energetically carried out to get the more worthy men, and those men were afterwards allowed a week each instead of four days in a fortnight.

Duration of
relief work
given in
West Ham.

Mr. Horace Leonard Humphreys.

21 Oct. 1907.

After-history of men relieved in West Ham.

Effects of relief work on the men assisted.

Cost of relief work and of labour colony to West Ham.

Sources of funds of West Ham Distress Committee.

Benefit to West Ham from Unemployed Workmen Act.

Industrial conditions of West Ham.

The Poor Law in West Ham.

Class of persons assisted in West Ham by Unemployed Workmen Act.

79441. Have you been able to trace what happened to those people; are they still in West Ham, or have you been able to get occupation for them elsewhere?—Unfortunately we have been able to gain very little success in that direction. For instance, I have noted here the total number of men who last year applied who had applied in the first period, and it was nearly half of the total registration; again this year, opening on the 7th of this month, we have registered 1,350 roughly, and of that number roughly one-third are quite new applicants, but of the remainder, more than half are applicants who have registered both in 1905-6 and 1906-7.

79442. As to the condition of those you have helped during the past two years, do you see any sign of improvement when they have come up again, or have they gone back again do you think?—There is improvement of course, during the period of assistance, but then a very few weeks after that assistance stops they drop back to the old state. There is very frequent evidence of an earnest struggle to pay up while they are getting the work, the debts that they have incurred during their time of stress. Of course there is evidence the other way, but within five or six weeks after the assistance stops they seem to be as bad off as ever.

79443. And the farm colony, although it may be educational, is very much more costly per unit, I assume, than the employment you give in connection with relief works?—Yes, that is so. That would be represented by the fact that in the work of the past winter our total expenditure was £10,250 on the local works, where the contract price would have been nearly £7,500 to carry out the same work; at the farm colony, however, the work is stated to cost three times as much as it would do under ordinary conditions of agricultural labour.

79444. Of your total expenditure, what proportion has come from outside?—The greater proportion by a great deal. We have only had from inside efforts, which have been many and earnest, a total during the last year of £69 ls., out of a total of voluntary contributions collected of £230, and our total expenditure has been something like £27,000.

79445. Without this Act there would have been a great aggravation of distress in West Ham?—Unquestionably.

79446. What is your view as regards the future now. Would you like to continue the Act, if so, what alterations would you suggest?—Personally, I feel that the Act has hardly yet been in being sufficiently long to test the benefits or otherwise of its operations: that is speaking generally. We in West Ham have had cause to be sincerely thankful to the operations of the Act both as a borough and for the individuals assisted. Hence we naturally consider that the Act has been, even although temporarily, a boon to the borough in general.

79447. Have the conditions in West Ham been abnormal during the last three years?—No, they have been the gradually increasing result of past influences in the borough; year by year the problem has been getting more and more chronic in the district.

79448. Do you go so far as to say that in normal conditions the machinery of the Poor Law is insufficient to deal with the social problems of distress and unemployment in West Ham?—In West Ham I think it would be lamentable to leave the conditions as they exist there simply to the machinery of the Poor Law. The Poor Law operations, possibly through practices current to Poor Law administration in outdoor relief and so on, seem to have had some effect in attracting a good many to seek that form of relief, that might have kept from it. We should rather strike at the bottom of the trouble.

79449. What occurs to me from your evidence, admitting what you say that this Act has been beneficial to West Ham, is that it does not seem to me that those who receive relief, or a very large proportion of those who receive relief, were exactly the class for whom it was intended. The class for whom it was intended were respectable persons ordinarily in regular employment, and by some abnormal disturbance temporarily thrown out of employment. I am afraid the great mass of those relieved here were normally very much under-employed?—That is so, but they are also those who a few years since were in pretty regular employment, but who, by reason of the features of the district which I have attempted to note in different ways, have gradually gone lower and lower in the

industrial and social scale, so that they are now forced to pick up what little work they can in the docks and other parts of the borough.

79450. You have been for some time in West Ham, have you not?—For sixteen years nearly.

79451. Certain changes have been made in the docks by which I understand there are certain lists, and attempts being made to decasualise, as far as possible, the labour which is employed. Have they had any effect in increasing unemployment in West Ham?—I have no direct statistical evidence to show, but I should believe that they had, because the more you replace casual labour by permanent labour you are bound to throw some of the others out into permanent unemployment.

79452. Those are difficult people to deal with?—Exactly.

79453. Employment, I suppose, is not increasing or keeping up in West Ham with the growth of the population?—I do not know that the population is growing very much now because the borough is pretty well built over. I do not think from the evidence I have read and seen during the last few years that industries have very much increased there. There have been one or two additional industries started in the locality, but there has been no great industrial enterprise, rather the reverse, especially in respect of the Thames Ironworks, jute works and others.

79454. Was Yarrow's Yard there?—It is not actually in West Ham, it was in Poplar, but it directly affected employment in that fringe of the West Ham borough.

79455. I suppose you have very few highly organised industries in West Ham; I take as a highly organised industry a shipbuilding yard?—We have had more than we have at present. The Thames Ironworks have been highly organised. We have the Boilermaker's Society, the Rivetters', and various skilled trade unions in the place, and there has been a good deal in the engineering works, and the chemical works, and so on.

79456. Are there many railway works in West Ham?—Yes, there are the Great Eastern works, and those of the London, Tilbury, and Southend railway.

79457. (Sir Samuel Provis.) Is there reason to think that West Ham has been somewhat overbuilt of recent years?—No, I do not think there has been that.

79458. Are not there a good many houses empty?—Yes, we have a large number of empty houses, not that they have been put up with no demand for them, but they have been left empty largely on account of the incidence of the rates.

79459. Does that mean that the people are leaving West Ham rather?—Yes, a great many have left West Ham, and those who have taken their place are in many cases, especially in some parts of the borough, not of the same status as those that have left.

79460. Therefore the better houses would be more difficult to let?—Yes, unless they are let in parts, or to those in a scale somewhat lower socially than the previous tenants.

79461. You attribute that largely, do you, to the high rates?—That undoubtedly has been so; there have been other influences at work of course. To a degree one of those influences in the winter of 1904 was the exploitation, as many of us thought, of the unhappy condition of the borough, which led to general national opinions of the borough, which caused many of those in the higher levels of social life in the borough to leave it. Undoubtedly that had an effect.

79462. Prior to this Act, did you get into West Ham an influx of persons desirous of getting assistance?—I personally cannot give any statistics to evidence that, but it was the general opinion that the Poor Law practice in the matter of liberal outdoor relief tended to draw a number into the borough, especially from districts where they found it less easy to get that out-relief.

79463. You had some newspaper fund, had you not, which was administered in West Ham?—Yes, in the winter of 1904-5.

79464. That was prior to the Act?—Yes, just immediately prior to the institution of the Act.

Effect of decasualisation of dock labour upon employment in West Ham.

Growth of population and industry in West Ham.

Reasons of number of empty houses in West Ham.

Poor Law administration in West Ham.

Newspaper fund in West Ham.

79465. Was it also prior to your setting up a joint committee under Mr. Long's scheme?—We did not come under that scheme, being just outside the Metropolitan area.

79466. You did not adopt a similar plan?—No. I believe some effort was made by the borough authorities to be taken in for participation in that scheme. I have no definite information on that, but I have heard so. We were not included in that scheme.

79467. What do you consider was the effect of those Press funds?—Indiscriminate distribution of funds to such a degree that it tended rather to the aggravation of the trouble than to any reduction.

79468. Do you think they attracted people to come to West Ham in the hope of getting similar assistance?—That was one influence; it tended to draw some in from immediately contiguous boroughs.

79469. Therefore your view is that the operation of those Press subscriptions was bad?—Yes, by reason of their form of administration.

79470. It is alleged that at all events in one of them they did make a good deal of investigation. Would your opinion coincide with that view?—No, the information that I received rather contradicted that.

79471. Were you concerned in the distribution?—I did not take part in the distribution.

79472. With regard to the register, do you register each year?—We have a new register each year.

79473. Do you carry forward any cases from the past year?—None at all. We cancel the whole register of the past year upon the opening of the new, and the applicants are notified by posters and otherwise that the old register is cancelled. If they wish to remain on the books they must re-register. We have also adopted the plan this year of putting on the card of each applicant for notifying to the office any work he gets that he must renew the application in the last week of each month; that enables us to get the numbers actually unemployed as registered at each month end.

79474. Therefore these figures show the people who did actually apply during the year to which the figures relate?—That is so.

79475. I think I understood from an answer that you gave to the Chairman that the amount you got in subscriptions was very small?—Voluntary subscriptions very small indeed, in spite of widespread efforts.

79476. What was the nature of the efforts which you made?—One thousand eight hundred repeat appeals, accompanied by reports and evidence of our first year's operations, were forwarded in September last, and at various times since, to Members of both Houses of Parliament, city companies, borough churches, magistrates and business firms who might subscribe, proprietors of borough theatres and places of amusement, football, cricket and concert societies, and others, and they were also inserted in the London and local Press.

79477. Did they have any collections in the churches and chapels for these?—Yes, they did, but not to the same extent, or with such success, as they had in the first year.

79478. After the passing of the Act?—Yes. It, perhaps, was rather then more of a novelty, and the idea had not then grown to the extent that it seems to have grown since, that a statutory institution should be supported by Government grants, that is, subscribers appear to feel they are contributing either through taxes or through local rates, and hence there is not the same readiness to give, or appreciation of the need of these voluntary contributions.

79479. Did you get any voluntary contribution during the year the unemployed fund was in existence, apart from that fund?—Yes, in that year we received between £3,500 and £4,000, but £2,000 of that was an anonymous donation through the member for the borough.

79480. Was that for the purpose of setting up the farm colony?—Yes. Most of the other was in amounts, much larger than usual, in £10, £50, and £100 in support of that effort.

59481. In support of the farm colony?—Yes.

79482. And definitely given for that purpose?—Ear-marked for that purpose.

79483. That was rather a special set of contributions?—Yes, that novelty has worn off also.

79484. You think that the existence of the Queen's Unemployed Fund diminished the voluntary donations you would otherwise have received?—Yes, I think it did because a great number of those that would have given to that effort contributed to the Queen's Fund.

79485. Then perhaps the Parliamentary grant in the following year had something of the same effect?—Probably.

79486. The notion would be that if there was a Parliamentary grant it was not necessary to make a donation?—Yes, largely that, but as far as local subscribers were concerned, they were unable to give, in view of the many calls upon the societies and institutions connected with local churches and other efforts.

79487. The contention on the part of West Ham was rather, was it not, that it ought to receive a share in anything that was done for London itself, in subscriptions and donations that were given for London?—I do not know that that view was very energetically expressed. The opinion was noted, but I do not know that it was pressed. Certainly what we sought to demonstrate was that sums ear-marked for London did not reach West Ham. We had evidence to show that some contributors to the London Fund expected that their contribution to an extent benefitted West Ham, but that could not be so because West Ham was outside the area.

79488. The voluntary subscriptions that were given under Mr. Long's scheme did not extend to West Ham because they were only given for London itself?—Yes.

79489. Was not there some suggestion in West Ham that they ought to share in that?—Yes, I think there was a suggestion, but so far as my knowledge of the position of the thing goes there was no energetic process in that matter.

79490. (*Mr. Russell Wakefield.*) Did not a deputation wait on the old London Unemployed Body to ask for moneys to be allocated?—Yes, that was so, in connection with Mr. Long's scheme, the 1904 body. I was thinking only of the operations under this Act.

79491. With regard to any renewal of the Act, would your view be that West Ham should remain isolated, or that it should come into a general scheme for London?—I should be inclined to say, combine it with London, but there is this consideration in that respect, that the burden of the trouble is so heavy in West Ham that, in view of the complaints that one has heard from the treatment that some London boroughs appear to consider they have received, I am afraid West Ham would hardly get its due share in such a combination.

79492. Therefore you would rather stop out so long as the present body is in power?—Yes.

79493. You do feel that after all you are in a very true sense London: you send your workers into London, and a great many people who work in London live amongst you. It is very difficult to separate you from London?—Yes, I feel that, particularly so in connection with labour exchange questions.

79494. (*Chairman.*) You answer that question in the general sense of being incorporated with London?—In connection with this particular effort I take it.

79495. (*Sir Samuel Provis.*) Do you want to limit it to this particular matter, or do you say that for Poor Law work West Ham should form part of London?—My opinion is that it should come within London for Poor Law purposes.

79496. Have you thought it out at all?—Yes, to the extent that looking at the details of administration generally it would be well to more centralise the Poor Law administration, and in that opinion I should naturally go a step further and consider that West Ham should go into the London area.

79497. Have you considered whether a step further should be taken, namely, that West Ham should come into London for all Local Government purposes?—That I should not like to express an opinion upon.

Mr. Horace Leonard Humphreys.

21 Oct. 1907.

Effect of "Queen's Fund" and Parliamentary grant upon voluntary contributions in West Ham.

Question of joining West Ham with London for purposes of unemployment relief, Poor Law administration, and in general.

- Mr. Horace Leonard Humphreys. 79498. You have no doubt realised that the tendency of modern times has been not to have overlapping areas ?—That is so.
- 21 Oct. 1907. 79499. And consequently if an alteration were made in the area of the county of London for Poor Law purposes there would be a contention it ought to be so for other purposes ?—I think that is likely to follow.
79500. It would not perhaps be a very popular proposal ?—I do not think it would.
- Enquiries in regard to applicants by West Ham Distress Committee. 79501. You took a great deal of trouble in West Ham, I think, in making enquiries with regard to the applicants for assistance under the Unemployed Workmen Act ?—Yes, we did.
79502. What did you precisely do ?—First of all, in respect of the record papers we did not adopt simply the questions on the Local Government Board record paper. I could not have reported to my committee, to the Local Government Board enquiries and to various other enquiries, the not only interesting but very useful particulars about our applicants if we had so limited ourselves, so we added enquiries upon particulars which I am able to supply.
- Method of investigations made by West Ham Distress Committee. 79503. Before you leave that point, did you have any objection raised to these additional enquiries ?—In the first year we had three objections to the form of enquiry, and there was a good deal of outside comment as to the inquisitorial character of the questions ; but so far as the applicants themselves were concerned there were only three. Each of those three we hadly worth considering in view of character and for last year's registration we had no trouble whatever. Of course, steps were taken to secure that the registrars should work on a uniform plan, that they should be firm, tactful and courteous in their treatment ; and I saw that they observed the few rules that they had at the start right through.
- 79503a. Would you describe the procedure adopted in your investigation of applicants' statements ?—The record papers are made up in batches according to streets. (We enter upon a street index immediately after the filling up of the records). These batches in streets enable the senior in the investigation department to arrange his papers for enquiry amongst his different investigators so as to secure the minimum waste of time in running from one part to another. The investigators make their enquiries on a uniform basis ; and they report by written reports on a uniform plan, too. The case papers and reports then pass to the senior in charge of the department, and he has the duty of framing a summary upon the whole case, and recommending the classification of the men on the basis I have indicated in my Statement. From that they pass to the classification committee, and the suggested classification is confirmed or otherwise by the committee. Lists are compiled of the recommended cases, and the men, as required, are called up for selection for the different works.
79504. Do you find that the classification that you have described is expensive ?—Yes, very.
- Cost of investigation in West Ham. 79505. Could you give us any kind of particulars ?—I should say it works out at from 2s. 10d. to 3s. 4d. a case.
79506. You do not see your way to reducing the cost of getting a satisfactory result ?—When I am speaking of the cost I cover the whole investigation and registration ; but, of course, the registration is only a small part of it ; the investigation is the main part. You might say that the full investigation of a case cost 2s. 10d. I arrive at that upon the total cost to the body last year up to the time of closure.
79507. Have you got now your own officers for the purpose of investigation ?—Yes ; last year and this we have carried out investigation ourselves ; in the previous year the Charity Organisation Society undertook the voluntary treatment of the whole matter.
- Information as to cases given by guardians. 79508. Now you have to bear the cost ?—Yes.
79509. Did you get any information from the guardians ?—Yes, considerable, in the direction that the relieving officers fill in our enquiry papers as to the receipt or otherwise of relief.
- Results of West Ham farm-colony. 79510. Therefore you know the cases ?—Yes.
79511. Is your view that the operation of your farm colony has been satisfactory ?—Satisfactory to the extent that it undoubtedly benefits the men while they are there, and especially the home, which means maintenance and independence of Poor Law aid. We look upon
- and treat these payments not as doles paid to the home, but as money earned by the men at the farm. Our lady distributors write reports at the back of the weekly receipts as to the state of the home. As I have noted before, once the men's time there is over the benefit soon vanishes. To that extent one regrets that we cannot keep them there longer. There is, however, another aspect that so far as getting the men permanently back to the land is concerned, we have not yet had a single case of a man voluntarily seeking work in land occupation on adjoining farms, or in other agricultural work.
79512. Do you make a discrimination in the men you send to the farm colony in relation to their previous occupation ?—To the best extent that we can, that is we have so few that have had actual previous experience in agriculture that we should not perhaps get a dozen going down to the colony if that were the sole qualification, other things being satisfactory.
- Method of enquiry used by West Ham Distress Committee. 79513. (Mr. Gardiner.) As to the larger enquiry, you pursue your enquiries in West Ham yourself ; supposing you want information from Holborn, do you send your agent up to Holborn ?—In regard to the enquiries from employers we make that entirely by letter. If necessary then the agent would go up to Holborn, but that would be in the decision of the senior in charge of the department. There is very little of such outside personal enquiry.
- Staff of West Ham Distress Committee. 79514. (Dr. Downes.) What staff have you ?—In what department ?
79515. In every department ; I know nothing about your organisation ?—The staff fluctuates considerably throughout the year. As to the permanent staff, we had three in the first year and have had four this last, but the rest of the staff has fluctuated considerably from one up to twelve.
79516. What is the most you have had at one time ?—Eighteen is the largest number.
79517. What would that eighteen be composed of ?—That would be composed of four investigators, two in the classification room, two in the general office, one accounts clerk, and the rest are temporary registrars doing registration work.
79518. It seems to me from your answer that the main bulk of the staff has been in the registration department ?—Yes, but only very temporarily. The four in the investigation work have continued for a much longer time, to complete the investigations necessary.
79519. The heavy department is the investigation department ?—Yes, apart from the regular men.
79520. How many cases can an investigator deal with ?—It now averages four cases per day.
- Method and extent of investigation in West Ham. 79521. As to the summary which you give us at the end of your Statement, were all those various facts got out by your investigators ?—No, they are the results of information given upon the record papers. When the investigator finds that any of that information is vitally false, such constitutes a false record ; but we have had very little of that. For instance every registrar, when a man comes in, asks him first whether he is actually unemployed at the moment, and tells him to be careful in the particulars given, as they will afterwards be investigated. That has had the effect of being something of a warning to the men very generally to give facts. The direction in which they do not give reliable particulars is the question of the reason of their unemployment.
79522. Does it come to this, that the main facts are obtained by questioning the men—the men's own statements ?—The main facts constituting this sheet of statistics have been all taken from the record papers.
79523. But in a certain number of instances checked by your investigator ?—Yes, all the information given is checked by the investigator.
79524. It would be impossible for the investigator to check all this, would it not ?—You mean to say as to the number of dependents and so on ?
79525. Yes, and the duration of the man's residence in West Ham ?—He has the record paper, and he has certain headings of enquiry ; with what he has and what he asks he gets the information, and if there is anything opposite to what is recorded on the record paper, he has to note it in his report so that to an extent he covers the whole ground. I do not say he goes into every detail in every record paper.

79526. 588 men said they had been in West Ham under ten years at the date of registration. Would that all be gone into and verified, or would you accept that?—We accept that unless there is evidence from the investigator's report that it is false.

79527. So that your enquiries are partial enquiries are they not, they are not complete enquiries?—They are not absolutely complete to that degree.

79528. Are they incomplete in any other respect, any essential respect that you would like to mention?—I have described generally what the investigation is, and what the investigator does. I do not know whether there is any other point you think I have not covered.

79529. I want to know if there is any suggestion you would make as to points which the investigator might take up, which he has not taken up, for want of staff or for other reasons?—I would not recommend further investigation than we at present practice. There is quite enough of it. There is a very strong feeling in the Committee itself that work tests rather than all the private investigation should be adopted. I cannot say that I hold with that personally, because there are so many who might satisfy the short work tests, but whose earnings would little benefit themselves or their families, and thus might keep a more worthy man out.

79530. What do you mean by "more worthy"; are you speaking of efficiency as workmen, or are you speaking of character?—Both, the two combined. Of course if the character proves to be thoroughly satisfactory, but the industrial record is the opposite, one tells against the other, and practically results in no recommendation.

79531. The title of the Act is, "With a view to giving employment or assistance to unemployed workmen in proper cases." What do you consider a proper case?—As the Act, as you suggest, says, it is for those men who ordinarily are in regular employment, and are only out of employment on account of exceptional circumstances. That, of course, we have not been able to apply to any very great extent in West Ham. There are a number of these who have been in regular work at one time or another; but we have not been able to apply that condition, namely, the professed purpose of the Act, as a condition of assistance, or I am afraid we should have been able to assist but very few in the area.

79532. The first duty of the distress committee after receiving the application is to inquire into it and discriminate, but if you are not to make an investigation, how are you to fulfil your duties under the Act?—How do you mean 'not to make an investigation'?

79533. Some of your committee recommend you should not investigate; if their view was right, how would you fulfil your duty under the Act?—They only think that should be an amendment of the Act.

79534. Is there any inquiry into character at the present time?—Yes, it is an industrial and private inquiry.

79535. And in your inquiries which would you lay the most stress upon at the present time: the inquiry into character or the inquiry into efficiency of work?—The full report is given as to what the investigator finds upon his investigation, and it is left to the classification committee to strike the balance as to whether the man upon the industrial and private report given is worthy of assistance. Very frequently where the man's industrial record is thoroughly good, though his home record is open to question, they give him the benefit of the doubt on the basis of his good industrial record.

79536. How are the facts put before the committee; are they reported by you?—No, the papers when done with by the investigation department are forwarded to the classification room, where a rota of the classification committee meets during the stress of the work, and if they agree with the details of the summary, that is confirmed and stamped and put forward by the clerk as a recommended or not recommended case, and the list is made accordingly ready for calling upon the applicants for selection when work is to be offered.

79537. How often do the full committee meet?—The classification committee meets monthly, on the first Friday, as a rule, of each month.

79538. Of how many members does your committee consist?—Thirty-five; sixteen councillors and aldermen, twelve board of guardian members, and seven others.

79539. What is a quorum?—Eleven.

79540. Do you find the attendances regular?—Of some members, yes. The general attendance during last year has not been quite so good as it was during the first year.

79541. Has there been any special reason for that; is there less novelty about the whole thing?—Possibly the novelty wears off. Of course it is the case, as in most other institutions, that the bulk of the work drops upon just a few, and as long as those few show readiness to carry it out, then most of the others seem to think it is quite good enough, being satisfied with the way the few do it, I suppose.

79542. With regard to Paragraph 39, Sub-section 6, you say the weekly wage equivalent made to the colonist and his family is decidedly higher than that obtained by the ordinary agricultural labourer. Can you tell me what that weekly wage equivalent would amount to on the average?—In the first year the total wage equivalent was about 22s. 7½d. During this past year it has been a trifle less; 20s. 3d., I think it is.

79543. That includes the payment to the wife at home, and the cost of the men in the colony; is that it?—Yes.

79544. That would not include any office management?—No, it does not include establishment charges at all.

Humphreys.

22 Oct., 1907.

Numbers of
unemployed
registered
in West
Ham :
what they
indicate.

79545. (*Professor Smart.*) In Paragraph 2 you call attention to the very large proportion of applicants to the distress committee in West Ham, as compared with the number of applicants to the distress committees in ten county boroughs north of London, the figures being 15·9 in 1905-6, and 16·3 in 1906-7 for West Ham, as against something like 5·1 in 1905-6, and 2·4 in 1906-7 for the ten northern county boroughs. The columns are headed "per cent.," but it must mean per thousand, must it not?—The table gives the number of registered applicants per thousand; "per cent." is certainly a mistake.

79546. I think you there suggest something which has not been brought out. May I ask if it is this? You account for the large proportion in West Ham, and also in East Ham, partly by the special causes mentioned in Paragraph 3, but partly also, I think, by something which you hint at in Paragraph 4. Paragraph 4, I take to mean this, that the special distress in West Ham as such, as evidenced by the numbers registered in West Ham indicates the real extent of unemployment over the whole country, while the figures for the northern counties do not adequately indicate that distress? Do I understand you to say in regard to the registration in West Ham that I intend to imply that it shows the extent of the trouble over the whole country?

79547. Yes; you hint at that, do you not? You suggest that unemployment over the whole country is far greater than appears by the figures for the northern counties, do you not?—It is not my intention to suggest that.

79548. Is it not so; I thought it was?—No. It is rather my intention, as I say in 4 (a), to show that the character of the local organisation and of the administration under the Act may result in getting a nearer approximation to the actual extent of unemployment if that organisation be thorough. It is wholly in direct proportion to the thoroughness of the organisation.

79549. Exactly; but I thought your inference was that the state of things in West Ham was such that you brought out the full extent of unemployment?—In West Ham?

79550. No, over the whole country?—I do not intend to imply that, and I could hardly do so.

79551. I thought that 4 (a) meant, for example, that your administration was sympathetic for one thing; that 4 (b) meant that the prejudices against registration had broken down amongst the workless generally; that 4 (c), meant that the independent spirit had given way; that 4 (d) meant that trade unionism was not strong in West Ham; that 4 (e) meant that you had registered people whom other distress committees had not registered, namely, those who had received poor relief; and 4 (f) that people came to you a second year because they got relief in the first year. In all these ways you seem to

bring out the full amount of unemployment?—I am speaking somewhat generally in Paragraph 4. In speaking of the numbers of the unemployed, I am looking not only to West Ham, but to the country generally, not with the intent of implying that West Ham's registration indicates the whole extent of the trouble throughout the country, but rather, treating the matter generally, as showing that the actual numbers of unemployed in any particular locality are subject to the considerations that I have sub-noted there.

79552. Exactly so; but I thought you had a further reference, namely, to show that there was no special cause which accounted for this large figure?—I do not intend to imply that all those causes operate in the numbers that have registered in West Ham.

79553. In Paragraph 6, I note you say that the professional loafer did not register, owing to his distaste for the methods of investigation employed; is that not a very good defence of investigation?—Yes. I believe in investigation.

79554. Then you are quite convinced that there is nothing for it but strict investigation on the distress committee?—I believe in investigation to an extent.

79555. Have you any sympathy with the cry against inquisitorial questions?—I have no sympathy with that, in connection with registration I do not find in my practical experience and touch with the realities that there is that difficulty.

79556. May I ask if you relaxed the residence qualification for twelve months?—If a man had been in the borough eight months, then he was registered—not that he would be at that time qualified for being entertained, but possibly, if he renewed his registration month by month, at the end of the twelve months' period of residence, the Committee would then be in a position perhaps to help him because he would then have qualified by twelve months' residence. We made the twelve months' residence one of the bases of assistance.

79557. You prove that very few women apply—only 2·9 per cent., I think?—There are very few women who apply, compared to the total registration.

79558. Yet in West Ham you have a great number of women employed in industries like jam manufacturing, and so on?—Undoubtedly.

79559. That is to say, women of the very class from whom you would have expected large numbers of applicants to come?—Yes. I have expected right along a much larger registration of women unemployed than we have actually experienced.

79560. Can you give us any reason why they did not apply?—Mainly on the ground that in the past there does not seem to have been any chance of the committee rendering any assistance to them, and on the ground of certain prejudices arising out of that belief.

m.

79561. You say the stoppage of building has been so marked in West Ham, that you class a great number of building labourers as chronically unemployed?—Yes, unemployed and under-employed, and they become increasingly so.

79562. The same you say is true of those engaged in the Thames Iron Works, Yarrow's Shipbuilding Yards, and Woolwich Arsenal?—Yes.

79563. You know of a great many men chronically unemployed in those places also?—Yes.

79564. They have not yet drifted away from West Ham, I suppose?—No.

79565. Was your administration calculated in any manner to stop them from drifting away? Did you fully recognise that the only salvation of those people was to migrate them?—Yes. We attempted to get information of the scope that there might have been for them, and that we understood there was, in one or two of the northern centres; but on application to those northern centres, the usual reply was that they had enough men of their own to meet the local needs. We did actually assist, to a small extent, under the powers granted in the Act for removal from one district to another, those who had been engaged in past years in the Thames Iron Works; but that did not affect the trouble much, so far as the distress committee's operations were concerned. Of course, there were a good many who went of their own accord, and who did not register at all; I mean to say that I believe there was a large migration from the borough to the northern centres of men rather more skilled doubtless than many of those that came upon the distress committee's registers.

79566. You did not find in the distress committee any tendency to keep men from migrating?—No.

79567. A small percentage of unemployment, 5·2 per cent., you say is due to avoidable personal causes?—Yes.

79568. A great proportion of that unemployment, I gather, is due to a great flood of labour attracted to London by such things as the Tubes, the building of tramways, and so on?—Yes. I believe so.

79569. And then those men are left stranded?—Yes. Evidence of that is to be found in many of the record papers that we have as to their last employment, and the previous employment to that, and so on.

79570. And so London tends to become a swamp to a greater degree than other places?—That is my belief.

79571. In Paragraph 11, where you deal with the underlying causes as evidenced upon investigation, you speak in (c) (ii.) of the "failure to recognise the equal national need of the manually as well as the mentally dexterous"; I do not quite understand your evidence on that?—That touches upon questions which are, in my conviction, at the root of part of the trouble in our educational ideals generally. In my conviction, there has not been sufficient recognition of the need for regular opportunities for the manual training of every child, not merely of a small percentage of the elder boys or of the elder girls in each school, in order to give a chance of letting each child show what latent or other powers he or she has manually, in addition to the close attention that we have given generally to the mental training.

79572. The influx of rural workers into West Ham is, in itself, very small, is it not?—That is the case so far as our distress committee's registers indicate. It is a very small direct cause, as I say.

ixf
l
urs
Any
icas
def
npy-
direct
irect.

79573. I shall bring out the indirect cause by the next reference perhaps. What do you mean by the military discharges as accounting for 0·7 direct, and 14·2 indirect? You might explain that general reference?—I think if you will look at the sheet of statistics in the Appendix, you will see that I have noted there the numbers of those who have been in the Army at some time or other. In Section 9 of the Appendix, I say that the number of applicants who had been in the Army was 688. That is the ground of my reference to the matter as an indirect cause; so many men have been in the Army, as I have noted there, during some of the best years of their lives for trade training, then they fall out, and a great number of them seem to come regularly upon the unemployed lists year by year. I had a case this last week which exactly illustrates that. A man was obliged to come out of the Army, and he had no work and no employ-

ment at his fingers' ends to go to. His records and details of investigation that I have looked at since seem quite satisfactory, but, having spent these years in the Army, and being thrown out now without any means of subsistence apparently, he comes upon our lists. That will illustrate what I mean by the direct and the indirect causes. The direct causes are such cases as that given, and the indirect causes are those men who have, at some time or other, served in the ranks.

79574. How do you apply that to the rural labour that I spoke of before, when you said the direct influx of rural workers was very small?—Do you ask what is my meaning of "direct" and "indirect" there?

79575. Yes?—It is a direct cause, in that those who have noted that their last employment was agriculture were under ten on our total list; but those who have had some little experience, at some time or other, were a larger number—I do not know the exact number. My main inference or suggestion is this—that these men from the country do not come immediately upon distress committees' registers, but their immediate effect is to oust others of the town workers out of their work, and then these town workers fall immediately upon distress committees' registers, and the rural workers themselves will gradually, if the same conditions continue in the locality, lose their stamina, and will thus gradually fall upon the registers in their turn.

79576. How do you make out that the Employers' Liability and Workmen's Compensation Acts throw controlling powers into the hands of the largest employers?—I am stating wholly my own opinions there, and I take it that it is quite understood that I am not necessarily giving expression to my committee's opinions at all. I mean by Paragraph 11, Sub-section (ix.), that the liabilities which are imposed in respect of these liabilities upon the smaller employers tend to lay upon them greater responsibilities against which they have to insure, which have either to be taken into consideration in their continuing as employers instead of journeymen, or which are deterrent possibly to others who would be small employers taking up that position in view of the increased liabilities that they would have to be under.

22 Oct., 1907.

Influx of rural labourers and Army Service as causes of unemployment direct and indirect.

79577. Cannot a small man insure himself at the same rate as a large man?—Undoubtedly, but the rate still has to be paid whatever that rate is, and if the small man has not the means to meet it, he has, I presume, to take all those liabilities into consideration before becoming even a small employer.

79578. You speak of the pains and penalties; do I gather that you do not quite approve of these increasing pains and penalties?—As contained in those Acts?

79579. Yes?—Generally I do. Possibly these matters may gradually right themselves.

79580. Do you think them inevitable generally?—They are inevitable at present. In my general opinion labour legislation has somewhat considerably changed since, say, the times contemporary with the Statute of Labourers, when it seemed to be rather legislation wholly against the workman and in favour of the employer; we have got now to the point when things rather tend the other way, I think. That is my own opinion, of course.

79581. Then in Paragraph 11, Sub-section (x.), you refer to the lack of recognition; what do you mean by that paragraph exactly?—I say there, "lack of recognition that a country's industrial welfare is closely bound up with its aims and methods in national education"—that I have already touched upon—"and directly with its commercial policy"—that perhaps touches a somewhat delicate question.

Underlying causes of unemployment.

79582. That is what you are alluding to, is it?—Yes. I do not know that I should get very much nearer if I went into greater detail.

79583. Then in Paragraphs 13 and 14 you deal with minor effects, social and municipal, and in Paragraph 13 you allude to the geographical position of West Ham, I think it is, and you seem to think that West Ham is a geographical focus of distress, as I understand it?—Yes, in West Ham, etc. by reason of the provision of the docks with their allied industries. That has the effect of drawing a large number of men, who have failed in other

Effects of dock and industries

Mr. H. L.
Humphreys.

22 Oct., 1907.

directions, to attempt to get work there. Our experience, as our lists indicate, shows that there are numbers of men who have been in skilled trades who, losing their places in the labour market and getting lower and lower in the industrial and social scale, go to the docks as their last resort; and so you get an aggregation of such men as that, not only from the borough of West Ham itself, but from other districts in the immediate neighbourhoods, whose unemployed will seek a little work in the same way.

79584. Is West Ham the worst case of that in London, do you think?—I can hardly say it is the worst case because I think Poplar would be affected in the same way, and one or two other dock districts.

Expenditure
on relief
works in
West Ham.

79585. In reference to Paragraphs 16 and 17, am I right in the following figures? You say that the direct expenditure on relief works amounted to £21,000 in 1902–1903, and to £25,500 in 1904–5 plus administration charges, plant and raw materials?—That is so. That was wholly provided from borough funds, or will have to be eventually.

Unemploy-
ment
distress in
West Ham
in 1893–4.

79586. In reference to Paragraph 18, the date of the borough engineer's report referred to there, surely should be 1903–1904, but you say 1893–1894?—No. That is the beginning of the period when attempts were being made to meet this problem in the borough.

79587. Even then, he saw it was difficult to find work?—Yes. That is about the period that I mark as the beginning of the development of the chronic stage.

79588. (*Mrs. Webb.*) Are there any reports about that period?—The only report that I have been able to obtain as bearing directly on this question, is the report I quote there.

79589. There are no other Reports then?—I know of no other.

Opinions
in West
Ham
Distress
Committee
as to Un-
employed
Workmen
Act.

79590. (*Professor Smart.*) You are not ill-pleased with the Unemployed Workmen Act as a reasonable first step, I gather?—No; I think it has done a great deal for West Ham.

79591. But you would like it in various departments strengthened and developed?—Yes.

79592. Is that the general opinion among your Committee?—Among my Committee, yes.

79593. Distinctly?—Yes, it is the general opinion; I do not say it is the unanimous opinion.

Advantage
of labour
exchange
system.

79594. I see you approve generally of labour exchanges; have you any criticism to offer on them?—Generally, I believe that they would tend to attack a part of what I think is the cause of the present big volume of casual labour in the borough. If we could only get those who need casual labour to arrange, much in the same way as it is suggested ordinary commercial houses will in their slack times transfer men from one department that may be slack to another that may be busy for the time being; and if we could apply that municipally among the firms through a central exchange for the borough, which would be similar to the central office of a firm so transferring its men from a slack to a busy quarter, that, I think, would certainly tend to keep some of these men who are now in casual labour in more regular employ, while at the same time, of course, it would make absolutely unemployed, as I said yesterday, some of those who are now under-employed.

79595. Then supposing you had had a thoroughly efficient system of labour exchanges all over England, would the position of West Ham have been materially bettered? What would it have done for West Ham particularly?—I believe that it will gradually improve the conditions everywhere, as we get a linked-up system right through the country. I do not say that that is by any means the only remedy, but it is one means of attacking the causes which I think we need to aim after.

79596. Would the chief value to West Ham be negative, that is to say, to show that there was no hope of employing the large masses of casual labour that you have there?—Undoubtedly it would.

79597. And that would be one of the very greatest positive services?—That would have the advantage of ridding us of a little bit of the general confusion as to causes which at present exists.

79598. Then you say that there was a large scope for engaging unskilled labour on an extensive scale upon Wanstead Flats, and in Wanstead Park; what West Ham were these works?—I have not seen what they were?—The work on Wanstead Flats was a large surface drainage scheme, including the enlargement of a lake for the purpose of draining the Flats and relieving the surface drains of the immediate near neighbourhoods. The whole system opened out into what was previously an unpleasant hollow in Wanstead Park, and last year we developed the scheme further by excavating and concreting this hollow in the form of a lake.

79599. In Paragraph 30 you are very emphatic against doing anything that would interfere with the ordinary employment of labour?—Yes.

79600. Do you mean to say that these works in Wanstead Park would escape that criticism?—That would not have been done under the ordinary conditions of labour.

79601. Why?—It was under the control of the Epping Forest Committee, and there seemed no near prospect of the Epping Forest Committee recognising the special need for this work. Though the West Ham authority and other near authorities might have strongly wished for some such work to be done for the relief that I have named, still the whole is under the control of the Epping Forest Committee, and they might not possibly have considered that it was their duty to go to the expense of adopting that relief.

79602. Do I gather you to mean that the Epping Forest Committee could not have recouped themselves for the expense?—Not to my present knowledge, except by letting the lake for boating purposes.

79603. The results would have been too general, do you mean, to have been put into money form at all?—Yes.

79604. But that is what your work was able to do?—Yes. It was a useful work to the surrounding localities, and at the same time it was forming an outflow to the work that we carried out last year. It is now amply justifying its construction in the increase of that lake.

79605. In Paragraphs 34 and 35, you say there has been a decrease in the West Ham pauper statistics, and you ascribe that, I think, rather pointedly to a transfer from the Poor Law authorities to the distress committee?—The remark was made to me by one of the officials of the Board that there was, as statistics indicated, a decided decrease in the pauper statistics of the borough. That may possibly have been due to greater care owing to certain recent circumstances in connection with Poor Law administration, but also, I believe, that numbers of those who would under the ordinary conditions of things have applied to the Poor Law, kept out of it for the sake of getting some little help by work from the distress committee.

79606. Then you admit that you have been doing Poor Law work, although in a healthier form, as you put it?—In a healthier form, yes. I look upon our farm colony, and upon the works that we have provided, as really improved labour yards applied to much more useful purposes than the ordinary work in most of the workhouses.

79607. You say outdoor relief saps independence and self-respect; I suppose you mean to suggest that outdoor distress work does not?—Yes; because out-door relief really consists of doles of money or kind, whereas I look upon work as the healthiest form of assistance that anybody can provide.

79608. As regards emigration you have come to the conclusion that very few of the best workers did emigrate?—Yes.

79609. And you have no sympathy with the general cry that emigration is draining the best blood of the country?—I have very little sympathy with it, so far as our experience goes, that is, experience derived from the distress committee's operations. I recognise that a great many good workers are leaving the country of their own free will, and of course, everyone of those that we emigrated went of his own free will, by a definite written application for that assistance. So far as the cases that we have dealt with are concerned, as given in the classification, it certainly does not seem to have affected the skilled workers as generally so described.

Emigrati

22 Oct., 1907.

79610. I very often hear that grievance put into form by distress committee men, but does it not amount to this, do you think—irritation that the Colonies get the best of the unemployed while we are left to support the very worst?—They give us help really where we least need help, because the Colonies take the best of our unemployed and leave us the worst?—If you take the sum total of the emigrants of all kinds, not only from distress committees' operation but of all kinds, doubtless the Colonies are getting some of the best of our men.

79611. And that rather irritates those who administer the law, sometimes, I think?—I am discussing it only in the light of the distress committee's action.

79612. Then I see you are so strong upon the residential qualification that you would actually extend it beyond twelve months?—For the sake of forming a greater deterrent to those who would try to get upon distress committees' registers simply for the sake of the emigration assistance. For instance, there were a number at the end of last year, and there are a number who will possibly register this time whose main object is to get emigration assistance. In one case in particular, I found that the applicant had some very real means at her disposal, yet she was attempting to get this form of cheap assistance from the Committee on the plea of poverty. Investigation, of course, brought that out; that is further evidence where investigation became valuable.

79613. What were the farm colonies in which West Ham was interested?—South Ockendon in Essex.

79614. And what others?—There was only one.

79615. Your final judgment on the farm colony seems to be that it is a first-rate sanatorium, but does not lead to any permanent strengthening of the men?—Not under present regulations, which only allow of their giving the man, whatever his aptitude or capacity or previous experience may have been, a maximum period of sixteen weeks.

79616. May I ask what you mean by Paragraph 39 (viii.)? Are you looking forward to a discontinuance altogether of relief to unemployed workmen and considering what was to be done afterwards with the colonies, or what?—No, I did not write that with any idea of looking forward to that action, but rather with a view to some general comments that have been made as to farm colony operations, and the possibility of their being stopped and put an end to so far as present purposes are concerned.

79617. Would you recommend that they be changed definitely from these purposes, and be used for small allotment holders under the present Act?—That I should not like to give any opinion upon, because in my general conviction we have hardly yet had time enough to determine their usefulness for present purposes.

79618. You say, "Should farm colonies be discontinued" etc.? I want to know whether you mean to discontinue them or to continue them?—I refer to farm colonies "as under the Unemployed Workmen Act."

The Right Rev. the LORD BISHOP of STEPNEY, called; and Examined.

79619. (Chairman.) You have been good enough to prepare a paper giving your views as to distress due to unemployment in London, which we may take as your evidence-in-chief, if you will hand it in?—Yes. (The Witness handed in the following Statement.)

EXTENT OF DISTRESS DUE TO UNEMPLOYMENT.

1. *Numbers of Persons affected.*—There are no statistics which are really trustworthy; the most illustrative figures that there are about 30,000 men, with families, in Unemployed Fund in 1905, and by the London Central Unemployed Body in 1906. It would appear from these figures that there are about 30,000 men, with families in London, ready to register themselves as unemployed during the winter; of these about two-thirds are regarded by the distress committees as *prima facie* genuine unemployed cases. But very different standards of investigation were used by different committees. It must also be remembered that the figures only refer to men who have been twelve months resident in London, that single men, and the large class of vagrant labourers are not included, and that the more skilled artisans, even while unemployed, were reluctant to register themselves. Only 338 women were registered—possibly because it is in the summer months that their employment is most scarce.

2. *Classes of Persons affected.*—The main bulk of the unemployed come from the class of general labourer, men who are either casual labourers, or labourers attached to seasonal trades, such as building, or painting, or to the docks. The skilled artisan either does not apply for work, or during unemployment is otherwise maintained.* The only large class of artisan who applied for work belonged to the seasonal trades, specially painters.

3. *Character of Persons affected.*—There are, no doubt, large numbers of quite honest men without any special skill or capacity, but who are anxious to obtain work. Of a large number of the men for whom work was found (see previous note) 71·9 per cent. were between the ages of twenty-six and forty-five. If the men employed in the various public works were samples of their class, it was obvious that they were largely inefficient for physical reasons, or unaccustomed to hard regular work, or merely incapable of good work without constant supervision.

* Thus of the men employed by the London County Council in the Royal Parks and at Osea Island, Garden City, and Farnbridge only 4·4 per cent. were members of trade societies, and only 5·3 per cent. members of other provident societies.

It has been found that such men are often improved in both physical and industrial efficiency by a spell of regular work and wages. This would indicate that they were not so much constitutionally inefficient as rendered so by the demoralising effect of periods of idleness and want of sufficient food.

4. *Period of duration of Distress.*—Unemployment is, of course, largely periodic, due to the natural shifting of trade and to the conditions of seasonal trades; but such unemployment is not the serious problem; the really serious problem is the mass of men, who appear to be in a chronic state of unemployment; or to be so casually employed as to be ready to enter themselves as unemployed, with a view to getting even temporary work provided for them.

CAUSES OF DISTRESS.

5. This question presumably means causes of unemployment. It is unnecessary to specify such normal causes as the changes of trade centres, the introduction of mechanical inventions, the changes of methods, the fluctuations of demand—but I would call special attention to three facts of London labour:—

(a) The excessive demand for boy labour. The business of exchange is vastly greater in London than the business of production, and readily absorbs any number of boys without teaching them any definite trade; so that after nineteen they are apt to drift into the already over-large class of general labourers.

(b) The prevalence in London of ill-paid by-employments, especially for women and girls, such as match-box making and slop tailoring and boot-making; the ability of the women in their own homes to earn money facilitates the men remaining idle, or refusing to move in search of work.

(c) The attraction of industrially undesirable persons to London by newspaper funds, spasmodic charities, shelters and the like. These attractions are an inducement to naturally idle and inefficient persons, and to the large class of broken men in country districts or provincial towns. Once they find their way to London, there they seem to stay, and pass in and out of the workhouses. They thus swell the ranks of those who are competing for the chances of casual labour. Nothing is more marked in many districts of London than the way in which a lower class always tends to drag down to its own level the class which is immediately above it. The report of the Stepney Guardians for 1906 contains some strong and significant words about this danger.

Effects of
unemploy-
ment.

THE EFFECTS OF DISTRESS DUE TO UNEMPLOYMENT.

6. The worst effect is the degeneration of body and mind which results from irregular employment or long periods of unemployment. A few months of this sort of life seem to be sufficient to sap both the physical efficiency and the moral self-respect of large classes of men and women. Hence the need of taking measures to prevent decent labourers, temporarily unemployed, from drifting into this degeneration.

7. Another effect of distress is, that women and children are sent into labour of a poor sort so as to earn even a few pence or shillings; and boys and girls sent into the streets at such times often acquire habits which hinder the chances of their ever becoming efficient workers; hence the need of seeing that work given to a genuine case is sufficient to maintain the home in decency.

REMEDIES FOR THE DISTRESS.

8. *Work provided by Municipal Bodies.*—On the whole in London such work has had a bad effect. It has tended to adopt the pernicious system of giving doles of work to all comers, two or three days of the week, with a view of satisfying the largest possible number of applicants. This is a plan which obviously rather creates a class of unemployed, than succeeds in lifting men out of it. In several boroughs there is, or until recently was, a real danger of a class of permanently unemployed expecting winter by winter to subsist on doles of municipal work. There seems little prospect of this remedy being anything else than an aggravation of the evil.

9. *The Work of the Central London Unemployed Body.*—In many ways this body has been useful.

10. It has spread a wider knowledge of the real problems of the unemployed among the members of local administrative bodies, than probably could have been given in any other way. It has been remarkable to note the different tone and language of its members as they have been gradually brought face to face with the real problems of administration.

11. It has made some effort, at least, to induce local authorities to realise the need of a uniform system of investigation through the distress committees. In this effort it has been only partially successful. It is extremely difficult to induce public bodies to take sufficient pains, or have sufficient patience about individual cases, and to find persons of sufficient leisure to be able to do so. It would seem that the best distress committees have been those which have made most use of outside persons, practically accustomed to the administration of charity, or familiar with the life of the poor. Moreover, it has been found impossible to make any satisfactory enquiries as to character, and even references to employers practically break down when the vast majority of the cases are casual labourers, who shift continuously from job to job. But the distress committees represent at least a possibility of great good in dealing with the problem; the possibility can be realised in proportion as the committees learn experience, and check the tendency to haste or temptations of popularity.

12. In regard to the work provided by the body, there have been great difficulties. Some sort of gradation of work to suit the industrial character of different classes of applicants is most desirable, but has been found practically unattainable; the work offered has been mainly merely labouring work. It has been difficult to avoid the two dangers, on the one hand, of making the conditions and payment of work too attractive; on the other hand of making them so distasteful, or cheap, as to affect the self-respect of the workers. The Labour Party not altogether unnaturally view with great suspicion any use of unemployed labour by public bodies, at rates of pay substantially less than the rates normally paid to that class of labour. The best results, as I shall mention later, seem to have been obtained in labour colonies. But in spite of these difficulties, the following good points in regard to the work provided by the body may be noted:—

(i) It has been continuous, lasting usually from between eight to twelve weeks.

(ii) It has been under supervision more or less vigorous, and in these two respects it has been much better than the sort of work provided by the municipal bodies.

(iii) The conditions attached to the grants given to municipal work, by the central body, have had a very real influence in inducing the municipal bodies to abandon irregular for more regular employment of the men. There has been a very general recognition on the part of the members of the body that it is far better to give adequate work to a few than doles of work to a large number; 4,098 men, heads of homes, were employed.

13. *Labour Exchanges.*—This ought to be one of the Labour most helpful remedies as a means of bringing the supply exchanges of labour into touch with the demand, and adapting labour to the fluidity of trade and industry. If they could only be given sufficient time, and could secure the co-operation of employers, and work in connection with one another in different parts of the country, they might do real good. But experience has shown that there are difficulties which must be avoided:—

(i) It is important that their work should not be too closely associated with any organisations directly dealing with the ordinary unemployed; the men who would be most likely to benefit by a labour exchange are often just those who would shrink from linking themselves with the ordinary unemployed.

(ii) The trades unions view such exchanges with suspicion, as they feel that they may provide facilities to employers to obtain cheap labour. They cannot be regarded as a substitute for the far more efficient organisation of supply and demand of labour through the great unions; but though their sphere may be thus restricted, they ought to secure more attention than they have in the past received.

14. *Emigration.*—Excellent work has been done in this respect in London through the Central Unemployed Body, the Charity Organisation Society, the East End Emigration Fund, the Church Army, and the Salvation Army. Probably, at present, it is the best remedy for the large class of honest men anxious to work, fairly efficient, but, through one circumstance or another, handicapped in the competition of labour at home. It is unnecessary to speak further, as the reports of the unemployed body, who up to January had emigrated 1,191 persons, and of the East End Emigration Fund sufficiently show the good work that has been done. Yet there is some justification for the often expressed dislike of the representatives of the working class to the growth of the idea that emigration is to be accepted as the real solution of the problem.

15. *Labour Farms and Colonies.*—There ought to be four kinds of such institutions:—

(i) *Occasional*; places where useful work could be provided for men separate from their homes and living together for a time under healthy conditions, close supervision, and good food; while in return for their work, their homes, at certain fixed rates, are supported for them. This separation from home is probably the best self-acting test that can be devised for distinguishing between the willing worker and the idler only looking out for an easy job. Experience seems to show that under such conditions the men more rapidly improve in physical and industrial efficiency, are better able to return to the ordinary world of work than under other conditions, and there is more security that the homes are kept in a good condition. The difficulty is mainly that of finding sufficient work of a really useful sort out of London, without interfering with local demands for labour elsewhere. It is here that probably the State might be able to be of some assistance in the case at least, of the best sort of workmen applying. It ought to be noted that the Labour leaders seem to object to this system, as prejudicial to the self-respect of the men, but this is an objection more sentimental than real.

(ii) *Educational colonies*; that is, colonies that set themselves to give some real training in some special kind of industry to those who work in them. Such a colony is that established by the Central London Body at Hollesley Bay. I would refer to the reports as to its measure of success. It may be said generally that there seems little chance of any real solution of the unemployed problem in sending city-bred people back to the land. Efforts ought rather to be concentrated on keeping the country-bred people from

drifting into the city; but such colonies might be of great use for selected men, especially in giving them a better chance if they are emigrated.

(iii) *Remedial*; colonies for the physically inefficient and the feeble-minded. There is great need for the increase of such colonies throughout the country.

(iv) *Penal*; colonies for persistent vagrants. I shall allude to them again later.

16. *Trade Unions' Unemployed Benefit*.—This is one of the really sound and effective methods of preventing good workmen from degenerating during seasons of unemployment. On the whole the system seems to work admirably. I have known hundreds of cases where it has entirely sufficed to keep up a workman's hope and self-respect, and allusion may be made again to the significance of the very small number of men belonging to the organised trades, who have cared to register themselves as unemployed.

17. I venture to call attention to the following *special points*:—

(i) There is urgent need of combining with any legislation for relieving the distress due to unemployment legislation for securing greater strictness in the treatment of habitual vagrants, and the segregation of the permanently inefficient and feeble-minded. It is earnestly to be hoped that the Commission may see its way to make some definite recommendations on this point.

(ii) I would emphasise the danger of dealing with the distress due to unemployment sectionally and spasmodically. It is a problem which can only be satisfactorily approached as part of a wider social question and by the gradual and patient co-operation of a number of simultaneous movements.

(iii) There is need of more systematic co-operation between the various public authorities concerned with this problem—Poor Law guardians, public health authorities and any bodies specially charged with dealing with the temporarily unemployed. It is obvious, *e.g.*, that many persons unemployed by reason of some mental or physical defectiveness ought to be regarded as suffering from a form of illness and treated accordingly. Again, co-operation will, it is hoped, become necessary between the police and the guardians in regard to distinguishing between occasional and habitual vagrants: and between the guardians and whatever bodies manage a system of employment exchanges. It is possible that the time has come for a re-arrangement of the functions of such public authorities: and also for the creation of a permanent stipendiary official in definite districts to whom all persons applying for "relief" ought to be referred, and who would determine for each case the authority by which it can be properly and satisfactorily treated.

(iv) In regard to unemployed persons left to the operation of the present Poor Law, guardians should discriminate between those who seem to be capable of becoming good workers and those who are habitually and intentionally "vagrant." In the case of the former every effort should be made to make residence in "the house" a time of stimulus and industrial training and in some instances an extension of the modified Workhouse Test Order might be used. The case of the latter ought to be dealt with in some form of penal colony.

18. The question whether any body should be allowed to use public money (apart from the Poor Law), whether in the form of rates or State subvention for the relief of the unemployed, is one of great difficulty. I can only point out here:—

(a) That some statutory body seems to be necessary to secure some uniformity of policy and to exercise some control over the action of other public bodies.

(b) That this can scarcely be done without the administration of some funds.

(c) That voluntary funds are not likely to be forthcoming for any serious and sustained public effort; and

(d) That voluntary funds administered by private individuals or societies are apt to be administered sentimentally and to do more harm than good.

19. It is obvious that there are other remedies going deeper to the root of the matter which must be patiently and concurrently applied, such as:—

(i) The development of the resources and attractions of country life.

(ii) The diffusion of industries outside already overgrown cities.

(iii) Some control over home industries—those usually called the "sweated industries."

(iv) The better organisation of private charity.

(v) The improvement of the health conditions attaching to the homes* and the rearing of children—defective conditions being largely responsible for the class of the wholly or partially inefficient.

(vi) Greater efforts to connect elementary education with skilled or regular employments. How to lessen the fluctuations of industry and trade is obviously a question far beyond the province of the present inquiry.

79620. (*Chairman*.) I am not quite sure that I know the limits of the diocese of Stepney?—The boroughs of Shoreditch, Finsbury, Bethnal Green, Hackney, Stoke Newington, Poplar and Stepney.

79621. Then it does not run at all to the south of the Thames or across the Lea?—No.

79622. In Paragraph 1 your Lordship gives an estimate, or accepts rather, an estimate of the persons who are affected and who come under the category of the unemployed. About 30,000 men have registered themselves as unemployed during the winter, and about two-thirds of those, I see, were accepted as, *prima facie*, genuine unemployed cases. Should you say, in your experience, that this class has increased in recent years in your diocese?—Yes, certainly. Of course I can only speak with a comparatively limited experience of six and a half years, but from the evidence of the older residents I should say distinctly.

79623. This class, which I may call the lowest stratum of unskilled labour, has increased proportionately, if not more than proportionately, to the population, has it not?—Yes. There may be other reasons for the proportionate increase, that is to say, the perpetual flux of the steadier working men from that part of London to the North and further East.

79624. So that certain parts are becoming rather a congested mass of low-grade labour?—That is so.

79625. The skilled artisan, as you point out in your statement, did not, in your judgment, apply for assistance under the Unemployed Workmen Act?—Scarcely at all.

79626. Then, in Paragraph 3, you go on to draw attention to the age of the persons affected, and you show that nearly 72 per cent. were between the ages of twenty-six and forty-five, that is to say, were really in what is supposed to be the zenith of life?—That is the working age. Of course that applies only to certain figures which were obtained in regard to the men employed in certain particular works under the county council, in the Royal parks and in some of the garden cities; but they were typical of their class.

79627. The serious problem in this part of your diocese is that there is a large number of persons who are either chronic in a chronic state of unemployment, or perhaps I might use a word which another witness utilised largely, of "under employment"?—Yes.

79628. And the influence of this under-employment has a most deteriorating effect both on the physique and on the morals of the persons that experience it?—Certainly.

79629. So much so that I suppose one may fairly infer that in a very limited number of years a person who otherwise might be capable of ordinary work would almost drift into a condition of being unemployable?—I think he loses spirit and he loses will-power and he loses physical efficiency, which is the basis of those other qualities, more perhaps than we think.

* It is worthy of note that of the unemployed for whom work was found in the ways mentioned in a previous note, whose average number of children living at home was 3.04 and children under 14, 2.66, 27.6 per cent. occupied single rooms and 41.1 per cent. two rooms.

Large
permanent
reserve of
labour in
London.

79630. Then your Lordship passes on to the special causes of this distress?—Yes; but perhaps I ought to explain that in putting it in this form I merely followed, being much pressed for time, the questions which were addressed to me by your Secretary.

79631. I think it is a very convenient sequence. The first cause which you put is the excessive demand for boy labour?—Might I interject there that I should think perhaps these three points to which I call attention in Paragraph 5 should really be all included under one cause, which is not specifically mentioned, which is a signal cause, and which, I suppose, one might describe as what appears to be the permanently over-large margin of available reserve labour in London, to which I have no doubt many other witnesses have called your attention.

79632. That is to say, there is in almost every form of occupation, and particularly in all low-grade labour, a considerable reserve?—Yes, which is permanently much larger than the community and our industrial conditions require. There must always, of course, be some reserve of labour, but in London, at any rate in that part of London, there appears to be a much greater supply of that reserve labour which will always be necessary than is really involved in the industrial system. The points that follow are instances of the way in which that over large reserve is maintained and increased.

Uneducative
boy-labour.

79633. We have had evidence from a number of witnesses, and I think the trend of their evidence is to show that there is almost an increased demand for boy labour of a certain kind in London?—Yes; and I should think so too, very strongly.

79634. It has been suggested to us that the education through which they have gone has been considerably wasted on these boys, inasmuch as on leaving school they drift into these occupations, and when they have arrived at the age of adults are not infrequently discharged from them; is that your experience?—Yes, very much so—constantly.

Types of
casual
labour.]

79635. Should you say that the demand for casual employment in London is on the increase as regards men? It seems to me that there are two classes of casual labour which have obtained great dimensions in London; there is (1) the casual labourer at the docks?—Yes.

79636. And then (2) at the other end of London there is a very rich and large residential district where there is a great deal of odd-and-end jobs of casual labour, which are connected with the houses of the rich?—Yes.

79637. You would agree there, would you?—Yes. Then I think there is an increasing tendency to throw men out of regular employment when they have got over a certain age, say forty, and the like; and for casual work which can be done before that age there is this continual influx of unskilled boys ready to do it at almost any wage.

Casual boy-
labour.

79638. This class of labour is attractive to the boys, is it not, as it gives them greater liberties?—Because it gives them freedom.

79639. Freedom from regulations and restrictions?—Yes.

79640. I suppose you would say that this demand for boy labour in the course of time recruits these reserves of ill-paid low-grade adult labour?—Yes.

Sweated
women's
labour, its
causes and
effects.

79641. Then you go on to point out that there is a prevalence in London of ill-paid employments, especially of women and girls; I assume that this under-employment of the men rather tends to force the women into employment?—Yes, it does. I might mention that I made a long tour of visits to women engaged in what are called these sweated industries in a certain district of London; I visited them all, and went as carefully as I could into their conditions. I remember in one day five or six cases where the unemployment of the man—and in most of these cases they were dock labourers—had forced the young wife, in spite of her having children, some of them children whom she ought to have been nursing, to undertake this sort of labour.

79642. We have had evidence to the effect that this class of labour is not only detrimental to the women, but also has a bad moral effect upon the men, as there is a tendency for them to rely more and more upon the women's earnings rather than upon their own wages?—Certainly. It would be difficult to judge, but there seems evidence that where there exists an immense preponderance of this sort of low-

grade labour, certain types of manufacture come there which are able to give employment especially to women and girls, at very low rates of wages, such as jam-making, rope-making, sack-making and the like.

79643. Some of these employments are seasonal, are they not?—Yes; at any rate the work is not very regular. Such manufactures are specially prevalent in the region in the farther east of London—Poplar and about there.

79644. As regards the Unemployed Workmen Act Effects of you think, I see, that the work which was provided by municipal the municipal bodies previous to the introduction of relief work the Act had on the whole a bad effect?—Yes, I should say so. previous to Unemployed Workmen Act.

79645. It was a system of giving doles without proper investigation, and the assistance given to the men was scarcely sufficient, owing to the limited number of days in the week on which they were occupied, to give the applicants means of supporting themselves or their families?—Yes; and certainly in many places it meant that a large number of men hung about, so to say, on the chance of getting their dole of two or three days.

79646. Then you think that the work under this Act Advantages of work provided under Unemployed Workmen Act. is a decided improvement on that of the municipal body?—Distinctly.

79647. That it has had the indirect effect of making people study more closely the problem, and that it has tended towards the establishment of uniformity as regards both the investigation and the relief given?—Yes, and also towards a certain amount of continuity. It increased the available experience in the hands of public bodies and those concerned with the problem, and it has, I think, with whatever defects may be inherent in the nature of its work, tended to make the work given more continuous and under better supervision.

79648. I gather that you are not altogether satisfied with the methods of investigation, and I note that you point out that it is very difficult to get public bodies to show sufficient patience in this class of work?—Yes. I fancy there was the greatest variety—you have probably heard that over and over again—in the standard of requirement in the different distress committees. Character of investigations made by Distress Committees.

79649. As you point out, it is rather special work and requires previous training and experience?—Very much so.

79650. And these bodies which were brought together, unless they utilised the experience of those who have been Poor Law Guardians, or who have been connected with social work, were themselves hardly competent to undertake these inquiries?—Yes, or were too busy, having too many other things to do. Of course some sort of classification, difficult as it is, is inherent in any real solution of the problem.

79651. Investigation, you would say, is very important?—It is intensely difficult under present circumstances, and most important.

79652. Then as regards the work, you only endorse, I think, what other witnesses have said that it was excessively difficult to find work which would not on the one hand make the conditions of payment too attractive, or, on the other hand, make them too distasteful?—Yes. As long as our present haphazard system of dealing with this question goes on, and the unemployed are treated like the poor, so to say, in a lump, I see no way of overcoming that inherent difficulty about relief work which I have mentioned in Paragraph 12. Difficulties in providing relief-work.

79653. Really the margin between the two conditions is so very small?—It is very small.

79654. In Paragraph 12 you indicate three points in which the work provided by the Central Unemployed Body is superior to the work provided by the municipal bodies; first, you say it has been more continuous; secondly, you say it has been under better supervision; and, thirdly, you say the tendency has been to abandon casual or irregular employment for more regular employment of the men?—No doubt the Commission has heard frequently from other witnesses of the difficulty there was in inducing the borough councils to come into line in desiring to make the work more continuous. If it had not been for the degree of pressure which the Central Body is able to exercise by its control of the finances, that measure of uniformity would not have been obtained. Superiority of Central (Unemployed) Body to municipal bodies in provision of work.

But when I look back over the discussions of that body ranging over three years, I can see that one point at least has been gained—that the municipal bodies, the boards of guardians and others, have learnt that they ought not to expect any encouragement for that system of giving as large a number as possible a certain amount of very casual employment.

importance
of labour
exchanges.

79655. Then passing on to the labour exchanges, I see you think that they would be a very useful remedy in distributing and absorbing this great mass of surplus cheap labour?—I think something of the kind is an essential part of any coherent system of dealing with the problem. It is important to point out, especially in regard to controversies which have arisen, that a labour exchange must be only a market for bringing the demand for labour and the supply of it together, and that it must not be an institution in any way attempting to regulate the rates of wages.

poor
principles
of labour
exchanges
system.

79656. We have had some evidence to the effect that there has been some difficulty in connection with them, in that the trade unions have viewed with some suspicion the establishment of these labour exchanges; on the other hand we have had evidence to show that that difficulty had to a large extent been got over in Germany by the committees being nominated half of employers and half of employees. It would seem that to make these labour exchanges really useful, we should try and get them to include labour of a higher grade than that connected with the so-called unemployed?—Certainly. I think the more these exchanges are, at any rate in the popular mind, divorced from unemployed organisations the better. It ought to be regarded as a perfectly natural thing for any workman of whatever grade, who finds it difficult, partly because he belongs to some unorganised labour, to find work, to apply to a labour exchange.

79657. Your view is that they should, in the first instance, be kept as an exchange for labour?—Purely. I think that tact on certain occasions would be very necessary. I think it would be most unfortunate if, on the outbreak of any strike in any district, the labour exchanges were to be used by employers to obtain a considerable amount of what is called free labour. But that is a matter where one must trust to a certain amount of tact on the part of the committees of management.

79658. I assume you would look to have these exchanges established all over London, with a sort of common clearing-house?—Yes, all over London, and I should say more or less all over the country. It seems to me that the system loses half its benefit unless it is by some means so organised as to be extended over the whole country.

79659. You would be disposed, therefore, I assume, to put some pressure, either direct or indirect, upon local authorities to establish them?—Very much so.

79660. Of course the success of the scheme very largely depends on the system being generally adopted throughout the country?—And on fairly uniform lines, and with constant interchange between the different exchanges, which in these days of telephones and telegrams ought to be perfectly easy.

Results of
labour
colonies.

79661. The labour colonies you think on the whole have worked well, though there are considerable difficulties connected with them in finding work of a really useful character?—I should be sorry if you thought that they had really worked well. They have worked as well as could have been expected, considering that when this problem was at all seriously faced there were only a few existing colonies of the kind to deal with, and that we had more or less to accept their lines of organisation. The whole work of labour colonies which has been, as the Commission knows, so well carried out on such a large scale in Germany and elsewhere, was almost unknown in this country except for small efforts on the part of the Salvation Army and the Church Army, and at Osea Island, and elsewhere. There was no real thinking out of the problem, and there was no classifying of the kind of person to be dealt with. The whole thing was haphazard, and when employment had to be found the committees which were responsible for finding it had to make use of the material which they had. But that the working of any of the colonies is really satisfactory I think could not be said, simply because no attempt has been made to co-ordinate them and bring them together as a coherent attempt of the community to deal with the problem.

79662. And the scale, of course, on which they have been attempted, is very small?—It is very small.

79663. Attaching importance, as you do, to classification, that makes the necessity of a thorough investigation in the first instance all the more necessary, does it not?—Yes.

*The Right
Rev. The
Lord Bishop
of Stepney.*

22 Oct., 1907.

79664. You could, I assume, classify the applicants very much after investigation, and then regulate that classification according as the person responded to whatever kind of test was imposed upon him in the labour colony?—There is a sentence in one of the subsections of Paragraph 15 of my Statement which I think might be misunderstood as I notice it again. It is the passage where allusion is made to the State undertaking works of its own outside London. I should be sorry that it should be thought that I held that the State, as the State, in any of the State works should make these works what are ordinarily called "relief works." I think that all the State can do in such cases is to arrange its work, or create it, where it is really necessary, and employ the best sort of workmen available for that class of job. To that extent they would relieve the labour market. But I do not think that the State ought on these enterprises to employ the labour which would ordinarily have gone to what are called "relief works."

Importance
of investiga-
tion of
applicants
for relief.

Duty of the
State in
carrying out
national
works.

79665. Then the State is not to find work for anybody who happens to be out of employment?—That, of course, is a very wide question.

79666. Is that what you mean?—I mean that I think if the State does come in, it ought to come in by regulating the employment in its own workshops so far as it has them, and when it establishes new works of any kind, such as the much-talked of afforestation, and the like, it should employ there the best sort of men that can be got for the work.

79667. You think that the State should rather deal with unemployment by trying to increase employment?—Yes, and steadying it.

79668. As regards the benefits for the unemployed to which you allude in Paragraph 16, it has been suggested in various ways that there should be some scheme by which those who are seasonally employed, or casually employed, should insure themselves against unemployment. It is a very difficult and almost insoluble problem, but have you ever attempted at all to discuss any proposal to get those who are casually employed, or seasonally employed, to insure themselves against unemployment?—Do you mean on the German system?

Insurance
against un-
employment
—how far
practicable
in case of
casual
labourers.

79669. Yes?—I think there is a great distinction between the seasonally employed and the casually employed. By the seasonally employed, I suppose is meant, those who at one period of the year are in the receipt of fairly good wages, such as painters, builders and the like; and by the casually employed, I suppose is meant, those who are always casually employed. In the case of the former I think it is lamentable that greater effort is not made on their part to insure themselves; in the case of the latter I am bound to say I do not see how any insurance could ever be possible.

79670. It would be possible, would it not, in the case of the strong able-bodied casual, who is perhaps at the docks more or less in regular employment, but it would be very difficult in the case of those who are only employed two or three days a week?—Yes. I should go further than that. I think that the great mass of ordinary casual labour as we know it in the East End of London is really incapable of finding money to put by on insurance. If they have families there are all kinds of uncertain demands which occur in any week, such as illness, clothing and the like, which would make it almost impossible to be regular in their insurance payments, and if those payments are not regular the insurance breaks down.

79671. To put it in another way, regularity of employment is almost of necessity a preliminary to any system of insurance?—Yes. If you could decasualise an immense amount of the present casual labour in London, and if by some means or other you could regulate the fluctuations in trade, no doubt it would be possible then to consider the practicability of a universal insurance against unemployment; but until that is the case it seems to me impossible.

79672. Now passing on to your special points, your first suggestion is that there should be greater strictness in classification, and that people should be treated really

ing Charity
Boards.

more according to their character than to their physical condition. I do not think we need trouble you on that point, because we have had a good deal of evidence upon it, and that contention answers itself. Then we pass on to what in your mind is the danger of dealing with unemployment sectionally and spasmodically. Would you mind just a little enlarging that sub-section; do you wish this distress to be dealt with as a national problem?—Perhaps it would be convenient if I put, in as short a space as I can, what I mean by dealing with the question as a whole. If one may put it in this way, I think that where we have suffered in the past in regard to this particular section of the question of the poor, as in regard to the whole question, is in dealing with the unemployed as we have dealt with the poor, as I have said before, rather in the lump; and that what we must do is to try to specialise the various ways in which the community is attempting to deal with it, and see that these special functions work together and are in touch with one another. For instance, beginning at the top—that is to say, at the prevention of workmen or labourers falling into the class of the unemployed—obviously an immense amount could be done, which is not done, by the better organisation of our charity. There ought to be much more prevention than there is of labourers getting into that position. I think that part of this co-operative method of dealing with the problem is the establishment of some charity board—one of your number has long contended for that—which should have some sort of recognition by the State, and which should really try to bring into some sort of order the administration of charity throughout the country. What one seems to want is a charity board, having certain of the powers no doubt of the present Charity Commissioners but more administrative in their work, with provincial boards, district boards, and parish boards more or less upon the lines, but adapted to our own difficulties and needs, of the Elberfeld system, of which the Commission has heard so much. In London we are making slow and painful struggles to produce some such organisation. We are attempting it in the case of Stepney, and I have here a paper on what is being done in that way which I will hand in to the Commission. (See Appendix No. XC.). Much more has been done, and done very admirably, in Hampstead, and something of the kind has been attempted with fair success in Finsbury. But in regard to this side of the question nothing can be done until the administration of charity is in the main divorced from either churches and chapels, on the one hand, or outside committees on the other. It ought to be a part of the social service of those in any community, in any district, who are really most familiar with the class of people, and they must in some way work together. One would like to see some such board. People dislike the word “charity,” which they have only too good reason to do in London, but you could call it some Social Service Board, or otherwise. It might have paid workers. Then I think an immense amount could gradually be done in the way of seeing that no really good case need drift into seeking relief from the State, either in the way of employment or of other relief. That is a matter much too long to go into in any detail, and of course in the previous stages of your deliberations it has been often enough no doubt mentioned.

79673. A good deal of that question has been mentioned in connection with the evidence on the Poor Law; and what your Lordship says is in accord with the idea which has been expressed by many of our witnesses, that it is the preventive side of the Poor Law and of local administration that is so weak at the present moment?—It is so very weak.

79674. You would wish that people should be helped before they become destitute?—Yes, certainly. Then, still dealing with the preventive side, there would come in emigration, for what it is worth—I need say nothing more about that—and the whole question of migration through these labour exchanges. If these things were really brought into effective working through the distress committees, or any work committees, which might be appointed by the county councils or borough councils, I think they would do a great deal in preventing men finding it necessary to register themselves as unemployed. Meanwhile both the State and the municipalities can do much more perhaps than they have done, with a little more thought in the way of arranging for their own work at times when it is most important to keep employment going, or undertaking works, which are really necessary

works, at similar times. Even in small ways the State can help, as I think the Army Department has helped by trying to call out the Militia in the winter, when all the employment that can be got is needed, rather than in the summer, and so forth. If something is done in that way at the top to prevent the necessity of men registering themselves as unemployed, much more has to be done systematically at the bottom—that is to say, in dealing with those who are, and, so far as we can see, who must remain, inefficient and more or less useless. If attempts were really made in a sustained way to get hold of that large class of the unemployed who are physically inefficient, and to treat them as inefficient physically; and that large class which is feeble in mind, and to treat them as feeble in mind, and send them to the appropriate public institution which can deal with people of that kind; and if the present pernicious system of ins-and-outs were in some sort of way regulated, so that persons were not allowed to go out again into the labour world until they had shown some capacity to take a useful place in it; and behind that, if, as was said before, the man who was proved to be an habitual, idle vagrant were detained in some penal colony—then at the bottom a great mass would be removed from the casual labour world which is competing with the better class which is just above it, and that would give that better class which is just above it, which is the one which is always tending to become unemployed, a greater chance of getting what employment there was going. If you dealt with those at the top and at the bottom there would be more chance of dealing adequately with the class who are apt to become unemployed, that stands between. There, at present, one does not see any other way of dealing with them when they do become unemployed except through colonies or relief works as wisely contrived as is possible. It is a poor make-shift at the best, but if anything has to be done that is all that can be done with such as were left when matters at the top and at the bottom had thus been dealt with. Of course, some will always fall out, for whom no adequate provision can be made, but that seems to me to be inevitable in our present system of industry. I feel sure that if, quietly and patiently, and without panic, attempts could be made on these lines to deal with the problem in a more thoughtful and coherent way, it would gradually become less.

79675. Those views which your Lordship has expressed, I think, cover most of the special points at the end of your statement; but there are one or two suggestions for remedies in the last paragraph on which I should just like to put a question. I think the first two answer themselves; then you think there should be some control over the home industries, which are those usually called the sweated industries; have you any special suggestion to make under that head?—It is a matter of immense difficulty. That something must be done is obvious; what is to be done it is extremely difficult to say. I cannot help feeling that an effort must be made to have some sort of inspection of these home industries, and if possible to insist upon some minimum wage being observed by the contractors. One has no sooner stated that than one arouses in one's mind a sense of the enormous difficulty that is involved.

79676. We have dealt with the better organisation of private charity, which is your next suggestion, and I come now to the improvement of the health conditions of the homes, and the rearing of children. You illustrate that suggestion by some figures in a little note, but I think they are not quite clear, are they?—I think the form of the statement is very obscure, if I may say so; but what it means is that taking those unemployed who were employed in the particular works that were mentioned in a previous note, those of them whose children living at home numbered three, or whose children under fourteen numbered two—of that lot 27 per cent. occupied single rooms, and 41 per cent. two rooms.

79677. I assume that in your judgment this overcrowding is one of the roots of the evil which you have been describing—It produces the physically and mentally insane who are the real permanent trouble. Of course, one might go on all day enlarging on that theme, but it is obvious.

79678. And the difficulties here are almost as great as those in connection with State industries, are they

ployment
and poverty.

not?—Not quite, I should hope, if there were a more efficient and vigorous administration of the Public Health Acts.

79679. And a condemnation of certain houses?—Yes, and more attempt to instruct the poor in the management of their own homes and of their own children.

79680. Now I come to your last suggestion, which is that greater efforts should be made to connect elementary education with skilled or regular employment. Several witnesses have expressed their dissatisfaction with the present system of elementary education as a trainer or precursor of unemployment, the contention being that the education is too literary. What is your opinion on that point?—I do not think that I should accept the phrase “too literary.” I think it would be equally true in some respects to say it was too scientific; certainly I have listened to lessons in board schools which tax my own brain quite sufficiently. I should have thought the education certainly was not sufficiently relevant to the interests of after life. In the towns, of course, that is very much more difficult than in the country where one can prepare for agricultural pursuits. What I rather meant there was not so much to presume to reform the Minutes of the Board of Education as to suggest that part of the work of managers attached to schools ought to be, in consultation with the teachers, to have committees on which local employers of labour, representatives of the different trades and persons giving the best of their services to the community there should sit, so as to try to arrange that boys and girls shall be prevented from slipping at once into mere casual boy-labour, or a “little place” for the girl, but should be put into something like a decent trade. It is only a very small point but it all works up to the same end of attempting to make labour more steady.

79681. The labour exchanges would help as regards the boys, would they not?—To some extent; but I would much rather try to get the boys into regular labour from the very first.

79682. You have no suggestion to make, have you, about the State keeping any supervision over the children until a later age?—I should like it extremely, and I think public opinion will soon be ready to accept it. I certainly feel with regard to numbers of those lads now employed on vans and elsewhere, that it would be of the greatest possible importance that they should be obliged to put in some amount of attendance at some form of school, literary or industrial. Even if it meant putting boys into shifts of labour during the day I certainly think that that might easily enough be arranged by those who employ them.

79683. So as to make them a kind of half-timers?—Yes. Perhaps I might supplement what I have ventured to put down in my 17th Paragraph. Of course all that is said in my statement assumes the question which the commission has already dealt with elsewhere of the continuance of our present system of public administrative bodies; but I venture to hope that the question may be considered as to whether that system is as good as it can be, and whether in a better re-arrangement of our public administrative bodies there would not be more care that the great gaps do not occur which occur under the present system. I do not want to go into that unless the commission wish to ask any questions, but I feel that the effective dealing with the unemployed really depends upon the effective dealing with the whole question of the proper treatment of what we call the poor, and that it cannot be isolated from it.

79684. (Mrs. Webb.) Might we ask your Lordship the exact meaning of these words in Paragraph 17 (iii.), which I think you are partly referring to, namely, “It is possible that the time has come for a re-arrangement of the functions of such public authorities; and also for the creation of a permanent stipendiary official”?—That is what I am thinking of now.

79685. Might we ask whether you at all contemplate the possibility of, so to speak, breaking up the Poor Law, and dealing with each service by an authority that is concerned in that service for the general population; for instance, handing the children over to the Board of Education?—That is what I have in view. I think that we have drifted along, and the result is that certain bodies like the boards of guardians are undertaking

functions which would much better be discharged by other bodies.

79686. Would it be your view that boards of guardians do a lot of separate services all of which require a different technique, and that they are not necessarily suited, being elected for the one function of relieving destitution, to deal with those technical services?—Exactly.

79687. (Chairman.) Have you any predisposition towards concentrating the functions that are now distributed among a number of local authorities in the hands of one authority; is that your idea at all?—No, not necessarily; but I had in view reconsidering what is the proper authority to deal with the different elements in the problem—the different classes of poor that have to be dealt with.

79688. Taking at the same time a broad view of the poor and of the functions which now are put upon different bodies with a view I suppose, of making as germane as possible the functions of one body, and filling up any gaps that exist now between the different authorities?—Yes.

79689. In fact, you want really a thorough revision of the duties of the various local authorities which are now in existence?—Certainly.

79690. Have you any particular suggestions to make as regards the transference of any set of duties from one body to another?—Of course, I speak with great diffidence to a body which has been listening to evidence of this sort from the greatest experts in the country, and which contains itself some of those experts. It seems to me that under some better re-arrangement the present boards of guardians would fail to find any particular place; that the work which they have done has become of a kind which makes it plain that it probably would be done quite as efficiently and with better results to the community as a whole by other bodies, which have, since the Poor Law administration was arranged, come into existence, and which represent the experience of the last century. For instance, one feels that in regard to the old, the infirm and the sick poor, they ought to be and they would naturally be under the public health authority; one feels that the schools would naturally be under the education authority; and one feels that the whole question of graded colonies for dealing with the unemployed ought to be under the authority of whatever body exists—of distress committees, or any new bodies that might be created for the purpose, and not under the Poor Law authorities. If all these functions are discharged by other bodies which appear more specially competent to deal with them, one does not quite know where the functions of the present boards of guardians would come in. It would still perhaps be said that they could give out-relief; but one would hope that the day is not far distant when the giving of outdoor relief will become unnecessary, or if it were necessary it ought to be only given in cases where some maintenance is required before persons can be properly treated in these various institutions which would be under their proper authorities.

79691. Your suggestion would really result, I think, in the mass of duties performed by the guardians being transferred to some other local authority, which in most cases would probably be the county authority or the borough authority?—Yes.

79692. On the earlier part of your paper your Lordship made the remark that public bodies rather lack the patience necessary for the personal investigation of cases; might there not be the difficulty that, if you transfer these duties to a public body, these particular methods of investigation and the whole system which would be drawn up might go into the hands of persons who had not the necessary patience, or perhaps had not the inclination to exercise it?—I think it is very important that in any such re-organisation ample provision should be made for the appointment and co-option of persons qualified by their knowledge of the poor and of the different classes dealt with to give their services and their experience. Besides, one would hope that gradually such a more efficient system of charity could be organised that public bodies should always have at their hand and in any district a body of people who could be immediately referred to for the purposes which you mention in your question.

The Right Rev. The Lord Bishop of Stepney.

22 Oct., 1907.

The proper local authority for London. Necessity of preventive measures against unemployment.

Question of influx of countrymen into East London.

Boy-labour.

Desirability of education of boy-labourers.

Importance of keeping the countryman on the land.

79693. I think your idea really is to have one local authority administering a big area, who would be the local authority for all London perhaps?—Yes, in the case of London.

79694. With the power of co-opting and nominating people outside?—Yes; a body of large numbers and with greater powers of nomination of outsiders, both to the body itself and to local committees in connection with it.

79695. (*Bishop of Ross.*) I gather your Lordship attaches very great importance to preventive measures in this matter of unemployment?—Yes.

79696. You think that more valuable than curative measures?—Much.

79697. I think I gather that your Lordship said that in your diocese in the East of London the number of workers was permanently in excess of the amount of work available?—Yes.

79698. So there, of course, you require both preventive and curative measures?—Yes, at present we require both.

79699. Is there much influx of outsiders into the labour market of East London now, thus crowding it still more?—Of course, we have the ever-present problem of the alien.

79700. Without going into the alien question, what about our own population; is that crowding into the East End of London?—Yes; but I do not think that there is the same number of good country people coming into the East End that there is into other parts of London now.

79701. Did they come in some years ago?—They did.

79702. But they are not coming at present?—Not the good ones. The disreputable, useless, country labourer and beggar comes in as frequently as before, and perhaps more frequently, with all the increased prospects that there are of finding what it is worth his while to seek in East London.

79703. The keeping him outside if possible would be a great advantage, I take it?—A great advantage.

79704. I think you said in reply to the Chairman that you would much prefer that boys should start on some regular and fixed employment?—If possible.

79705. In a great city like London will there not always be a very large demand for messenger boys and boys of that class?—There must be. I do not so much mean that attempts should be made to put them all into skilled trades, but I mean that they should be put into regular employment with good-standing firms.

79706. But even in those cases, is it not the fact that a number of those boys when they reach the age of eighteen or nineteen must go, and be replaced by other lads of fourteen or fifteen, who in their turn must go also?—For that class of work on which they were originally employed—certainly.

79707. In order to deal with those boys, then, your Lordship, I take it, would wish that there should be some sort of industrial schools or technical schools; would you contemplate organising the matter so as to give them a trade in the course of their time as messenger boys?—I think if it were possible, if public opinion would stand it, it would be a great advantage that these boys should have some such technical or industrial or general education during part of the day.

79708. Would you think it possible that a system could be introduced by which they would have, say, three hours a day at an industrial school or a technical school, which would prepare them for their after life after they had lost their temporary employment?—It ought to be possible. I wish it were.

79709. In disposing of your surplus population in the East End, some of them have been sent back to the country, I think?—Very few.

79710. I notice that you think the city-bred people are not likely to be as successful on the land as the others?—No.

79711. You do not think they are?—No, not under our land conditions in this country.

79712. You would much prefer, I notice, that the people on the land should be kept there?—I would much prefer that.

79713. And should not be brought into the towns and cities?—Quite so.

79714. You would wish very much to increase the health conditions of the homes?—Very much. The housing question.

79715. Having regard to the wages that the people receive, is not the rent question a very great difficulty?—It is the root difficulty.

79716. I have some difficulty in seeing what the sanitary authority can do. If they condemn and pull down those that are insanitary homes, and erect better homes, must not the rents go up?—If the better homes are erected too extravagantly or for an obviously very much higher grade of labour (which has been the tendency of the past) they must.

79717. You have not only the question of the erection of the home, but you have also the question of the purchase of the sites?—Yes.

79718. Which is the bigger difficulty of the two?—Yes. The housing question is full of complications.

79719. Say that you take a family, and they are paying 3s a week for a single room; they cannot afford to pay 5s. for two rooms, can they?—No.

79720. I suppose your Lordship will admit that to comply with the commonest elements of decency those families you discuss in your Statement, consisting of the father and the mother and two children, would want a four-roomed house, one room to live in and two or three bedrooms?—Yes, if possible.

79721. Do you see your way to making any suggestion for settling this root difficulty in the way of better housing and more decent housing?—No. I think, of course, that as long as rents are as high as they are, certainly in the East End, it is extraordinarily difficult to enable families to have sufficient room. But even so, without bringing in the whole question of the rent of property in London, an immense amount could be done even under these conditions, with a little more care given to the poor as to the arrangement of their own homes and the management of their own cleanliness, their own ventilation, their own sanitation, and the like; though, of course, that is only a palliative.

79722. I quite admit that, and I entirely see that it would be good to be done; but there is a great difficulty in the question of fresh air. I was speaking to a mother of several children the other day and she told me that her children were never downstairs and never could be downstairs except when they went down to go to school, because she was living away up in the fourth storey. This was not in London, but in another British city. In the last paragraph of all you suggest that greater efforts should be made to connect elementary education with skilled or regular employments, and I presume you would connect that paragraph with the boy question which we discussed at first?—Yes.

79723. (*Mrs. Webb.*) I gather that your Lordship is in favour of the institutions treating destitute persons being managed by the authorities that manage the corresponding sections of public work for the community at large, that is to say, for instance, the sick destitute would be managed by the Public Health Committee?—As a general principle Proper authority for management of sick poor, and question of out-door relief.

79724. That would leave the great question of outdoor relief unsettled?—Yes.

79725. You would not suggest that the education authority, if it decided the child could remain in its home, should be able to give outdoor relief in its case, would you?—No.

79726. And the same with the public health authority; you would not suggest that if the public health authority decided that a phthisical patient might be treated in her home for a certain period they should give outdoor relief in her case, would you?—My idea rather was that there should be some official, or Department, like those who administer relief in, for instance, Denmark, at Copenhagen, who should have funds at his disposal which he could use for any case where some sort of relief was necessary before and until the proper authority could deal with the case. I should also add that one would hope that with a better organisation of our charity numbers of the cases could be referred to the representatives of that more organised charity, which would make any regular and systematic outdoor relief unnecessary.

79727. Then you mention a stipendiary in your Statement; is that stipendiary to decide on where outdoor relief is permissible?—Of course, it is an awkward phrase. What one has in mind is someone who, in regard to these matters, would occupy something of the place of the county court judge in legal matters, or of the sheriff substitute in Scotland, who is much more generally used in administration matters.

79728. Or of the superintendent of relief in Scotland?—Yes.

79729. Something betwixt the superintendent of relief and the sheriff substitute?—Something of that kind. What one fears is that if you merely have a number of authorities dealing with sections of the problem there may be no natural way in which they come together in regard to particular cases.

79730. Then you would put this man, the superintendent or the stipendiary, or whatever we call him, under a committee of the County Council, the Finance Committee or something like that, would you?—He ought to be in some relationship of responsibility to the general civic authority which is dealing with the problem.

79731. He would have his inquiry agents, I suppose?—Inevitably.

79732. Would he be the sort of person to administer an old age pension scheme, supposing we had an old age pension scheme?—That is rather a wide question, and I do not express any opinion about old age pensions in answering it. But if there are to be old age pensions, I should have thought that some such person as that, with others combined with him, as for instance under the Danish system, where the third section burgomaster, as he is called at Copenhagen, acts with a committee containing representatives of the municipal council in settling both whether a pension shall be given and the amount of the pension.

79733. I gather that, putting it as carefully as one can, your position would be that institutions ought to be managed by representative committees, that outdoor relief ought to be given by a judicial authority working under a representative body, and that that judicial authority ought to have the assistance of a statutory charitable committee?—That is putting it with a precision which goes rather beyond anything that I thought. Substantially that is it.

79734. One other point. In dealing with this problem it is comparatively easy to deal with the children, and it is easy to deal with the sick, and it is easy to deal with the aged, but the great difficulty that I see is the able-bodied. Would it be possible to have a national authority to deal with the able-bodied?—You speak of all these graded farm colonies, but is it not quite clear that perhaps even a county could not have all the graded colonies that would be required?—I should have thought there could be co-operation between neighbouring counties where the population was sparse and the number of big towns was not great.

79735. Would you not contemplate having a national department which provided penal colonies and educational colonies?—I should think that possibly anything in the nature of a penal colony might be ultimately under the Prison Commissioners, as in Denmark the penal workhouse is under the Minister of Justice.

79736. I see that there is some difficulty in dealing with the vagrants otherwise than by a kind of national authority, because otherwise we should probably get the police moving them over the border of a county?—Yes.

79737. If we were to hand over the vagrants to a county authority *simpliciter* there would always be that old tendency of shoving the vagrant over the county boundary into the next county, would there not?—I think there are details of great importance which have to be considered, and I am afraid I would not like to express a definite opinion about them now.

79738. You have really no definite opinion that it would be advisable or not advisable to have a national department dealing with the able-bodied in the place of a county department?—I have not thought it out, and I would not like to say.

79739. On the whole I gather that you are in favour of the county borough as the area for the other services?—As the central area for the others, yes.

79740. (Mr. Bentham.) I wonder if your Lordship has thought out the necessary machinery that would have to be set up under a scheme such as you have outlined. Take, for instance, the hearing of applications for relief of whatever kind, which would have to be undertaken by some authority—you suggest a stipendiary or some officer acting in the capacity of a stipendiary. I am wondering what machinery would be necessary all round him for keeping together, and for disposing of, the various classes who would make application to him; and I am also wondering whose officer he would be. This is rather a lot of questions all in one, but it seems to me that a lot is involved in a suggestion of this kind?—I am afraid the honest answer would be that I have not time to think out many things in detail. The whole question wants thinking out with much greater care than I should like to go into it with now. I did not anticipate having to answer many questions of detail. I should have thought, that was a question of organisation which could be surmounted. I quite see the difficulties, but it does seem to me a matter of organisation which is not insurmountable.

79741. I would like, if it is possible, to see whether these difficulties are insurmountable or not. Taking for granted that the guardians are disposed of so far as their dealing with applications for relief is concerned, and that a person in a judicial position is set up in the place of the guardians, whose officer would you say that person would be?—I think he ought to be paid by the authority for the area which he administers, but that he ought to be not removable except with the consent of the Local Government Board, or whatever was the appropriate central authority.

79742. With the dividing up of the various elements now under the Poor Law that has been proposed, there would be no authority analogous to the present Poor Law. Would it be the ordinary civic authority?—The civic authority subject to the Local Government Board.

79743. The county council, or the county borough council, as the case might be?—Yes.

79744. He would need inquiry officers?—Yes.

79745. And a staff of clerks for keeping the records, etc.?—Yes.

79746. When an application were made, say, by a family, and one of them had to be sent to an institution under the public health authority, and another had to be sent to a school which was under the education authority, and they had on their hands the aged and infirm members of the family, who would have to be dealt with by another authority, then there would be a distribution of the whole elements of that family to several distinct authorities?—That would be involved and would produce great difficulties no doubt.

79747. The point that is puzzling me is whether the change is commensurate with the advantages?—Of course, what you have alluded to is the obstacle, the difficulty. It does mean that in many cases where the Poor Law guardians have at present themselves dealt with several members, at any rate, of a family, those members of the family would then be under different supervising bodies.

79748. And each body would have to keep records, as it were, of the people dealt with?—Yes.

79749. So that would be a duplication of records all the way through by five or six different bodies, would it not?—In regard to that particular family.

79750. Then the machinery would be increased really, and considerably increased?—To that extent, yes; but I should not mind that if it meant that each individual case was dealt with more efficiently.

79751. With regard to the provision for the sick in London, can it be said that the present authorities have not already made ample provision for the sick, so far as institutions are concerned?—So far as I know, ample; and in many cases they are doing very good work.

79752. Would there be any advantage in transferring those institutions, as they stand, to another authority, so far as management and treatment of the cases are concerned?—I think that depends largely upon the character and competence of the different boards of guardians.

79753. Then with regard to the treatment of the sick in the country, so far as institutional treatment is con-

treatment of
the sick and
infirm poor.

cerned it will probably be within your knowledge that there are very few boards of guardians in the country that have made separate provision for the sick apart from their present workhouse site. The institution is on the workhouse site?—Yes.

79754. The transference of sick cases to another authority would involve, would it not, a new set of institutions for the treatment of the sick?—Ultimately, I suppose. Temporary arrangements could be made for the joint control of existing premises. Ultimately it would, no doubt, come to that.

79755. Then the transference of inmates from one institution to another would be very, very great indeed; take it that from the infirmary institution to your sick hospital the transfers would be very numerous?—In the case you speak of where the sick institutions were on the same site as the ordinary workhouse?

79756. I mean if they were separated, and the sick institutions were under a separate authority to the workhouse proper, the transfers from one institution to another would be very numerous. The infirm are constantly falling ill, and are sent to the institution for the sick, then they come back; so they would be constantly transferred backwards and forwards?—Yes. I think, of course there would be no objection, so far as one can see, to the public health authority maintaining homes for the aged in the sense of the poor house, the house for old people verging on the infirm.

79757. That would mean really that the infirm would also be dealt with by the public health authority in addition to the sick?—Yes.

79758. Then as all aged people get more or less infirm ultimately it would be probably advisable that all the aged people should be under the health authority?—Those who required institutional treatment; except, of course, lunatics and imbeciles, who would be treated otherwise.

79759. In answer to a question which was put by Mrs. Webb, I think you said with regard to outdoor relief that the stipendiary officer might grant temporary relief to tide them over their difficulties until they were otherwise dealt with?—Yes.

79760. Was it in your mind that there would be no permanent outdoor relief at all? Take widows with children, for instance, I suppose we should always have widows and children?—Yes. Of course, there one feels that there must be some provision somewhere; if a better organised charity fails to deal with the question that is just one of those gaps that one would like to see filled in.

79761. Otherwise it would mean the public authority would have to give permanent outdoor relief where charity does not step in to fill the gap?—Unless the family could be otherwise treated through educational institutions or otherwise.

79762. (*Professor Smart.*) Can you explain why painters figure largely amongst your unemployed artisans?—I think simply because their employment fluctuates so much according to the irregular demand for building, and also the weather.

79763. Only that? You do not find that they are a particularly thriftless class?—No; I should have no reason to say that at all.

79764. You consider that women's labour in many cases is equally a cause of men's unemployment. Would you be in favour of putting any restriction upon women's labour on that account?—No, I should not like to put any restriction on women's labour, except what would be involved in an inspection of a good deal of home industry. I would much rather see all the women's labour there is made as regular and well paid as possible.

79765. I allude to a general feeling in some trades, for instance the metal trade, and certain other trades, that there are certain trades from which women ought to be excluded: of the metal work trade, iron work particularly, the expression is often used that it is not women's work at all?—I should be disposed to deal with that as a question of public health rather than whether women as such ought to be kept out of the trade or not.

79766. In Paragraph 5 do you mean that respectable unskilled, even casual, labour should, if possible, be protected against the competition of those who fall down from higher classes through misconduct?—Yes. You

mean that one does not want the thriftless of any sort or kind to be in the position of dragging down to their own level what ought to be the regular army of casual labourers who are wanted for industry?

79767. I suppose you recognise that the casual labourer has his place, the place only for which he is fitted by nature; it is rather hard that when other classes fall to that same level they begin competing with him. He has his rights as well as other people?—Certainly, and a most inevitable place in the industrial community.

79768. Then the proposal to give a preference to all well-behaved casuals over worthless characters would have your approval?—Certainly, most cordially.

79769. You seem to think that distress committees are part of the education of the citizen?—I think that is one of their most useful functions. Distress Committee

79770. Have you sat on any distress committee?—I have not sat on one, because I did not belong to any district sufficiently, but I have been present during their working.

79771. I wondered if, from practical experience, you would confirm my impression that all members of distress committees feel perfectly helpless when confronted with the real trouble, and that after all there is very little difference amongst the methods they severally adopt to deal with it?—I think the differences that remain are as to the ultimate remedies rather than the immediate ones.

79772. Would you agree with me that the Unemployed Workmen's Act, if nothing else, has had a great deal to do with awakening the opinion of the country to the fact that they were faced with a new problem, and a difficult problem?—I think it has certainly tended to make people realise that you cannot describe the unemployed as those who will not work and do not want to work: it has made them feel that there is an immense population that wants to work and cannot, either because it is too inefficient or because there is no work for it to get. Effect of Unemployment Workmen's Act.

79773. You think that investigation is one of the most indispensable duties of a distress committee?—One of the most difficult. Difficulty of importance investigation by Distress Committee

79774. But one of the most indispensable?—Certainly.

79775. You have no sympathy at all with the outcry against inquisition?—None. I think the questions have to be asked with discretion and the answers have to be treated with a good deal of tact and a knowledge of the circumstances and life of the poor; what I mean is that it would be ridiculous to be pedantic always in the way of insisting on recommendations from past employers in the case of a very irregularly employed man who has moved about from job to job, although he may have had a good deal of work and been quite honest at it.

79776. You rather agree that the employment of labourers at municipal works at less than the standard wage is dangerous?—Yes. Danger of municipal work at low wage.

79777. On what account particularly?—Do you mean by the municipal bodies?

79778. Yes. Why do you call it dangerous?—Because I think the fear is that if public bodies get into the way of finding a supply of labour to do the work which that public body really wants doing, at a very cheap rate, it may go on doing it, and that would really have the bad effect of unsettling the industry and keeping out of work the regular workmen who might be expected to do that class of job.

79779. They may anticipate the work which otherwise would be paid for in due time at high wages to the ordinary workman?—Yes, under normal conditions.

79780. That I regard as one of your chief reasons for recommending labour colonies?—Yes, amongst others.

79781. As regards labour exchanges, would you say that all endeavours should be made to make them places where everyone out of a job will go without fear of being thought a proper subject for a distress committee?—Certainly. If possible, I would not have them in the same building as the distress committee sits, and I should, as much as possible, in all their papers, their communications and the like, dissociate in the public mind the labour exchange from any relief station. Proper principles labour exchange.

79782. But that would not prevent the labour exchange dealing with some of the men ultimately by some thing in the nature of a distress committee?—No, I think the

casual
labourer.

labour exchange, if it is to be under any body, ought to be ultimately under the body which is dealing with the employment question.

79783. Evidently you think the labour exchange comes first for most things?—If it was properly worked I attach the greatest importance possible to it.

79784. You say it must come before compulsory insurance, because compulsory insurance comes after decasualisation, and you cannot get decasualisation without the labour exchange?—Yes.

79785. Would you agree that the labour exchange should rank as part of the civil service?—Do you mean in the sense of its employees being paid by the municipal council?

79786. Or that it should take rank as a service. Do you not think it should be a very honourable service?—Yes, a public service

79787. A very honourable, intelligent, highly paid service?—Certainly.

79788. Is there not a danger there, and a great difficulty that seems to present itself with regard to labour exchanges, that you have to get them begun, and if you begin on a small scale you will not command the best men; but at the same time is it safe to begin with them on a large scale when you have the employers so apathetic and the trade unions so hostile?—An official, when of a high quality, will do most to conciliate both employers and trade unionists.

78789. The suggestion has been made to us that the initiative work might be done by a Department of State in the form of a propagandist body?—I think it would be best to leave the creation of the labour exchanges to local enterprise.

79790. Do you not think they would be very slow to come in that way. Do you know anyone enthusiastically working towards them except Mr. Beveridge?—I only know of London. I should be sorry if it was so elsewhere, but I could speak with no certain knowledge.

79791. What about London?—I think the difficulty in London has been considerable misunderstanding on the part of the trade unions, which I hope may be gradually removed.

79792. Do you know of anyone who is really working at it except Mr. Beveridge just now?—No, because his committee have taken over the work which was hitherto done by a large number of scattered labour exchanges.

79793. You think something is being actively done towards it beyond general approval?—Through his committee, and some sub-committees, which I believe he has been able to form in different parts of London.

79794. Is it not a very bad state of things when all men approve and no man will put his hand to it?—I am afraid that is a very common state of things; it is an imperfect world.

79795. You divide labour colonies into casual, educational, remedial and penal; your casual, I see, are really sanatoria?—They are the kind of work which the Mansion House Fund, of which I acted as chairman in 1903, undertook. We were very anxious, if possible, knowing the difficulties of investigation, to provide something in the nature of a self-acting test, a self-acting sifting process, and we thought that the best was to put it to a man that if he was willing to show his genuine desire to work by leaving his family and go to work under healthy conditions in the country, we would see that his family was properly maintained in the interval. On the whole we found that that attracted a much less satisfactory type of man than we expected. The sifting was not so self-acting as we had hoped, but we found that when the men realised the conditions under which they had to live, there was less tendency for the unsatisfactory to come, and that as the year went on (that was in 1903, I think) a much better type of man presented himself, and the ultimate type of man who came was very satisfactory, and certainly so far as that experience has gone on under the unemployed fund and under the unemployed council, I think the evidence is that the men who went in this way to work in these country works, and who were under close supervision, and on the whole were regularly and sufficiently fed, turned out at the end to be much more efficient workmen than those who stayed at home and were employed on the parks or other relief works.

79796. You are quite satisfied, then, with that one little bit of good that was done?—So far as it went.

79797. It did not seem to go very far?—Not very far.

79798. May I ask what kind of colony you have in your mind for the permanently inefficient?—I do not think I say "permanently inefficient."

79799. In one place you do; you use both phrases, I think?—The physically inefficient.

79800. In another part you change it to "permanently inefficient"?—I think the permanently inefficient would be subjects for an infirmary or an asylum, according to whether the permanence of his inefficiency was due to body or mind.

79801. There are a great many men who are just lacking, very slightly lacking?—I should like them to be treated in something either of the nature of the German labour colonies like Wilhelmsdorf, or in the nature of the Danish workhouse, which is very clearly distinguished from the poor house. In Denmark the man who is not really getting on outside is sent to the workhouse and the training that is given there is adapted as far as possible to his intelligence, and he is detained there compulsorily until there is evidence, by the work he has done and the wages he has earned, and his general character, that he really is fit to hold his own in the labour world outside.

79802. Then he is not permanently inefficient?—Not permanently.

79803. Is there not a class who are not profitable to any employer just by reason of some very little defect? What are you going to do with those people?—They are the real difficulty. You mean those who are of good character, but have some slight defect of body or mind. They are a very great difficulty. I should hope that one would be able to find work for them more if those who are really hopelessly inefficient either in body or mind were taken out of the way.

79804. The only thing you could do is really, I think, to permanently put them out to grass, is it not?—If they are really sufficiently inane or infirm in body or imbecile in mind, or defective in mind, I would say then I think the only thing is to keep them away from both productive and reproductive living.

79805. Do you not think that covers a larger class now than it ever did before, that is to say the absolutely brainless worker who is no use to anybody and can never earn decent wages at an ordinary trade?—I am afraid so.

79806. (Mrs. Bosanquet.) With regard to the fixing of a minimum wage, has it occurred to you that the first effect would be to throw out of employment a large number of girls and women?—That is the real difficulty; that of course goes to the root of the question even with regard to all forms of casual labour. When the great dock strike took place, the ultimate effects of which were all felt to be good, the result was that while regular work was found for a considerable number of casuals, those that remained were reduced to more casual labour than ever.

79807. Are you prepared to face the unemployment that would be caused?—I do not see how one can ultimately deal with the problem otherwise than on that line, of making some labour better paid and more regular, even at the cost of displacing a good deal that is at present going on.

79808. Would it not be a more hopeful way to improve the efficient education of the girls?—I would not like to balance these things one against the other. I think they all ought to be concurrently tried. Certainly better education is an essential part of it.

79809. Of course, one knows that the results of the dock strike were considerable, but at present in ordinary work it would be very much larger, because it would mean an immense introduction suddenly of machinery, would it not, to do what the women are now doing?—I do not suggest that women should be prevented from doing this kind of work.

79810. But if you raise the wages beyond what their work is worth, it would pay employers better to put in machinery?—That begs the question that they are paid now what their work is worth, or even what it would pay the employers to produce the goods at.

of Stepney.*

79811. Would you maintain that in these low class industries their work is worth more than they get?—I should think certainly, judging from the prices which ultimately the goods obtain.

22 Oct., 1907. 79812. Would that apply to such industries as cleaning bottles?—I am afraid I am not familiar with that.

79813. There is a great deal of very unskilled work?—Yes. There, I was rather thinking of things like making match-boxes, brushes, artificial flowers, and trades of that kind, the clothing trade, and portions of boots, beadings, and all those sweated trades, as we call them.

79814. At the same time you would be for increasing the efficiency of the women?—Certainly, in every possible way.

Question of
expectations
aroused by
Distress
Committees.

79815. Do you think the existence of a distress committee in any district rouses much expectation amongst the people?—I think it did until its capacities were found out; not much now.

79816. But even in comparison to what it is able to do?—I think still people expect much more of it than it can do under present conditions.

79817. Do you think that expectation itself is an evil, that it leads people to stay in a district?—I have never been satisfied with any really clear evidence of people coming to or staying in a district because of distress committees. I think it is much more true of charitable funds, started for the benefit of a particular district, because there the people have a much more reasonable chance of being able to get something out of it than when they are dealing with a distress committee.

79818. At any rate I suppose you would expect that the distress committee would endeavour to make labour more and more mobile?—One would hope so certainly.

79819. (*Miss Hill.*) You say in Paragraph 10 that the result of the establishment of the Central London Unemployed Body has spread wider knowledge of the real problems of the unemployed, and that it has been remarkable to note the different tone and language of the members as they were gradually brought face to face with the real problems of administration. That one realises, but I wonder what you would think the educational effect on the whole of the people has been, has it or has it not been to raise in them a hope of work being provided, irrespective of the quality of the work, and irrespective of the need of it? Is not that a very serious question, the educational effect upon the body of the people?—It is quite another question certainly.

79820. Do the expectations that have been aroused fill you with any anxiety?—I do not think it is so much the creation of these bodies that has aroused that opinion, as the language that has been used about them by some who have known very little about their actual working.

79821. And also perhaps on the part of those who have been responsible for the Acts? That has certainly been aroused, and surely it has partly been from the authorities. There has been a great hope which has not tended to the people dispersing themselves or looking to themselves for improvement, when they are thinking of improving their position. They are not looking so much to fitting themselves as they, as they were, or to the necessity of improvement?—I should not like to say how far that is due to any expectations about work being found.

79822. Secondly, you say: "It is extremely difficult to induce public bodies to take sufficient pains, or have sufficient patience about individual cases, and to find persons of sufficient leisure to be able to do so. It would seem that the best distress committees have been those which have made most use of outside persons, practically accustomed to the administration of charity, or familiar with the life of the poor." That one quite realises, but then how does that bear on the suggestion of a larger body, or a body covering a larger area, and more subdivision of the work, which appears to be shadowed forth? I mean such a plan as making the county council responsible for all which is now done by the Poor Law, and sorting the people into children and imbeciles, and so on, rather than dealing with them as families. Does not the present Poor Law deal with them more in families and more in localities, and are you not much more likely to get this class of people of whom you speak, if it were possible to

purify the present smaller areas, get the local interest in them, and deal with the people in families instead of in kinds?—Do you mean that you think that the present boards of guardians are better guardians of the poor than such new and wider authority?

79823. That depends on the guardians; there are guardians and guardians, of course?—That is the difficulty.

79824. Take your best guardian, who now cares for his or her locality, and cares about the people, and knows more or less of the applicants, the men, the women, and the children, and has known them possibly for years; I am thinking partly of the country and also of good boards in London; is there not more dealing with the people in families if you get smaller areas, and do not sort the people so much?—I think I should reply to that; first, that if all your boards of guardians were like the best boards there would be very little problem for us to consider; and, secondly, everything would depend, in regard to these wider areas, on the degree in which the larger authority subdivided its work, and brought to its assistance the best representatives of the district.

79825. That I see, but I am wondering whether there has been shown on the part of the larger bodies any tendency to bring in the localities in anything like a powerful way. Is there not a jealousy of all co-option?—I think that is the present tendency. What one hopes is, that if the functions of the wider area were enlarged to include a great deal of this kind of work that is now being done by boards of guardians, a type of person would be induced to enter the wider authority, who would realise the enormous importance of securing these outside persons, and that more of those, what we call outside persons, at present engaged in charitable work amongst the poor would offer themselves for election to the public authorities, to the great advantage all round.

79826. The larger the area surely the more important it is to get the people who really wish to come face to face with the poor. Will not you get it more and more official the larger you get the area, the larger your body, and the more sub-divided your work?—I quite confess I think everything depends on the willingness of the larger body to work with and through representatives of civic interest and charitable service in the district.

79827. In smaller areas?—In smaller areas.

79828. Then if your body is to undertake the roads and the drains and the public health, in so far as it deals with drains and traps, and tangible things, will you get people who care about the poor; will not you get on your larger body the people who think about good business and finance, and so on?—I should think on the contrary, if you offer people the chances of being really in the highest sense the servants of the poor, you may get a much more public-spirited and thoughtful type of person sitting on the general public authority.

79829. But they will not be sure what they will be told off for. A guardian knows, if he is elected at all, he has to deal with the poor, but if a man is elected to the county council he may be put on to the roads or the drains?—I think a good deal could be done by the arrangement of committees.

79830. That seems to me the difficulty about it. I can see you are not hopeful of replacing city-bred people on the land?—I am hopeful of their being able to do a great deal in Canada under conditions like that, but not in our own country.

79831. Do you see any real outcome from these labour colonies?—I think there are certain special men who do show an aptitude and a liking for country work.

79832. Are you not trying to float them to the top of the tree above the agricultural labourer?—That is the great difficulty.

79833. Is it not the agricultural labourer who ought to be promoted to these more satisfactory conditions; is it not very discouraging to the agricultural labourer that when a man comes up to London and gets amongst the unemployed class and is moved back to the country, he is introduced in far better conditions than the agricultural labourer can be?—I think that is a very real difficulty.

with the poor.

Difficulties

79834. I should like to know whether you see any tendency towards the difficulty about the housing being very much mitigated by the exodus which is certainly taking place towards the suburbs? Is it affecting the East End? It is affecting the south of London very largely. We have numbers of empty rooms where we used to have none?—In the East End where the labour is, roughly speaking, preponderatingly casual, the man must be near the docks or near the great markets or near the big warehouses, and that makes it inevitable that they should stay as near the centre as they can. The only thing that is driving them out is the Jew; and they cling as hard as they can to the skirts of the Jews.

79835. You have no more unlet rooms now in the East End than you used to have?—Not as a whole. There are small districts which have been marked for some time for possible improvements, which have a way of getting empty. Ratcliffe Highway was empty for some time, but only for special reasons, not as a whole.

79836. In other parts of London it is really beginning to tell, not in Westminster, but in the south of London and in the north, and I think that rents must come down, therefore?—The efflux is rapid and continuous of all the better sort of labour out of East London, into the north and further east, but the places are very rapidly filled either by the aliens or by casual labourers.

79837. You are getting the worst left?—Yes.

79838. (*Mr. Lock.*) The conclusion would be, would it not, that you are dealing with rather a special form of the problem in the east of London?—You anticipated what I hoped I might have had time to say before I left. Of course, one does feel that East London stands very much by itself, and one's outlook is a good deal coloured by the conditions one has to face day by day.

79839. As to the minimum wage, have you thought it out, namely, that your minimum wage would very likely be a comparatively high wage, all those connected with labour wanting to get the highest, and that therefore it would be possibly an average wage of very much more than we at the moment might think would be the minimum wage?—Yes, I should hope that it might be kept down to what is really a minimum and not a merely average wage.

79840. Where it has been adopted, has that been the result?—Do you mean where it has been adopted compulsorily?

79841. Yes?—I should not like to say.

79842. If it were as I suggest it might be, it would very much alter your view of it, would it not?—If the minimum was raised so high.

79843. By combination coupled with compulsion?—What would be the evil effect then?

79844. You would throw out a still far larger number than I understood you to contemplate in answer to Mrs. Bosanquet?—That would be the danger.

79845. Are you prepared to intervené in the contracts for personal labour in a very large number of cases in the community by saying that a person is not to consider their convenience, but that they are to be put under the State rule in that matter?—I am afraid I should go further in that matter than probably you would like.

79846. If you accept your result, your own figures here show that roughly some 40,000 people made applications?—Yes.

79847. That excludes all the women practically?—Yes.

79848. You propose this wage with regard to the women as well, that will at least double, possibly treble, or possibly quadruple, the pressure on relief works, will it not?—Of course, that would depend entirely upon the minimum that was arranged, and the number of women affected.

79849. And the number that it would not be worth while on the part of the employer to employ?—Yes.

79850. Supposing it runs to these numbers, it is far beyond any Poor Law problem we have yet had in London. There is no comparison even with the worst days, if you have that number thrown on the State to support?—What do you contemplate the numbers would be at all?

79851. I am suggesting to you that that has hardly been thought out by you in making the proposition, but that it must be a very large one is undoubtedly evident if the wage began to be what you desire it to be?—Certainly a number of the women at present employed would be thrown out. One hopes that in time in the case of some of those the husbands would be compelled to betake themselves to work.

79852. What control have you over the husband?—None.

79853. The control you have as to a husband letting his wife work or not is a very small control?—Yes.

79854. What you look forward to as a remedy has hardly any relation to the issue?—There is always the compulsion that if the man could not get anyone to work for him he would be more active.

79855. Are you going to compel the men, is it to take another step later so that we shall compel the men, and shall not let the women work?—No, I do not suggest it for a moment.

79856. If you want to take the step of getting the women not to work, or only at a certain wage, you would have to take your other step and insure that the husband must work, and you must get compulsion?—No, I should leave that to him.

79857. Would you not be liable to get the result of the husband not working, the woman working at a different wage, but still the onus of the household remaining on one and not on the other?—You mean in the case of the women who work at a good wage?

79858. In the case of your own minimum wage?—It is only that if she is to work that she should work at a definite wage.

79859. Is there not to be any discrimination in regard to the relation of the woman to her work, as in this or that particular factory, or in regard to this or that particular duty, because in some cases what the woman wants is to supplement what she is doing. Again a single woman has a different position. Would you not have to discriminate immensely if you were to fix your series of minima on different wages?—There would certainly be very great need to discriminate in various trades—do you mean that?

79860. And you must include surely household work if you are to be fair, because a great deal of the work of woman is household work?—You do not propose they should be paid for doing household work in their homes?

79861. No, outside; a great many women do household work outside?—Yes.

*The Right
Rev. The
Lord Bishop
of Stepney.*

The
minimum
wage, its
difficulties
and effects.

Mr. WILLIAM WILKIE SCOTLAND, called; and Examined.

*Mr. William
W. Scotland.*

79862. (*Chairman.*) You are Superintendent of Works for the Central Unemployed Body in London?—I am.

79863. You have prepared a Statement, which we will take as your evidence-in-chief, if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. I am at present Superintendent of Works for the Central (Unemployed) Body for London, in whose employ (including the London Workman's Fund, their predecessors) I have been for the last two years and a half. I have been in charge of labour colonies at Garden City,

Letchworth, and at Farnbridge, Essex, the work at the former being road, sewer, and general ground work, and at the latter reclamation work. Previously to that I was employed as general foreman by Messrs. W. Griffiths & Co., Ltd.; as foreman with Messrs. Dick, Kerr & Co., Messrs. J. G. White & Co., and Messrs. Siebe, Gorman & Co. I have also been abroad a great deal, and have travelled in almost every country, being in touch with the labouring class all my life.

2. The classes of men with whom I have had to deal during my service with the Central Body have been princi-

large
national
works

pally those of unskilled labour—builders' and dock labourers, factory and warehouse men, and general casual labourers. I found them on the whole to be of good character, although several cases of drunkenness and insubordination were brought to my notice. These have been few, considering the number and class of men. During my experience of the working classes I have found that quite one-third of unskilled labour is out of work four months, taking the year round.

3. The principal causes of unemployment amongst the unskilled class are the introduction of machinery, the bad state of the building trade, and the fact that during the last six or seven years there has been a falling-off in contract work, such as tramway and dock work.

4. During the last three or four years London appears to be the only place where this kind of work is going on, and the men who have been employed by the London firms in the provinces follow them to London, and in most cases do the Londoners out of the work. Then, again, building contractors from the North and South of England doing work in London, in many cases bring their own men, and when the work is completed the men remain behind. I could give many instances of the above from my own experience on tramway work, where, having finished at various places, the men have followed up; and, now that the work is confined to London, they have all flocked here.

5. The effect of unemployment is, in my opinion, very depressing and demoralising. To a single man it is not so bad; if he has the pluck and determination to succeed he can obtain something to do—if not in this country, in another. To a married man, with a wife and family to support, continued unemployment is the first step to ruin, or to becoming a loafer or criminal. To obtain employment a man must keep up a good appearance; and if, after several weeks of unemployment, his once good appearance has gone, he finds it hard to make any employer or foreman believe that he was once a genuine workman. Every day makes a difference to a man in his position. His wife and children also suffer, and the latter are brought up without the proper necessities of life, making them in their turn unfit to do themselves justice when they have to go to work. They have to be supported, and are continually in and out of the workhouse; if the man were in employment this would not be the case.

6. I also think that a rate of wages should be fixed for men working in London; in no case should it be under 30s. per week.

7. *Labour Colonies (Garden City and Farnbridge).*—The work done at the Garden City Colony was satisfactorily carried out, although it took longer to do than would have been the case if a contractor had done the work, owing to the different classes of workmen sent down, a good many never having done any work of that kind before.

8. I do not at all agree with the present system. I would suggest that, if men are to be sent in large numbers to work at such places or on reclamation work, and no accommodation be available, portable sheds, cook-houses and mess-rooms should be erected near the works. (These could then be moved to other places.)

9. I also think that each man should be paid at a fixed rate per hour, to start on his arrival and end on his departure from the works. The cost of board and lodging could be deducted, along with the allowance allotted to his wife and family, from his weekly earnings, and the remainder would be retained by the man. A dry canteen could also be situated on the colony where the men could buy anything they might require.

10. The system of giving sixteen weeks' work only to a man in one year is doing no permanent good. I know hundreds of cases where men have proved themselves competent workmen, but on completion of their allotted time they go back into a worse condition than they were before, simply because there is not enough work generally for the number of men who require it.

11. Some national work should be taken in hand, such as reclamation work, afforestation, and cultivation of land now lying waste. There is work of this kind to last a great number of years, and a large number of men could be placed in permanent employment on the land.

There is no question of doubt that, if properly instructed and supervised, the majority of the unemployed could be doing something useful for the benefit of the nation instead of filling up workhouses and living on relief.

12. Some system of discipline and punishment should be in vogue for those who do not like, or will not, work; and penal and, in my opinion, penal or reform colonies would have a sure effect. Disciplinary measures necessary.

13. If, instead of first going into a man's past history, he were at once sent on these works, his record could be taken on his present form; for in a good many cases a man may have been bad, but is willing to reform so soon as he sees through the folly of his ways. And if a man does not do what is expected of him, transfer him to the penal colony under strict supervision, and detain him for a certain period, making him do task work. On his return to the works he may prove himself a different man. The feeling that some sort of punishment could be dealt out to a man would have a great effect on the majority, and would, I am sure, keep many from going wrong.

14. During my experience of workmen I have found that strictness is kindness to many, while a kind word acts better on some.

15. In summing up with regard to the unemployed, in my opinion about 30 per cent. are well and fit for work, but cannot find any; 30 per cent. are not physically fit to do the class of work we have been giving, but are quite willing and competent to do lighter work (men who are between the ages of forty and sixty, and who are not now required by their previous employers owing to failing health and age, and in many cases to the introduction of machinery. Men at that age out of employment find it impossible to compete with younger men). Proportions of good, inefficient and bad men among the unemployed.

16. The remainder of the men are relics of the past, men who have sunk, if not through their own fault, through being unemployed, and have thus degenerated into loafers and, possibly, criminals, although I do not think there would have been so many of this class if our system of employment had been better.

17. The efficiency of the men at their work, compared with men employed on ordinary contracts, is only fair; men in but I have no doubt whatever that, with the weeding out of the wastrels to penal colonies, and with supervision by thoroughly practical men, a great improvement would take place. The men under me showed great improvement in their physical condition and in their work as time went on. I can give an instance of this on the London County Council parks works this last winter, where thoroughly experienced men were placed in charge, and a great improvement on other years has been the result. Efficiency of work.

79864. (*Chairman.*) What does your work consist of: do you superintend all the works of the Central Unemployed Body?—All the work in London at present. I have been at Farnbridge and Garden City. Anything in the nature of contract work such as roads, sewers, and ordinary ground works. Nature of work supervised by witness.

79865. May I assume that you practically superintend all the unemployed who get employment direct from the Central Body in London?—Yes.

79866. What sort of number have you now?—We have none at work now in London, only on farm colonies. Numbers of men on work provided by Central (Unemployed) Body.

79867. What was the maximum number you ever had at work?—About 1,500 last winter in London, and 500 on colony work.

79868. They would not be continuously at work?—No, they came and went at all times, but the total maximum number of weeks' work we allowed was sixteen.

79869. Have you ever had any experience of labour colonies or work given to the unemployed abroad?—No.

79870. Taking the class of men that you had to deal with, you found them almost entirely unskilled labourers?—Mostly unskilled labourers. Industrial status and character of men employed under Central Body.

79871. What men do you come in contact with; only the men who have been sifted?—Yes. Sifted by Committee.

79872. So you would only come in contact with the best of the applicants?—Yes.

Mr. William W. Scotland.

22 Oct., 1907

Unemployment of unskilled men in London and in provinces compared.

Possible effects of better information as to labour market.

Desirability of minimum wage for certain classes in London.

Changes desirable at labour colonies under Central (Unemployed) Body.

Beneficial effects on men employed at Garden City Colony.

79873. On the whole the men you had to deal with behaved well?—They did fairly well. Of course there was a certain number of them committed themselves in one way or another; being slack on the work, insubordination, and there were cases of drunkenness.

79874. That one might expect?—Yes, you would expect that under any conditions.

79875. Did they behave better or worse than you expected, taking your previous experience?—Just as well as any other men.

79876. You found out that in London about one-third of the unskilled labour is out of work four months taking the year all round. Does that refer to the class that was under your superintendence or to unskilled labour generally?—That is unskilled labour generally in London from my own observations.

79877. That unskilled labour is for four months of the year out of employ?—Yes.

79878. Surely that would not be all kinds of unskilled labour but only of certain classes?—I should say mostly casual labour.

79879. The very large proportion of these persons were connected with the building trade?—A good many of them.

79880. You would not call those casual labourers?—The building labourers are casual labourers just at present.

79881. The building labourer is taken on by the week, is not he?—An unskilled builder's labourer works by the hour and is liable to be paid off at an hours' notice.

79882. Who engages him, does the skilled mate engage him?—The foreman as a rule engages the men, not the master himself.

79883. Are there not certain skilled men who select their unskilled men?—There are some cases, but not many. Sometimes a bricklayer or a mason will find his own mate, for instance.

79884. Would not a bricklayer's labourer of good character probably be continued in the employment?—Perhaps on that one building providing the weather was suitable.

79885. The general practice in the building trade then is to take on only by the hour?—Yes.

79886. But the others are on permanently?—So long as the work lasts.

79887. So they would not be casual labourers during that time?—No, not during the time they are in work.

79888. Is it not in this way that they are paid by the hour when engaged by the hour?—If a man is paid by the week he gets a week's notice as a rule, but if he is paid by the hour he gets an hour's notice.

79889. A man would not be turned off in the middle of the day, except for misconduct?—Sometimes they are turned off in the middle of the day for want of work.

79890. You attribute, as one of the principal causes of unemployment, the bad state of the building trade, and a great falling off in London of contract work?—Yes, and in England generally.

79891. I suppose there is a sudden expansion of this sort of work and then a contraction?—Yes, a falling off. I may mention that about ten years ago there was a big rush of tram works all over the country, in the provincial towns especially, and the London contractors going up there of course created a lot of labour in the tramway work where it had never been done before by the men in that town; when the contractor left those men followed him, and now the work is confined to this part of the country they have all settled here. There are a great many men that I know of personally to-day who have been employed in the provinces, good men, and who are now out of work in London.

79892. Is it unskilled labour on the trams?—About one-half unskilled.

79893. In London there are a great many trams worked by the London County Council. Does that affect the general market or do they rely on their establishment?—The tramway contractor brings his own men or engages his own men.

79894. That work is done by contract?—Yes, the constructional work.

79895. It is the contraction of this work that has a good deal contributed, in your judgment, to the distress in London?—Yes, a good deal.

79896. Have you any experience in towns other than London of unskilled labour?—Yes, in most of the provincial towns of England.

79897. Should you say that the four months' lack of employment was characteristic of the unskilled workmen outside London?—No, I would not.

79898. London is the worst?—I should say it is much worse than any other town.

79899. As far as you know was it always worse, or has it only of recent years been worse?—I should say more or less it has always been worse. There is always more attraction to come here than there is to go to any provincial town.

79900. Should you say that the unemployment in London can be at all attributed to the unskilled labourer not knowing where to go for labour?—Yes, a good deal to that.

79901. Supposing there were proper methods of distribution of information, the number of the unemployed might be diminished or the periods for which they were out of employ diminished?—That might be, but I do not suppose very much.

79902. Why do you think there ought to be a minimum wage fixed in London?—I have known carters and contractors paying men who work on London County Council contracts 18s. and £1 a week. If a man has a wife and family he cannot reasonably pay for rent and food for his wife and children on £1 a week in London.

79903. Supposing you fixed a minimum wage in London, your object would be to secure that minimum wage to the Londoner, but would not it have the effect of drawing up more and more people from the country?—It may have that effect, but I do not mean to apply the minimum wage to every man: I only mean certain classes of work.

79904. Your belief being that the rate of wage is unduly reduced owing to this considerable number of persons out of employ?—Yes, and the men really are worth 30s. As I said they have to work sometimes ten and twelve hours a day for six days a week.

79905. The work at the labour colonies was on the whole, in your judgment, satisfactorily carried out, though it took longer than if a contractor had been there, but you do not like the present system. Would you just amplify that a little?—By our present system the man's Central wife is getting paid a fixed rate in London, and he also gets 6d. or 1s. on the colony for any necessary wants he may require. I think it makes a lot of the men inclined to go sick without a cause, and to knock off work at the least sign of rain, knowing full well they will be paid all the time. It really attracts men to come from contract work on to this, knowing they will get full pay.

79906. You say there should be portable sheds so that the men can get their food?—Yes; in some cases we have had to send the food on to the work for the men and they have been some distance away.

79907. If you had the cookhouses and the sheds close to the work that would be a check on the men?—Yes, and there would be less time wasted in walking.

79908. You would pay them a fixed rate, the rate starting on his arrival at and ending on his departure from the work?—Yes.

79909. What is the present system?—The man is paid the day that he leaves London to get on the colony, and as a rule it takes all the day to get there. At Farnbridge, when I was there, he left London at 9 o'clock in the morning, and did not arrive on the colony until 6 or 7 o'clock at night. He could have got there by dinner time and worked half a day if he had liked. They take advantage of that.

79910. The system is rather an inducement to the men to take as long as possible in getting to the place?—Yes.

79911. The system of giving sixteen weeks' work does no permanent good, do you think it improved the physique and morals of the men?—Yes, it did a great deal.

79912. Did you follow these men up at all to see whether they got employment?—I found a good many of them employment myself with a contractor I knew in London,

Mr. William
W. Scotland.
22 Oct., 1907.

when the Garden City colony finished I sent twelve men down to work on the London County Council trams at Rosebery Avenue, and they worked the whole time the trams were being laid, which was about four months, after leaving the colony.

79913. Did they give satisfaction?—Yes, every satisfaction.

Prejudice
against men
assisted by
Central
Unem-
(ployed)
Body.

79914. Is there at all a prejudice against men who have been taken on by the Central Unemployed Body?—They did not go through the Central Unemployed Body.

79915. Is there a prejudice against them at all?—I think so.

79916. That is to say, if there were two men, one of whom had gone through and one had not, the other would get the preference?—I should say so.

Proper
duration of
work to
be given to
men under
the
Unemployed
Workmen
Act.

79917. What would you suggest with regard to the amount of work to be given those men? Of course if you employ them for longer than sixteen weeks you employ a less number?—Yes, but that depends entirely on the amount of work taken in hand.

79918. Would you rather take a limited number of men on and keep them until they get something to do?—Yes; although I should like to see all the men who were willing to work, able to obtain it.

79919. You think that although the number who would get this work would be less, the permanent benefit to the community would be greater?—Yes.

79920. That is to say, you would have put a certain number of persons who are slipping down the social scale into a position to rehabilitate themselves?—Yes.

79921. You prefer that to giving work to a large number, who drift back when the work is over to the position in which they were before?—Yes.

Necessity of
providing
more work.

79922. You would like some big work to be taken on hand?—Yes.

79923. You have given that view, I suppose, really looking at it from the superintendent of works' point of view?—I am looking at it from a practical point of view; if we are going to deal with the problem we must find work to put the men to. We are only dealing with the fringe of the question by dealing with 1,000 men when there are 40,000 wanting work.

Proper
method of
making
relief work
less
attractive.

79924. Of course, if you include anything of that kind, you would have to have strict discipline, and you would also have to make the work less attractive in some way or other than work which the men could get outside?—I agree with that altogether. I should say pay him so much less per hour, and you would not be putting him on the same footing as an ordinary workman.

79925. Unless that was done, there would be no inducement for a man to go outside?—No.

Uselessness
of in-
vestigation.

79926. What is your view about investigation? You do not say much there about the past; you care about the present?—Yes.

79927. Did you find any cases where the report on the investigation as to a man's conduct was not subsequently justified by his work?—A great many. They did not come up to expectations at all.

The
proper
test for
the un-
employed.

79928. So you are not a great believer in investigation at all?—I am not. I think if the proper man were found to select the men, a contractor's man, for instance, who had handled a large number of men himself, he could generally tell whether a man is a good man or not by looking at and conversing with him.

79929. In that case all the ganger would do would be to look at the physique of the man and his capacity. He would not go into questions of his family?—No.

79930. I suppose you rely really upon the way the man complies with the test put upon him?—Yes, and that has a great deal to do with the foreman, how he manages and humours the men.

Supervision
on relief
works.

79931. I suppose you had to have considerably more supervision than you would have had if they had been ordinary labourers?—Yes, more gangers on the job.

79932. Can you tell us what the difference was. Supposing you had, say thirty men working, what sort of

supervision would you have had if they had been ordinary labourers?—Do you mean gangers over them?

79933. You would have one ganger in each case—thirty is about the number, is it not?—Yes, thirty would be the right number for one man.

79934. Of course, the supervision is more expensive in the case of these untrained men?—Yes, it is. You could put fifty men under a man if they were all good workmen, but you would have to have two over that same number if they were not.

79935. Your idea of working this thing is to have a penal colony to which you could, under certain conditions, transfer a man who misconducted himself?—Yes. Need of a
penal
colony.

79936. Summing up your opinion as to the condition of the unemployed, you say that about 30 per cent. are efficient, 30 per cent. are not up to the average physical standard, but can do light work, and about 40 per cent. have for some reason or another degenerated into loafers?—Yes. Proportion
of efficient
men on
relief works

79937. That is to say 30 per cent. of the picked men were efficient for general purposes?—Yes.

79938. Speaking of the men generally who have passed through your hands, have any considerable portion of them, beyond those you have just mentioned, got permanent employment?—I do not know of any more; I only know those that I have found work for myself, independent of the Central Body. They all drift back into their old state. A good many of them may have got work as several left our works stating they had found employment, but I do not know if it was permanent or not. After em-
ployment of
men leaving
relief works

79939. Did you find that the locality from which the men came at all governed their conduct?—Did the men from some parts behave better than those from others?—Yes, there was a difference. Difference of
character
among men
from different
parts of
London.

79940. Which would you say is the best part of London?—The northern part of London is the best and the south.

79941. The east and the west are left, which of the two is worse?—The east is worse, there is more casual labour there. I mean east, generally south-east, east, and north-east.

79942. It is worse than the west?—Yes.

79943. Do you get many from the west?—Very few, there is a small percentage comes from there.

79944. We have heard a good deal about the disadvantage of casual labour. Is the tendency of casual labour for the men to loaf whilst working, is that one of the evils of it, or are they so paid that they think they are obliged to work, I mean in their ordinary vocations?—I do not think they loaf when they work. Do you mean in the labour colonies? How far
casual
labourers
tend to
loaf.

79945. No, casual labour where the men are taken on by the hour, and so on?—They have to be watched. I think a man in any condition would take advantage of the foreman if he was not looking, a good many of them anyway. It all lies with the supervision, I think. I always found these men worked fairly well if they were looked after properly. A good foreman makes a good man as a rule.

79946. On the whole I think your report is highly favourable to their conduct and the work they did?—Provided they are properly supervised; I have known cases where they have not been properly supervised and they have not done very well. Quality
of work
done under
Central
Body.

79947. Did you have the St. James' Park work under you?—No, only the London County Council parks.

79948. Were they not working under you in that broad part of St. James' Park?—That was in the Royal Park, and they superintended their own men; the men that were at the Garden City the first year conducted themselves very well and worked very well.

79949. What you have done, as you say, only touches the fringe of the unemployed?—Yes. Weakness of
Unemployed
Workmen
Act.

79950. Do you think the system you have been working is capable of great expansion, putting the financial and other questions aside; you say there is not the work to be done?—No, there is not the work to be done, that is the great difficulty, and I don't think very much of the system.

Quality of
work done
under Central
(Unem-
ployed)
Body.

79951. (*Sir Samuel Provis.*) You were satisfied with the work of the men generally, do I understand?—I was quite satisfied with the work that I supervised.

79952. You considered it satisfactorily done, and that they worked as well as ordinary men would have worked?—Only fair, not the same as ordinary men. I say in the last paragraph that the work was only fair compared with men on ordinary contract work.

79953. I do not quite see how you reconcile that with the statement that they did their work very well. You make a distinction between what you would expect from an ordinary labourer, an ordinary workman, and one of these men?—Yes.

79954. What sort of standard did you set up. For instance, how many men would you say would be required to do the work which would ordinarily be done by a certain number of ordinary labourers?—It varied a lot; on the average about two men to an ordinary navvy's work.

79955. You would require about double the number of men on the average?—In some cases not so much as that.

79956. Is that because they do not feel an interest in the work, or is it because they feel that they have a secured position, or what should you suppose is the reason?—I give the reason that they are run down, they are weak, and they also take advantage of the committees they have to deal with. I have known men come to me and say if I put them off they would go and tell some of the committee and get me the sack, and things like that.

79957. That is if you exercised proper discipline over them?—Yes.

79958. If you thought they were unsatisfactory and had to go, they would say they would make it unpleasant for you?—Yes.

79959. Did they show as a rule any desire to get other work; were you able to judge of that?—I could not judge that.

79960. They had a day off, had they not?—Saturday. Saturday is not the proper day to give them. There is no employer of labour that would employ a man on Saturday, they will tell him to come back on Monday morning.

79961. You think another day than Saturday would be a better day for the remission of work in order to obtain employment?—Yes.

79962. I suppose Saturday was taken because of the Sunday following, so that they could get to their homes?—I was thinking of the men in the London County Council parks, they could get home at any time.

79963. I thought you were speaking of the Hollesley Bay men?—The men from Hollesley Bay got from Friday night to Tuesday morning.

79964. So they could go on Monday?—Yes, to look for work.

79965. Did you find any considerable number of them tried to get work?—So far as I could hear, they did not try at all.

79966. They were satisfied to stay on with you, as long as they were allowed?—Yes.

79967. Did you exercise any choice; had you any power of exercising any choice as to what men should be sent to any particular piece of work?—No, I could only make a statement to the committee that none but the thoroughly strong, and men capable of doing this class of work should be sent. It was then left to the distress committee to send suitable men.

79968. You did not choose the men because you thought they were suitable for the work at Fambridge, or in the London parks, the committee decided?—Yes.

79969. (*Mr. Lock.*) When a man turned up at Fambridge at the end of the day, instead of mid-day, what happened to him?—He was generally told, when I was there, that he had done wrong, and if it occurred again he would be sent back.

79970. Did you have to sack a good many men in that way?—Yes, I had to sack twenty or thirty altogether during the time I was there.

79971. Out of what number?—300 or 400.

79972. Did you find that the men who came to you from the east of London were more spoiled men than elsewhere?—Yes, a great deal.

79973. What do you attribute that to?—I should say that the men looking after their interests were not the proper men for the job. They coddled the men too much, although the men from Poplar were on the whole fairly good, because the clerk to the committee is capable of knowing and selecting the best men.

79974. Were they men of the type you mentioned, who ran to the committee trying to get influence, and that kind of thing?—Yes.

79975. They knew the ropes?—Yes, a great many of them travelled from one colony to another.

79976. And yet those men passed through the committee's sieve, and had been appointed to come?—Yes, their record on paper had been put before them; that is all I know; I do not know the system of selection.

79977. They had come through the committee to you?—Yes.

79978. You talk of payment by task; do you mean by task work, paying a rate of so much per hour for measured work?—Rate per hour on the work; if they work an hour, they get paid for that time.

79979. Have you at all tried the measured work of so much per task?—I did in Garden City.

79980. Did that answer?—Yes, very well.

79981. Why was not it tried generally?—The work at Fambridge could not be done in that way because it was very difficult work, but at Hollesley Bay I should say it could be done, as regards double digging.

79982. You know the general result of experience is that not only is ganging much easier, but the men do much more work if they get task work?—Yes, but there are kinds of work you cannot do by task work.

79983. If you were a contractor you would not employ a city man to whom you could not apply the task system?—No.

79984. Have you any power of selection as to what task you use a man on?—Yes.

79985. You say something about a 30s. wage for all; do you mean that that should apply to all the men employed in this work?—I do not mean on unemployed work; the men on such as tramway work, or navvy work.

79986. Under contract?—Yes.

79987. With regard to this number you divide it into three sections, and such a thing as 12,000 men if there were 40,000 applications would cover one of your sections?—Yes.

79988. Supposing we take the whole of those men, namely the section that was rather hopeless, what do you say might have to be done with them?—If he was a loafer?

79989. I think it is the last class which are generally unfit: "are not physically fit to do the class of work we have been giving but are quite willing and competent to do lighter work; the remainder of the men are relics of the past, men who have sunk if not through their own fault, through being unemployed" and so on?—Those who are able to work and won't. I should put them in a penal colony by all means. The others should be found some lighter task.

79990. Is not that rather a large order, 12,000 on a penal colony?—It is the only way to solve the problem. It is better that than to let them drift.

79991. Would you bring them up before the magistrates?—Yes, get a magistrates' order to compel them to work.

79992. Amongst the men you had before you there were some of this very class, I suppose?—Yes. The percentage which I take is that of the general men out of work in London, not the men that passed through our hands.

79993. (*Chairman.*) I understood they were the selected men?—The percentage I take here is not of the men

Mr. William W. Scotland.
22 Oct., 1907.

Character of men coming from East London to relief-works.

Question of payment by task on relief-works.

Causes of comparatively low quality of work done.

Question of furlough to men on relief works under Central (Unemployed) Body.

Choice of the men for particular works.

Mr. William W. Scotland. who passed through my hands: it is from my general observation of the unemployed of London.

22 Oct., 1907. 79994. (*Mr. Loch.*) 30 per cent. are of the loafing class?—Yes.

79995. And ought to go to a penal colony?—Yes.

79996. Have you had any experience about a penal colony?—I have not.

Difficulties of penal colony.

79997. Judging from your most difficult class of men, do you think you could manage a penal colony?—Yes, providing that power were given the man in charge to put some sort of punishment or restriction upon them.

79998. The difficulty is very great, is it not, of managing these broken labourers in a penal colony, some of the men strong, some of the men weak, and so on, and supervising them so as not to let the standard drop?—I do not think the supervision would be any difficulty. The difficulty would be obtaining the various kinds of work to suit the men.

79999. Is not that so great that the tendency is in criminal colonies to let the standard of work drop, one man putting it down for another?—Yes, I should say so.

80000. If you do not succeed in that your penal colony breaks in your hands?—If you cannot find the work suitable for the men it would.

Difficulty of finding suitable jobs for men after they leave labour colonies.

80001. If you take your next class of course these are a very large number, that class of 12,000 are not fit physically to do the class of work, but want lighter work; they are men between forty and sixty. What do you say they might do?—I do not know.

80002. It will again be a very large order to find work of this sort for 12,000 men. You mentioned Garden City. Were you in charge of the men there?—Yes, the first year, under the London Unemployed Fund.

80003. Was it not the case that in the Garden City a great deal of trouble was taken to allow the men opportunities of settling in the country or getting work locally, and so on, when they were leaving?—There was a lot of talk about it, but there was not any work offered; only in two cases, and that was accepted.

80004. What would you have done that was not done to enable them to settle in that Garden Colony again?—I do not see where they could have offered them any work; there was not any work going.

80005. That is to say practically after they had done their work at Garden City they were more or less at loose ends?—There was no work for the men to do; the work that remained to be done was given out to a contractor who gave it to his own men.

Reclamation work.

80006. Do you look forward, if you continue that work year by year, to a considerable number of the men passing through your hands being put on the land as could be best arranged?—I have no experience of farm colonies, or of work on the land. I should say reclamation work would be the best to put them on.

80007. Your reclamation work would have to be strongly backed by a penal arrangement?—Yes.

80008. It would fail without it?—Yes, you would be doing some men a good turn, and doing a great many of them a bad turn by picking them up and putting them back again.

How far the labour colony is deterrent.

80009. It has been stated in evidence that the test of their having to get out of London is a good and sufficient test by way of a deterrent, do you think that it is?—I do not think so.

80010. Would you give us your reason why you think it is not sufficient?—A lot of men under the present system look upon it as going down into the country for a week or a fortnight's holiday, because we do not force them to work as we ought to do.

80011. In fact the bargain is one which they would gladly accept as a better bargain than the open market, would they?—A lot take that view.

Amount of money received by the men on labour colonies.

80012. With regard to the relation to the family, have you found that the men saved their money up till they went home, or did they spend it on their pleasures? The money they had was 5s. or 6s. a week, was not it?—They did not have 5s. or 6s. a week, on our present system they only get 6d. a week.

80013. They used to get more, did they not?—No, 6d. a week to the men, and the remainder to the wife. In some cases at Fambridge they got more because it was heavier and dirtier work, that was 1s. 6d. a man, but in a lot of cases the wives send the men money.

80014. Did that money go to the better class men?—There were very few that did not get money sent from their wives.

80015. So that the money that was given to the women for the family, apart from the husband, would be handed over in some degree to the husband while he was on the work?—Yes, mostly 1s. 6d. or 2s.

80016. Did you have much trouble with drink, their Drunkenne breaking away to go to the public-houses, or that sort of at Fam- think?—At Fambridge I did have some trouble with bridge and drink, because there was a public-house close to the Garden Cit colony, and at the start I had a good deal of trouble colonies. there, till I got them under control.

80017. At Garden City?—At Garden City there were only six cases of drunkenness all the time.

80018. Because that was at a distance from the public-house?—The nearest public-house was three miles away.

80019. While you say on the whole the men worked well, may I say the general impression of your evidence result of is that unless very great changes were made in the system relief-work a great many men would be employed who should not, system as and many would be hardly bettered by the employment regards the they got?—Yes. There would be a great many men men em- being helped that were not worthy of help. ployed.

80020. And whom the help did not benefit?—Whom the help did not benefit at all, although they would be weeded out eventually.

80021. That is a lengthy process; what is said of them when they are handed over to be selected does not at all point to the ultimate selection?—No, it does not.

80022. (*Mrs. Bosanquet.*) Can you tell me how it is with Question of ordinary contract navy work, do they generally provide dwelling places for the men?—No, never, unless accommo- they are well out in the country where there is no ac- tion for men commodation available. on contract works.

80023. Does not that lead to great hardship sometimes?—It does, a great deal.

80024. Would it be possible to have any general recognition that that must be provided?—I should say there ought to, and it should have been done many years ago.

80025. Would there be any large opinion against such a thing?—By the men themselves?

80026. Rather by the contractors?—I should think there would, still I should say the contractor ought to be able to raise his price for the tender accordingly.

80027. (*Mr. Gardiner.*) Some contractors make provision, do they not?—Yes, in cases out in the country, such as railways, they provide huts for the men.

80028. And certain men of particular repute do?—I have worked with the biggest contractors in this country, Dick, Kerr & Co., and they have never provided accommodation for the men on anything we have done they had to put up with any little hovel they could get.

80029. Do Pearson's provide accommodation?—As a rule they do large contracts where there is not sufficient accommodation available.

80030. I am afraid I do not know what happened to every hundred men they sent out to you as selected. Would you say that only 30 per cent. of them were satis- Proportion of satisfac- factory for your purpose?—For the work that we gave tory men them to do. on relief works.

80031. Only 30 per cent. of the selected?—For the kind of work. Of course, others would work if they were fitted for the task.

80032. With regard to the remaining 70 per cent., some were not physically fitted or there was some other reason?—Yes.

80033. (*Dr. Downes.*) With regard to the housing of Housing of the men, it has been alleged that one difficulty a con- men on tractor has to meet with arises from what is called contract subbing?—Yes. works.

80034. He has to keep more men than he really wants because he is not sure that the whole of the men will be ready for work at a given time?—I have not found that the case, and I have had 500 or 600 men under me. I have never found any difficulty from subbing; they always turn up the next morning.

80035. How did you house your men at Fambridge?—In huts.

80036. Did you put them up?—No. They were previously used by workmen and their families employed at an engineer's factory which is now closed down.

90037. What sort of huts were they?—Corrugated iron outside and match-boarding inside.

80038. Have you finished your job at Fambridge?—I did not finish it; I was taken away to supervise the London work.

80039. Have they finished the work?—Yes, about two months ago.

80040. What became of the huts?—The huts are still there.

90041. Did they buy them?—We only rented them.

80042. At Garden City how did you manage about the housing?—There were huts there.

80043. Provided by Garden City?—No, we built them; and the agreement was that they should take them over when we finished the work.

80044. What is the cost of hutting, roughly?—You can house 200 men with mess-room, day-room, and kitchens, and suitable accommodation for about £2,000.

80045. About £10 a head?—Yes.

80046. Would those be huts you could take away in sections?—Yes, portable huts.

80047. What would be the life of a hut like that?—It all depends on how they were handled when shifted. I should say they ought to last for twelve or fourteen years, or something like that, with care.

80048. In your evidence you tell us that the contractors' men who come to London are apt to stay there?—Yes.

80049. What is the reason of that?—I think there is a different life in London to what there is in the provincial towns; there is more attraction and temptation for an ordinary working man to stay in London.

80050. The attraction of pleasure?—Yes; and there is a better chance of picking up casual labour.

80051. Is there any general idea that it will be provided by distress committees or guardians?—No; I do not think the majority that come know anything about distress committees.

80052. In your suggestion that the men should be paid a fixed rate per hour, would you give the workers and the shirkers the same?—For a start I would, and weed them out afterwards.

80053. How would you deal with the shirkers?—Send them to a penal colony—discharge them altogether from the works.

80054. Have you had any experience where men have had to earn their food in any of your unemployed places?—No, I have not.

80055. Is the food all found for them?—Yes, in all our colony works.

80056. No matter how slack a man is he is sure of his food?—Under our present system we give them their allowance and feeding and everything, lodging and all, whether they are slack or not; if they are slack we have to put up with that for a certain time to see whether they are going to do any good or not.

80057. Would it be an advantage if the man simply had a subsistence found, and he had to earn what he wanted to supplement it with?—For his wife and family?

80058. No, for himself in the colony?—At present he only gets 6d. a week.

80059. But he gets his food. Suppose he has a loaf of bread found him and he wants a sausage, he has to earn a sausage. Would that be an advantage?—I do not think so.

80060. Why do you not think so?—Because a good many of them if they did make a little bit of money would spend it in beer instead of food.

80061. I am assuming that he had something he could not spend in beer. Could not he have a token instead of money?—That is what I mean by paying him so much an hour, giving him his food and deducting it from his wages.

80062. You do it another way with the same object. The dry canteen would be a canteen where he could not get liquor?—He could not get liquor at all.

80063. It has been alleged that in some cases men cannot get a job on ordinary work unless they make friends with the foreman; have you heard anything of that?—Yes, any amount of it. I know cases of dock and tram work where the foreman had half-a-crown a week from each man, and if they did not pay half-a-crown to him they got the sack.

80064. Is there any means of stopping that?—If the superintendent over the works knows anything about it, and if he is a straightforward man he would sack the foreman, I should think, and the man who gave the half-a-crown too.

80065. Do the men themselves combine against the foreman?—I have known cases of their doing it, but they got the sack—the whole lot.

80066. (*Miss Hill.*) Would wooden sheds be cheaper than corrugated iron?—I did not mean to put corrugated iron places up, corrugated iron outside with match board- ing inside.

80067. (*Professor Smart.*) With regard to that general statement of yours that quite one-third of the unskilled labour is out of work a third of the year, do you mean the unskilled labour of London or the country?—The unskilled labour of London.

80068. And you include those who are thorough casuals and do not want to work more than a certain part of the year?—Yes.

80069. You include the whole body of casual labour?—Yes.

80070. With regard to the minimum wage, why a minimum wage for London?—Because of the rates, and accommodation in London is much dearer than in provincial towns.

80071. Does not that indicate that you must have a minimum wage all over the country?—I should say it would come to that.

80072. Why 30s.?—Because I think 30s. is little enough for any man to be paid at the work I mentioned—at navy work or carting.

80073. Do you think employers would agree with you as a rule; would they be willing to pay 30s. to that class of worker?—I do not think they would.

80074. What about the enormous number of men who could not be employed, whom employers would not take on, at 30s. a week?—If they are not worth 30s. a week the employers would not employ them; they would get other men; it would be relieving the labour market just the same.

80075. That is one way you would take to relieve the market, to take the inefficient away?—Yes.

80076. (*Mr. Bentham.*) With regard to a remark you made to the Chairman, you said you only meant the minimum wage for certain classes?—Yes.

80077. What classes are they?—Navvies, men working on tramway works or building works, or carters—carters generally in London.

80078. (*Professor Smart.*) That would be putting a premium on those particular classes?—Yes.

80079. You think many of our paupers might be doing something useful, as you say?—I do not know, if they are fit they ought to be doing something.

80080. You mean to imply that a great many paupers could be doing something for their living. Do you find that opinion held by workhouse masters, for example?—If a man is fit and able, instead of going to a workhouse he ought to be put to some work to benefit the nation.

Mr. William W. Scotland. 80081. After all, are there many of that class in work-houses?—I have no experience; only what I hear.

22 Oct., 1907. 80082. With regard to the proposal of yours in Paragraph 13 that a man should be at once sent on to the works without going into past history, would that be quite fair to the respectable men?—Yes, because if the man that was selecting the men knew what he was doing when they came before him he would select the best case, naturally.

80083. I thought you said the man should be sent at once to the works without going into his past history?—I mean that a man should pass the inspector at once without going into his family history, for them to be questioned individually without going into his family history at all.

Penal colonies for men refusing to do fair day's work. 80084. Could you transfer a man to a penal colony without a conviction?—The only conviction would be his refusal to do a fair day's work.

80085. That is a new form of offence, is it not?—I should make it an offence.

80086. You would require legislation for that?—Yes.

Elderly men among unemployed. 80087. Is it your experience that there are more men now than formerly between the ages of forty and sixty able to work whom employers will not employ?—I should say they are on the increase just now.

80088. If so, does not that constitute a new phenomena?—Yes.

State relief-works. 80089. (*Mr. Bentham.*) In Paragraph 11 you make some suggestions of work of a different kind from that which has already been done by the Central Unemployed Body for the employment of the men, such as afforestation etc., and you think that would be much better work than the work which has been found for them. What I want to know is whether you would have that kind of work always open to resort to by men when they are out of employment?—Yes, I say there should be that kind of work always open.

80090. So there would be always, in good times and bad times, men selected for this kind of work?—Yes.

80091. As relief work, not as ordinary work?—As relief work only; just to relieve the surplus labour.

80092. You did not mean that afforestation should be taken in hand by the Government as an employment on economic grounds?—I say it should all be taken on these lines by the Government. I do not think it could be done with any success without.

80093. As you would have no test whatever as to the character of the men employed on such work, it would be open practically to all who came, if there was room for them?—Yes.

80094. Have you considered what effect that would have upon men who are in ordinary employment now, and are contributing towards their trade union for out-of-work payment, in a sense insuring against unemployment?—If the work was made so strict they would not want to come there at all; they would want to keep clear of it.

80095. Strict in what way?—Do not pay them the same rate of wages as men in employment are getting.

80096. You would pay them a less rate of wages?—Yes.

80097. A less total amount in a week than they would get by ordinary employment?—Yes.

80098. You mention amongst the kinds of work, reclamation work?—Yes.

80099. You suggest the reclamation and cultivation of land now lying waste, do you mean with the object of settling the men on that particular land, or merely reclaiming it for sale?—Reclamation for settling if there are any men wanting to settle on the land.

80100. Or to let as farm land?—Yes.

80101. All the work you have in view practically would not pay for the labour employed on it, would it?—No.

80102. Can you suggest any kind of work that would?—No, I do not think so. I do not think any work could pay with unemployed labour.

80103. Have you thought about another thing, and that is: The Government to employ men in these occupations on their merits, that is as ordinary workmen at certain times of the year, only setting on those that could be efficiently employed, and pay them the regular rate of wages, thereby relieving the labour market at certain times of the year?—I have. That is a good suggestion, but what would become of the wives and children in London? Would you leave it to the men to send the money home?

80104. When large contract works are let for reservoirs and such works, to ordinary contractors, the men take their wives and children with them, or make their own arrangements. Would it not be equally safe to do the same thing with regard to Government work of this kind?—It could be tried, but a good many men on contract work do not send the wives money; the wives and children suffer; I know a good many of the men that have worked under me did not send their wives anything for years.

80105. What happens to the wives and children?—They have to struggle on as best they can, and take up employment.

80106. (*Chairman.*) Are you an engineer by trade?—As a boy I served my time in the merchant service. I am a diver and also a contractor's general foreman and have served three years in the Royal Engineers.

80107. Assuming the present Act or anything like it was to be in operation for a certain number of years, is it not rather essential that there should be a scheme of works prepared in advance so that there should be plenty of time to think out what is the best possible way of utilising this unemployed labour?—I should think that is the best possible way of doing it.

81108. It is rather a haphazard way of doing it now?—It is scandalous the way the thing is going on now.

80109. You really have to find jobs, I suppose, in order to employ the people?—I have been employed all the summer trying to find work for the unemployed and I cannot find any now, with the exception of some the London County Council are going to grant us; other than that I cannot get any. I do not see where the Central Body for London can find anything when everybody is against them. Something must be done by the Government itself.

80110. When you say everyone is against them, the borough councils, I suppose, have their own ideas?—Yes, the borough councils have their own staff of men, as a rule, and can just find enough for them, without finding work for the unemployed labourer.

80111. You would not like them to displace their staff?—Not to employ our men, that would not be fair at all.

80112. If it is to be done at all in the future, the only way is to have the preparation of plans in advance?—Yes.

Mr. Thomas Smith.

Mr. THOMAS SMITH, called; and Examined.

22 Oct., 1907. 80113. (*Chairman.*) You are agent for Mr. Joseph Fels and manager of the Nipsells Dairy Farm at Mayland in Essex?—Yes.

80114. You have been good enough to prepare two statements, one as to distress due to unemployment and the other as to Mr. Fels' small holding experiment at Mayland. If you will kindly hand them in, we will treat those as your evidence-in-chief?—Certainly. (*The Witness handed in the following Statements.*)

REMEDIES.

1. *Labour Farms or Colonies.*—In discussing the value of the work done on labour colonies it is necessary that there should be a clear idea as to the kind of men who are sent to them.

2. Unemployed men of the better class will not apply to a distress committee until they are reduced to extremities.

Question of State works at certain seasons at ordinary wages.

Difficulty of finding work under Unemployed Workmen Act.

Objections of better class of unemployed to applying to Distress Committees.

(a) Because an atmosphere of charity permeates the operations of a distress committee.

(b) Because they hope, by remaining near the usual avenues of employment, to get work at their own trades.

(c) Because relief work affords no permanent alleviation of their distress (after a short period they return really worse off—they are no better in pocket, and are out of touch with the various means of obtaining employment).

3. It is therefore easy to understand that men on labour colonies are mostly of a low type. From personal observation I classify them roughly as follows:—

25 per cent. good.

50 per cent. fair (inefficient, slow, or stupid).

25 per cent. bad (lazy, or of doubtful character).

4. Many of the men arrive at the colonies in a poor and emaciated condition. After arrival, a few weeks must necessarily pass before they are in a condition for hard work. They leave greatly improved in health and physique.

5. When physically fit, they are still only suitable for the simplest unskilled labour. The period of their stay on the colony (usually about sixteen weeks) does not afford any chance of their becoming expert at any of the work. In judging results these facts should be borne in mind.

6. When at work, the men are not sufficiently supervised. Those who happen to be under the charge of an experienced ganger (usually a paid local man) work satisfactorily, but this system needs extending. Generally the men work with very little oversight, have no tasks set them, and the average output is very low. The men thus get into a slack habit, bad for themselves and bad for the system.

7. The knowledge that there is no permanence in their employment, no matter how well they may acquit themselves, has also a great effect in damping any zeal they would otherwise have.

8. I suggest that an efficient system of supervision, coupled with rewards in the form of better pay for selected men, the possibility of a permanence for the best of these, and the speedy rejection of the lazy and doubtful characters, would overcome most of the foregoing objections. These rejected persons can only be suitably dealt with in penal colonies formed for that purpose.

9. It is not sufficient simply to find work for the unemployed; the work ought also to be necessary, and, as near as may be, it should be remunerative or self-supporting.

10. The quality of the work done by the men at Farnbridge and Hollesley Bay, under expert guidance, is quite as good as that done by ordinary paid labour. The crops raised at Hollesley Bay are excellent, but the market value of the produce is far below the cost of raising it. This result is unsatisfactory, but is to a large extent remediable. Ordinary farm and garden crops, to be sold in a distant market, cannot be produced from large areas profitably by hand labour. If half the number of men, or twice the area of land had been used, supplemented by horse implements, or a choicer description of produce, needing more intensive methods of cultivation, had been grown, the returns would have been much more favourable.

11. The question of competition is an important one. At first sight it seems cruel to add further competition to that which our own home growers have to meet from abroad, but when it is remembered that most food stuffs are produced at home in insufficient quantities, and have to be supplemented from outside sources, to in any way discourage Britons from producing more at home to avoid competition seems to be a policy of despair. Our own people should have every help and encouragement to compete with the foreigner in the production of articles of general consumption. If our markets are supplied more freely with fruits, vegetables, and salads of home production, foreign supplies will diminish in proportion. It is noticeable that there are always larger supplies from abroad of any article of which there is a short crop here, attracted, no doubt, by the higher prices.

12. There is much room for improved methods of cultivation, and for dealing with the numerous insect and fungoid pests with which growers have to contend, and the extension of farm colonies would tend to a greater interest being taken in such matters by the Government, to the ultimate benefit of all concerned.

13. Summary:—

(a) The men on farm and labour colonies are mostly inefficient, with certain percentages of good men and idlers.

(b) The men gain much in health and physique through good food, fresh air, and regular hours.

(c) The absence of sufficient supervision and of any prospects for the future causes slackness, which leads to demoralisation.

(d) Penal colonies should be instituted for the incorrigibly lazy.

(e) The quality of the work done is up to the average, but the output is low, and is too costly under the present system on farm colonies.

(f) The ultimate effect of increased home competition will be to check imports of foreign produce.

14. The *Hollesley Bay Experiment* offers a remarkably favourable opportunity for demonstrating the suitability of labour colonies in dealing with the unemployed problem.

15. As it is run at present, I am of opinion, for the reasons already stated, that this particular labour colony is not satisfactory. Nevertheless, it is a place of great possibilities, and it ought not to be difficult, worked on a different system, to make it a splendid success. The soil is good and easily worked, the water supply is abundant, and the climate is equable, with above the average of sunshine. All these factors contribute towards making the estate eminently suitable for intensive cultivation.

16. In August, 1906, the Working Colonies Committee Scheme of the Central (Unemployed) Body for London appointed me to re-organise the market garden department of the Hollesley Bay Labour Colony, and asked me to draw up a scheme for future working, so as to ensure better financial results. I drew up a comprehensive scheme, which was approved by the Committee, and passed by the Body, but, when submitted to the Local Government Board, was rejected.

17. Considerable time elapsed between the committee's approval and the Local Government Board's rejection, and in the interval some items of the scheme were carried out, such as planting a large area with fruit trees and laying out small holding plots with orchards, outbuildings, etc. but when it was certain that the Local Government Board would not sanction the further carrying out of the scheme, I resigned my position.

18. I venture here to give a brief outline of the scheme which was approved by the committee, in the hope that it may form a useful contribution in the consideration of remedies for unemployment.

19. The Hollesley Bay Colony is about 8 miles from a line of railway. Ordinary market garden vegetables have little monetary value in comparison with their bulk, and haulage by horses and waggons a long journey by road is a costly business, when the value of the consignment is considered; if distant markets have to be reached there is the additional expense of railway rates, salesmen's commission, etc., so that it is practically impossible to grow common vegetables profitably under the circumstances. My object was to grow commodities containing greater value in less bulk, so as to proportionately reduce cost of carriage; to introduce intensive cultivation, on the system of the Parisian gardeners, and so find constant employment for a large number of men on a small area; to erect glass-houses and frames for growing plants, vegetables and fruits in winter and spring; and to plant large areas with fruit. I also suggested bulb growing, as this estate is particularly suited to this culture, and the establishment of a nursery of fruit and forest trees and shrubs, which could be utilised to supply further colonies, small holdings, public parks and re-afforestation schemes. There is a large tract of heathland on this estate, and this I proposed to bring under cultivation at a minimum of expense by unemployed labour, after which it would be available for small holdings.

20. I proposed that the men should work under constant supervision with gangers or foremen, each in charge of a limited number. The best men were to be selected

Mr. Thomas Smith.

Advantage of farm colonies in encouraging better methods of cultivation. Summary of foregoing paragraphs (1-12).

Possibilities of Hollesley Bay colony.

for re-organisation of market garden department at Hollesley Bay.

Mr. Thomas Smith.
22 Oct., 1907.
Scheme for re-organisation of market garden department at Hollesley Bay.

for further training, passing through a proper course in the various departments; those finally approved to be drafted on to small holdings. Each holding would be completely fitted up with cottage, outbuildings, fences, fruit plantation, and live stock, and would be manured and put into working order before the advent of the holder. The man installed would be directed and supervised. Having no capital, he would be supplied with everything necessary, and be paid a weekly wage. All receipts from the holding would be credited to him, and all disbursements, rent, etc., debited against him. After a certain period, the excess of income over expenditure would enable him to pay off his indebtedness, and he would then, having worked out his own salvation, become a free man with capital in hand to work his own holding.

21. Pursuing this plan, a constant draft of men would be placed upon holdings, and after a few years the receipts from those discharging their indebtedness would furnish funds for further operations.

22. Those of the unemployed who were shoe-repairers, harness-makers, carpenters, tinsmiths, etc., could be encouraged to establish themselves in those businesses.

23. Naturally, small traders and shopkeepers would establish themselves in close proximity to the settlements. Village communities would come into being, where before there were barren wastes.

Advantages which would result from improved system of labour colonies.

24. If labour colonies on the lines here set down were formed in various centres, the result would be that a regular and constant stream of selected men from our congested cities would be sent back to the land which cries out for their presence; the pressure in the cities would be relieved; the people would improve in health and physique; instead of emigrating the best men from amongst the unemployed they would be retained at home to help in building up and strengthening our own nation.

Mr. Fels's small-holding experiment at Mayland.

25. In the summer of 1905 Mr. Joseph Fels purchased in a London auction-room an estate known as Nipsell's Farm, and took possession on September 29th following. About the same time he also bought at auction a small adjoining property known as Mayland Mill, on which is a working windmill and sundry farm buildings.

State of Nipsell's Farm before laying-out.

26. Nipelle's Farm is in the parish of Mayland, Essex, on the river Blackwater, $3\frac{1}{2}$ miles from Althorne, 4 miles from Southminster, and 8 miles from Maldon. The soil is clay loam on clay subsoil, and the total area is 620 acres, including sea-wall and saltings. The area of Mayland Mill is 13 acres.

27. Nipsell's Farm was in a neglected state. Fences, gates, roads, buildings, sea wall, sluices, etc., have all had to be repaired or renewed. There was no water on the estate except from a well which could be pumped dry in an hour or less at any time, and after some months' use could not be depended upon for more than from 100 to 200 gallons a day.

28. Having secured this property, Mr. Fels proceeded at Christmas, 1905, to lay it out in a way which he considered would be a public object-lesson on the profitable utilisation of derelict Essex.

29. This very heavy land was supposed to be useless for anything except the usual four-course rotation cropping, in which corn growing is the principal object; and corn growing being no longer profitable, the farm had for many years previously been used mainly for the production of hay.

Laying-out of Nipsell's Farm for intensive culture.

30. Mr. Fels decided to use the whole frontage of the farm, about 130 acres of the best land, for small holdings, and the remainder as a dairy, market garden and fruit-growing farm. The adjoining property, Mayland Mill, he has laid out as a nursery and fruit plantation, with a range of glasshouses and frames, and a portion is devoted to French gardening exactly on the lines of the Parisian gardens for *petite culture*, and for this purpose two experienced French gardeners have been introduced.

Roads, water supply etc., on the estate.

31. Over 2 miles of new roads have been constructed on the estate, mainly for the convenience of the small holders, and a system of water supply has just been completed, by which water drawn from a boring 300 feet deep is conveyed to a 10,000-gallon water tower, and thence by mains and service pipes to all farm buildings, farmhouse, small holdings, cottages, greenhouses, nursery and gardens.

32. Extensive alterations have been made to the farm buildings; ranges of airy and commodious pigsties and cowhouses have been constructed, which are at present occupied by over 100 pigs and between sixty and seventy milch cows.

33. About 40 acres on the farm and nursery have been planted with fruit trees and bushes, strawberry plants, asparagus and market garden crops.

34. There were seven labourers' cottages on the estate, mostly in a ruinous condition. These have been repaired, renovated and tenanted. Seven additional ones have been built, and six more are about to be built. Cottages on the estate.

35. Twenty-one small holdings have been laid out; each consists of a five-roomed cottage, set of outbuildings and 5 acres of land. The whole is securely fenced and divided by fences from its neighbours. Two acres of each holding were cultivated, manured, surrounded by wire netting to exclude rabbits, and planted with fruit trees and bushes before occupation. The remaining 3 acres on each holding are in some cases grass, and in others now carrying a good crop of wheat or oats. A 7-acre field, in a central position with a main road frontage, is reserved for the holders as a playing field, and, upon this field, it is contemplated building a hall for social and business meetings, school-house, etc. Small holdings at Mayland.

36. The total expenditure on the small holdings section, inclusive of road making, has been capitalised, and an interest of $4\frac{1}{2}$ per cent. on the whole becomes the rent which the holders have to pay. This works out at from £29 to £32 each holding per year. They are let on a yearly tenancy for the first three years, after which time approved tenants will be granted a life lease at the same rental.

37. All the holdings are tenanted, the occupiers having been in possession from about eight months to a few weeks. With two or three exceptions, they are without previous experience, being drawn from various trades and occupations in town. One of the conditions of tenancy is that the holder shall be in possession of at least £100 capital with which to stock his little farm, and provide a living for his family whilst waiting for crops. The holdings are laid out with a view to the produce being marketed co-operatively. Part of the holding is left for individuality to express itself, but the remainder on every holding is planted with identical crops, so as to facilitate sowing, harvesting and selling.

38. Fruit growing and *petite culture* is regarded as the ultimate goal of the holders, assisted by poultry, bee, and pig keeping; but, as several years must elapse before anything approaching a full return is obtained from fruit, etc., the interval has to be bridged over by something which will give a speedier return, and this is being attempted by general market garden crops. Expert advice is freely at the disposal of the tenants.

39. Part of the land on the nursery was laid out during the winter of 1905-6 (one year before the land of the holdings was planted) with apples, plums, black currants, gooseberries, strawberries, and asparagus; and, during the following summer, such crops as tomatoes and cucumbers, marrows, runner beans, cauliflowers, lettuces, and other general market garden crops were grown. Very good results were obtained, the tomatoes giving a gross return of £100 per acre.

40. This year the fruit trees and bushes are showing plenty of healthy clean growth, apples and plums show a very fair crop of fruit, gooseberries have yielded well, strawberries have given an excellent crop, and black currants a remarkably fine crop of very choice fruit. The currants and strawberries were amongst the earliest on the market. The asparagus looks well and strong, and it is hoped that cutting may be commenced next spring. As these crops are the same as will be grown on the holdings, the prospects are distinctly encouraging, it the first year or two of preparatory work is successfully passed.

41. The French garden was laid out especially with the view of being a centre of instruction and an object-lesson to the small holders. This method of cultivation, which is highly intensive, appears to be particularly well-suited to their requirements. Heavy and continuous crops are obtained from a small area, and once the garden is fairly established, say in about three years, the natural soil is Prospects of the fruit crops, etc., at Mayland.

42. The French garden was laid out especially with the view of being a centre of instruction and an object-lesson to the small holders. This method of cultivation, which is highly intensive, appears to be particularly well-suited to their requirements. Heavy and continuous crops are obtained from a small area, and once the garden is fairly established, say in about three years, the natural soil is

of no importance, as the operations are conducted entirely with soil produced from well-decayed powdery manure; but, until there is a sufficient quantity of this, really good results must not be expected. This decayed stuff is then the only soil used, and the vegetables thrive in it; the plants are earlier, there is little or no damping off in the winter and spring, and the work is easier and quicker. Of course, experience is very necessary, as this work consists of attention to a multitude of details.

42. A commencement upon the French garden at Mayland was made on February 5th this year (about a month later than is advisable). At the present time (July 9th), from one piece of ground four distinct crops have already been gathered and sold at very good prices; others are now occupying the same space and are well on the way, so that it seems probable that six or seven crops can be gathered from one piece of ground in one season, and each crop a full one of the highest excellence. On another portion of the ground in the same garden large quantities of melons are now ripening. A few have already been marketed and have realised good prices. This French garden produce from Essex has been said by experienced men in the market to compare very favourably with similar produce from France. Considering the unfavourable season we have had, this should at once dispose of any doubt as to the suitability of soil and climate for this culture. It is intended to make this French gardening permanent, and to this end the area will be considerably extended during the coming autumn.

43. Arrangements have been made for the holders to commence operations in this method of gardening during the coming season. The French experts will give lessons and demonstrations as often as is necessary. It is not to be expected that success will be attained at once, but, judging from the way in which several of the holders, though previously quite inexperienced, have so far managed, it is probable that, in the course of a few seasons, they will become fairly proficient.

44. Every holder is entirely independent, and takes the whole proceeds of his labour, but, wherever possible, co-operative working is encouraged. Manures, implements, seeds, groceries, and any materials needed in common are purchased jointly, and better terms are thus secured. Produce of all kinds is gathered together and despatched in bulk to markets or private consumers. A co-operative store is in active operation, in which each holder has five £1 shares. Weekly meetings are held for business purposes, and for the discussion of any matters in which the holders are interested; there are very few absentees from these meetings.

45. A lending library is in course of formation. When the hall which it is proposed to erect on the playing field is available, it is expected that accommodation will be provided for store, library, reading room, games, concerts, schoolroom and packing room.

46. The formation of a credit bank is contemplated, and it is hoped to have this in active operation very shortly.

47. Very little can yet be said as regards results. The experiment is only just commenced, and any attempt to generalise regarding success or failure is premature. A fair number of eggs and poultry have been sold. Numerous litters of pigs have been bred and some sold, and at the present time vegetables of various kinds are being marketed in small quantities. The crops which are being depended upon as the mainstay for the first season, viz., tomatoes and cucumbers, are not very promising at the moment. Fine bright weather is essential for the success of both these crops; the average for the past twelve years in this district has been very favourable, and it was considered fairly safe to depend upon them for this season. Contrary to expectation, as everyone knows, this summer so far has been conspicuous by its absence. Cold, wind, rain and lack of sunshine have been the prevailing features all over the country, and of these we have had our share. Ridge cucumbers seem likely to be a complete failure, and tomatoes are very backward. If we speedily have some bright warm weather, there is still time to get a fair crop, but if the present weather conditions continue, the returns will be very meagre.

48. In these circumstances, the credit bank will prove invaluable, and next season it is hoped that we shall not be quite so sensitive to weather conditions.

49. The effect on the health of the holders and their wives and children has been remarkably good. Some few of the women have complained of the "loneliness," but that feeling appears to be passing away, and, as social intercourse becomes better organised, will probably entirely disappear. All the children are bright and cheerful, and have no doubt benefited considerably by the change from town life. The men work well and have taken kindly to the life. Less is heard now of aching backs, and it is evident that if the next few years can be passed successfully, a new class of British yeoman is in process of formation.

80115. (Chairman.) Have you had any special experience in connection with labour farms or colonies?—I was at Hollesley Bay for eight or nine months.

80116. Had you any experience before that?—Not before that, except with the small holdings at Mayland.

80117. Your classification of the men who come to labour colonies is made from that experience of eight months or so?—From observation only, and that experience of eight months at Hollesley Bay, my observation at Fambridge and the little notes I took at Laindon. I have no figures, but a general close observation.

80118. Twenty-five per cent. good, and 50 per cent. inefficient and slow. I suppose a certain proportion of those were capable of improvement?—I think a large proportion would be capable of improvement with proper supervision. I think a good proportion of that 50 per cent. was due to the lack of proper oversight and supervision.

80119. I suppose a considerable portion of those 25 per cent. had rather come down in the social scale?—I think so, there would be many good men who had been unfortunate.

80120. Then there is the last 25 per cent. that is bad. Conditions As I understand it, the Hollesley Bay experiment was really a philanthropic experiment in the first instance?—Not at all. The Hollesley Bay estate was purchased, I believe, by Mr. Fels, and immediately offered to the London Central Unemployed Body, and they took it in hand for an unemployed colony. There is nothing philanthropic about it, except as a public experiment.

80121. Would it not come under the head of philanthropy?—It comes under the head of one of the ordinary labour colonies worked by one of the Government institutions, if you can call that philanthropic.

80122. The experiment was not made for the purpose of making money, but to try and see whether these persons could be utilised and, after going through a course of training, be made useful members of society?—That is so, but still I do not quite understand the way you apply the word "philanthropic." A certain piece of land was offered to the London Central Unemployed Body for any use they chose to put it to with regard to the unemployed, and they chose to send a number of unemployed persons there under certain conditions as an ordinary farm colony.

80123. As I understand it, it was not a question of the purchase of this, Mr. Fels put this at the disposal of the Central Committee?—That is so, without rent for three years, to experiment with.

80124. Surely that is philanthropy, is it not? I think it was very generous of Mr. Fels. It was not what I call a business operation?—That was the only philanthropy about it, other than that it was a public experiment. I wanted to be quite clear upon that point.

80125. You had a good deal to do with the laying out of the land in order to convert what was before only pastoral or ordinary agricultural land into garden land?—Some of it. What I was really called there for was by the fact that the colony at that time was not working satisfactorily. The expenses and income were too far apart, and I was called in to endeavour to obtain a more satisfactory result.

80126. Your object rather was to try and devise some method of cultivation or horticulture which would increase the amount of employment required?—To increase the amount of employment, and raise more valuable products. One of the reasons, at any rate, for the indifferent result financially was that they were so far away from the railway, and when men raise cabbages and potatoes and have to cart them 8 miles to a station

Mr. Thomas
Smith.

22 Oct., 1907.

Witness's
experience

of tenure
of Hollesley
Bay.

Unsatis-
factory
results of
Hollesley
Bay
experiment
in 1906.

- Mr. Thomas Smith.* to get them on to a market, and go practically 20 miles to a market town like Ipswich, which they did, it does not require deep thinking to see that the things were being raised at a loss. My idea was to raise quite a different class of products in order to make the carriage and handling proportionately less expensive.
80127. How long was the experiment going on before you reorganised it?—I cannot say accurately, but probably about eighteen months.
80128. It was all that time, I suppose, in the possession of the central committee?—All that time.
- Effects of Hollisley Bay on men employed there.* 80129. I have been down there, and over the whole of it, and I think other members of the Commission have as well. The results, I understand, are satisfactory so far as the health and physique of the persons coming down is concerned, and that their conduct generally has been good, with one exception?—That is so.
80130. Their physique has been very much improved?—Yes.
80131. The attempt, judging by a limited inspection, has been successful in making the colony self-sustaining in the sense that all the works and all the repairs, and things of that kind, are done by people in the place?—That is so.
- Good management at Hollisley Bay.* 80132. Was that possible because there were on the place trained men, or were the men taught to do painting and things of that sort?—It was possible in the first place because they had a good capable man as works' manager. He had several employed men under him and he gradually found that certain of the unemployed men who came on to the colony were suited to his requirements and he drafted first one and then another in as he wanted them, and some, I believe, he has retained in permanent employ and given them ordinary wages: that is, they have got back into the ranks of the employed again through that.
- Cottages at Hollisley Bay.* 80133. Mr. Smart is coming up and will go more into detail. Was not part of the scheme to build cottages with certain gardens attached to them into which persons should be put?—That is so.
80134. Was that part of your scheme?—It was embraced in my scheme, and twelve cottages were built before I went there, but they had done nothing with them.
80135. Mr. Fels built the cottages?—Mr. Fels, I believe, advanced the money to build the cottages. The cottages were there and they seemed lost as to what to do with them when they got them.
80136. May I ask what were the terms. Mr. Fels kindly spent this money on the property, and then handed it over free of rent to the central committee?—That is so, with the proviso that if they thought it worth their while to continue the experiment at the end of three years they should pay him the purchase price; if not, they should hand the property back to him at the end of the three years.
80137. Do you know at all what the financial result of the new system is at Hollisley Bay?—It was never carried out. You will notice I say we only got a certain distance with it when I resigned because the Local Government Board would not permit us to go on with it.
- The Mayland Estate.* 80138. There were two separate pieces of work in which you were engaged, one is you laid out Hollisley Bay for the new experiment, and the second is that you are now managing Nipsell's Dairy Farm at Mayland: is that right?—At Mayland I am managing the estate for Mr. Fels, where we have a number of small holdings. We have twenty-one small holdings, a farm, a nursery, a French garden, and some hothouses.
- Refusal of Local Government Board to allow small-holding experiment at Hollisley Bay.* 80139. The Local Government Board declined to continue to allow the experiment at Hollisley Bay, but it is still going on?—The experiment which is going on is simply allowing men to go into Hollisley Bay, Labour Colony for relief work for a matter of four months, and then turning them adrift on the streets of London again. That was the kind of thing that we thought was not a wise thing to do. The scheme which was rejected was to select the best men from those who came into the colony and draft them on to the land and keep them on the land permanently by a system of selection, but although the Working Colonies Committee of the Central Body approved of that, the Local Government Board refused to find funds to carry it out.
80140. Funds which would have been spent in putting up buildings?—Funds to do any portion of the work. When you were round there I dare say you noticed a lot of land had been broken up and planted with fruit trees. That was entirely opposed by the Local Government Board although it was done before their rejection of the scheme took place. That was really included in the scheme which they rejected, but as fruit trees cannot be planted at any portion of the year, and as their decision was deferred rather long, it was thought wise to proceed with that part before we actually got their sanction.
80141. The present scheme, as I understand it, is that a certain number of persons come down for sixteen weeks, and I think that they come down without their families, and there are a certain number of persons with their families in cottages there?—There are twelve cottages only: the scheme was for 100 cottages to start with. We could have gone very much further than that and made them self-supporting.
80142. That is the part of the scheme which the Local Government Board have declined?—That is one part of it. There were several other portions of the scheme which they rejected, but that is one part.
80143. There is a large college there: would these persons who would have cultivated the land there have been in separate cottages or would they have been in the college?—In separate cottages so as to make the man a self-supporting man, so as to get him out of leading strings.
80144. All that remains of the original idea is that a certain number of men go down and work for sixteen weeks?—That is so.
- Present condition of Hollisley Bay colony.* 80145. All the development of the estate, and the establishment of a large number of separate cottagers, whom you hoped would be self-supporting, is swept off?—As a matter of fact they might just as well be breaking stones. They produce large quantities of very good vegetables, but at a loss—naturally at a loss; they cannot help it under the present system. They might just as well be breaking stones; it is simply a large relief yard; and the Local Government Board decline to allow any alteration of that system.
80146. Now we come to the other experiment which is entirely under Mr. Fels' control?—That is so.
80147. This, I suppose, rather developed the idea which you wanted to give effect to at Hollisley Bay, if you had been allowed to?—Not quite; because at Hollisley Bay the men were unemployed; at Mayland the men are free, better class working men who have saved sufficient money to afford capital to carry them through. These are not men who are being relieved at all.
- Status of small-holders at Mayland.* 80148. This really is just a little outside our subject, but it would bear relation to it in a sense; you would contend that if this was successful it might arrest the depopulation of the rural districts and perhaps cause people to flock back to the rural districts in order to earn a livelihood there?—Undoubtedly that is the intention. It is perhaps also the intention that it might put a little more courage in the authorities; if they saw it could succeed in one place it might possibly succeed with the unemployed. In fact we have in our little experiment two of the unemployed from Hollisley Bay amongst them, and they are beginning very well indeed.
- Possibilities of Mayland experiment.* 80149. What as?—As small holders running their own little farms; we have taken two of the Hollisley Bay men in, and they are doing remarkably well.
80150. You tell us a great deal here which I should like to supplement by one or two questions. This property was bought in a neglected state. How many small holdings have you been able to create on it?—Twenty-one.
- Progress and results at Mayland.* 80151. So far as you know everything is going on well?—I think so. Of course we have only been in existence about eight months.
80152. Has it been a bad season?—We do a wide assortment of different things; for farming we have had a very good season; for ordinary common market garden things it has not been a bad season, nor for fruit-growing; but for special things, such as tomatoes and

cucumbers, it has been very bad. As a matter of fact we had no summer till about September. The weather was very cold and dull and gloomy, and for tender things like tomatoes of course it was quite unsuitable.

80153. Have you had much difficulty in making arrangements for getting these things to a market?—No difficulty whatever; but we have a difficulty in getting good prices.

80154. What market do they go to?—We practically send them all over England. A large quantity goes to Stratford and Covent Garden, but we send as far north as to Glasgow, Manchester, Leeds, Bradford, Hull, and many other places.

conduct and
work of
small-holders
at Mayland.

80155. As to the conduct and work of the occupants, have they worked well during the eight months?—Fairly; taking the whole number I should say they work quite well. There are one or two exceptions, which is only to be expected from the first gathering together of twenty-one men; on the whole they work very well.

principle on
which the
occupants
were
elected.

80156. How did you select them?—I intended using a lot of discretion and judgment in selecting them; but as a matter of fact one condition was made which is that each man should have £100 to carry him through, and that was really the factor which selected them, because there are very few working men with that amount of capital. Provided there was nothing really against him the £100 was the selecting factor. I dare say we got close upon 1,000 applications for those small holdings without any direct advertisement. How many we could have got if we had tried to get applications it is difficult to say. I cannot, of course, say how many of those applicants would have been eligible but in the early days of selecting them I was very glad to get the number who had £100. It seemed rather a difficult thing to get working men with £100.

80157. They have all got their £100?—They had when they started, except the two we took in from Hollesley Bay, and I think there were two others who were helped a little.

80158. A working man with £100 I should say was a rather superior working man; you must have got rather the pick of the men who wanted to settle?—It does not follow that you get most suitable men; because a man has got £100 he is not therefore the best man for the land. A man may be a very much better man who has not got the money than the man who has got it. That is my experience. Because a man scrapes £100 together it does not follow he is going to make a good cultivator of the land or a good small holder.

80159. Assuming he is a working man it shows that the toil of his hands has been successful?—It might have been the toil of his head.

80160. That is just as good is it not?—No, it is a different thing; it might have been from some grasping and unscrupulous doings that he got that £100. It might have been from many other things than actual hard honest work.

Status of
occupants at
Mayland.

80161. Are the men who came in of the labouring classes?—We have one ex-schoolmaster, and two or three ex-mechanics. There seems to be a general assortment of trades and businesses amongst them. There is a book-keeper.

Credit bank
at Mayland.

80162. Then there is a credit bank; how is that credit bank managed?—We have arranged all in connection with the credit bank, but so far nobody has wanted any credit. We are prepared to lend any of our members some money when they want it, but they have not wanted any so far from the credit bank. There is a central organisation in London who are prepared to advance us certain sums at about 4 per cent., and we would then lend them out again to the members at 5 per cent., that 1 per cent. difference would cover all the expenses. If one of the members borrows the money the whole of the rest of the members have to be responsible for it.

80163. Do they pay their way?—They have paid their way up to the present fairly well.

80164. Do they pay their rent monthly?—Quarterly.

80165. They have paid their rent so far well?—Yes.

80166. It is an interesting experiment, and we shall watch it very closely, but it deals with a class above the class whose case we are investigating?—I have no doubt there will be something come from it that will be of service. Mr. Thomas Smith.
22 Oct., 1907.

80167. (*Bishop of Ross.*) Do you think some of those who have got these holdings have small incomes or occupants. pensions?—None of them; I do not think anyone has.

80168. The retired schoolmaster or retired tradesmen are not men who merely want a residence and would have to live somewhere, and have come to this place as a residence to have a little try at this gardening?—There is one man only now I come to think of it whom I am suspicious of under that head, and I have given notice to quit.

80169. Otherwise they propose to make their living by the small holding?—Most decidedly. I do not think there is an exception to that except in the case of the one man who is leaving us.

80170. Those who have not already had any dealing with the land will have some difficulty in getting the highly specialised knowledge necessary for intensive agriculture?—Yes.

80171. The knowledge is highly specialised, is it not?—That is so. Intensive agriculture.

80172. There is considerable difficulty for tradesmen, clerks and others to get the knowledge necessary to work an ordinary farm?—Yes.

80173. Of course, the difficulty will be increased very much in getting the knowledge necessary to work on intensive lines?—I think it is rather simplified because the work lies in a small compass, and it is work which appeals more to a man's brains than his hands, and a man from town is as a rule rather keener of perception; it is not so difficult to teach him intensive agriculture as it is extensive.

80174. It requires constant attention?—That is so.

80175. Attention to detail?—Really the whole thing is a mass of detail.

80176. If the smallest detail is neglected the whole thing goes wrong?—Yes.

80177. If you get that constant attention to detail, you think you can make something of the men?—They are shaping very well indeed so far.

80178. Without that attention it is a failure?—Of course, it is not all intensive work. We have had a lot of what you may call broad-acre work as well, and taking it all round, considering that some of them were totally ignorant, they have made a very good attempt.

80179. You had been growing tomatoes, have you been growing them in the open air?—Yes.

80180. No glass?—Although this season has been a very bad season for that class of work, we have sent away I should think off the holdings alone an average to each holder of perhaps a ton and a half. They have had no glass, but on Mr. Fels' market garden we have seven greenhouses.

80181. I did not think the climate of Essex could produce tomatoes, especially in a district like this?—Many people think not, but that is a mistake, because I have been growing them there for twelve years.

80182. (*Professor Smart.*) Do you say the quality of the work done at Hollesley Bay under expert guidance is quite as good as that of the ordinary farm labour? You say the reason why the financial results were not better, as I understand, are: First, because expert guidance has to be paid for; and, secondly, that it is all hand labour?—No, I do not say the first. Reason why Hollesley Bay work did not pay.

80183. The expert guidance has to be paid for?—I do not think I put it that way. Naturally expert guidance has to be paid for. I do not think I quite said that that was the reason why it did not pay. The reason why it did not pay was because it was so far distant from a railway station.

80184. I understood you to say the work was as good?—I do say that.

80185. The question was put: Why was not the result as good as to an ordinary farmer; your answer would be that the expert guidance would have to be paid for?—I

Mr. Thomas
Smith.

22 Oct., 1907.

Reason why
Hollesley
Bay work
did not pay.

did not say that. I say the reason why the results were not so good were: First, the distance from the station, and secondly, that the men did not work up to their power owing to lack of proper supervision. Expert guidance would pay for itself in so far as it would produce more work out of the men.

80186. With regard to the second objection, you object to the hand labour?—In this period of improved machinery and all that, I say that if you could cultivate double or treble the area with the same number of men, mingling with their labour mechanical labour or horse labour, that you could thereby get three or four times the amount of crops from the same number of men employed.

80187. Their object was to get a large number of men on one of the few colonies they had?—The extent of the colony is so large that it would not affect the number of men by extending the area of cultivation. There is a vast area still untouched, and you could cultivate four times the amount of land by the same number of men, without reducing the number.

80188. The proposals you made to the Local Government Board were: intensive cultivation, more costly products grown under glass, bulb growing, establishment of nurseries, and so on, and more and more constant supervision and guidance. You proposed all those things and they were all rejected?—That is so.

80189. To pass to your other experiments, two of your men came from Hollesley Bay?—Yes.

80190. Did you exact the £100 requirement from them?—No, we are financing those two.

80191. You say that from the French garden between February 5th and April 9th four distinct crops have already been gathered, and sold at good prices, others are now occupying the same place and are well on the way, so that it seems probable that six or seven crops can be gathered from one piece of ground in one season. Could you tell us what those crops were?—Four distinct crops were cultivated before that date. If you want to be very precise, on July 9th we had got the sixth crop on the ground. The first crop was radishes, the second was lettuces, the third carrots, the fourth cauliflowers, the fifth radishes, and the sixth celery. By July 9th, although the celery had not then been gathered, all the other five had been taken off the one piece of ground.

80192. (Bishop of Ross.) They were grown simultaneously, or almost simultaneously?—They were grown in this fashion: a hot bed was prepared, and on the prepared bed radish seed and carrot seed are sown simultaneously, the seed is covered up, and on the top of that are pricked out lettuces, so that you have at once got three crops growing; the lettuces are developing and the radishes coming up, and in three weeks from sowing we were selling the first radishes. Before the lettuces are large the radishes are up and away. Very soon after the radishes have gone the lettuces begin to fill up the whole space. These are not half crops, I want you clearly to understand; we did not get half crops, the crops were touching each other each time. The lettuces expanded so that they were touching each other over the whole bed. As soon as they were ready to commence cutting, which would be perhaps six weeks after planting, cauliflowers were pricked out in the bed between them, just small plants pricked in between the lettuces. When the lettuces were got away one saw all over the bed fine carrot plants which looked as though they were not worth much; they had been up to that time smothered by the lettuces. No sooner were the lettuces removed than the carrots gained strength, and in a very short time they filled the whole bed, and you could see nothing but one mass of carrots with a cauliflower tucked in here and there. This was under glass frames on hot beds, not in the open. By that time we had got to weather which was sufficiently mild for us to move the frames and to put them on something else. We put them in another part and grew melons under them. The carrots and cauliflowers were then in the open and presently those were pulled and sent to market. Carrots were sent to market in April and the cauliflowers in May, and immediately the carrots and cauliflowers were got off, which made the fourth crop, the soil was turned over and sown down again, some with one crop and some with another, say with radishes. We had been raising celery plants in another place which were planted out on the bed the radishes were sown

in. That gave the sixth crop. On July 9th we had already sold five crops, and the sixth crop was in evidence.

80193. (Professor Smart.) I see your small holders grow wheat?—Yes.

80194. Is that not rather a dangerous crop for small holders to grow?—Not at all. You have to take the facts. Each small holder has five acres of land. Two acres we prepared and planted with fruit; and as to the other three acres, perhaps when the cottage was not finished and no holder was coming along, the three acres had been ploughed, and was prepared for something to go in, but if we had left it it would have got full of weeds; in order that it should be doing something useful, when the proper seeding time came I sowed wheat or oats according to the time; when the small holder came along I charged him with the seeding; it seemed to me a much wiser thing to sow a crop in the ground for that man than to let it get full of weeds for want of a crop. Next season he will do what he pleases with those extra three acres.

80195. I was only on the question of small holders growing wheat at a profit?—I want you to look at the facts; the fact of the matter is we prepared two out of the five acres for market gardens and fruit trees, leaving three acres for the man to use his individuality upon. The land has to be prepared some time before the house is ready for the individual to come into it. The extra three acres being ready for a crop, and there being no man to handle it, and choose what to do with it, I filled the land up with wheat or oats, so that it should be doing something other than growing weeds. When the man came along I charged him with the cost of putting the wheat or oats in; and I do not know that they have done so very badly. Wheat is up to 40s. a quarter, so it has not turned out quite so bad as it might.

80196. You could not foresee that when you wrote this paper?—When I wrote that paper I simply stated the facts; and whether it had brought 40s. or 20s. the fact still was that the wheat was there for the reasons that I have stated. I put it there simply to fill up the ground.

80197. The crops you depended upon for a first season are rather risky crops, such as tomatoes?—That is so.

80198. Would it be safe for a small holder to risk his small funds on such crops?—I thought it was the best thing for him to risk it, because the holdings are laid out principally for fruit-growing, and fruit-growing needs a considerable amount of waiting for, and whilst we are waiting for the fruit we want something to get a living out of. I have no faith in a small holder growing common vegetables for a living. I have no faith in him growing wheat or oats for a living; but in order to bridge over the interval I wanted something to bring a better return. Now whilst I admit that tomato growing is a risky crop, none the less I have grown tomatoes for twelve consecutive years in Essex, and have only had one really bad season out of the twelve; therefore I thought the percentage of probabilities was in our favour. Unfortunately we have had a bad season, but we have not had a collapse, and we have still got something out of them; I daresay more than if we had grown cabbages.

80199. It seems to me that a hundred small holders with you as expert adviser would work very well; but is not expert knowledge such as you give them everything? Could you trust a small holder to carry out any such plan?—Most decidedly, after he had had a certain amount of tuition, and there are surely people to advise in the country. If you took a hundred of the best men from Hollesley Bay, men who had been selected during the first four months as being likely men, and passed along after another period to better jobs until you finally got the cream of the lot, and put them on holdings, those men would have had a training before they got into those holdings; and a supervisor would find material to his hand already trained and proved to be intelligent, hard-working and suitable to the purpose; and it would not be at all a difficult matter for the supervisor to put them in the way of earning their own living.

80200. Is not the essence of your scheme that these small holdings should be co-operative?—Not necessarily, but it naturally follows that if a number of men together are growing the same kind of crops it would cause a tremendous amount of confusion unless they did work

co-operatively. There would be such cut-throat competition amongst them that it is a natural and proper thing that they should co-operate.

80201. Your conclusion is apparently that a holding of five acres should support a family if it is cultivated in the proper way?—According to the class of crop that is put in, a holding of considerably less than five acres will support a family.

80202. But it must be done on the principle you have laid down, very highly skilled labour and very costly crops?—Not at all. It does not need very highly skilled labour and very costly crops on 5 acres. If a man were making his living off half of 5 acres of course he would need to be more highly skilled.

80203. You think it can be done on five acres?—I would like you to understand that supposing a man only grew such ordinary things as black currants and strawberries, and things of that kind which it does not require a very high degree of skill to grow from five acres he would make a very good living. You might take it roughly that he would average about £40 an acre from them when they got in good bearing.

80204. (Mr. Gardiner.) I understand you are not satisfied with the present position of things at Hollesley Bay?—I am not.

80205. What use would you make of Hollesley Bay in the future?—I would make the use that I have suggested in this paper: give the men a chance of getting back on to the land permanently, instead of sending them back to London.

80206. Assuming that the Local Government Board had ruled that that was out of the question, what would you do with it?—Wash my hands of it. I would have nothing to do with it under present conditions. I do not see that you can do anything.

80207. You would not like it used as a place for training men?—You cannot train men in four months. It is out of the question to train men in four months, it takes years to train a man on the land.

80208. You think the thing is perfectly futile if you adhere to the four months?—I do. I do not think you can do anything at all. I do not say that without con-

sideration. I think you might as well have a stone-breaking yard as have the men there for four months only, except that it is healthy, and a nice holiday for them. Mr. Thomas Smith.
22 Oct., 1907.

80209. So, on your point of view, you would abandon it?—That is so, under those conditions.

80210. You have not any information to give us from your previous experience as to what the real value of the town-bred man is in an experiment such as that you are agriculturists, trying?—That is just the trial we are on now.

80211. How many men of those are town-bred?—They are all of them town-bred.

80212. You have not a single countryman?—We have two who make some sort of profession to be gardeners; they are both hybrid, I would not call them countrymen.

80213. What do you mean by that?—They are town countrymen.

80214. Grown in the suburbs?—Yes; I do not think either are real countrymen.

80215. So that practically all your men are town-bred?—I should say so.

80216. Supposing any experiment were made to train men for the land, would you insist on having countrymen, or would you have town men?—I would have any who came along who were intelligent. Intelligence and a will to work, I think, is all that is necessary.

80217. You have no views as to relative fitness?—I have found the less a man knows with regard to the land, provided he is intelligent, the more easy he is to get along with. You can teach him better if his mind is a blank with regard to cultivation of the ground than if he thinks he knows and is mistaken.

80218. (Mrs. Bosanquet.) Does this intensive cultivation afford suitable work for women and children?—In this particular class of cultivation women and children are absolutely necessary for picking, bunching and packing. Work of women and children in intensive cultivation.

80219. It is really a family industry?—It is.

80220. It would keep the families together, and employ them all?—Yes. Women and children have to take part in it.

ONE HUNDRED AND TWENTY-SEVENTH DAY.

Monday, 28th October, 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (Chairman).
The Right Hon. Sir HENRY A. ROBINSON, K.C.B.
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. C. S. LOCH.

Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (Secretary).
Mr. J. JEFFREY (Assistant Secretary).

Mr. FRANCIS WOOD, M.Inst.C.E., called; and Examined.

80221. (Chairman.) You are the borough engineer of Fulham, I think?—Yes.

80222. I think you have been good enough to prepare a Statement for us in reference to distress due to unemployment which, if you will hand it in, we will accept as your evidence-in-chief?—Yes. (The Witness handed in the following Statement.)

EXTENT OF DISTRESS DUE TO UNEMPLOYMENT.

1. The number of persons affected, 1,344; the class, artisans and labourers; the character of persons affected, principally unskilled.

CAUSE OF DISTRESS DUE TO UNEMPLOYMENT.

2. Unemployment is caused by slackness in building trade.

REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

3. Special Work provided by Municipalities prior to the Unemployed Workmen Act.—A municipality should carry its work out as economically as possible, and not have the slightest regard to the state of the labour market in any shape or form. It is a business concern, and its works should be carried out on business lines. No private contractor carrying out work for a borough would engage more labour than it required to carry out the work at the lowest possible cost, and, to gain that end, would only employ those persons who had experience in the work or demonstrated their fitness for the work that had to be performed. Mr. Francis Wood.
28 Oct., 1907.

4. There is a popular idea that a municipality should provide work, and I have many unemployed applicants

Possibilities of small holdings.

Hollesley Bay, its usefulness under present conditions.

Popular idea as to provision of work by municipality.

Reforms desirable in system of municipal employment.

Cost of work-house relief.

Results of provision of work for unemployed by municipalities.

who grumble very much that, although they have lived in the borough for a number of years and have paid rates, the borough does not provide work or put work in hand for them. This is not particular to London. Others come (sometimes the wives) and beg for work, that they have been out of employment for some time, have a large family and don't know where to look for a mouthful of bread, if they don't get it it means the workhouse. They regard the workhouse as a disgrace to them—they come to me as a sort of last resource.

5. When I first came to London (about six years ago) I suggested that if younger men were employed as scavengers, a greater efficiency would result, as the work would be done equally well with a reduction in the number of men by 25 per cent.; but this was not favourably received, and for the following apparently substantial reasons:—Each person dealt with at the workhouse costs about 15s. per week, and as the man employed as a scavenger had probably a wife or another dependent, then unless they were so employed they would go to the workhouse, where it would cost the ratepayers 30s. per week, and not receive anything in return. But as a scavenger the cost to the ratepayers would be 27s. per week, and the streets would be kept in clean condition.

6. I, however, maintain the position I took up that the municipality should not consider the question from any point of view than efficiency combined with economy. Whereas I employed at that time about 112 men, only seventy-six are now employed—doing the same work with even better results and at the same pay. This is a saving to the council of nearly a 1d. rate. I do not find that the poor rate has increased at all in consequence.

7. There is the argument, also, that whereas the old man and his wife are only two persons, the young man and his wife may have a family of young children to maintain.

8. The cost of workhouse relief is very heavy—I notice the average cost per pauper per annum of all classes in 1903-4 is £34 per head (taken from "London County Council Statistical Report," Vol. IX., 1906, pp. 36 and 40), so that the cost of indoor paupers will be quite 15s. per week.* In my enquiries respecting housing of the working classes, I found that at the Guinness Trust Buildings no person (or family) was allowed to occupy the flats if he earned more than 19s. per week on the average. If this is the case, then workhouse relief should be much cheaper than 15s. per week, it ought to be under 10s.; then the argument of those who are in favour of finding men work because it is cheaper than sending men to the workhouse would be gone and able and capable men employed.

9. The work to be done by local authorities is provided for in their estimates, and consists of road making, sewer-ing, sewage disposal works, tramways, water and gas-works, parks, cemeteries, etc. So far as it is possible, it is so arranged that the work of maintenance is performed by men employed throughout the whole of the year. If, therefore, work is found for the unemployed, it either dislocates these permanent hands or lessens the amount of work they would otherwise perform, to the loss of the community.

10. Then the class of work that is found for the unemployed is not suitable, and the cost is out of all proportion to the labour expended.

	Materials.	Labour.
Wood-paving maintenance (soft wood creosoted) - - -	9	1
Macadam removed, concrete foundation and soft wood paving -	4	1

11. Scarifying roads by machine costs about ½d. per square yard, cost by hand labour about 1½d.

12. Such works as buildings bring for the labouring class, as distinct from the mechanics, only about one-fifth to one-sixth of the total cost. From these figures it must be evident that local authorities, when they find work, not only find the cost of labour, but from nine times to an equal amount for materials in order that the work can be carried into effect. It is not fair to expect local authorities to do this unless the work is immediately required to be done, apart from the unemployed problem.

* Many a family lives in the country in some comfort on this sum. I have recently heard that in Los Angeles, U.S.A., a person (whether native or foreigner) who applies for relief is set to work at the cultivation of the necessities of life to such an extent that the ratepayers do not contribute to any appreciable extent; that there are no workhouses—what are known as country homes are spread about the country.

13. There would be few local authorities that could find work where the amount to be spent would be entirely on wages for workmen of the labouring class. Only such work as levelling sewage disposal areas, drainage works, etc., i.e., the re-drainage of a town, would be work of a suitable character. But sewage disposal areas are usually chosen where they are level, and would require but little labour to bring them to a proper condition. Water reservoirs are essentially works that have much labour in comparison with the material.

14. Perhaps if the Government were to send engineers into the Welsh hills, and find suitable gathering grounds for the collection of water, and applicable to certain cities and towns, e.g., London, then the work of construction could be put in hand and carried out at such times of stress, and in such manner, that the cities or towns could take them over, as and when required, at a price to be fixed or at a charge for the water, the excess, if any, being borne by the State.

15. *The Unemployed Workmen Act, 1905.* *Distress Committees.*—Two years ago in Fulham, 2,478 were registered at the labour bureau, but last year only 1,344 were registered. It is, generally, the opinion that the unemployed were quite as numerous last year as the year before. Only 45 per cent. of the cases were investigated and 6 per cent. found employment. This is as it applies to Fulham. When the same is applied to London generally, 70 per cent. were investigated, and 7·7 per cent. were found employment.

16. Then the cost of investigation, etc., is £2 8s. 6d. for each man employed, and he will only receive about £20 in wages, reckoned at sixteen weeks, forty-two and a half hours per week at 7d. per hour.

17. It is evident that the men think that they can do better by their own efforts, but there are some who will make no effort, and these will register. It is a striking fact that the numbers, so far as Fulham is concerned, have dropped 50 per cent.

18. Then the class of man that applies is not to be taken entirely from the description he gives of himself. Every man who applies knows, or soon gets to know, that the chances are he will receive greater or quicker consideration if he is classed as a labourer, and it comes about that, whether they are labourers or mechanics, they come under the class of labourers. Men also state that "they are willing to do anything," which, from the point of view of the employer, is not in any way satisfactory.

19. A labourer is as skilled as the mechanic in his own particular line. There is the navvy—he is quite a class by himself, and is generally found on large contracts, reservoirs, docks, railways, etc. He is accustomed to heavy spade work, and will move large quantities of materials without apparent effort. There is the brick-layer's labourer, who is accustomed to carrying bricks and mixing mortar; the gardener's labourer, who is used to light delving. Plasterers, carpenters, plumbers and other trades all have their following of labourers. But when unemployed these men are classed under the one heading and the work they perform can be more easily imagined than described. Distress committees cannot distinguish, and very few persons can until they are seen at work.

20. I have employed about 200 men at a cemetery—Small the whole of them have been taken from the list as approved by the distress committee. Many of them have been mechanics, but there was, throughout the time the job was in hand, the greatest difficulty to obtain skilled men—masons in particular—although a large number were known to be out of employment. Men were spoken to and asked to go and register themselves, and I managed to secure a sufficient number, but at the end of the sixteen weeks had to re-engage the same men because no others were available.

21. The reason they would not register was given that they objected to the inquisitorial remarks of the committee and investigators. I had a list of names, and on several occasions sent postcards informing men that work was available, but I could get neither reply nor men. I had eventually to send the foreman to look up the men at their houses. Some of them would be in work or hoped they would, or they would not go four miles out, or promised to turn up and did not. He managed to get sufficient to keep the work going. But it was most unsatisfactory and costly, and although we have put in hand work which gave work to all classes, bricklayers, masons,

carpenters, plumbers, excavators, etc., and employed the men, as far as we were able, in accordance with a fair and reasonable construction of the terms. The Central Unemployed Fund Committee have declined to pay the whole of the money they promised to contribute by £200, although our labour bill is considerably more than it was estimated it would be before the job started.

22. We have done what no other body has done, and this is the manner in which we have been treated. It is not to be wondered at that the Fulham Council look upon the methods adopted as being in the highest degree unsatisfactory.

23. We had little difficulty with the men at the commencement of the job, but towards the end had the greatest difficulty to get them to work in as satisfactory a manner as had been the case when it was in full swing. I refer particularly to the labourers. I had little or no difficulty with the mechanics as a class, *i.e.*, no more than I would expect on an ordinary building job.

24. On the last portion of the work some twenty or thirty men were employed, and they were worse than any previously sent to me. I had no satisfactory manner of dealing with them. If I discharged them, probably the next lot would be as bad or worse; and so it would go on, until the cost of the job would have been out of all proportion to the estimate.

25. There ought to be some means of identifying the unemployable, the unfit, and the "won't works," and dealing with them in a manner that cannot be applied by a municipality under present circumstances.

26. As a result of the inability of the committees under the Act to obtain work for the men, the best men when out of work will not register, but will try to find work for themselves; the loafers, unemployables, etc., register, and the above is an illustration of how employers will become disgusted with the men sent by the distress committees. These men are satisfied if they get even a day or two at a job; the amount they receive enables them to jog along for some time, and they are indifferent whether, in return, they give good service for their wages or not. While work is provided for such men without the means of forcing work out of them, they will continue in this fashion.

27. If a municipality has work to perform of a remunerative or useful character, they can easily find the men to perform it—men who are out of employment—at any rate I have not found any difficulty, but I have found the difficulty of obtaining the men through the distress committee's list. Consequently I do not agree that work should be found for the unemployed, but, rather that the work should be found that requires labour—a distinction with a considerable difference.

Reasons
against pro-
viding work
for the
unemployed.

28. Suppose you find work for the unemployed, and use as an example what has been done recently (outdoor work and for the labouring classes, *i.e.*, digging and removing material). If you have men with trades at their hands and employ them, they are prevented from endeavouring even to follow their own trade, and this is to their eventual loss. If you provide work for the labouring class you ought also to find work for the skilled, and it is no answer that because some of them provide for themselves (through various benefits, etc.), that they should not be provided for with actual work in a proper scheme.

29. To find work is an encouragement to thriftlessness. If work is found for the labouring classes only, then the men who are thriftless in the other classes come down to the labouring class standard. Then there is the clerk, who does not receive as much in wages as the labourer, and the men who have through sickness, age, etc., been thrown out of employment and have been engaged in indoor work. If these are given the same work as labourers have to perform, the standard of work performed by the labourers is gradually brought to the level of the amount of work done by the clerk, and consequently the amount of work done is very materially lessened.

Labour
exchanges.

30. *Labour Bureaux.*—These should be maintained by employers and workmen, and all bureaux should be in touch with one another. To instal them without the co-operation of the employer and workmen is a mistake. Special facilities should be made to enable a man to go from one bureau to another. Here should be kept a record of those persons habitually unemployed—as distinct from those that have been casually employed.

31. *Trades Union Unemployed Benefit.*—I have noticed that few carpenters are out of employment or show themselves in want; on enquiry I found that they contributed to a trades union benefit and they received pay when out of employment from this fund.

Mr. Francis
Wood.
28 Oct., 1907.

32. *Municipal Insurance.*—If trades unions can deal with their unemployed, it does not follow that it is possible to do so generally, because in a municipal insurance scheme only those who are likely to be unemployed would contribute. In a trades union scheme all men in permanent or casual employment would contribute; but an insurance scheme might be inaugurated in combination with some scheme of provision of work, *i.e.*, those that insured would have the first right to any Government-aided work such as afforestation, reclamation, etc., and in such work as small farms.

Trade Union
Unemployed
Benefit.
Municipal
Insurance.

33. *Unemployment in Fulham.*—This is always more apparent in winter than in summer—and is accounted for by the fact that the majority of the unemployed are in the building trades.

If there is a boom in a district, then the various mechanics interested in this work flock to that district and remain there when the boom is over, instead of returning whence they came. They try to obtain work or wait in hopes of the boom returning, and one can easily imagine their disinclination to leave when they have made homes for themselves, even though the building trade may be flourishing in another part of England. Another disadvantage is that a man receives a much higher wage in London than he does in the provinces, and he would not care to accept 8d. an hour 50 miles from London when the wage in London is 10½d. per hour. So that London is more likely to suffer than a provincial town.

80223. (*Chairman.*) You seem to think that there was an idea amongst certain persons who obtained employment from the Municipality of Fulham, that they were almost entitled to get work?—There are a certain number of persons who apply to the town hall who are out of work, and have been out of work for some time, who think it unfair that the council should not supply work to them. These persons think the Council ought to find work for them seeing they have been ratepayers for a long period.

Popular idea
in Fulham
as to duty of
Borough
Council to
provide work.

80224. Is that a wide-spread idea?—Fairly so.

80225. That it is the business of the Municipality to provide work for them, on the plea that they have paid rates?—Yes.

80226. Passing on to Paragraph 5, which refers to scavengers, perhaps you will explain what you did. It is not quite clear to my mind on reading that paragraph in connection with the succeeding one, what was the change which you effected as regards the scavenger's work?—You will see that I have stated in Paragraph 6 that a reduction was made from 112 to seventy-six men.

Reform in
method of
municipal
employment
at Fulham.

80227. What were the 112 men?—The 112 men were scavengers.

80228. Were they unemployed?—No; they had been employed for years previously.

80229. Then these paragraphs have nothing to do with the work of the distress committee or the unemployed body?—No.

80230. You are simply mentioning a change that you made, by which you were enabled to get as much done by seventy-six men as had previously been done by 112 men; is that it?—Yes.

80231. Passing on now to the Unemployed Workmen Act, 1905, I see that 2,478 cases were registered two years ago in Fulham, and 1,344 were registered last year?—Yes.

Operation of
Unemployed
Workmen
Act in
Fulham.

80232. And that less than half the cases were investigated?—Yes.

80233. Then you say 6 per cent. found employment; does that mean 6 per cent. of the cases investigated, or is it 6 per cent. of the total number?—It is 6 per cent. of the total number.

80234. As far as you know, applying the same calculation to London, that would mean that about 7·7 per cent. of the applicants found employment?—Yes.

Mr. Francis
Wood.

28 Oct., 1907.

80235. Apparently the cost of investigation is heavy but I take it that the £2 8s. 6d. which you mention is not the average cost of investigation in the case of each individual for whom you found employment, but would mean that the total cost of the investigation which resulted in the rejection of a good many, amounted to £2 8s. 6d. for each man who passed the test and was employed?—Yes.

80236. That is to say, if 45 per cent. of the cases were investigated, and only 6 per cent. found employment, the £2 8s. 6d. would relate to the 45 per cent. of cases which were investigated, and not to the 6 per cent. which were employed?—Yes, but it works out to £2 8s. 6d. per case employed.

Investigation of applicants. 80237. Would it be possible to work any scheme of this kind without some system of investigation? What is your view on that point?—I do not experience any difficulty in finding unemployed if I have any work to perform.

80238. And you usually employ them without investigation, and judge of them by the work done?—Yes.

80239. Then the test would be the manner in which they perform their task?—Exactly.

80240. I think further on you say the investigation was objected to by a good many of the better class persons who were out of employment?—Yes, that is so.

Small
number of
unemployed
applying to
Distress
Committee.

80241. You make a rather important statement in Paragraph 17. You say: "It is evident that the men think they can do better by their own efforts"; and I think that opinion is repeated further on in your Statement, that is to say, there were a number of persons who were temporarily out of employment, and who did contrive to get work by their own efforts without coming to the distress committees?—Yes. I think many of these men who did register found employment without the distress committee's efforts; and I think that is borne out by the fact that, as you will see in one of the paragraphs (21), when I applied for a number of men by post-cards, I could neither get a reply, nor men. Many of the men had already got work, or had hopes of getting work.

80242. (Mr. Nunn.) May I ask whether your list was confined to men who had registered with the distress committee?—Yes, it was.

80243. (Chairman.) This work that you had in hand was not merely unskilled work, I think?—It was both skilled and unskilled.

Industrial
status of
applicants to
Fulham
Distress
Committee.

80244. That being so, what should you say as regards the operation of this Act, which was put on the Statute Book in the belief that it would give temporary relief to respectable persons who were usually in regular employment, but who, owing to exceptional circumstances, had fallen out of employment; was that the class that registered?—No, I should say not; and I should say that it is not the case particularly now.

80245. Would you say that the class that registered are those whose employment is either seasonal or casual?—Exactly.

80246. In fact, a class a little above those who come to the Poor Law?—Yes.

Borough
Council work
in Fulham
with men
from Distress
Committee.

80247. Passing on to Paragraph 22, there you complain of your treatment by the central body, and you say, "We have done what no other body has done." Would you just elaborate a little what it is that you have done which was different from, or better than, what other bodies did?—We have given all classes of men—bricklayers, masons, carpenters, plumbers, excavators, and so on—work to perform; while, so far as I understand, the other bodies have given work only to portions of the labouring classes.

80248. Did you make work, or was this work which you happened to have in hand?—It was work which was likely to come forward.

80249. You anticipated then?—It was anticipated.

80250. Did you keep the persons to whom you gave this employment continuously on the job?—For the sixteen weeks.

80251. Do you think that the class of work that you found was better and more useful than that which other bodies in London gave?—I should say so decidedly. We gave every man that had a trade at his fingers' ends

something to do, instead of putting a bricklayer to navy-Borough Council work in Fulham with men from Distress Committee.

80252. How did you provide the £200 which, according to your statement, the Central Unemployed Fund did not pay, though, in your mind, there was an understanding that they should do so?—It would be got out of the loan, which would really reduce the £900, or the amount of money that was contributed by the Central Unemployed Body, by £200. They originally agreed to contribute £900; they only gave about £700.

80253. Why, on the last portion of the work, were the men worse than in the previous portion? Do you draw any inference from that? Would you say that the persons who had been previously employed had been able to get work elsewhere?—Yes. They were a different class of men altogether. You see we had to vary the men, as sixteen weeks' employment was the limit, and if there were others, others had to be employed.

80254. Should you say that the Act, so far as Fulham was concerned, was of use in enabling a certain number of respectable people to tide over the day of difficulty, and then get work?—That is a matter I could not say.

80255. But some of the earlier applicants were of a distinctly better class than the later applicants?—Decidedly.

80256. You are averse to municipalities undertaking to find work for the unemployed, but you say you would not object "that the work should be found that requires labour"—what is the distinction between the two?—I do not think the municipalities ought to make work, but I think that if there is work which is requiring labour, then the distress committees might find where that work is in order to send the labour to it. Question of provision of work by municipalities for the unemployed.

80257. Would you, in other words, anticipate work that would have to be done; is that it?—No. I say a municipality ought not to make work, and ought not to anticipate it, but if there is work, either in the particular town or away from that particular town, which requires labour, then the distress committee ought to be in touch with that work, so that the labour might be sent to it.

80258. (Sir Samuel Provis.) It is work outside their own district you have got in mind?—Yes.

80259. (Chairman.) One of your criticisms on finding work for the so-called unemployed is that persons are put upon it who are not accustomed to that class of work and that they bring down the whole standard of work?—Yes.

80260. Have you that difficulty now?—Yes.

80261. I see you think that something could be done by labour bureaux, and that they should not be confined to the so-called unemployed, but should secure the co-operation of both employers and workmen?—Yes; that is bearing out what I say in Paragraph 27. Labour exchanges.

80262. I suppose you feel that if these bureaux are entirely associated with the so-called unemployed, they will get a comparatively bad reputation, and will not be made use of by good employers of labour?—Exactly.

80263. You raise one difficulty at the end of your statement which I think is rather novel. You think that the higher wages in London deter persons from migrating to the provinces?—I think that is likely. If a man receives 10½d. per hour in London, he does not like to go away for 8d. per hour. Effect of high wages in London.

80264. In your experience has that objection been at all urged?—No; but I do not hear of skilled men going outside except they are forced to. I know very few cases where they have gone outside.

80265. Outside London you mean?—Yes.

80266. What is your opinion about the Unemployed Workmen Act? Would you renew the Act as it is, or Unemployed would you drop it, or would you renew it in an amended Workmen form?—I do not really see that it has been of much Act. benefit.

80267. Because, in your judgment, it has not touched the class, or has very slightly touched the class for whom it was intended?—That is so.

80268. (Mr. Nunn.) You are aware, of course, that the Act of 1905 does other things besides providing work in London?—Yes.

80269. It pays for men's passages abroad or to the colonies, and it pays for their migration to other parts of England?—Yes.

80270. Is that not a useful function for them to perform, in view of your statement at the end of your last paragraph?—In that respect, yes.

80271. Does that not aim at combating the objection men, perhaps, have to going into the country to work?—Yes, I think it does.

80272. I suppose that objection arises, does it not, from the fact that the men like to have the more money, even though it may not be more in actual worth in the purchasing of commodities? Is that how you account for the fact that they prefer 10½d. in London, to 8d. in the country?—Yes, I think that is so.

80273. But the 8d. would be worth quite as much in the country as the 10½d. here, I suppose?—I question that.

80274. It is rather an intricate subject to decide, perhaps. On the whole, with regard to the work provided in London, you are opposed to the Act?—Yes.

80275. If it provides work for men at the present time out of work, by means of work which is required, to be done by a municipality, it tends to throw out of work those who would ordinarily have been employed?—That is so.

80276. And if it goes in for anticipated work, the likelihood is that it will throw out workmen a year or two hence?—Exactly.

80277. I should like to ask you one or two questions with regard to the cemetery and other work, and also with regard to your connection with the Central Unemployed Body. The list of names which you had to work from, I think you said, was a list of names provided by the distress committee of your district?—Yes.

80278. You had to keep to that, did you?—Yes.

80279. In Paragraph 18, you tell us that you had a great difficulty in getting men who professed themselves to be bricklayers and masons, because they desired, under some misapprehension apparently, to give themselves out as labourers?—I did not have the same difficulty at first. I think the general opinion was that it was found that more labourers obtained work through the aid of the distress committee than mechanics; and the consequence was that the man who was a mechanic put himself down as a labourer.

80280. But were they not disabused of that idea in Fulham, where you were publicly giving work to all grades of men?—Not to the extent I should have liked. You must remember there were 2,000 odd applications, and we were only giving employment to about a couple of hundred.

80281. So that it was not sufficiently known?—That is so.

80282. Then with regard to the £200; do you mean that the whole of that £200 was in payment of work for which men had applied to the distress committee, and been passed by the distress committee?—Yes; it was the excess of the work.

80283. You were not refused this £200 by the Central Unemployed Body because some of the men you had employed and paid for in this £200 were men who had not applied and passed through the mill of the distress committee; or did you employ other men besides those who were passed by the distress committee?—One case in particular that I can remember was that the man was a single man and not a married man, and there were other cases that had not been investigated in time.

80284. Precisely; they had not been passed by the distress committee?—That is so.

80285. How was it possible for the Central Unemployed Body to pay for them if they had not been passed by their distress committee?—I think that they were using more red tape than was necessary.

80286. Red tape in sticking to the rules and regulations of the Local Government Board?—Yes. We could not get the men, and these men were investigated, but because the investigation was rather late, they declined to pay.

80287. If you wanted men in the open market, you could have obtained them at the market rates?—Yes, without any of this trouble.

80288. But if you choose to get men at the cheaper rate by payment from the Central Unemployed Body?—Not at a cheaper rate; we paid them the same wages.

80289. You got their wages supplemented by the Central Unemployed Body?—Yes.

80290. That is all this £900 was for?—Yes.

80291. If you apply to a body to supply you with cheap labour, you have to comply with their conditions, I suppose?—We did, so far as we could.

80292. When you could not, you employed other labour, I understand, and then you complain that you did not get the payment?—It was only a question of them investigating.

80293. Precisely; but then that is the whole question involved. That is what the distress committee is there for, is it not—to investigate?—Yes.

80294. (*Professor Smart.*) What kind of district is Fulham, residential or manufacturing, or what?—Residential mostly, and manufacturing just by the river.

80295. A better class district?—A class of district for the middle classes.

80296. What kind of industries have you there?—There are Macfarlane, Lang & Company's biscuit works, the Fulham Steel Works, and other iron works, and White's Mineral Water Manufactory.

80297. Do you mean it is a residential district for those persons engaged in the industries of the place?—No, mainly for the building trade: bricklayers, carpenters, joiners, masons, and so on.

80298. What is your experience of Fulham? Have you been there all the six years?—Yes.

80299. As borough engineer?—Yes.

80300. Your idea is that a municipality should get its work done exactly as a private employer does?—Exactly.

80301. You would give no preference to local labour?—I think preference might be given to local labour, but not wholly so.

80302. You would not willingly take on an inefficient workman?—No.

80303. Have you succeeded in carrying out that principle at Fulham?—Yes.

80304. You have not been interfered with?—No.

80305. Is not influence sometimes brought to bear on you from above, from persons in the municipal body to give employment to friends or people in whom they are interested?—They mention names occasionally, but I do not necessarily take any action on it.

80306. But a considerable proportion of your employees would be recommended by councillors, would they not?—No, I do not encourage it at all.

80307. You represent one view of municipal employment. Is not there something to be said for the other side, that municipal employment might act as a kind of reserve for men of good character rather down on their luck?—I do not think so.

80308. Do you not think that in a good many municipalities that is the view taken and acted on?—I think it may possibly be.

80309. We are often told that municipalities should arrange their work and spread it over the year, so that there should not be a hunger at one part of the year and a burst at another. You seem to say in Paragraph 9 that this is what you already do in Fulham?—Yes.

80310. Do you personally know of any big job that could be postponed till there was a time of depression?—I do not. The usual time of depression is, of course, in the winter; and the winter for outdoor work is the most inconvenient time.

80311. Then you do not know of any job that was going to be done some time which could be postponed till a bad time?—I do not know of any.

80312. In Paragraphs 10 to 12 you make an interesting calculation and say that such works as buildings bring cost falling for the labouring class only one-fifth to one-sixth of the total cost. I suppose you speak authoritatively on that?—Yes.

Mr. Francis Wood.
28 Oct., 1907.

Residential character of Fulham.

Proper principle of municipal employment.

- Mr. Francis Wood.* 80313. It is not a mere *obiter dictum*?—That is approximately correct.
- 28 Oct., 1907. 80314. Is what you say in Paragraph 14 about the Welsh hills a serious proposal or a mere hint?—It can be taken as both a hint and a serious proposal.
- Question of large water supply from Wales. 80315. You regard it as practicable?—It is quite feasible, except, of course, there is the proviso that even if this work was done in times of stress, that is in the winter, the weather would be most unsuitable.
80316. But it would depend on whether the work was necessary for London or not?—I do not think it is necessary, not for London particularly. I was only referring to London as an example.
- Investigation of applicants to Fulham District Committee. 80317. In Paragraph 15 you say only 45 per cent. of the cases were investigated. Why only 45 per cent.?—I think that is all they had time to do. I could not give you any answer, I prefer not to give any answer to that at all.
- Difficulty of providing work for skilled mechanics. 80318. Why do you say in Paragraph 18 that every man who applies knows or gets to know that he will receive greater attention if he is classed as a labourer?—If work is found for men of the labouring classes they receive work sooner than the bricklayer or carpenter and the men usually get to know that.
80319. You mean the distress committee lay themselves out to employ unemployed labourers principally?—I do not say they lay themselves out to do it; I think they have a difficulty in getting work which requires mechanics.
- Unemployed Workmen Act in Fulham. 80320. In regard to the cemetery, I gather that you had compromised yourself to do certain work at the cemetery with unemployed labour, and towards the end the men became worse and worse, and the cost was greater than you could possibly have anticipated? Is that what you mean? Was that the reason of your exceeding the estimate, or was that the reason of your being refused the full amount?—No; I think I explained to Mr. Nunn the reason why that £200 was not given; it was on account of the cases not being investigated at the proper time.
80321. Not on account of the cost being greater because of the inefficiency of the last body of workers?—No, I should not say so.
80322. You seem to suggest that the men who did register at Fulham were mostly loafers and unemployables?—No; I think that the men that we obtained towards the end of this particular work were worse than those that we obtained at first.
- Effect of providing work for unemployed. 80323. With regard to Paragraph 29, your experience is that if work is provided for the unemployed, that is labourers, there is a tendency for other men in other trades to qualify as labourers?—That is so.
80324. That is to say, there is a premium on unthrift?—Yes.
80325. Do you mean men call themselves labourers, or actually become labourers to obtain that work?—Yes. I think that in order to get work they would become labourers.
- Question of municipal insurance. 80326. What is in your mind when you speak in Paragraph 32 about municipal insurance? I am not quite sure of that paragraph?—It seems to me to be impossible for a municipality to frame an insurance scheme, because I think that the people that would bring themselves under the scheme would be only those that had the fear of unemployment, and not the general body of workmen who are not necessarily under the fear of unemployment.
- Cause of unemployment in Fulham. 80327. In the second paragraph you put down quite baldly that unemployment is caused by slackness in the building trade. Do you mean this is the only kind of employment in Fulham worth speaking about?—Yes.
80328. With regard to the question of unemployed men in London not usually migrating! this tends to keep a greater number of unemployed in London, does it not?—Yes.
80329. And yet we have a recommendation that men working in London should be paid a minimum wage of 30s. on the ground that living in London is so high.—But I do not think living in London is 25 per cent. above living in the provinces.
80330. You do not agree with this minimum wage of 30s. at all, I suppose?—I am not going to say that at all. I give an example that a mechanic was receiving 8d. an hour in the provinces, and he got 10½d. or 11d. in London. I do not think the extra 3d. per hour is accounted for by the increased cost of living in London.
80331. Have you ever thought of that idea of a minimum wage for men in the building trade say of 30s.?—I think that there ought to be a fixed living wage.
80332. For London alone?—I think it would have to be peculiar to the different districts. It may be more expensive to live in London than in other districts, therefore if there was a living wage it should be higher in London than it is in the provinces.
80333. You are not speaking of a minimum wage for London alone?—No.
80334. With regard to Paragraph 30, the form of Labour labour bureau you favour, I think, is one maintained by employers and employed. Do you mean that as against a State provided bureau?—I think that if a State provided bureau was in existence without the support of the employers it would be useless.
80335. How do you consider that the work you provide for the unemployed compares with the work they get in a farm colony?—I have no experience of a farm colony.
80336. (*Mr. Lock.*) With regard to Paragraph 21, to take up one of the points which has been raised, you say, "Some of them would be in work, or hoped they would, or they would not go four miles out, or promised to turn up and did not." As a matter of fact, did you find in connection with your work any considerable proportion of the men were of this class—25 per cent.?—I should say so, quite.
80337. More than 25 per cent.?—I mean, taking a specific example, we should send out perhaps quite twenty post cards asking these men to turn up, and in all probability we should not get above two or three replies.
80338. May I conclude from that that the demand alleged to exist for work was probably not a real demand to a great extent?—I think the demand was real enough.
80339. What did these people do; did they get jobs in spite of the fact that they seemed to be unemployed? I think some of them would do, and others would not go out four miles.
80340. What did they do; did they suffer in consequence?—I could not say what happened to them.
80341. Practically then it would not have made very much difference if the matter had been left to the ordinary market conditions?—I do not think so.
80342. That is to say if instead of having this special machinery, or this special intervention, they had allowed the natural forces to act, the question would have come out all right in the long run?—I think so.
80343. According to Paragraph 33, in Fulham, apparently owing to the building trade, you have a good deal of seasonal out-of-work?—Yes.
80344. Have you any suggestion to make with regard to that?—I have not.
80345. Do you find a great many of these seasonal out-of-work people come on the Poor Law?—I have not heard of them doing so particularly.
80346. In spite of the out-of-work seasons they still support themselves?—I think the majority of them do.
80347. So that although it is a cause of distress, yet it is not a factor which assumes any very large proportion in fact?—I think during the past twelve months it has been more severe than it has been in previous years. The building trade is very bad at the present time.
80348. It is connected solely with that trade in Fulham?—Practically so; a very large percentage.
80349. Have you found out whether these men finding the building trade in this plight are to any extent moving into other trades?—No.
80350. Have a large number emigrated from Fulham?—Yes, I believe there are a number.
80351. You have not had that clearly before you?—No, I have not.

Rate of wages in London, and question of minimum wage in general.

Difficulty of getting men for Borough Council work in Fulham.

Seasonal unemployment in Fulham.

80352. Yet you say that pauperism in Fulham has not gone up at all in consequence of this?—I could not say on that point.

objections to investigations on part of unemployed. 80353. (*Sir Samuel Provis.*) You say in Paragraph 21 that the applicants for assistance objected to the inquisitorial remarks of the committee, and the investigators. Did you find that objection more at the outset, and did it diminish as the time went on?—Yes, it was particularly so at the beginning, but I make a note that only 50 per cent. of the men applied in the second year, and the majority of the 50 per cent. would be the better class mechanics who objected to this system.

80354. Do you know at all what the nature of the objection on the part of the applicants was?—No, I do not.

80355. You do not know whether it was to the questions on the record paper, or whether it was to the personal inquiries that were made? Perhaps you have no information on that point?—I think perhaps there was a little of each.

80356. Were the investigations that were made in your judgment unreasonable?—That I could not say.

80357. You had some difference with the central body, had you not, as to the payment of the contribution to be made to the work taken in hand?—Yes.

80358. What was the nature of their objection?—On account of these men not having been properly passed by the distress committee.

80359. The objection of the central body was that they had not been sufficiently tested?—I think they were tested, but they were not tested in quite the right order, or at quite the right time.

80360. It was not on the ground of the cost of the work?—No.

80361. It was that you had not got, for whatever reason, the right men?—Yes.

80362. I gather you do not yourself think it desirable that the Unemployed Workmen's Act should be renewed. Merits and faults of Unemployed Workmen Act. Is that your view?—I think so, so far as municipalities in London providing work through that Act. I quite think that they do good work in connection with Act. sending men to the Colonies.

80363. You would keep up their power for emigration?—Yes.

80364. Perhaps you would also for migration, would you; for sending persons to other districts?—Yes.

80365. And perhaps also in connection with a labour bureau?—Yes.

80366. But you would not with regard to the provision of work, is that your view?—Yes, I do not agree that work should be made for the unemployed.

80367. But they need not necessarily make work, need they, because they may take work which would require to be done, though perhaps not at that particular moment?—In that case I do not think it is desirable that it should be done.

The Right Rev. the LORD BISHOP of STEPNEY, recalled; and further Examined.

The Right Rev. the Lord Bishop of Stepney.

28 Oct. 1907.

Minimum wage for sweated home-workers. 80368. (*Mr. Loch.*) I think we were discussing the question of the minimum wage when we stopped last Tuesday, and I think I will just resume by asking you one or two points which may bring us into accord, before going on to discuss further the question. I think we understood that your view is in favour, generally, of a minimum wage being adopted?—We were speaking simply, I think, of women's work at home.

80369. What we call sweated work?—Yes. I am not to be considered as going into the further question of any regulation of the minimum wage for other industries.

80370. We are thinking of it from the point of view of the prevention of the relief of distress, I understand?—Quite so.

80371. Your first proposition would be that you would accept a minimum wage in what you call roughly the sweated industries?—I should like some form of regulation. My feeling is that here you have a class of labour which cannot organise itself, and which, by reason of its weakness in bargaining, is compelled to accept a rate of payment which can only become a subsistence by the use of excessively long hours; and that as there seems no possibility of organising this class of employment, and as its present unorganised state increases, I think, the ability of employers to get a class of labour which is detrimental to the community, and indirectly increases the unemployment, it is very desirable in some form or other to regulate that labour.

80372. May I ask you whether you mean by regulation something more than fixity of wage?—Though I do not think the difficulties are to anyone more apparent than they are to me, I should like in some way, if possible, to establish in certain scheduled trades a certain minimum rate of payment, and if it were possible some sort of inspection of the sanitary condition of the places in which the work is done.

80373. (*Mrs. Bosanquet.*) Is this only for home workers?—Only for home workers. I am not considering any other problem at present.

80374. (*Mr. Loch.*) Does not what you have stated cover both men and women?—So far as the men are employed in these industries.

80375. That is to say, so far, for instance, as they too are unskilled and unorganised?—Yes. Of course I premise that the trades concerned would have to be very carefully scheduled.

80376. As I understand it, your proposition deals not with what you may call the organised trades?—Not at all.

80377. But with the unorganised trades?—Yes.

80378. And with those that are unorganised with regard to which you think something like a living wage should be provided—I am using the word "living" instead of "minimum"?—Of course, "living" is a vague term.

80379. "Minimum wage" would equally be so, would it not?—By a minimum wage I mean some wage which some properly constituted body would consider as sufficient to enable the person who receives it to do the work, without undue damage to health and general competence.

80380. Would that not of necessity be what we might interpret as a living wage, because if it were not enough for that, your point would fall?—Yes; in that sense using "living" as an interpretation of the word "minimum."

80381. I judge from your answer that you are somewhat inclined to give a rather wide interpretation to the word "minimum," namely, that it might be something nearer to the normal, if there was a standard fixed, than at present; by that I mean a normal wage might be in the mind of a person, and this would be as near that normal as possible—for you must deal with the question of how you would fix your wage?—Yes. It would be in regard to the general circumstances of the particular trade.

80382. Would you include in your question of the minimum wage the work done by women who take comparatively low terms in factories, other sources of income being forthcoming?—In what I am saying now, I am not considering what is equally a sweated class of industry in the ordinary sense of the term—women and girls employed at a very low wage in certain classes of factories; because there, at any rate, so far as they are working in a factory, the question of the health conditions is regulated by the ordinary factory inspection, and therefore the problem in their case is not so urgent as in the other case.

Question of minimum wage for low-paid women in factories.

80383. Do you not think that if you take the economic question up in the case of one large miscellaneous class of men and women, you will have to take it up in the case of others?—I think there is no doubt of it, so far as the industry being done in a factory was of the same class as the industry being done in the home.

*The Right
Rev. the Lord
Bishop of
Stepney.*

28 Oct. 1907.

Effects of
minimum
wage on
labour
market.

80384. Then this change would affect a great many people, would it not?—It would certainly. As to that—and you asked about it before—my feeling is that although any such system of regulation, however it was devised, would certainly throw out of employment a very large number of women who at present get some sort of employment, I should be prepared to face such an addition to the ranks of the unemployed for the time, because I should feel that that was a step towards the ultimate solution, which is, broadly speaking, the greater regulation of industry. It would have the same sort of effect as, for instance, the regulation of boy labour in the streets. In London now there is a large number of small boys out of employment, and that, therefore, has removed a certain support from a good many homes.

80385. Therefore, you would expect employers to say that at these larger wages the labour was not worthy of their employment, and that therefore they would refuse to pay them?—They would refuse in many cases, but not, I should hope, in an excessively large number.

80386. Of course, the question of the "excessively" raises a difficulty?—Yes.

80387. Why do you think, not in a very large number? I take it for granted that you think the higher wage is, in the view of the employer, too much at present; therefore the chances would be that in the future, if the state of the market is the same, this higher wage would still be too much; and, consequently, the employer would be inclined to refuse to pay the wage and the person would be without the work?—Why I said I did not think the number would be necessarily excessively large, is because I am under the impression that at present the margin between what is paid to the home worker and what the article commands in the market is sufficiently large to enable the employer to pay a somewhat higher wage without suffering real loss—without making it no longer worth his while to put such goods on the market.

80388. You are pretty well convinced that there is that margin, are you?—In some cases, I should almost be sure of it.

80389. Do you know where that has been handled quite conclusively?—No, I do not know of any place where this particular problem has been dealt with thoroughly. It is very different from the problem which has been dealt with in New Zealand, and Victoria, and elsewhere. I think it would be to that extent an experiment.

80390. Where have we, may I ask, records showing that if this interference took place with these particular trades, there is actually at the moment a large margin from which the higher wage could be drawn?—We have no evidence, except the comparison between the price which is paid to the worker in the home, and the price which is paid by the customer at the shop.

80391. And you think that would justify a considerable increase of wage, but that it would have to be considerable?—Yes, I do.

80392. And you think that point is proven by literature at present—by inquiries already made?—So far as they have been made.

80393. Could you refer me to any source of information which would settle that point?—I could not at the moment, I am afraid.

80394. Take the question one step further: the process that would take place would be the absorption into other trades of these people who are refused, or else they would come for Poor Law relief?—Yes, in some form or other.

80395. If all the trades which were unskilled and of the type to which they have been accustomed had had similar regulations, then they could not very well fall back on other trades, could they?—Not of the same type.

80396. Then they would be, in a way which is quite new to us, limited in the search for labour, unless they went outside London, we may say, or to some place where your rules did not apply?—That is so.

80397. That is to say, it would lead to a considerable increase of State support if the number rejected was large?—At the time, no doubt.

80398. Do you think that that can be in any way estimated? Take our able-bodied pauperism in London—*Effects of minimum wage on labour market.*—and we are thinking mainly of able-bodied people—that would be a matter of 46,000 in and 70,000 out, mean numbers, would it not?—Yes.

80399. These trades deal with a very large proportion of our Poor Law people, the unskilled class; would you expect us to have to look forward to something like a duplication of our Poor Law charges?—Do you mean literally a duplication—a doubling of them?

80400. I meant as far as numbers go—a duplication of our Poor Law numbers. Suppose they run to 116,000 men, women and children, would you expect that anything like that number of men, women and children would have to come back upon us if this great change were made?—I should have thought not at all.

80401. Why do you think not?—Because I do not think the displacement of industry would be anything like to that extent.

80402. But this unskilled class is a very large class; I mean, for instance, even taking the men only, there were a matter of 40,000 applications made to the distress committees?—You should remember that I am not dealing in the least with any proposals for fixing minimum wages in men's ordinary casual labour.

80403. That is so; but what I should argue is that a great deal of this labour which you refer to is women's labour, attached to the homes in which men are not working or where the men are working, but not fully?—Do you mean that the men would therefore be thrown out on to the ordinary market?

80404. The men would be thrown out on to the ordinary market—men who are habitually earning money on this method that you criticise?—I can only say I should be quite prepared to accept that risk.

80405. Even though it ran to a very large figure?—Yes. I have no means of knowing what the figure would be, but, as I said, ultimately it is the same situation which has had to be faced very often in economic history before, when the greater regulation and steadying of one class of labour has thrown large numbers out, and it has taken some time before they were absorbed in new classes of labour. During that time there must be distress and anxiety and difficulty; but it is moving toward the only ultimate solution. In my own mind, when I attempt to reply to all the difficulties which I am just as conscious of as Mr. Loch, I ask: What is the alternative?

80406. May I point out that the absorption of labour is probably immense in the present state of things? Is it not the case, for instance, after your dock strike, which, it is said, excluded a large number of men, that numbers of men were in some ways absorbed, or, at any rate, did not turn into overt pauperism?—I should not like to say how far, at the time, that was the case or not; certainly large numbers have been in some way or other absorbed.

80407. Have they not been absorbed necessarily by undertaking work not better than the work for which they were before considered unsatisfactory?—But of another kind.

80408. By your hypothesis they are excluded from that, that is to say, you stop this work of economic absorption, do you not?—Not necessarily. Have you in mind the prescribing of a minimum wage over the whole field of unskilled industry?

80409. No; I limit myself to your proposition, but I think it covers a large section of the unskilled field?—Yes, but it is a certain section.

80410. And I limit it entirely to that, only I would suggest to you that the question is a very wide one, even with your limitations. Now people would be in this position, would they not—under your *regime* they would have the alternative either of work on a fixed scale or else of maintenance under the Poor Law system; that would be the alternative, would it not?—No doubt, for a time. *Problem of thrown out of employment by minimum wage.*

80411. Then, as a matter of fact, would that not lead to their accepting an industrial position which in their circumstances would, to a certain extent, reduce their energy and spontaneity?—Of course, a great deal would depend on what was done. If they did come upon the com-

Problem of
persons
thrown out of
employment
by minimum
wage.

munity, the community can, if it likes, under the present system give them outdoor relief, and the community might under an improved system deal with them in a more fruitful way. It might, for the time, in many cases—in the case of the younger women, at any rate—give them some sort of industrial training which would fit them to be absorbed into a better class of labour. In the case of the children, under such circumstances the community might at least secure that these children would be trained for some better class of labour, instead of being under the present system kept merely to reinforce the already over-large margin of very unskilled labour.

80412. Is it necessary for us to enter into the case of the children, if the education of our community is properly conducted?—I merely mean, in answer to your question as to what should be done and as to what the position of these women would be if they were thrown out of employment and had to turn to the community, that that position, whether it was of value or not to themselves and to the community, would depend largely on the use which the community made of them while they were on its hands.

80413. Do you think that the community dealing with large numbers has actually power to undertake a very large industrial scheme of training, apart from the labour market?—It all depends what you mean by "large." It could deal with it in certain cases.

80414. Take the figures as standing at 30,000 or 40,000?—Are you assuming that something like 30,000 additional people would be thrown on the rates?

80415. It is a contingency which I think you might have to face?—Of course that is a matter of opinion.

80416. That is to say, you think really that the number which would be excluded by a living wage being forthcoming and by law payable in all unskilled work of this type?—Pardon me, I am only speaking of unskilled work, in certain specifically scheduled trades.

80417. But those trades would be scheduled which would cover the difficulty of sweated labour?—There, again, I am speaking now only, as I said at the beginning, of those trades where the worst conditions of employment in homes are found.

80418. But, of course, we do not get sufficient statements of quantity. I only suggest that the system once adopted, you will have to adopt it, as I think you will admit, in a larger way; for instance, the factory girls will come in?—Yes.

80419. If you did that, you would be dealing with a larger and a larger number?—Certainly. It would be very much the same problem as had to be faced in connection with the hand-loom weavers in the past. Gradually in the case of the factory labour I have no doubt that something of the same kind will be done. But into the whole question of settling a minimum wage in industry generally I am not entering and I cannot enter at present.

80420. Is it not true that in the other instances the ordinary process of absorption in the market has been in force, and in this particular instance the doors are closed so far as those particular trades are concerned which you entitle sweated trades?—If the system of regulation were extended over the whole area, it would be so.

80421. Do you rely at all upon the colony system as a means of dealing with the men who might come under this category?—If you are speaking of men, I would repeat what I said in regard to women—I have no doubt that so far as men were affected, though they scarcely come into any of the trades that I have in mind, if they were unable to find work under any system of another kind and were compelled to have resort to the community, the community might in many ways train them for some better class of labour.

80422. Is it your evidence that by training people in the way you suggest we should raise them, and that the community has the power really to do such a thing?—We have only evidence of such very limited experiments in colonies.

80423. But take the colonies; what would you say is the percentage of successes out of those colonies which have been in force some little time—we have had acquaintance with them for two or three years?—One can only rely on what the managers say. I have not the statistics with me at this moment, but they claim that a certainly

appreciable number of their men have become regular workers.

80424. But that is a very small selection out of a very large number?—Yes.

80425. So small that it does not affect the large number materially?—I should not think that. I should think they would claim a much larger proportion of successes than that.

80426. The total number that went to the colonies was very small?—Do you mean the colonies connected with the Unemployed Body?

80427. Yes?—I was rather thinking of such colonies as the Church Army colonies, the labour homes, and the Salvation Army colonies.

80428. Can you refer us to any details on that point which might be taken as trustworthy?—I think if you want the details you will have to get them from the managers.

80429. The labour home would in that case represent the type which you are meaning, would it not?—If it was extended over a sufficient length of time.

80430. Then with regard to the question of unemployment, have you noticed that there has been considerable want at times in the case of persons selected for emigration?—I have not come across any instances.

80431. You have not dealt with these cases personally at all?—Not personally, but I know fairly well the proceedings of the East End Emigration Fund.

80432. Then with regard to seasonal unemployment, that would cover, I presume, a different group of people to that which we have been referring to as persons who were under sweated labour, that is, it would include a larger number?—Yes, certainly.

80433. What is your suggestion for trying to prevent the distress that arises from year to year through a seasonal want of employment?—Of course "seasonal" may mean many things. It may mean that certain classes of work are wanted in certain seasons of the year. Is that what you mean?

80434. Yes, in the normal sense, that is to say, the particular work that the man has to do may be a nine months' trade, and he cannot carry it on through the whole year?—I know no way of dealing with that, except the thrift and self-control of the man when he is in receipt of wages.

80435. Granted that, do you think any step can be taken to enable him more thoroughly than at present to do that; I mean, is it a question of opportunity?—I should imagine it might be possible to enable a man to save something during these months, and to draw it out during the periods of slackness; but, of course, a great deal depends upon the circumstances. We are referring, I suppose, to the unskilled labour attached to these seasonal trades?

80436. Yes, roughly?—The skilled labour will probably have its own unemployed benefit funds to draw upon.

80437. Would you be in favour of any form of intervention in contracts for labour—deductions or anything of that kind?—In the nature of what?

80438. With a view to the creation of a fund for seasonal purposes?—Something in the nature of compulsory insurance?

80439. Employment insurance?—I should not like to say. I think that is an interesting point, but I have not thought it out.

80440. Apart from that, you see no way in which this unskilled body could be organised to take the position in some places of a trade union, which has its own unemployment fund?—I do not think among themselves they are capable of that degree of organisation.

80441. Nor do you see how to impose it on them in any way?—I should be delighted to think over any scheme which might be submitted, but I could not now submit any myself.

80442. Referring now to the difficulty of finding sufficient work of any useful sort out of London, you have suggested that there might be a deterrent system sufficiently effective by the fact that they have to leave their homes. Are not the difficulties insuperable, unless you adopt a

very definite programme of deterrence? We had a witness here after you left last Tuesday who had had charge of these works, and he seemed to think that the sending of the men from home was really no deterrent, and had very little effect?—I think I admit in my Statement that it did not prove to be as deterrent as we had originally expected. I had many years ago a conference at my house with some of the labour leaders who were in touch with unskilled labour, and they were of the opinion that the deprivation of the life and comforts of home for a time would be a very real difficulty for the class of men of which we were thinking. But, as I think I have admitted, it did not act so much as we had expected.

80443. Does not that drive you back to something more like the Poor Law system? You may call it a colony or not, but does it not really drive you back to a deterrent system of some stronger type?—Do you mean in the case of what we may call the honest sort of unemployed?

80444. Yes, the sort of middling-class of people who apply for relief of this kind that you had last year?—As I said before in regard to those who remain, when you have dealt more systematically than we have done with prevention at the top and with compulsory detention at the bottom—in regard to that middle class, I see nothing but the best system of relief work that can be devised; and I think any system is very unsatisfactory.

80445. But it would include deterrence as an element?—Yes. There must be some element that makes it less worth while for the man to do that class of work which is provided for him than a similar class of work which he would be able to obtain by his own efforts.

80446. Then more or less we fall back on the old Poor Law as far as that is concerned, in the sense that it is more preferable to stay outside and support yourself than to come in and be supported?—In some form you must come back to that.

80447. I should like to ask you one or two questions about Paragraph 17. Did you actually find amongst the unemployed many habitual vagrants?—Not among those who registered themselves, because vagrants were *ex hypothesi* excluded by the regulations; but certainly in the number of men who at any given moment are applying for unskilled work in East London there is always a very large number of persons who really are vagrants.

80448. Who have come up to London to get work?—Who are in London looking out for any kind of work that they can get.

80449. Would you include as vagrants there the ordinary common lodging-house person?—I should include that type.

80450. I should just like to ask one or two questions about subsection (iii.) of Paragraph 17. You suggest a judicial settlement of the question of relief, as I understand, apart from any outdoor relief committee, or any charitable relief committee?—My suggestion is a judicial settlement working in connection with charitable aid committees, or whatever name they may have.

80451. May I suggest that it seems almost as if that was a fifth wheel to the coach? How is the person to intervene? As I understand you, between these various bodies, one dealing with hospitals, one with charitable relief, one with another form of relief, there would be a judicial admitter, as it were, to the title to relief which the applicants should have?—Yes.

80452. On what evidence would he judge, except the ordinary evidence, such as can be collected in what we call case work?—Such evidence will be before him.

80453. Then practically is his decision in any particular sense judicial? A judicial sentence would be founded on a fact, but this would be a collation of facts which would have to be dealt with by an independent judgment?—I do not use the word "judicial" in a strict sense; in fact, I do not know that I have used the word "judicial"—I think it is your word.

80454. In this subsection you speak of "a permanent stipendiary official in definite districts," and I understood you to say on the last occasion, in answer to a question which was asked you, that he was to be a judicial person?—I would say that he would be an administrator rather than a judicial person.

80455. It has been suggested to us that there should be a judicial person in this capacity, but you would not have that kind of person? Your stipendiary would be a sort of paid chairman, would he?—I think his decision would have to be accepted, unless an appeal was made from it to, say, the Local Government Board. He would act on common sense and knowledge of the poor, not on the legal rules of evidence, if that is what is meant by "judicial."

80456. I meant that there should be outdoor relief given or refused on what has been termed a judicial line, that is to say, that as there is destitution or there is not, so there shall be outdoor relief or there shall not?—I say he must act on his best judgment, with all the facts of the case before him.

80457. You know that in relief work on a committee you want to have touch with all the sources of relief, medical, for instance, or whatever it may be; you suggest, I understand, that there should be a sort of statutory charitable committee—a recognised committee?—I should like something of that kind.

80458. Do you think it would be to the good of the people to dissociate that committee from the medical relief system altogether, and to put it into any other hands?—I think perhaps I do not quite understand your question.

80459. I understood you to mean that the medical relief would be in one hand, so to speak, the school would be in another hand, and the third, as it were, would be the voluntary or statutory charitable committee?—Yes.

80460. And not in touch with each other?—They would be in touch, and I should say very closely in touch, by each continually working with the representatives of both the others.

80461. How would you deal with a particular case? Would you be able to do what you can now, that is, order admission to the infirmary, from the voluntary or statutory charitable committee?—I should imagine when a person came before such an authority as is suggested there would be present during his examination a representative of the charitable aid committee, or whatever name it has, as well as a representative of the public health authority, or of the education authority, if the case involved either.

80462. Would the decision of the voluntary or statutory charitable committee be binding, if it desired, upon the other authority to give an admission into the infirmary for instance?—No. I imagine that the authority, whatever name he has, would listen to anything that the charitable aid committee's representative had to say before deciding what was the best way of dealing with the case.

80463. But then it seems to me that you rather leave out an important issue; surely it is better to have one system of inquiry in an area than several, is it not?—Yes; but I do not quite see how that arises.

80464. Is it not, therefore, better to have one centre for inquiry purposes attached to the committee that deals with the miscellaneous cases, and have the inquiry for the purposes of all the agencies that are interested, so as not to repeat inquiry?—I presume this authority would himself have his officers, who would make inquiries for him.

80465. The medical authority, do you mean?—The stipendiary authority, whatever he is called.

80466. Then there would be a duplication, as at present, of inquiries made by the charitable agency, or the statutory committee, and inquiries made by the stipendiary?—I should have thought the operation would be just the other way, and that when any particular case came up there would be the *prima facie* inquiries which had been made by the inquiry officers, and if it seemed right that it was a case to be undertaken by the charitable aid committee, the case would be referred to them, and they would make any further investigations they pleased.

80467. And so of course you would say with regard to the hospital, the stipendiary would be the judge and would refer the cases to the infirmary or to the hospital?—Yes.

Vagrants

Machinery
and work-
ing of re-
organised
system of
Relief
Committee.

Machinery
at work-
in of re-
organised
system of
Relief
Committee.

80468. And all the information before the stipendiary would be at the disposal of either body?—Of any recognised body.

80469. Could the infirmity people on notice from the stipendiary refuse a case?—They could appeal against his decision if they thought the case was not one for them.

80470. Would that not be a very cumbersome machinery?—I think any machinery may be made cumbersome—at least I would say that you can easily find ways in which any machinery can get hitched up; but I think in its general working it would be less cumbersome than the present system.

80471. Might I not suggest that there might be another line taken? I suppose what is desired is preventive work?—Yes.

80472. Might it not be possible to refer all cases to the statutory committee first, so that the best inquiries on all points might be made by them, and then let the cases go to the official bodies—I mean to the infirmity, as a matter of course, or, if you would like it, and it were legal, to any other body? In that case would it not follow that all the best of the work would be done at the outset, and one system of inquiry would go for everything?—I think that is a very interesting point, which I should like to consider further about. It all depends on how far it is conceivable to have any such statutory charitable committee invested with sufficient powers.

80473. Take the analogy of the Elberfeld system; there you have this local body chosen by the central body?—Yes.

80474. Supposing that were done here, would that, do you think, justify the responsibility imposed on the *quasi* charitable body?—I think if they did the work and had the sanctions which the Elberfeld system has, it would. There, of course, the voluntary president would act very much in the kind of way that, in this suggestion, the stipendiary magistrate would do, only in the Elberfeld system he is a volunteer, and in this case he would be one who is paid.

80475. I had that in my mind, and I am trying to come to a point at which these two should be, as it were, one, and the chairman, or whatever he may be, that you suggest, made part of the system of the statutory or voluntary charitable committee?—I think if we were to begin *de novo*, and could organise on the best scale, in our English cities, and in our English country places, the Elberfeld system in its entirety, that would be the proper procedure.

80476. Granted we could not do that, the proposal I make as a kind of middle point or position would not seem to you—well, impractical?—No. It is an interesting suggestion, but I think the difficulties in this country of carrying it out would be very large. I should like to see the closest possible co-operation between any such official as is spoken of in this suggestion and such a charitable aid committee, or whatever name it might have.

80477. In your opinion, unless that was adopted and carried through, the scheme would fail?—I think it is essential to the scheme.

Difficulties of
stipendiary
and Com-
mittee
system of
relief.

80478. (*Chairman.*) I should like to put one or two questions to your Lordship about your proposal for a stipendiary official who should adjudicate upon the various cases, and refer them to the different branches or different committees who were in charge of certain establishments. Would your idea be that the stipendiary should decide to which class the applicants belonged, and then hand them over to the authority?—May I first say that that is scarcely my proposal? I think all I venture to say in the statement which I have submitted is that it is possible that the time has come for the creation of such an authority. On this matter, as on so many others, we are learners and inquirers, waiting for such decisions as this body, with all its evidence before it, can come to, and anything that we can give is necessarily not so much a proposal as a suggestion for consideration. With that preface, what you say is what is in my mind.

80479. The objection that occurs to me is that you want, in the first place, to establish uniformity in the future administration of the Poor Law, and I think you would agree about that, would you not?—I should like to know what is exactly meant by “uniformity.”

80480. Assuming that there was an official in the position which you suggest, would you propose that he should dictate to each committee the treatment that was to be accorded to the applicant, or would he leave it to the committee to whom he handed the applicant over to treat him as they thought fit?—The latter entirely.

*The Right
Rev. the Lord
Bishop of
Stepney.*

28 Oct., 1907.

Difficulties of
stipendiary
and Com-
mittee
system of
relief.

80481. Then you would have, would you not, some four or five different bodies, each having to make their own rules for the treatment of persons who applied for relief?—They would have their own methods of dealing with the cases no doubt, under such general regulation as already exists from the State.

80482. It sounds plausible at first, but would it not be necessary, assuming you had a stipendiary magistrate, that there should be an authority to whom the applicants could appeal from his decision?—Yes, there should be a power of appeal either by themselves or by the authority to which he assigned any case.

80483. Would it not also be necessary that there should be some authority to see that the treatment accorded to these various applicants by the different committees or bodies who are in charge of institutions, should, making an allowance for the different conditions of each applicant, be more or less on the same lines?—That would be the function of the State.

80484. There must be some machine by which the State can give effect to that, and what I am coming to is this—that if you have a body of that sort, which I think you must have to control the action of the stipendiaries, is it not really very much like the present Board of guardians, only giving it another name?—No, because I imagine the appellate body which would control and supervise the decisions of such an official would be much more like the Local Government Board.

80485. (*Mr. Phelps.*) Acting through its inspectors?—Yes.

80486. (*Chairman.*) In that case of course you make the Local Government Board, which is a Parliamentary office, practically responsible for the personal treatment of all the paupers in the country?—It would inspect their treatment if there were any glaring case of neglect or mistake, and would deal with it, as I imagine inspectors can deal now.

80487. That would be in a glaring case, but assuming you had a number of stipendiaries in London, for instance, adjudicating in the sense you suggest, would it not be absolutely necessary that there should be some authority above each stipendiary which would not only hear appeals, but would also see that there was not a very marked difference between the treatment which these different disconnected committees accorded to the different persons who came up?—I am suggesting that these committees are not altogether disconnected; they are the committees of the county authority.

80488. But if the county authority appoints, as I think they must do, some body to look after the stipendiaries, would not that body be very much like the present board of guardians, only under another name?—In the sense that it was responsible ultimately for the treatment of all the individuals under its charge, it would.

80489. It really comes back to that, does it not, that this body which must deal with the stipendiaries would perform a very considerable number of the duties which are now discharged by the board of guardians?—I do not understand what you mean when you say “this body which would be over the stipendiaries.”

80490. There must be some body to control the stipendiaries, must there not?—As at present advised, as the saying is, I should suggest that that was the business of the State, I mean the State in the sense of the Central Department, whatever it was.

80491. The State then would become solely responsible for the treatment of all classes of paupers?—It would be responsible for seeing that the bodies whose committees deal with these people were doing their work to the public advantage, in fact, it would inspect as it inspects now.

80492. The Poor Law guardians now decide what relief they think necessary?—Yes.

80493. And the inspector can report, and the Local Government Board has indirect power of interference

*The Right
Rev. the Lord
Bishop of
Stepney.*

28 Oct., 1907.

Difficulties of
stipendiary
and Com-
mittee
system of
relief.

which is not ordinarily exercised ; but under this system the stipendiary, supervised by the inspector, would be responsible for the treatment accorded to all persons applying for relief ?—Not responsible for their treatment but responsible for the particular authority to which he committed each particular case, responsible, that is to say, for his decision, not for the treatment accorded to those on whose behalf he exercised that decision.

80494. But must there not be some uniformity in the treatment of these different committees ; and can that be attained otherwise than by there being some body over them ?—I should say that the State inspector would be in close touch with the county authority and its committees.

80495. How would that improve the present system ? At present the person goes to the relief committee, and the relief committee hears his case, and—assuming there was a wider classification and that the applicants were more thoroughly classified—what advantage does the stipendiary system, with these separate committees, give over the present system ?—In that regard the advantage would be that the body whose committees these different authorities were, would be a larger and more responsible body, and I should hope, as I said before, in much closer touch, through co-option or sub-committees with persons in each district familiar with the lives of the poor. It would be a body presumably attracting a rather better class of member ; it would be a body dealing with a much larger area, and therefore securing uniformity, at least, within that area ; and it would be a body which by having these different functions within its own control would be able to keep these different functions in closer relation to one another.

80496. Would you not have all that at the present time, if there was an enlarged area with greater powers in the hands of the present boards of guardians ? Would they not do this work better than all this elaborate machinery of stipendiary magistrates and charity committees ?—An enlarged board of guardians with wider powers, and undertaking many of these functions, would, I think, if I may put it very humbly, be next best.

80497. Just one question about the minimum wage. Are the profits of those who sweat really considerable in the particular industries that you are thinking of ?—By “ those who sweat ” do you mean the ultimate employer or the middleman ?

80498. Both or either. What I was coming to is this— if there was a considerable profit would there not be a tendency to raise the wage, in fact, would not competition raise the wage ? I thought the position rather was that many of these sweaters were in mean circumstances themselves ?—Many of them are.

80499. And that one of the difficulties is that there is such a large amount of this low-class labour that any attempt to raise the wage is difficult, because so many more come in ?—Yes ; there is always a large number ready to come in at any time.

80500. Does it not rather come to this that in certain districts the apparent remedy either is the compulsory breaking up and removing of this mass of low grade labour, or having recourse to some new device and to ideas which are new to British law by which a person should not be allowed to work under a certain rate of pay ?—That is suggested as the only ultimate remedy of a very difficult situation.

80501. Assuming you put the wage up would that not draw a number of people from other parts of London ?—I do not think that the sweated industries are so closely localised as that.

80502. I suppose as a rule it is not a class of labour which competes with factory labour ?—I think it competes with factory labour in the sense that it competes with labour done on the employer's own premises.

80503. In small factories ?—In work-shops or work-rooms.

80504. (*Mr. Nunn.*) I should like to approach the same question of the stipendiary and the statutory committee, if I may, but from a different point of view ?—I hope Mr. Nunn understands, as I said before, that one can only offer suggestions and that one waits for light from this Commission.

80505. Take the Act of 1905, and the principle of Mr. Long's committees ; I suppose one may start by presuming that the two objects which Mr. Long, and afterwards the Act, had in view, were to prevent this demoralising borough council work and to prevent application to the Poor Law ?—Yes.

80506. Those both attacked workers from different points of view, and seriously demoralised their character as well ; and this expedient was adopted to get both the bodies which were demoralising the workman in this way to join forces in order to prevent that demoralisation taking place ?—Yes.

80507. First the joint committees and then the distress committees under the Act were committees which were formed partly of borough councillors, partly of guardians and partly of other experienced persons ?—Yes.

80508. I think it was intended, was it not, that these experienced persons should be persons who had got their experience partly by the means of provident societies into the districts and partly through the charitable agencies of the districts ?—That was the intention.

80509. And as a matter of fact I think that is how it turned out ?—Yes.

80510. As I understand it the proposal which attracts you—I will put it in that way—is that we should extend that principle—that having been successful in preventing a good deal of demoralisation of industry and a good deal of pauperisation of industry, it should be extended ; and that the various agencies of a district which would represent the persons who are inclined to be charitable should combine together in the same way that these two bodies did under the Act ?—Yes.

80511. Is there not a good deal of presumption that the same kind of evil is being done to charitable work by the Poor Law as was found to be done to the ordinary un- employed workman by the action of the regulations apply- ing to an able-bodied man ?—In many parts.

80512. The mere existence of the Poor Law, I suppose, tends to check a certain amount of charitable and provident agencies, does it not, or is that not your opinion ?—Do you mean by giving people the impression that, after all, there is something for everyone to fall back upon ?

80513. Yes ; I suppose the existence of the Poor Law has to a very large extent prevented the development of provident societies, by offering this funds out of the rates ; is that your opinion ?—Yes ; I should think so far as the class of people we are dealing with ever think at all they have sometimes thought that it was unnecessary.

80514. An able-bodied man who is sick can now get relief from many boards of guardians without the trouble of joining a club ?—Yes.

80515. There is another cause which operates, I suppose, and that is the very large number of charitable agencies ?—Yes.

80516. And the great waste of funds ?—Certainly.

80517. Is it your opinion that, to a very large extent, out-door relief might be restricted if these various forces of the community itself were put into motion ?—Yes. My hope is that the number of cases for which outdoor relief seems to be the only solution will be greatly reduced.

80518. So that if you had a combination of all the agencies, municipal and otherwise, in a district and if their source of funds were supplemented by some such central board as you have suggested which would have power over endowed charities (which would in themselves produce a very large source of income) you would not only get a certain amount of guidance for a central body but you would also get a large source of income ?—Yes.

80519. And a source of income, I suppose, which might be used to fortify the power that ought to be exercised in guiding these local statutory bodies in their work ?—Yes, certainly. One hopes that in some such way a larger number of persons would be prevented from ever reaching that position which we call destitute.

80520. It is obvious that considerably more funds would be available under the development of such a system ?—One would hope so, certainly.

80521. In such circumstances you would have a body which was working in two directions—first of all, to pre-

vent distress by developing the provident faculty in working people, and secondly to cure distress by the organisation of the charitable agencies generally of the neighbourhood?—I feel most strongly that some resolute attempt to administer our charities on a better system lies very much at the root of a great deal of this unemployed problem.

80522. The result would be that wherever there was a case which seemed at all hopeful and which seemed at all curable it would probably be taken up by a body which would be very much more efficient than any isolated agency that at present exists?—Yes; it would be more expert.

80523. Therefore, whatever the Poor Law authority of the district was it would only have to deal, or to a large extent it would have to deal, with the hopeless residuum?—That is what one hopes; that before, so to say, any case came before the Poor Law authority, whatever that authority ultimately proves to be, it would have dropped down through the weight of its own unsatisfactoriness, through a network of agencies which might have stopped it getting there if it had been a more satisfactory case.

80524. The statutory committee would be a sort of sieve to prevent the hopeful cases from falling into Poor Law?—Yes, from slipping through.

80525. Then we come to the Poor Law body itself. The present boards of guardians, I think you said just now, to a very large extent have invaded the province of charity by taking up a large number of cases under Poor Law treatment because the community expected it of them?—They tend to do that.

80526. And that the work in the future under this new system which is suggested would leave a very much smaller number of persons to be dealt with?—That is one's hope.

Superiority of
stipendiary
to board of
guardians.

80527. Then we come to the stipendiaries; you prefer the stipendiary to a board of guardians, and I should like to know why?—Because I feel that what you want is to get some quick experienced method of dealing with such cases as come before the community as destitute or as in need of treatment.

80528. I suppose you would prevent the extreme variety of treatment of different boards of guardians?—I was coming to that. I feel further that these authorities who take up any case which has to be taken up will be kept together if they are committees of one body. In the third place this larger body would keep the whole administration of those who are reduced to having to be helped by the community in order and coherence.

80529. And those bodies would receive greater justice you think, at the hands of the stipendiary than they would at the hands of the boards of guardians?—I think if a board of guardians had its own functions and its own policy it would tend to keep cases in its own hands which might perhaps be better treated by some other authority.

80530. Is it because you despair of the present Poor Law boards of guardians that you propose to substitute a stipendiary—because you are dissatisfied with their treatment?—I do not at all despair of boards of guardians—I have known too many excellent boards of guardians and excellent guardians; but I think that certainly in London, as I have said, it seems to have become quite necessary to extend the area over which a board of guardians deals. My only notion in suggesting this stipendiary magistrate is that it is an immediate and ready way of finding some preliminary decision as to how a particular person ought to be treated. Whether the ultimate body which has to control the different treatments to which an individual is to be subjected is the

county council or an enlarged board of guardians is another matter.

80531. As I understand you you hope that a stipendiary would act much more precisely and justly than the board?—I think he would gradually come to be what so many similar officials, whether paid or unpaid, in other countries have been—a real expert friend of the poor.

80532. Would you couple with that closer regulations on the part of the Local Government Board than are at present exercised over boards of guardians. You stipendiary. know they have every wide limits at present, have they not?—Yes. I think that the Local Government Board would probably draw up, from time to time, regulations of a rather definite sort for the guidance of these stipendiaries, whatever they are called.

80533. If the stipendiary had to deal with a very much reduced residuum he could work well under very much more restricted regulations than those which at present obtain in the giving of relief, could he not?—So far as his own action was concerned, certainly.

80534. He would simply apply the regulations of the Local Government Board to the particular cases that came under his attention, but with more certainty and more uniformity than a board of guardians does at present?—One would hope so.

80535. Of course, one does not know how such a scheme would work, but is it your view that it would mean ultimately that he would not have to do with outdoor relief at all, that that would be dealt with by this statutory committee, and that he would practically merely have to refer persons to the suitable institution?—I should hope that the cases that came before him in which the only solution seemed to be outdoor relief would become increasingly fewer as the system got into work.

80536. Then with regard to his method of obtaining information, he would have the applicant before him as a board of guardians does, I suppose?—Yes.

80537. He would have an officer to make inquiries, and that officer, I suppose, would have access to any knowledge which the statutory committee or any of the agencies it represented might have gathered?—I should hope that these officers would be in close and continuous touch with all bodies in the district who were dealing with the poor.

80538. So that instead of the inquiry machine being duplicated it would merely mean that you had a check upon any inquiries that had been made by the voluntary bodies previously by an expert appointed by the Poor Law?—Yes; in the case of good officers it would have that effect.

80539. The stipendiary would not be bound by the results of the inquiries made by the charitable bodies, but the stipendiary's officer would have access to the result of those inquiries, would be able to weigh them, to check them, and to place his own opinion before the stipendiary?—Those inquiries would be part of the evidence that he might call before him in dealing with the case.

80540. So that he would be practically adjudicating on the facts which were laid before him, partly as the result of his own officers' inquiries, and partly as the result of inquiries made previously by other bodies?—Adjudicating, but, if it is not a "bull," not judicially in the strict sense.

80541. He would be simply applying the regulations he received from time to time from the Local Government Board?—To the cases before him, with the evidence which from any source was available for him at the time.

Mr. HARLEY HECKFORD, called; and Examined.

Mr. Harley
Heckford.

80542. (Chairman.) You are the borough surveyor and works manager of Poplar?—I am.

80543. You have prepared a Statement, which if you will kindly hand it in, we will treat as your evidence-in-chief?—Certainly.

The Witness handed in the following Statement.

Extent.

1. Statistics prove beyond doubt that in London, as in other large cities in this country, a considerable number

suffer from unemployment, and the proportion, I believe, has been ascertained. My experience of the unemployed has been chiefly with the labouring and artisan classes, and has extended over several years.

2. Whilst there can be no doubt that a proportion of the unemployed consists of those who never by choice remain in any employment for any length of time, I am satisfied that the great majority of the unemployed remain so, despite very earnest and real endeavours to obtain work. As evidence of this, I instance the fact that some of the

Character
unemployed.

Wide extent
of unem-
ployment.

28 Oct., 1907.

Mr. Harley
Heckford.

28 Oct., 1907.

best, most steady, and painstaking of the men now at work in my department have been selected from the ranks of the unemployed.

3. From time to time I have to engage a number of men for a few days, weeks, or months, according to the extent of the work to be carried out, and I do not know of an instance where a man from the unemployed ranks has been promoted from temporary to permanent work and not done full justice to his work.

Duration of
unemploy-
ment.

4. The period varies very considerably and is dependent chiefly on the condition of trade. Only with a proportionately small number is it chronic, for that means the workhouse, and the average unemployed man I have found to have extreme reluctance even as a last resource to receiving relief in this form, and is prepared to try anything possible to save himself and family from what he considers degradation.

Causes.

Cause of
unemploy-
ment.

5. To my mind the system under which large numbers of men are engaged temporarily from time to time when work is required is the chief cause, as when trade is bad they cannot all find work, and those who cannot, become "unemployed."

Effects.

Effects.

6. Discontentment and, if protracted, then moral and physical deterioration and demoralisation.

Remedies.

Work
provided by
municipal-
ities prior to
Unemployed
Workmen
Act.

7. Such work as that provided by municipalities, prior to the Unemployed Workmen Act, was beneficial in so far as it helped a number of men over periods of distress, and so long as real useful work of sufficient extent can be found at such times it would be advantageous to continue such a system. The great difficulty, however, is to have ready work of such a character as will relieve the number and classes unemployed.

Various
remedies.

8. The Unemployed Workmen Act, 1905; distress committees; labour bureaux; provided work; emigration; labour farms or colonies; trades union unemployed benefit; municipal insurance—all serve a useful purpose.

Character of
unemployed
in Poplar.

80544. (*Chairman.*) I assume that the mass of the working classes in Poplar are rather of a low grade?—There are a fair proportion of mechanics there.

80545. Your experience is that, though there may be a certain proportion of loafers amongst the so-called unemployed, a very considerable majority of them are anxious to work, and find a difficulty in obtaining work?—That is so.

80546. You give, as evidence of this, that some of the best men that you have now in your works department were taken from the ranks of the unemployed?—That is so.

80547. How long ago is that, in the last two or three years?—Three or four years.

80548. I suppose you had a good many to pick from?—Yes, a good number.

80549. Assuming you had many more places, would you have been able to fill them, do you think?—Yes, a great many more than we had vacancies for.

80550. What were these men, were they persons who had rather fallen in the social scale, or were they merely labourers and so on, out of employment?—Chiefly labourers, a few mechanics.

80551. You go so far as to say your experience is that you hardly know anyone who comes from the unemployed ranks who has been promoted from temporary to permanent work, who is not doing well?—Of course, they had worked for us before, and would not have been put into a permanent position unless it was thought they would give satisfaction.

80552. What sort of number have you placed in this way?—During my six years, experience of Poplar?

80553. Taking just the early part, would it be fifty, or as much as that?—I should say from thirty to forty.

80554. How many have you had to select from, some hundreds?—Some thousands.

80555. Therefore, you have had the pick of a very large choice?—That is so.

80556. You still think that you could have got, shall I say, hundreds more?—Easily, deserving men.

80557. Have these men been mostly employed in the building trade?—A few in the building trade; a large number of dock labourers and engineers. A list got out of 2,346 names in the winter of 1904-5, proved that there were some 90 bricklayer's labourers; 35 bricklayers; 89 carmen; 321 dock labourers; 98 excavators; 935 general labourers; 186 painters; and a large number of other trades.

80558. An expression has been used by one of the witnesses which I think is a good one, namely "under-employment." Is there, should you say, a considerable proportion of the unskilled in Poplar that suffers from under-employment?—Yes.

80559. That is to say, they are not fully occupied?—Yes.

80560. If they are taken on for weeks at a time there will, perhaps be a gap, or otherwise they are employed only two or three days a week?—Two or three days a week at the docks particularly; they have to load up a ship in a given time, they work long hours during that time, and then for some days have nothing to do, or for some weeks, very often.

80561. And the result, as you point out, of course, is both morally and physically very unfortunate for the men?—It is.

80562. You think that the Unemployed Workmen's Act, so far as Poplar is concerned, has, on the whole, proved good?—Yes, I think so. It has not been able to do sufficient, but it is good work so far.

80563. If you had a choice, would you prolong it as it is, or would you alter it, or let it be repealed?—I would rather prolong it than have nothing at all, though I think it only touches the fringe of the question.

80564. I assume that you had difficulty in finding work that was good in itself for these persons, without interfering with the work of those whom you regularly employed?—That is so. There are a great number of casual labourers always to be had, and if we take the men from the unemployed ranks, of course these men cannot get a job.

80565. How has your labour bureau worked, do you know?—I really do not know, I have not kept in very exchange close touch with it.

80566. You indicate a number of methods which might all operate towards reducing the amount of unemployment; amongst others you mention municipal insurance; what was your idea about municipal insurance?—I say that all those things serve a useful purpose, though I do not advocate anything.

80567. You had nothing in your mind?—No. I stated that in reply to the questions put on this subject, and I say they all serve a useful purpose.

80568. (*Sir Samuel Provis.*) You refer to engaging men from time to time; are you thinking of men who have passed the distress committee?—During the winter of 1904-1905 we practically only took those men who had passed the distress committee.

80569. Did the borough council provide works with a view of employing those men, or was it that they had need of them quite apart from that?—They pushed on work to provide for the men.

80570. What sort of work?—Street work, paving work, building work, sewer work, and that class of work generally.

80571. Their general municipal work?—Yes.

80572. It was not special work intended for the purpose?—No, it was all useful work.

80573. How did you find the men work?—They worked particularly well as compared with previous winters; we had very much better value than before. Previously we had given the men three days' work and got through a great number of men, but in this particular winter we only got through, I think, altogether 1,350 men against 3,270 the previous winter; but the men worked for a longer period, and we had much better value after they had been working for some time.

Borough
Council work
in Poplar in
1904-5.

ough Council work in Poplar in 1904-5.

80574. That was before the passing of the Unemployed Workmen's Act?—That is so.

80575. You had, before the passing of the Act, determined to give continuous employment rather than a few days' employment?—Yes, the borough council had directed me to do so.

80576. You found the previous method unsatisfactory, and you yourself changed it?—What we did was to put a certain number of men on, and if they gave satisfaction they continued till the jobs were completed. Sometimes the job only lasted three or four weeks, at other times it was four or five months. We found towards the end of the work that we got much better value than at the commencement.

80577. I think I understood you to say that your experience is that the men you got and put on this work, worked satisfactorily?—Satisfactorily as a whole; I do not say they were quite equal to men accustomed to the work.

80578. Allowing for inexperience in the work, did they work fairly well?—Very well indeed.

80579. You had, perhaps, to employ a larger number of men, taking them in that way, than you would if they had been men accustomed to the work?—Yes, I took it for a three months' job to be about 15 per cent. more.

current cases of application for relief.

80580. You have had experience of this sort of thing for two or three years; do you find that they are the same men that come year after year?—We find some of the same men.

80581. Do they differ at all?—They differ sometimes, but we get some of the same men again.

80582. Are the men who do recur the less satisfactory men?—A proportion are.

80583. Is the reason that they come to you that they cannot get employment elsewhere, because they are not such satisfactory workmen?—Yes.

80584. Therefore they rather rely on you to provide for them, seeing they cannot get jobs elsewhere—not because there is not work, but because they are not regarded as satisfactory?—Yes, but we give preference to those who have not been on before.

wages on relief work in Poplar.

80585. (*Sir Henry Robinson.*) What is the rate of wages you pay?—We paid at the rate of 7d. an hour.

80586. Is it the same for the unemployed as you pay to the ordinary men on your staff?—The trade union rate of 7d. an hour.

80587. When you carry out the work of a municipal body is it all work which they would have to carry out in any case?—Yes.

80588. What class of work is it?—I have a long list of the works we carried out in that winter which will show you (*producing a document*).

80589. (*Mrs. Webb.*) Might I ask whether that report is the report of the distress committee?—It is.

increase of rates in Poplar through provision of work for unemployed.

80590. (*Sir Henry Robinson.*) Did this lead to a very great increase in the rates in the district?—Yes, it did.

quality of work done by unemployed.

80591. Were the works carried out on loan?—A large number on loan, but some were carried on out of revenue.

quality of work done by unemployed.

80592. Did you find that these people you employed worked as hard as the other people you employed?—They worked as hard, but the work of a man who was just put on was not so good as it became afterwards. I have seen them with their hands skinned from unaccustomed work.

Municipal relief work in Poplar in 1903-4 and 1904-5;

80593. (*Mr. Loch.*) Can you say what was the amount spent on the unemployed that particular winter?—£65,000.

80594. That comes under the words: "Employed by borough council 1904-5"?—Yes.

Cost thereof and numbers of unemployed assisted.

80595. This would be the series: 1903-4, 3,270 men aggregated 14,520 days at 4s. 3d. per day, at a cost of £3,085 (from rates). In the next year, 1904-5, 1,350 men aggregated 61,990 days at 5s. per day, at a cost of £15,497?—That is for labour only.

80596. That is from the rates, and a grant of £520 from the London Unemployed Fund?—Yes, partly from

Capital and partly from Revenue. The cost of material is very much greater than the labour.

Mr. Harley Heckford.

80597. Then in the third year you have "Employed by Mansion House Committee and by guardians at Shenfield, wages of thirty-one men at Shenfield, £617 from local funds"?—I had nothing to do with Shenfield.

28 Oct. 1907.

80598. However, that was the work done in the district? Was that the only work done with the municipality that year?—There were men who were sent to Shenfield. We did nothing particular in the year after that year you mentioned.

Cost thereof and numbers of unemployed assisted.

80599. The next year, 1904-5: "Employed by Committee of London Unemployed Fund," you had ninety-eight men employed at Long Grove and Victoria Park?—Yes. That is the report of the committee. I was not responsible for the cost of it.

80600. That came from the London Unemployed Fund?—Yes.

80601. "Employed by Poplar Guardians, twenty-one men at Hutton's School Farms, Shenfield, £330 (from rates)"?—Yes, I presume so.

80602. Is there anything else not down here that you would have included in summing up what was done for the unemployed year by year by the municipality at Poplar?—You will see a full list in my report. There is the committee's report and my report following on.

80603. In the year 1904 there were a large number of works, smaller or larger, in various streets and places in Poplar?—Yes.

80604. The total estimated cost of which amounted to £65,411?—That is so.

80605. Your note on that is: "The wages paid up to March 24th on the above have aggregated the sum of £16,845, and 1,350 men have been put to work. Deducting a sum of £1,347 paid to the council's regular employees leaves a balance of £15,497 as having been paid to the 1,350 unemployed mentioned. This equals an average of £11 9s. 7d. per head. The length of time employment has been given has varied from a minimum of three weeks to eighteen weeks, and 138 of the men who have been found work for the longer period are still employed. Together with this number there are at the present time 245 men who have been sent to me by you still at work." With regard to the monetary matter was a loan raised by the Poplar municipality to meet the expense?—Yes.

80606. What was the amount of the loan, do you know?—The estimates that are down there. The biggest work was the granite sett paving work in Manchester Road, which was estimated at £24,700. The majority of that amount would be for materials and not labour. In running work of that class, the labour would only amount to about 20 per cent. of the cost.

80607. Was that work which these men were in a position to undertake?—Yes, the excavation connected with it.

80608. Was this £65,000 an extra expenditure for the year generally spread over Poplar?—It has to be repaid in a certain time. The paving works are spread over twenty years.

80609. And the rest?—According to the class of the work; sewer work is from twenty to thirty years, wood paving ten years, and asphalt ten years.

80610. Does this mean that at the conclusion of that year practically the work of this description was done for the district, or would you be spending another £65,000 in the next year?—Not on these streets; on other streets there might be expenditure.

80611. Are the Poplar Council in a position to incur a loan like that another year?—No, they are not.

80612. They are not in a position to incur any expense like that?—No.

80613. The numbers employed varied very much, in 1903 there were 3,270, and the next year there were 1,350, and the next year apparently you did nothing. Was that because nothing was needed?—There was not nearly so much distress the following year, and Poplar felt it had done as much as it could, and it could not afford to do anything the following year.

Mr. Harley
Heckford.

80614. Was it not the latter reason?—I think both; there was not nearly so much distress the following year.

28 Oct., 1907.

Relief work
in Poplar in
1905-6.

80615. Taking 1905-6, there again very little was done by you or by outside authorities, but you altered your policy and took a great deal on, did you not?—We had frequent deputations coming before the council, and they urged the council to pass work; the council considered those works which were considered advisable, and they passed the works, and they put them in hand.

80616. Do you think the fact that these works were not undertaken in a previous year in any way affected the population? Was there more starvation in the years in which there was nothing done?—I should say there would be.

80617. As a matter of fact, did you find it so?—I do not come in contact with cases of starvation, but I should say there was more distress that year.

80618. Have you any reason for saying that the able-bodied men in the house, owing to this, have increased in number, there being no work for them by the municipality, whereas there had been in other years?—I am told that the number did increase by that reason.

Examination
and selection
of applicants
for work in
Poplar.

80619. Did you adopt at all the system of employment by piecework?—No, but if a man did not do a fair day's work he was sent off.

80620. What was the number of your dismissals in the last year?—Not many, because the men were carefully examined first of all by the committee, and only those who passed the committee were sent to me. I had always an absolutely free hand, in the event of the men not giving satisfaction, to send them off.

80621. So that you may say the supervision and ganging was better than in previous years?—The system of employment was better than in previous years; by keeping the men on for a longer period you get better value.

80622. Did you have to send away a good many when you employed them in 1903-4?—A good many.

80623. Have you any reasons to suppose that the men sent away in 1903-4 obtained employment?—I do not know.

80624. They simply disappeared?—Yes.

Question of
value of
piecework
system.

80625. Would you in future years, if you had to deal with such men as turned up in 1903-4, adopt the piecework system?—The Poplar Borough Council do not believe in the piecework system.

80626. I am rather asking you what your view is?—I think it is better not to have piecework, if you can avoid it.

80627. Why?—Because you get better value otherwise. Piecework is scamped almost invariably.

80628. When you were dealing with the larger number of 1903-4, did you not find there were many men whom you could hardly control under your system, who might have worked on the piecework system?—Some knew they were only there for three days and did not take the interest which they would have done if they knew by working better they would be retained. I do not believe in the three days work at all.

Effect of
relief work
on permanent
staff in
Poplar.
Gangers on
relief works
in Poplar.

80629. (Mr. Gardiner.) Could you give us the result on the morale of your permanent staff in consequence of using this kind of distress work?—I do not think it affected it.

80630. How did you manage to supply the gangers necessary?—We selected the best of the permanent men as gangers.

80631. And after the jobs were over?—They went back to their other employment.

80632. Did you find them equally satisfactory?—Yes, you get some very good men who work temporarily as gangers or foremen and go back to their work afterwards and work well.

80633. You pay them extra for being ganger?—Yes.

80634. They do not mind going back?—They like it for the time and wish it to continue naturally.

Rateable
value of
Poplar.

80635. With regard to the £65,000, which was raised in 1904-5, what does it do in the £ produce in Poplar?—A little over £3,000.

80636. You used granite setts in Manchester Road rather than wood paving?—Because it was less expensive and more durable.

Comparative
cost of wood
paving and
granite setts

80637. Is it less expensive than wood?—Much less; the initial cost is greater, but you borrow for twenty years, while for wood it is ten years.

80638. You think in a road like Manchester Road it is right to have granite setts?—I think so certainly; that is the main road to the docks.

80639. Do you think the improved quality of the work you got at the end of the period was due to improved physical conditions?—Yes.

Quality of
work done by
unemployed.

80640. Did you notice when the men were first put on they seemed incapable of doing a decent day's work?—A good number seemed incapable of doing a decent day's work, but in that case we gave them sufficient to get a dinner the first day.

80641. You subbed them really?—Yes.

80642. Had you been carrying this out as an ordinary contractor, would you have employed these men?—Some of them. I would not have employed a large number of them, because of their state.

80643. Not of the 1,350?—No, because, as I said, that was 15 per cent. more than the normal rate of pay. Knowing that, of course I could not.

80644. You think it is for the permanent interest of the borough to use municipal work for this purpose; having regard to the fact that Poplar is a poor place, and you want every penny you can get out of your rates?—I do not know whether it is to the permanent interest of the borough. The difficulty is there is a large number of men living in Poplar who work in outside boroughs, but when they cannot get work there they come home to roost at Poplar.

Question of
desirability
of putting
unemployed
to do municipal
work.

80645. You, as borough engineer, are responsible for the conditions of your roads and drains and so forth?—Yes.

80646. Do you think, in the interest of your work, it is desirable to employ such unemployed men for that purpose?—I think under proper supervision it does not affect the work.

80647. Not laying drains?—We do not let men of that kind lay drains; they only do the excavations. We get expert men to lay the drains, and do the brick work, and the setts and that sort of thing.

80648. And the joints?—Yes.

80649. (Professor Smart.) How long have you been in Poplar?—I was appointed in January, 1902.

Experience
of witness.

80650. What was your previous training?—I was surveyor to the Vestry of St. Luke's for four and a half years.

80651. Were you bred an engineer?—Yes.

80652. And you are the borough engineer now as well as the surveyor?—Yes.

80653. You believe that unemployment is an economic phenomenon and not a mere accompaniment of bad character?—That is so.

Unemployment
an economic
phenomenon.

80654. You think unemployment has become permanent?—I am afraid so.

80655. I understand where possible you have made openings in your borough department for unemployed men who have proved themselves deserving cases. Do you give those men temporary work or permanent work?—When they have been taken on temporarily, if a vacancy occurs in a permanent position, the best man of the unemployed would be put in to fill that vacancy.

System of
employment
relief in
Poplar.

80656. What number of staff do you usually work with?—From 500 to 600 is the normal staff.

80657. It is a kind of elastic staff—you extend it as much as you find necessary?—According to the work to be carried out.

80658. Not according to the unemployed workers sent to you?—When there are unemployed, the council direct me to push on with the work: for instance, supposing a work is contemplated in the spring, and the council are aware of that, and there is a large number of unemployed in the winter, a few months before, we should start the works earlier than we should otherwise.

System of
employ-
ment relief
in Poplar.

80659. That is anticipating?—Yes.

80660. Supposing there is no work you can anticipate?—There always has been.

80661. Would you be in favour of extending the system, and making your department a kind of reserve for unemployed workmen?—No, I do not think it is advisable.

80662. But actually a very large proportion of your staff does consist of those that have come from the ranks of the unemployed?—That is so.

80663. And have been recommended to you by councillors perhaps?—Some have been recommended by councillors.

80664. Any large proportion?—No, only a few.

80665. I suppose in most large corporations the anxiety of every works manager is to get the work done in the cheapest and most efficient way?—Yes.

80666. This leads them rather to select the *élite* of the workers?—Yes.

80667. Is it not the fact of the case generally that municipal labour offers the best wage, and the best conditions, and so deservedly attracts the very best men of the class?—Yes, I think so.

80668. You look on casual labour as not only an effect but a cause of unemployment?—Yes, undoubtedly.

80669. And the best thing we can do is to decasualise the labour as much as possible?—Yes, I think that is a remedy, if it can be carried out; it is a difficult matter.

80670. Your statement is so suggestive that I ask this further question: have you ever thought of any scheme or any kind of work which could always be ready in reserve to put unemployed men to. You seem to have been wonderfully successful in finding work for the unemployed. Can you suggest any scheme for other corporations by which work could always be ready, to be taken up or dropped?—I do not think I could suggest a scheme whereby work could be found year after year. We have only been able to find work in Poplar on account of doing a lot of work one year and skipping a few of the other years; practically getting our work to such a pitch that so much would not be required for several years.

80671. You have not done work at any time that you would not have done in the ordinary course of a year or two later?—That is so.

80672. You have never "made" work?—No, we have started it probably a little earlier than it would otherwise have been started.

Proper rate
of wages for
employed.

80673. I suppose your view of an unemployed man after all is this, that he is a person who has been employed; therefore you ought to expect a full day's work from him, and, therefore, he ought to be paid a full day's wage?—Yes.

80674. If not you turn him off?—Yes.

80675. You do not give him any special mercy because he is unemployed?—No.

80676. You approve of farm colonies, I see?—Yes.

80677. Do you do that from experience?—I think they serve a useful purpose; they employ a certain number of men; it is better that than not having any work at all.

80678. Do I understand that you approve of them rather from what you know of the failure of ordinary relief work to meet the case?—Yes, more so.

80679. Do you think that a farm colony is a better way at least than that?—Yes.

80680. Would you like a farm colony attached to your own borough?—In so far as it would employ a certain number of men we could not employ.

80681. Would you suggest that a farm colony be attached to every large employment centre like yours?—So long as they get useful work there it would be useful.

80682. What kind of men would you send there?—The general labourer, and those you could not find other work for.

80683. Is it a last resort: you would rather prefer to employ them under yourself?—It depends on the class of labour: of course a mechanic would not care to go to a farm colony. If he could not get anything else to do he would go down there ultimately.

80684. You have not any particular aim in suggesting farm colonies?—No, except that so long as men could be employed there usefully it is a means of relieving distress.

80685. You look at it only as a means of tiding over, not as providing employment permanently?—Yes.

80686. You never thought of it as passing men on to emigration or to the land generally?—I should say it would be very useful training for that purpose.

80687. But principally you regard farm colonies as a kind of relief work for tiding over?—Yes.

80688. (*Chairman.*) Would you want a labour colony for test purposes to see whether the application is a *bona fide* one?—It would be extremely useful for that purpose, I should say.

80689. You might have it as a test; if it is to give employment it would have to be on a very large scale?—Yes. Of course, if the applicant knew it was a test he would do the best he could for the time being, even if he was not genuine.

80690. Did many of the people coming under your hands fail to pass the test that you thought it necessary to put them to?—A few did, but the majority did their best; they were really decent deserving men.

80691. (*Mrs. Webb.*) Could you tell us about the previous experiments in giving work to the unemployed. How many years have you been giving work to the unemployed?—The winters of 1902-3, 1903-4, and 1904-5.

80692. In 1902 under what body did you work, was that the Mansion House Fund?—No, the borough council did it; the year was a hard one; deputations came before the borough council, and the borough council were aware there was a large amount of unemployment in the district, so they did their best to relieve the distress.

80693. 1903-4 was the same?—Yes.

80694. Was 1904-5 under Mr. Long's scheme?—No.

80695. That was still your own scheme?—Yes.

80696. What was 1905-6?—Practically nothing was done so far as the council is concerned.

80697. And 1906-7?—The borough council did practically nothing.

80698. So you stopped doing anything in 1904?—The winter of 1904-5. We did a tremendous amount of work during that season.

80699. Did you notice any difference in the conditions that were imposed of eligibility for employment, or the conditions of life in those years in which you were giving employment?—The third year we got much better men than the previous two years, the committee sifted them out very carefully and sent them to me. I was directed to keep the men on if deserving until they finished the job. The men had an incentive to work, and they did a great deal better than those who were only sent to me for three days.

80700. When first you started you limited it to three days?—Yes, we got a greater number of men and it was limited in time.

80701. The experience of the committee led them to discontinue that?—Yes.

80702. Did they go on giving three days' employment?—Not after 1903-4.

80703. In 1904-5 it was continuous?—Yes.

80704. You spoke about piecework just now, and I gathered that you were against piecework?—That is so.

80705. Does that relate to any experience you have had in dealing with unemployed workmen?—No; my experience generally of employing labour is that when men are put on piecework they get through more work, but they scamp if they have an opportunity of doing so.

80706. What sort of piecework do you mean, building or what?—You would set out so much for them to excavate or so many bricks for them to lay, or so much plaster work for them to do, as the case may be.

80707. Is it not difficult to settle the piecework rate for that class of work?—There is no difficulty at all; it is often done in that way.

Mr. Harley
Heckford.
28 Oct., 1907.

Poplar in
1904-5.

Disadvan-
tage of
piecework.

Casual
labour.

Municipal
relief work
in Poplar.

Labour
colonies.

Mr. Harley Heckford. 80708. It is generally done in that way by sub-contract, is it not ?—It is often done by contract.

28 Oct., 1907. 80709. It is piecework rate to the headman, but time rate to the subordinate men ?—It is often done that way.

Disadvantage of piece work. 80710. Did you attempt to get a piecework rate for all men ?—We tried to get as much work done, or nearly as much work done, as if working by piecework, and we paid so much an hour.

80711. When you tried piecework was it co-operative piecework ? Did you give it to a little gang of men who divided the amount you gave, or how did you work it ?—The little piecework has been done direct. The only piecework as a matter of fact I have had done since I have been there has been bricklaying, and the men were required to lay so many bricks for a day's work.

80712. Each individual, not merely the gang ?—Yes ; that was in a tunnel where it could not be seen, and we found they scamped it ; they did not flush up their joints as they ought to have done.

80713. In that kind of work you really did give piecework ?—Yes.

Qualification demanded of men relieved by Poplar Borough Council. 80714. May I ask whether the committee who sent the men selected the men, or did you ?—The committee selected the men and sent them on to me ; I had the right, if I thought the men were not working as they ought to work, to dismiss them at an hour's notice practically.

80715. What sort of qualification did the committee exact ? Did they exact a limit as to residence ?—Yes, twelve months' residence.

80716. And as to having a family. Did they refuse single men ?—They gave preference to married men with families.

80717. Did they make any kind of inquiry whether a man belonged to a trade union or not ?—No, they never asked that question, it did not matter whether a man belonged to a union or not.

80718. Did they make any kind of inquiry whether he had received Poor Law relief ?—Yes, they asked that question, I believe.

80719. Did they verify his answer ?—Yes, in every case. They had an investigator going round for the purpose.

80720. Did they visit the home and see that the conditions of the home were right ?—Yes ; I believe the home was visited in every case as well.

80721. You were quite satisfied with the inquiry ?—I believe a very thorough investigation was made of each case.

80722. That is to say in the third year ; you were not satisfied before ?—I was not satisfied with the work that I had from the men before. I should say under the three days' system the labour cost 100 per cent. more than it should have done, whereas I estimate that in work extending over two or three months the manual labour did not cost above 15 per cent. in excess.

80723. Why was that extra cost ? Was that 15 per cent. due to the fact that the men were not working at a thing they were accustomed to ?—Yes, chiefly.

80724. It was not because it was municipal work ?—No, they improved as they went on. If you take a work which lasted three months it might have cost 30 or 40 per cent. more than it ought to for the first week or two, but at the end of the work they were almost just about doing as much work as any man would do at that particular class of work.

80725. Who did you get to look after these men in the way of supervision ?—We have our regular inspectors of work and foremen. Supervision of unemployed in municipal works in Poplar.

80726. Did you choose those inspectors with a view of dealing with unemployed men ?—No, they were the regular inspectors. Each inspector has so many foremen, and the foremen have so many gangers ; the gangers were taken from the council's regular men, the best of the regular men.

80727. Did you find a particular type of man more successful in getting work out of these unemployed men ?—No ; generally it was all round the same. I have the reports from the foremen and inspectors, and they generally record that the labour cost about 15 per cent. more.

80728. (*Mr. Nunn.*) When you were speaking of the market rate of wages you were not speaking of the work which was done under the Act, I suppose, and the wages which were paid to the unemployed ?—No. The rate of pay that Poplar has paid has always been the trade union rate of pay. Wages paid to unemployed in Poplar.

80729. Not to the unemployed under the Act of 1905 through the distress committee ?—The council has not employed any unemployed practically since then.

80730. (*Chairman.*) Should you say the majority of those who applied were persons who were chronically under-employed ?—I should think the majority were. A large number were men who had been in regular employment, such as mechanics, carpenters, carmen, and so on. Class of persons Poplar.

80731. The majority were under-employed, but there was a strong sprinkling of men who had been regularly employed ?—Yes.

Mr. Hubert Hammond.

28 Oct., 1907. 80732. (*Chairman.*) You were superintendent of the Fambridge Labour Colony ?—I was superintendent, it is now closed.

80733. You have prepared a Statement which we will treat as your evidence in chief if you will kindly hand it in ?—Certainly. (*The Witness handed in the following Statement.*)

Labour Farms or Colonies.

Advantage of labour colonies. 1. Farm colonies, if properly managed, appear to be a very suitable way of relieving unemployment and distress. The work is of so varied a nature that it should be possible, on the one hand to test the colonists' willingness to work by starting them on the more laborious operations, and on the other hand to find light and easy work, for a time, for the men who come on the colony physically unfit through privation.

2. The colonists do greatly improve in health and physique, and are enabled to earn at least a portion of their own living, and would probably, under good management, tend to become entirely self-supporting.

Bad effects of present system of labour colonies. 3. At the same time, it is certainly the case at present that the system obtaining is demoralising. The large proportion of inefficient and unsuitable men (probably due to the lack of care in selection by the distress committees), and the absence of sufficient supervision of the men's work, bring down the pace of the whole, and there

called ; and Examined.

exists a general feeling amongst the colonists that they are only engaged in temporary relief work to keep body and soul together. Bad effects of present system of labour colonies.

4. They have no hope for the future, no matter how hard they work nor however well behaved they may be, and, as a consequence, there is a general slackness. This can only be overcome by some system which holds out a prospect of permanence to those men who show themselves hardworking and reliable.

5. As things are at present, the men know that they have only a short period (four months) of work to look forward to ; they are separated from their families, their wives receive an allowance which is barely sufficient to provide the necessaries of life, and they know that at the end of their time they must resume the hopeless search for work. This knowledge does not inspire them with zeal.

6. Four months, in any case, is useless for giving a townsman any useful training in farming or gardening. Reforms necessary in labour colonies.

7. Those men who prove themselves thoroughly unsuitable should be discharged or transferred to a penal colony.

8. Those who show aptitude and industry should be kept on for a longer period.

9. Really good men could be selected from the latter class for drafting on to small holdings, where they would have their families restored to them, and could be taught to be entirely self-supporting.

10. For the successful working of a colony it is necessary that the men be in charge of gangers, not only to instruct them, but to enforce a fair day's work. When the men are kept well up to their work, they are far happier and much less inclined to grumble.

11. It ought also to be possible to reward those men who really try to do their best.

12. At Hollesley Bay the men on the farm and garden have worked without any proper gangers, and there has been a decided tendency for them to become lazy and dissatisfied. Good work was done at Hollesley Bay at building and brickmaking, but the men engaged were under the supervision of a building foreman.

The Temporary Relief Colony at Farnbridge.

13. This colony has been in existence rather more than a year.

14. Over 900 men have been here since the start, but the maximum number employed, at any one time, was 180.

15. The colonists have built a new sea-wall and rebuilt a considerable extent of damaged wall, by which some 200 acres of submerged land have been reclaimed.

16. The work—digging and wheeling heavy clay—has been very laborious, and the conditions here, especially during the winter, have been exceptionally severe, and particularly so as the colonists are all London men, many of whom have spent all their lives at indoor occupations.

17. They have worked in gangs of about fifty, each in charge of a ganger, and the majority have worked cheerfully through the bitter weather at this exposed and desolate place during the winter. They have frequently worked wet-footed, with clay and slush right up above their knees.

18. More than half the men are described as labourers, but there were artisans and mechanics of all descriptions, such as painters, carpenters, french-polishers, boot-makers, electricians, engineers, leather-dressers, etc.

19. The majority were of little use for the first few weeks, either from starvation or from being set to work which they had had no experience of; but they showed a marked improvement by the end of the first month, and this improvement has been progressive.

20. Those men who showed no improvement in their work or proved themselves lazy, were discharged at the completion of their first month.

21. It was found necessary to keep some twenty paid men, used to sea-walling, to do the skilled work, but some of the unemployed men became almost as useful at the end of their period of four months.

22. It has also been necessary to retain a number of the best men beyond the usual period, so as to always have some useful men available to distribute among the raw new-comers, and forty have been selected to stop on after completing four months, and are paid an extra 1s. per week. The privilege of a further period of work and the extra 1s. has proved a great incentive to good work and good conduct.

23. The working ability of the men who have passed through Farnbridge Colony during the last six months is as follows:—

Good workmen	-	-	-	-	-	205
Fair	"	-	-	-	-	166
No good or unsuitable for this class of work	-	-	-	-	-	88
Not here long enough to judge	-	-	-	-	-	6
Total	-	-	-	-	-	465

24. This gives a proportion of 44 per cent. who have proved themselves good workers, 36 per cent. who have done their best, but who have not had the same strength or skill as the best men, and 20 per cent. who ought not to have been sent to the colony.

25. Only 14 per cent. have obtained work, and the majority are certainly deserving of a better fate than to drift down to chronic unemployment and consequent pauperism. Many are men who will never obtain permanent work in London again, having passed their prime.

26. Even the 20 per cent. undesirables could be dealt with on a penal colony, and while they were compelled to do something for their own and their families' support,

the children could be prevented from growing up equally useless and expensive to the State. *Mr. Hubert Hammond.*

27. All the remainder could be successfully dealt with by State provided work—reclamation of submerged land, afforestation, and preparing land and building the necessary State houses, etc., for small holdings. This latter work was done on a small scale at Hollesley Bay, and in my opinion was the best work done by the unemployed there. *Oct., 1907.*

28. And I believe that from the unemployed themselves it will be possible to select men who will successfully manage small holdings on their own account, and so not only reduce the numbers of unemployed now, but help to permanently solve the problem by bringing up a healthier and more useful race to follow them.

29. In conclusion, I am very glad to be able to say that I have found the men grateful for the efforts made on their behalf. In trying circumstances they have behaved admirably, and there has been very little misconduct or grumbling.

80734. (*Chairman.*) Under whom was the Farnbridge Labour Colony?—Under the Central Unemployed Body for London.

80735. Did they initiate it, or was it in operation before?—They initiated it.

80736. How long was it in existence?—About fourteen months.

80737. In the earlier part of your Statement you express a very strong opinion about giving employment for a limited period. You think it is demoralising, and the lack of prospect of permanence affects the men detrimentally? *Effects of giving short spells of work.*

—Yes; they know that they are only there for four months and they do not put the same heart into their work as they would, or as one would expect them to, if good conduct on their part would produce any permanent result. At the end of the four months they are just as badly off as they were at the beginning.

80738. Have you been able to trace what happens to the men who are employed for these four months and then go back to London?—No, but I have had a large number of letters from them imploring me to try and get them back to that or other colonies.

80739. You would prefer to take a less number of men and keep them longer?—I think I should.

80740. At Hollesley Bay you think there has been a tendency in the people on the garden and farm to become dissatisfied and lazy?—Yes, but not necessarily because they are there or because they are unemployed, but because any crowd of men would do just the same thing with the same conditions and the same lack of supervision. *Tendency to laziness and need of supervision.*

80741. You attach great importance to effective supervision?—Yes.

80742. I suppose you may say that the less skilled and practised the men are the more you have to increase your supervision?—Yes, for two reasons; for the good of the men, to make them work better, and also to get better results out of them on the remunerative side.

80743. At Hollesley Bay they have done some good work in the way of building and brickmaking. Do you know whether the persons engaged in that work were accustomed to that work, or were suddenly put on to it?—Most of them had been accustomed to building work. The brickmaking was quite fresh to them. *Building and brickmaking at Hollesley Bay.*

80744. Now, we come to Farnbridge. Was the period of employment the same as at Hollesley Bay, four months?—Yes. *Farnbridge: work done by unemployed.*

80745. The idea was the same, although the work was rather different?—Yes.

80746. What did you do, did you reclaim some land from the sea?—Yes, we repaired a large breach in the sea-wall.

80747. Did your work stand?—It is standing.

80748. It has stood the test of the sea?—I have not the slightest doubt it will; it has not the sea on it yet.

80749. I thought the wall had fallen in?—With respect, that does not touch the unemployed problem or the central body.

80750. We want to get information?—The engineering advice on that work was unsatisfactory.

Mr. Hubert
Hammond.

28 Oct., 1907.

80751. Was it difficult work?—I do not think it was extraordinarily difficult. The work that went wrong was done by the contractors, not by the unemployed at all, and the superintendent of the unemployed at that time had very little say in the matter. The consulting expert decided what should be done and how it should be done.

80752. Why was the colony closed, I understand it has been closed?—The work was finished.

80753. What has been the result, have you reclaimed any considerable amount of land?—I believe that we have saved at least 1,500 acres from the possibility of being flooded, but the central body have only got 200 acres. They are actually supposed to have reclaimed 200 acres.

Cost of work
at Fam-
bridge.

80754. What was the amount of money expended in saving this?—The amount of money expended was altogether ridiculous in proportion to the work done. I believe it totalled up to about £25,000, but a very large amount of that money was wasted through bad advice, trying to do almost the impossible, and having to do the same work over three or four times.

80755. That £25,000 would include, I suppose, the contractor's work?—Yes.

Efficiency of
men
employed at
Fambridge.

80756. So far as your own people were concerned, you were well satisfied with their inclinations and the result of their work?—Yes, I was very well pleased with the men.

80757. Out of 465, about 44 per cent, proved themselves good workmen and 36 per cent had done their best; by that I suppose you mean it was new work to them, they were not accustomed to it?—Yes, a lot of these men had never done outdoor work of any sort at all, they had perhaps been in a factory all their lives, and they were set to work they were quite unsuited to, but they did the best you could possibly expect them to do.

80758. About 20 per cent. were bad or indifferent?—Yes.

Work
obtained by
men after
leaving
Fambridge.

80759. 14 per cent. of those you had under you have got work?—Yes.

80760. Are they still employed do you know?—That we cannot tell, we only know they got work.

80761. Did they get work on your recommendation at all?—No.

80762. Did they get work through the local gangers, do you know?—I should say nearly all of them got work themselves, either when they went up on furlough, or through former employers writing to them.

Advantages
of penal
colony.

80763. As regards the 20 per cent., you would like to deal with them by a penal colony?—Yes.

80764. I suppose the way you would work it would be that persons would be sent down to a relief colony such as this, and if they did not conduct themselves properly they would be sent on to a penal colony?—I think that would be far more satisfactory than the present arrangement. The only thing that a superintendent of either of these colonies can do now with an ill-conducted man, is to send him home, and that means that it may not punish the man much, but it certainly punishes his wife and children.

80765. If you sent him to a penal colony, you would want some power of detention to keep him there?—Decidedly.

80766. What effect do you think it would have had on, say, this 20 per cent. if they had known you had got this power behind you? Do you think that would have made them exert themselves more?—I think so.

80767. I suppose any man could leave when he chose?—Yes.

80768. Did any leave of their own accord?—Yes.

Suitability
of small
holdings for
townsmen.

80769. What are the class of men that you think might successfully manage small holdings; are they men who were countrymen accustomed to horticulture or agriculture, or are they mostly townsmen?—I think the countrymen have the preference.

80770. Did the others show any aptitude for this sort of work, gardening and so on, men from the towns?—Some of them are very smart and intelligent at gardening

in fact they are more intelligent than the countrymen, they will pick up a new thing that they have never done before far quicker.

80771. Were they keen about this sort of work?—I cannot say that they were. You see they had nothing to see in front of them; they cannot see any definite result of what their work is leading to; they have to take it all on trust so far.

80772. You think that if there was a prospect before them, that they might be able to manage small allotments or small holdings, it would be better?—Yes, I am quite certain that if there were some small holdings going, which these men could see for themselves, or at any rate get information about, it would certainly inspire them with enough zeal to qualify themselves for similar holdings. At present they have nothing to look at; they have no object lesson of the sort, except in a limited way.

80773. Should you say that the majority of the men you have to deal with were in a chronic state of under-employment or were short of employment, or that it was only an exceptional difficulty they were in?—I think a very large number of them were chronically unemployed. Industrial status of men relieved at Fambridge.

80774. That is to say that they were short of full employment, or was it seasonal unemployment?—The employment of quite a number of them is gone, they will never get any more, their trade has disappeared. In the case of the Arsenal, the men will never get back there.

80775. You have had men from the Arsenal?—Yes.

80776. How did they turn out?—It was a very decent lot of men we had, but I think their case is practically hopeless in the ordinary labour market. They are men who have been earning £2 or more a week in the Arsenal, and are quite worth it to the Arsenal, but they are utterly useless to an ordinary employer. They know nothing except the trade they have learned in the Arsenal. We have had such men as those doing housework, indoor work, on the colonies.

80777. Of course, Woolwich men are rather exceptional. Had you many more from other parts of London, or other trained industries, of the same character?—I do not know personally of many other instances, but we have had examples of trades that have ceased to exist and been replaced by machinery, coopering for instance.

80778. Those men that have been in permanent employment which they have lost, either through reductions, or changes in machinery, I assume would be of a superior stamp to the casual labourer?—Yes, quite a different stamp.

80779. What proportion would there be amongst that class, say amongst the 900 who passed through your hands? Would there be any considerable proportion?—I could not give that offhand. I think the figures could be got at. Probably the central office could get out a tabulated statement of the whole number of men there.

80780. Would it be quite a considerable percentage of the number?—It would not be a big percentage at Fambridge, because the tendency seemed to be to send the roughest men they could down there. It was a rough unpleasant job, and the rougher type of men were sent. System at Fambridge.

80781. (Professor Smart.) What was this Fambridge labour colony; was it a colony of men located on the spot?—Yes, the men were all married Londoners sent by the Central Unemployed Body through the various distress committees to Fambridge. They were housed and fed there and sent home on furlough once a month, in precisely the same way that the men at the Hollesley Bay colony are.

80782. What buildings did you get for them?—There were buildings on the place, disused works, which were rented for the purpose.

80783. And the men all came from the central body?—Yes.

80784. When did you come to be superintending them?—At the beginning of January last.

80785. What was your previous experience?—I was at Hollesley Bay from the start of that colony, and previously to that I was enquiry officer to the first distress committee at Woolwich under Mr. Long's scheme.

80786. And now, might I ask?—Now I am back at Hollesley Bay.

80787. You complain of the general slackness at Fambridge; you say the least fit sets the pace, and it is always considered temporary relief, not educational work?—I was alluding to Hollesley Bay there. At Fambridge the men were well looked after by gangers and their work was satisfactory.

80788. You consider the four months useless as training, and there is no future for the men, so that they are set up for the moment in health and then fall back?—Yes. I think it is quite impossible to teach any man gardening or farming work in four months.

80789. You advocate penal colonies on the one hand for the thoroughly unsuitable persons, and a longer period for the suitable, and then drafting the better men off to small holdings?—Yes.

80790. I gather you see little good in farm colonies, unless they lead to small holdings?—I do not.

80791. Farm colonies have some little value as tests, surely?—Undoubtedly they are of great value as tests.

80792. Better tests than you have in ordinary work supplied by a borough council?—Yes, I think so because you have such a varied assortment of men to deal with. A good proportion of them could not be dealt with on borough council work, they would be fired out as unsuitable straight away; but at a farm colony we can find work for all sorts of men, and test the willingness of the physically weak as well as the navvies.

80793. You are very strong upon the necessity of gangers both for training and for enforcing work?—Yes.

80794. You say Hollesley Bay has suffered from the want of ganging. I thought Hollesley Bay rather prided itself upon its ganging system?—That is just my opinion. I do not think the ganging of the men is at all sufficient. There is a large number of men spread over a very large area.

80795. Have you vented that opinion before?—No, I have had no opportunity.

80796. You apparently think that Fambridge has had better results than Hollesley Bay?—I felt amongst the men that they showed signs of being more contented, and they most certainly did far better work.

80797. And they showed a marked improvement also?—Yes, they showed a very marked improvement. I went through every one of them at the end of each month when they went home, and recorded their work and conduct, and in almost every case they showed up well at the end of the four months. Perhaps at the end of the first month they were classed as fair; at the end of the second month the man who was only fair would be good, and at the end of the fourth month he would be very good. There was a general tendency among them to improve.

80798. I believe you would have a ganger over fifty men. I suppose it was possible at Fambridge, but would it not be difficult at Hollesley Bay: fifty men would cover a large area?—It would be more difficult, but if the ganger has nothing else to do but look after fifty men, he will get it done. He cannot always be watching all of them, but he can shift himself about from place to place, and he will certainly be able to detect the lazy men.

80799. Is the expense the reason why more ganging is not employed at Hollesley Bay, or do they differ with you in your opinion?—I should imagine it is the difficulty of expense. The original idea appeared to me to be to run Hollesley Bay as economically as possible, and to have as small a staff as it could be worked with.

80800. Do you not think they had the idea that the men ought to be trusted a good deal?—There is that idea as well.

80801. I see you scored your success by having a number of paid men guiding the unemployed. You had twenty paid men I see on the seawalling, to do the skilled work?—Yes, we could have done with less of those skilled men if we had had our own trained London men on permanently, but as soon as they got useful they had to go.

80802. I see again that you kept forty of the best men at an extra 1s. ?—Yes. *Mr. Hubert Hammond.*

80803. You came to the conclusion that 44 per cent. had proved themselves good workers?—Yes, during the six months that I had experience of the colony. *28 Oct., 1907.*

80804. But unfortunately only 14 per cent. of those have obtained work since?—Yes. *Numbers obtaining work after leaving Fambridge.*

80805. Have you followed them subsequently?—No, after they have left the colony I know nothing of them, but only 14 per cent. obtained work to my knowledge. Of course, some of them who were discharged at the end of their sixteen weeks may have got work since, but I do not know.

80806. You mean 14 per cent. of the whole number, not 14 per cent. of the 44 per cent. ?—This is dealing with a total of 465 men, and the proportion of those.

80807. (*Chairman.*) That is during the last six months?—Yes.

80808. (*Professor Smart.*) In regard to that matter of cost of work of cost, was not the original estimate £8,000?—There at Fambridge or thereabouts, I believe it was, but on a previous attempt by the landowner I believe £8,000 was spent, and the whole of that was washed away, so that in the face of those facts the estimate was an absurd one.

80809. What was the basis of that £8,000. Was it considered that 200 acres of reclaimed land would be worth anything like £8,000?—No, the original estimate was £5,000, and I believe the Central Body saw that the land certainly was not worth that, but they considered that the work they would be able to give the men would make it worth while attempting.

80810. What would be the value of the 200 acres?—It was valued at £800, but that is rather a pessimistic valuation. It is not worth more than £1,000 though.

80811. Is it true that a great deal of indirect good was done to the other farmers in the district?—Yes. *Results and value of Fambridge reclamation.*

80812. That was clearly foreseen?—I take it that was taken into consideration.

80813. The work was not done simply in order to reclaim 200 acres of land?—No. The piece of land that is now safe from the sea is very much more than that 200 acres.

80814. Formerly it was inundated now and then?—Yes, so much so that at one time the railway line was flooded, and the passengers had to leave the trains and be conveyed by brakes a short distance till they got to the other side of the flood.

80815. Do you agree with an opinion commonly expressed that the work would never have been undertaken at all by private persons?—Most certainly it would never have been.

80816. It was to no one's interest?—No. I do not think really it was worth doing at all.

80817. I thought you might have thought it was worth £8,000 on the whole, but certainly not worth £25,000?—If it could have been done for the £5,000, I should not have objected to it so much, but it obviously could not be done for that sum.

80818. Then it was a clear case you consider, of "making work"?—Yes.

80819. (*Mr. Phelps.*) What was the state of the colonists when they appeared, as a rule? Did you find many cases of people who were underfed?—Yes. *Physique of men on arrival at Fambridge.*

80820. Had you any medical advice with regard to those?—I had a doctor whenever he was wanted. We got the men treated as a club.

80821. Supposing people came in very varying states of physique, how did you decide what sort of work to put them to?—I very soon found out what to do with them. If I saw a man was obviously in misery I took him off the work, and put him to chopping wood, or something like that for a week or so.

80822. You proceeded on your own judgment; you did not proceed on medical advice necessarily?—No.

80823. After their physique there comes the question of aptitude. Did you find that many of them knew how to handle a spade?—Yes, at Fambridge they were more or less selected. The people who selected them knew *Aptitude of men for spade work at Fambridge.*

Mr. Hubert
Hammond.

they would have to do heavy spade work, but there was, on the other hand, quite a large proportion who obviously had never handled a spade.

28 Oct. 1907.

80824. How long do you take it it takes to teach a man of average intelligence, an average Londoner, spade work ?—He ought to get into it within a month.

Dietary at
Fambridge.

80825. Who prescribed and arranged their dietary ?—I presume originally the Visiting Committee would have done that. When I got there the dietary was in existence ? and I did not alter it very much.

80826. You did not watch over it from the first ?—I did not institute it there, but it was practically copied from the Hollesley Bay dietary, because the cook there had been assistant cook at Hollesley Bay, and he followed the Hollesley Bay method.

80827. Were you there from the first, or did you join when it was a going concern ?—I joined Fambridge after it had been going something more than six months.

Right of men
to leave the
colony.

80828. What rule had you with regard to detention, had you any ?—No, we had no power of detention at all, a man could leave whenever he liked.

80829. Did many people so leave ?—Not a large proportion.

80830. Did those who left turn up again ?—If they left with a real reason they did, but if they left for no reason they were not allowed to return.

80831. Did you hear anything of the future history of any of those who ran away ?—I did in one case, I was subpoenaed to give evidence at the police court.

Question of
drinking at
Fambridge.

80832. What was your distance from the nearest public-house ?—The nearest public-house was just opposite the office, it was not five minutes away.

80833. Had you any rules with regard to that ?—None at all, except that the men were not allowed to get drunk. We did not attempt to keep them out of the public house at all.

80834. You do not know at all what kind of business the public-house did in consequence of the colony ?—At one time during the first six months I think they did a very good business.

80835. How do you account for the difference after the first six months ?—Partly the change in the proprietorship of the hotel, the second man was rather a better stamp of man, and the men seemed to have settled down more, the 1s. a week, and the prospect of being kept on as selected men made a very considerable difference. That was one of the first things I fought for, to get something to hold up in front of the men to encourage them to behave themselves.

80836. To give them a motive ?—Yes.

80837. And the presence or absence of that made a real difference ?—Most certainly it did.

80838. (Chairman.) After how long did they get the 1s. ?—After they had been there twelve weeks.

80839.—The last four weeks they get a 1s. ?—Yes, and there was also the chance of being kept on should a vacancy occur among the 40 men.

Nature of
work at
Fambridge.

80840. (Mr. Phelps.) These people were mainly engaged in digging and wheeling and stacking chalk and clay, were they not ?—Yes.

80841. Do you think that had any educational value for their future chances ?—Not very much. There would not be any sea-walling work for them to do anywhere.

80842. Sea-walling work is very skilled labour really, is it not ?—I should not say so, I could go and do any of it.

80843. Is there not a class of men who monopolise that class of work ?—Yes, a class of men who have been trained up to it from boyhood, and know exactly what to do. You could not attempt any sea-walling without some such men working on it.

80844. You think there is a place under them for comparatively unskilled labourers, working under their direction ?—Yes.

Case of man
going into
farm work
from Fam-
bridge.

80845. Did you have any cases of men who went into farm work from Fambridge ?—I only know of one case. There was one man who got a job on a farm, and he is still there. It is quite a small farm that he is working on, but he gets some sort of a living there. I do not suppose he earns more than 13s. a week.

80846. Is he a married man ?—Yes.

80847. Is his wife with him there ?—Yes.

80848. They have a cottage there, I suppose ?—Yes.

80849. Had you any animals at Fambridge ?—No.

80850. You had no horses or cows ?—We had only one horse.

80851. Taking the case of Hollesley Bay in that matter, Farm at Hollesley Bay they would learn a greater variety of subjects ?—Yes, men sent there preliminary to going to Canada get a very good training ; they are taught to milk and use farm implements and look after horses. I think that part of Hollesley Bay is undoubtedly useful.

80852. And you find the people take an interest in that, and throw themselves into it ?—Yes, some of those men who have gone to Canada did very well on the farm.

80853. With regard to small holdings, what length of Small training do you think an average Londoner would require before he was fit to take a small holding, a quick man at picking things up, as they sometimes are ?—It is only a matter of opinion, there has been nothing done that one can base one's ideas upon. I should say three years.

80854. You say that Hollesley Bay would be useful if it prepared people for small holdings. Have you thought over the question of how the capital for small holdings could be provided in those cases ?—Personally I have not done that ; but I have seen a scheme proposed by which the small holdings would automatically repay the capital laid out on them.

80855. Have you any experience of those experiments which have been made in different parts of England in that matter ?—I have only experience of one, that is Mr. Fels' attempt at Mayland, but that is too new, it is only in its first year, so you cannot say anything about it.

80856. You have not seen any of the others, which have been going for some time ?—No.

80857. (Dr. Downes.) What were your arrangements Medical for medical attendance at Fambridge ?—If I could manage arrangements the case myself I did, but if it appeared at all serious I at Fam-telegraphed to a doctor.

80858. Was there a special doctor to whom you were expected to telegraph ?—Yes, we arranged with the local doctor to take these men as a sick club, and paid so much a head, 1½d. I think it was.

80859. What did you do with them if they were sick ? I suppose you had some sick men ?—If they were bad cases we had to shift them away, the place was altogether too rough to nurse sick men.

80860. Did you have any bad cases ?—We had only one serious case while I was there. It was a case of haemorrhage, and we drove him off to the infirmary.

80861. How far off was that ?—Four miles.

80862. Was that a Poor Law infirmary ?—Yes. We had another case of strangulated hernia.

80863. What happened to him ?—I wired straight off to St. Bartholomew's Hospital and asked if they could take him in ; they said they would, and I took him up myself.

80864. Did any of the men die there ?—No.

80865. Did those men that were taken away, that you have spoken of, recover ?—Yes, both of them.

80866. Was there any difficulty with regard to the Sanitary drainage of the place, and the sanitary conditions ?—No, conditions, there was no difficulty at all. You see it had been a small etc., at Fam-village in connection with these works before we went bridge. there. We had no special arrangements in that way to make.

80867. There was no complaint of any nuisance made by reason of the location of the men there ?—No.

80868. Was the water supply satisfactory ?—It was quite satisfactory ; but there was a lot of trouble ; we had an oil engine which broke down pretty frequently.

80869. Where did you get the water from ?—There was a well of decent water on the place.

80870. Were the huts satisfactory ?—They were corrugated iron, four-roomed cottages.

80871. How many men did you put in a room ?—We had two or three in each large room, and one in each small room.

80872. Do you know what space was given per head?—No, I do not, but it was quite ample; no standard would be infringed.

80873. Did the local sanitary authorities inspect the place?—I believe so.

80874. Were they satisfied?—I heard nothing from them at all; it had been going on for six months before I went there.

80875. Had you any complaints of immoral practices amongst the men, or any difficulty?—No, I had nothing there of that sort at all.

80876. Where did you get your skilled sea-wallers from?—From the surrounding district; some of them walked five miles or rather more to their work.

80877. They were local men?—Yes.

80878. What were they paid?—6d. an hour.

80879. Was that the regular payment for a sea-waller down there?—It is difficult to say; there has been so very little sea-walling done in that district, it has almost dropped out.

80880. How many hours a day did they work?—Their hours were regulated by the hours of the unemployed. They worked from seven in the morning till four in the afternoon.

80881. With an interval?—Yes, of half an hour.

80882. What would be the daily earnings?—Their weekly average was about 24s. or 24s. 6d., sometimes a little less, rarely more.

80883. Did you find them in food?—No.

80884. How much did the colonists cost per week?—For food?

80885. For everything, including the payment to their families?—I believe the payment to the families averaged 14s. 6d.; their food at Fambridge was 6s. 6d.; coals, soap, and everything of that sort, would be covered by 1s.

80886. That makes 22s.; that leaves nothing for the cost of providing the place, and the up-keep of the staff?—No.

80887. The 6s. 6d. does not include anything for lodging?—No.

80888. (*Miss Hill.*) Do I understand that the work which collapsed, or was not a success, was under the Central Unemployed Committee, as well as this, which was where the unemployed were?—Yes, the whole work was under the Central Body.

80889. Do I understand the colony is going on now?—No, the work was finished in July last.

80890. That was the work of the sea wall, or the work of the reclamation, or what? It was only a colony during the time that the reclamation was going on?—That is so.

80891. Has your previous experience before you took this been in this kind of work; have you been working under a contractor, seeing after men?—No, I have not.

80892. So that you relied really on the gangers for any special knowledge, I suppose?—Yes; there were skilled gangers who had been at this work the whole of their lives.

80893. Then you say the men have no incentive, and no hope, because the work was for a short time only but I suppose whenever they work under a contractor it may possibly be that the job will not be for more than a limited number of weeks; is that not so?—Yes, but then their conditions are rather better; they are not away from their families and friends. The conditions at Fambridge were very unpleasant indeed.

80894. That I see, but with regard to the future I was thinking; you thought keeping them on longer would be some incentive to better work?—It proved so; the chance of being kept on undoubtedly improved those men's work there, and their general conduct.

80895. And you do not feel that they really threw their heart or strength into doing this work well, although it was provided really for their sake?—Quite a proportion of them did so. In fact at Fambridge I am not grumbling at the men at all. I am very well pleased with them. What I am saying is that when any big crowd of men

are left with very little supervision the tendency is for them to become lazy.

80896. You say there is a general slackness; you are not very well satisfied with a thing where there is a general slackness, are you?—I am not alluding to Fambridge there at all.

80897. "They have no hope for the future, no matter how hard they work": does not that apply to Fambridge?—I had more in my mind the Hollesley Bay men when I was writing that.

80898. I thought at Hollesley Bay they had rather more hope for the future, had they not, than at Fambridge, because a certain number are kept on—emigrated and so on from Hollesley Bay?—Yes, at first that was so, but now they are only allowed to stop sixteen weeks. The process of keeping on the selected men has been stopped.

80899. And although this is being done for them, you do not feel that they throw their hearts into doing anything much; there is a general slackness among them, you say?—I would not put it quite in that way. You may get a good many, and you do get a good many, men who come down there exceedingly grateful for what is done for them, and they will try and work hard, but if they are in a large crowd of men a proportion of whom are as lazy as they know how to be, they will naturally tend to become lazy.

80900. One hardly thinks it would be very educational even to the better ones if the majority are in that state of mind; it is not very encouraging for a labour colony?—That is why I am laying stress on the necessity to have efficient supervision, and enough men, or gangers, to look after these men and see they do work.

80901. You think the gangers would supply sufficient incentive without hope for the future?—No, I think this, that if you have got a man idling away his day, at the end of that day he is much more likely to be discontented and to grumble. If he has done a fair day's work, no matter how he has done it, or why he has done it, he is more contented and a healthier man at the end of it.

80902. (*Sir Henry Robinson.*) Was any other kind of work done at Fambridge besides this reclamation and building a sea-wall?—Practically nothing else, except the necessary work in the huts that the men lived in.

80903. No crops were sown there?—No.

80904. Who does the land belong to that was reclaimed?—Now it belongs to the Central Body. It was given to them on condition that they reclaimed it.

80905. What use do they propose to make of it?—I do not think they have decided anything.

80906. It is still available if they want it?—It is still available, but it is quite unsuitable for anything they could do.

80907. Is it not suitable for such things as re-forestation or tilling?—It is only suitable for ordinary farming, to get one crop a year out of it. It is land you must not dig in the summer months; it is very heavy clay land, it is naturally low-lying, and is liable to be flooded after the melting of a considerable quantity of snow, and it is land that cannot be worked at all in wet weather.

80908. So that only for one period of the year could the Central Body work it?—Yes.

80909. When they sowed the crop and when they reaped the crop?—That is all practically.

80910. Looking at the work at Fambridge, with all your experience in connection with it, if you were starting afresh there now would you have made any other arrangements; are there any other improvements you would suggest beyond more gangers to render the work more efficient?—Are you dealing with Fambridge?

80911. If you had been starting afresh now, with the experience you have gained, what improvements would you make in the administration? Can you think of any besides more gangers? That is one thing I think you said you required, more supervision. Is there any other thing you can suggest?—I was fairly satisfied with the gangers at Fambridge. I think there were quite enough there.

80912. You think so far as Fambridge is concerned it was carried out with the minimum of abuse or waste?

Mr. Hubert Hammond.

28 Oct., 1907.

Effects of the colony work upon the men.

illed sea-wallers at Fambridge.

st of colonists at Fambridge.

orks at Fambridge.

ffects of the colony work upon the men.

General results at Fambridge.

Mr. Hubert Hammond. Taking the material you had to work upon do you think you made the most of it at Fambridge ?—I think, as far as the unemployed is concerned, that is so. There was obviously a large amount of money wasted, but I do not think the Central Body are to blame for that. They engage an expert who advises them, and they carry out his advice which proves to be mistaken.

28 Oct. 1908.

80913. Then, of course, they had men not used to the work, which was another reason, I suppose, for the waste ?—You will get that in anything. Naturally unemployed men cannot be expected to be up to the ordinary standard ; they are doing work they are not used to ; many of them, at any rate, are physically unfit for a time to do any hard work, and the majority of them are not much good for the first three weeks, at any rate. There is all that to charge against the work.

Men emigrated to Canada from Fambridge.

80914. Did you send anybody to Canada from Fambridge ?—Yes, I think about eighteen or twenty altogether.

80915. How did you arrange it ? Were you in communication with anybody in Canada to make provision for them ?—We at Fambridge had nothing to do with it ; it was decided in London to send those men ; they happened to be at Fambridge, but they would have been emigrated in any case. They were sent to Fambridge until they could be emigrated.

80916. (*Mr. Gardiner.*) So they ought to be added on to the 14 per cent. in Paragraph 25, presumably ?—No, I think they are included in that. There was only half a dozen men during this period.

80917. I thought you said twenty ?—During this period there were only half a dozen ; during the whole time there were about twenty, I think.

80918. (*Sir Henry Robinson.*) Did they get any report from you as to whether they were likely to turn out well as colonists before they sent them ?—Yes, in every case.

80919. (*Sir Samuel Provis.*) You were consulted as to the suitability of the men before they were emigrated, were you ?—Yes.

80920. I thought you said that the question of their emigration was determined before they came to you ?—I believe that was so ; but if I had given an unfavourable report they would not have gone.

80921. So that their coming to you was a kind of test before the thing was actually carried out in the way of emigration ?—No, the men had been carefully selected for emigration. All the intended emigrants were very good men at Fambridge, they were very satisfactory men, but I was asked to make a special report on them nevertheless.

80922. So that if one had turned out unsatisfactory you would have had an opportunity of saying so ?—Yes.

Repairing of sea-wall at Fambridge, and its destruction by the sea.

80923. What was the scheme that was carried out at Fambridge exactly ?—It was to repair a very large breach in the sea-wall.

80924. An existing breach at the time the thing was undertaken ?—Yes.

80925. Was that breach filled up ?—It was temporarily dammed with a timber dam, and then a new horse-shoe wall built on the solid ground at the back.

80926. Inside it ?—Yes.

80927. Was that inner wall destroyed by the sea ?—Previous to starting this inner wall a considerable extent of sea-wall that had been ruined by the sea when the land was flooded was rebuilt. The sea was inside the wall and knocked the wall to pieces from one end to the other. The unemployed men were repairing that wall all the time. Meanwhile the contractor's men were closing the gap. They set about it the wrong way, and the gap increased while they were working.

80928. When the gap increased was the inner wall interfered with and destroyed ?—The inner wall was in-

terfered with all the time. Every time the tide came up it interfered with the work done the previous day.

80929. So that the work done one day had practically to be done over again the next ?—Yes. After this timber dam was first completed and the sea was actually kept off the land, the timber dam collapsed the first high tide that came and flooded the whole place again. That time it did far more damage than the ordinary daily tide.

80930. It did damage to your inner wall ?—Yes.

80931. And that had to be done over again ?—Yes, it washed away hundreds and hundreds of tons of clay and chalk that had been put in the front and back of the timber work, and after this happened, the timber work obviously not being strong enough was repaired by less strong timber which smashed again, and the whole place was flooded again.

80932. With like results, I suppose ?—Yes.

80933. Ultimately did they get it satisfactory on the third try ?—Ultimately on the third try, when they did not spare the cost, and put in sufficient strength to stand the strain.

80934. When that was done you had to put your inner wall right, I suppose ?—Yes.

80935. Was the inner wall satisfactorily constructed in the first instance if it had been protected in the way it was ultimately done by the outer wall ?—Yes.

80936. There was no fault in that ; that was all right, was it ?—Yes, there was no fault in that.

80937. You would say, would you, that these disasters you have been describing were not attributable in any way to the fact that the work was done by unemployed men ?—Not at all. The unemployed had nothing to do with the timber dam at all, they did not touch it.

80938. It was not the actual work, but the arrangement that was bad ?—Yes.

80939. (*Miss Hill.*) Do I understand that part of the work was done by contract ?—Yes.

80940. (*Dr. Downes.*) Could the twenty skilled sea-wallers have done this work unaided ?—I think the squad of men we had there could have done the work without the contractor at all.

80941. You had twenty skilled men there ?—Yes.

80942. Could they have done the work which was done by the men who were employed down there, unemployed or contractor's men ?—Could the twenty skilled men have repaired that sea-wall by themselves, do you mean ?

80943. Yes ?—Yes, but not in the same time.

80944. How much time did you take in the work ?—It is very difficult to say, because the work was constantly washed away, it was done over so many times.

80945. What was the time that elapsed from start to finish ?—I do not think they really got to work till about April in one year, and they finished in the middle of July in the following year.

80946. Given twenty skilled men with properly designed work, how long do you think it should have taken them ?—I cannot say ; I do not profess to be an expert.

80947. Could you give an opinion ?—No, I could not.

80948. How long had this land been submerged ?—That I do not know certainly, but I believe from three to five years.

80949. Have you ever heard how long it takes for such land to recover after it has been reclaimed ?—It will take quite three years.

80950. Before it will be fit for anything ?—Before it will be fit for ordinary cultivation.

80951. (*Miss Hill.*) You say the inner wall is standing now. Does it appear all firm ?—Yes, it is thoroughly sound.

Repairing of sea-wall at Fambridge, and its destruction by the sea.

Quality of work done by the unemployed at Fambridge.

Time taken for the sea-wall.

ONE HUNDRED AND TWENTY-EIGHTH DAY.

Tuesday, 29th October, 1907.

AT SCOTLAND HOUSE, WESTMISTER, S.W

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc., (*Chairman*).
The Right Hon. Sir HENRY A. ROBINSON, K.C.B.
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.

Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (*Secretary*).Mr. J. JEFFREY (*Assistant Secretary*). *Mr. William Henry Hunt.*

Mr. WILLIAM HENRY HUNT, called; and Examined.

80952. (*Chairman*.) You are the manager of the Christian Social Service Union's Labour Colony at Lingfield?—I am.

80953. You have been good enough to prepare a Statement which we will treat as your evidence-in-chief, if you will kindly hand it in?—Certainly.

(*The Witness handed in the following Statement*).

1. *History of the Colony*.—The Christian Social Service Union was founded in 1896, at a time when the question of unemployment was greatly exercising the mind of the community. A book by Julie Sutter, entitled "A Colony of Mercy" and describing the work of labour colonies in Germany, had just been published, and had fallen into the hands of the Rev. J. F. B. Tinling, M.A., a London Congregational minister, who sought to unite the Christian churches in an effort to assist in the solution of the unemployed problem. A farm at Lingfield, Surrey, of 250 acres, was acquired, and accommodation was provided for a dozen men. Soon this accommodation was extended until fifty could be received; and during the last three years a vacant cottage has made it possible to accept another ten, so that, with sixty men in residence, the colony is full. In the early days there was a tendency to retain men for prolonged periods in the hope that their labour might be of some advantage to the colony, and in those days the percentage of men helped to independence was thirty. During the last three or four years it has been raised to fifty. Inspired by the German example set forth in Miss Sutter's book, provision was made for sane epileptic children on the same site, and this work has been allowed somewhat to overshadow the other department for unemployed men. But for the rapid development of the work for epileptic children, the labour colony might now be providing training for 200 or 300 persons with equally good results. It has become evident to the Christian Social Service Union that the work for epileptics will eventually claim all the capacity available at the Lingfield Colony, and it is proposed, as soon as another site becomes available, to transfer the labour colony and develop it.

2. *Statistics*.—I have been in charge of the labour colony for five years, commencing April, 1902. During that time 324 men have been dealt with. Of these, 105 were private cases and 219 were sent by boards of guardians. Of the private cases, 37 were inebriates and 68 were sent to the colony for various other reasons:—Out of work, 28; chronic laziness, 6; mental defect, 13; dishonesty, 9; nervous disorders, 7; weak will, 1; epilepsy, 1; consumption, 1; indecency, 1; religious persecution (a Christian Jew), 1. Taking the total number of all cases (324), 116 were under twenty years of age, 174 were between twenty and forty-five, and 34 were over forty-five. There were 155 successes and 131 failures; and 38 cases are still on the colony. Of those under twenty there were 62 successes and 30 failures; and 24 are still at Lingfield. Between twenty and forty-five the numbers were:—Successes 77, failures 84, 13 are

still at Lingfield. Over forty-five:—Successes 16, failures 17; one is still at Lingfield; or a percentage of 67·3, 47·8, and 48·4 respectively. Of the successes, 96 went to Canada; 45 to situations in this country; 9 were given appointments on the colony staff; 2 became brothers; 2 entered the Army; and 1 (a coloured man) was returned to his friends in America. The failures are accounted for as follows:—Physically unfit, 6; mentally unfit, 30; drink, 16; nerves, 4; left to seek work, 4; dead, 3; suicide abroad, 1; dismissed, 28; absconded, 39. Of the 16 failures through drink 11 were private cases. Eight of the drink failures were over forty-five and 8 were between twenty and forty-five.

3. *Classification*.—Paragraph 2 will have given some idea of the classes of people received at Lingfield. They may be broadly divided as follows:—The dull, the drunken, the intractable, the lazy, the 'physically or mentally unfit, and the unfortunate. On a larger colony it would be possible to group some of these classes and so get better results, the tendency being where they are thrown together at work for all to fall to the level of the lowest, rather than to pull the lowest up to the highest. Many of the cases received at Lingfield should find a permanent home in a colony devoted to hopeless inefficient.

4. *Methods*.—The main method pursued at Lingfield for the reclamation of men is personal influence and moral persuasion. We have from fifteen to twenty young, earnest Christian men, with enthusiasm for humanity, who are in training for institutional service. They are known as brothers. This training of workers has been systematically developed during the last few years only and we ascribe our increased results almost entirely to the presence and influence of these men. There is no distinctive uniform for brothers or colonists, and at work or at play it is impossible to distinguish the one from the other, except as regards industry and bearing. Our sixty men are divided into small squads, and for each squad a brother is responsible. We endeavour to live, and to teach colonists to live, active, natural lives; and with the exception of a few simple, necessary rules, colonists are as free as the ordinary labourer. There are simple religious services and a good deal of healthy recreation. Colonists are given a few pence per week as a reward for industry and good conduct, and the stoppage of this is almost the only means of discipline. Men soon get to understand that there is a spirit of kindness towards them, and there are very few who do not respond to it. In the pamphlet herewith you will see that I look to a system of graded colonies for additional discipline.*

5. *The Destination of Reclaimed Men*.—It will be seen from Paragraph 2 that the majority of our successful cases are sent to Canada. This is increasingly so. It is the best course for many reasons. It takes men out of

* Not printed.

Mr. William Henry Hunt. their old environment and gives them a fresh start under very different conditions. They are wanted in Canada and are not particularly wanted in England. I was in Ontario last spring and the cry was for labour. Farmers were turning their arable land into pasture because they could not find men. The pick of the labourers who emigrate go farther west, and the eastern provinces are glad to get our men. In England, where an employer may have the choice between a man of poorish type such as ours and a good, smart labourer, he will naturally take the latter. In Ontario, so far as my observation goes, there is no choice. I met a farmer last year who had taken a forty mile drive on the off-chance of getting one of our men, and who was bitterly disappointed when he found that they were already booked for situations. In England a man is sometimes placed in a situation and loses his place. He finds it difficult to get another. In Canada, so far as I know, the risk of not being able to find another situation is slight. We keep up a very considerable connection with men who have emigrated, and the majority do well. It would be a great advantage if something could be done to keep a friendly eye on such emigrants for a year or two after they land in Canada. They often need protection—especially the young ones—against rapacious employers, and it would be a satisfaction to all interested in social work to have some official record as to what eventually became of such men. One great advantage of emigration to our successful colonists is that they often settle with farmers who treat them as members of the family—a thing not likely to occur in this country.

Cost of
Lingfield
colony.

6. *Cost.*—When the Lingfield Labour Colony was first founded its promoters believed that, after a few months' sojourn, most men would be able to earn their keep. Consequently, in the first instance, 5s per week was asked with each man for a period of three months. This has been gradually increased, until now we ask 10s. 6d. per week with each man for the whole of his term of residence at Lingfield. The promoters of the colony overlooked the fact that agriculture, under the best conditions, is not, in England, a very remunerative industry; and also that it is impossible to profitably employ an indefinite number of men (even efficient) on a given area of land. It was early realised that, to get any monetary return from men, it was necessary to keep them on the colony much longer than was good for them. Apparently there were two alternatives—rapid and somewhat expensive training (expensive because of the need of increased supervision), or slower training at a lower cost. At 7s. a week the tendency was to keep men three years. At 10s. 6d. per week most men are pushed on to self-supporting employment outside the colony in a year. It should be borne in mind that permanence is an important factor if money is to be earned. A farm, worked by feeble-minded persons, who remain permanently, should show a better return than one with a much higher type of man who is rapidly passed on. It is a temptation to the administrator, anxious to make the best of things financially, to keep men who become useful; but we have felt it necessary to strongly resist this temptation and to keep before us the fact that our business is to train men rapidly and effectively for work elsewhere. It will be readily realised that the constant incoming of new, untrained colonists militates against getting the best monetary return. We have learned that we must choose between making money and making men, and we have chosen the latter alternative. Of the 10s. 6d. per week charged for each man, 4s. 9d. goes in food and the remainder in wear and tear, cost of supervision, and ordinary institutional charges. With a larger number of men this figure might be reduced. Sixty is too small a number to constitute an economical unit.

Lack of
funds at
Lingfield.

Results and
lesson of
Lingfield
colony.

7. *The Outlook.*—At present our work is hampered for lack of capital. We want to develop on a larger scale elsewhere, but have no funds. We think, as the State permits us to draw considerable sums for maintenance of men, it might also find a way to advance us capital for a larger colony, under proper safeguards. We are convinced that the only way to do this work successfully is on lines such as ours, where an enthusiasm for humanity may have full play. Probably the moral influence brought to bear on our colonists is as large a factor in their development as the farm training they receive. In many cases it is realised for the first time that, after all, somebody cares, and that there is a dignity and usefulness

in life to which they may attain. We are keen to try a larger experiment, and have no doubt of success, in spite of the inferior nature of the raw material and the difficulty of our undertaking. I should like to see a graded colony, combined with a policy of "the open door." Any man who could win his way out, even from the lowest grade, should be given an opportunity of doing so. For this to be carried out successfully it would be necessary for all three grades to be under one administration. In my opinion farm colonies are not a sound method of dealing with the "temporarily unemployed" as distinguished from the unemployables for whom we are working. Seasons of temporary unemployment usually occur in winter, when work on a farm is slack. Agriculture is, in a large measure, a season trade. It is unwise to flood a farm with unskilled labour in the depth of winter and to withdraw that labour as the summer comes along.

Desirability
of graded
Labour
colony.

80954. (*Chairman.*) Had you, previous to being in charge of the labour colony at Lingfield, any special experience of this kind of work?—I was in the Bermondsey Settlement in the East End of London for three years doing special work there. Previous witness.

80955. What is the class of persons that you take? Do you take people who are not necessarily unemployed, that is, people whom you think may be morally improved?—They are people who were out of work, and could not have got work if they had tried, or if they had got work could not have kept it. Class of persons taken at Lingfield

80956. Then they were unemployed?—Yes, all unemployed.

80957. Was that the first qualification?—Yes.

80958. Taking the number of cases that you have had to deal with, I understand that you give in Paragraph 2 and percentages of 67, 47, and 48 respectively, of successes?—That is so. Successes to failures at Lingfield.

80959. By success you mean not only that you improved them, but that when they left you they got employment?—They were able to maintain themselves.

80960. Do you ever hear from those people afterwards?—Yes, my Canadian correspondence is getting quite extensive. We send out about twenty-five or thirty every year, and the majority of them write to me regularly. I was in Canada twelve months ago and saw a good number of them who had gone out in previous years.

80961. Taking the failures, the great proportion of failures was due to mental unfitness, by that I suppose you mean feeble-mindedness?—Yes. There is a larger proportion who absconded or were dismissed. These would be refractory and not necessarily mentally defective.

80962. Have you much difficulty in deciding what constitutes a feeble-minded person and what constitutes a lunatic? Have you ever to pass on people to a lunatic asylum?—Very rarely. I think in five years we have sent on only two persons to a lunatic asylum.

80963. How are these persons selected?—We get an application from a board of guardians saying they have a man or men to send to us; we then send out papers with certain details on them, and they are filled up. If the papers are satisfactory I see the men; and if I think them satisfactory they come to Lingfield. Method of selection of persons assisted at Lingfield.

80964. The first channel through which they have to pass is the board of guardians?—There are exceptions; we get private cases occasionally, and those are nearly all drink cases.

80965. How do you hear of private cases, through your own agents?—No, in various ways. I had a gentleman from Brighton call on me about six weeks ago, a man in an independent position. His brother was an old ship's captain who had given way to drink, and the Church Army had told him of our colony at Lingfield, and he came to see if we could take in his brother.

80966. I suppose it is people who are interested in relatives or somebody about them?—That is so.

80967. You have the advantage of having a number of very earnest workers associated with the colony, and I see you put that as the first cause of your success?—Yes. I should not anticipate any very great success without such workers. Voluntary workers at Lingfield colony.

80968. Are these workers mostly voluntary?—They come to us for three years' training. They are young

men with Christian enthusiasm who give themselves to the work, and we train them for institutional service; we give them board and lodging and pay them 5s. a week, just enough to keep them in clothing.

80969. So that really the remuneration they get is in one sense rather a test of their earnestness?—Yes. Many of them have given up good situations to come to us.

80970. Have you ever heard what happens to them afterwards? Do these young people do well in the institutions to which they go?—This system has only been developed within the last three years, so it is too early to speak.

80971. Do the boards of guardians make contracts with you?—They simply sign the paper we send out to them saying they will be responsible for the man's maintenance. The cases that come to us are very difficult cases, and unless we had infinite patience with them I expect they would never become self-supporting. They try one a bit sometimes.

80972. Do you get any considerable proportion of cases of persons who have fallen from a better social status?—Yes, we have had a solicitor, and various other professional people like that. Several civil servants recently.

80973. What do they do?—Some of them get on their feet again, some of them do not.

80974. Of all the causes which have contributed to failure, what in your experience do you think is the most difficult to deal with?—Drink, undoubtedly.

80975. Would you take a physically defective person?—We might or we might not; we are not over careful as to the sort of person we take. We feel that everybody should be given a chance if there is any possible prospect of improvement.

80976. You would not refuse them on the ground that they cannot comply with the necessary test of work?—It would not be any good a man coming to us if he could not work.

80977. May I assume that you get few who are naturally much below the average physique?—We get a good number, but they improve considerably on the farm.

80978. You might get men who had run down, who had naturally good physique, but reversing it, do you take people who are of weak physique, too?—Yes, I have a case now on the colony of a man who was taken out to Canada twelve months ago. He was a very undersized boy who came from Richmond, I think; and they simply deported that boy; they would not admit him into the Dominion on the ground of defective speech. The boy has come back and been in two or three situations in England and returned to the colony again. We find him quite a capable workman, he is able to take out a plough and horses, and do a good day's ploughing; and yet he does not seem to be able to keep his situation. We have a case now of a boy on a neighbouring farm who has been there three years maintaining himself. When that boy was brought to us at Lingfield the officer did not bring an outfit; I asked the reason, and he said: "I thought when you saw the lad you would send him back again."

80979. How did you get the land originally? Did you get it through subscriptions?—Yes.

80980. Have you had to extend the size of the farm?—We are just in a difficulty now; it was bought originally for unemployed men, then a work for epileptic children was developed on the same site, and that work has extended more rapidly than the work for the unemployed, and the children are gradually pushing us out.

80981. Is that department under you?—I am answerable for the business management of the place.

80982. How is that getting on?—It is getting on very well, developing.

80983. I suppose they can only mitigate, they do not often effect cures?—It is very difficult to say. We have one case in the north of London now of a lad who was there six years ago, and he was then getting about a dozen fits a day. The last three years he has been maintaining himself in London as a carpenter without any fit.

80984. Your emigration results have been satisfactory?—Yes; and I regard emigration as the best outlet for our class of labour.

80985. Is there any considerable portion of your class of labour rejected by the Dominion?—Only one case in five years.

80986. That would be one in how many?—I should think about 100.

80987. Have you much difficulty as regards discipline?—Very little. Discipline at Lingfield.

80988. Do you grade them at all, if they misconduct themselves?—The numbers are insufficient. We have only sixty. If we had a larger colony we should grade them.

80989. You think grading is necessary in a large colony?—Yes, otherwise the backward men would pull the good men back, for the good men do not lift up the backward men.

80990. With reference to the cost, you now ask 10s. 6d. a week?—Yes.

80991. What is the term of residence?—The average period is twelve months; some men get through in six months, and some stay for two years. We cannot keep a man beyond two years without bringing the case before the council of the Christian Social Service Union as a special case.

80992. I suppose you only let them go at six months when you think they have been resuscitated to a certain extent?—Yes; they are quite capable of earning their own living or we should not let them go out.

80993. You make rather an interesting reference there about the expense. When the lower rate was paid the tendency was to keep men three years. When the higher rate is paid most of the men are pushed on to self-supporting employment outside the colony in a year. What pushes them on?—The number of brothers largely. We simply say to a man: Now you must get on and learn this; they are under good supervision, and they are taught as rapidly as they can possibly be. The farm baliff would like to keep men indefinitely, especially when they are good men; that is a thing we have had to work against.

80994. You sum it up here by saying: "We must choose between making money and making men; and we have chosen the latter alternative"?—Yes; it was a great temptation to me when I first went there, especially as there was a loss on the place at that time, to keep men in order that they might be serviceable and give us some return; but we felt it was best that they should be passed on to self-supporting employment. Consequently we are always dealing with inefficient.

80995. I think what you point out is that a farm if it was worked for a considerable length of time by feeble-minded persons would show a better return than a farm with a much higher type of man in course of training?—That is so, because they would get to know a certain piece of routine work and do it fairly well. Men, in training break and destroy and do many things like that, which they would not do if they were experienced.

80996. You are short of money, I suppose?—Yes, we are short of money, as the place was started without any capital. To stock the farm it was necessary to go into debt to the extent of about £2,000, and that has never been paid off.

80997. Do you pay your way as an institution?—Last year we just made ends meet. This year we will do a little more than make ends meet.

80998. By making ends meet you mean you have sufficient for maintenance?—There is a large sum coming in for maintenance, our accounts show a sum of between £5,000 and £6,000.

80999. (*Mr. Lansbury.*) What does maintenance mean? That the £5,000 is earned on the colony?—No; that is the money paid to us by guardians for the cases they send.

81000. (*Chairman.*) By making ends meet you mean that you get an income the main part of which is payable by boards of guardians?—Yes; you will find a revenue account on p. 46 of the Report for 1906 (*produced*), and there was a profit balance of £22 13s. 11d. last year.

81001. This is a balance sheet rather than a revenue account?—It is a trading account really, putting the amount earned on one side and the expenditure on the other.

Mr. William
Henry Hunt.
29 Oct., 1907.
Finances of
Lingfield
colony.

81002. I see you bring in farm valuation?—Yes, because the valuation may go up or down in the year, and consequently helps to counterbalance the income or expenditure. You may make income by selling your stock, and the valuation at the end of the year must therefore be taken into account.

81003. I see the main if not almost the overwhelming mass of income is derived from the boards of guardians?—Yes; but a large proportion of that is for epileptic children, not for unemployable men.

81004. The return would be better if a larger proportion was given to unemployable men?—My meaning is this, that of the £5,705 probably £3,000 or £4,000 is paid to us for epileptic children. It has nothing to do with the farm colony.

81005. But assuming that all the inmates of your colony were men, the return would be better?—For the men?

81006. For the whole colony, would it not?—No, because we get 14s. a week for the children, and only 10s. 6d. for the men.

81007. (Mr. Lansbury.) How many children are there?—125; and we have just now built for thirty-four more.

81008. (Chairman.) What keeps the colony going is the sums of public money you get from the guardians?—Yes, it is distinctly a training institution. Upon that farm you cannot profitably employ an indefinite number of men; that was the idea of the promoters; they thought they could put any number of men on that farm and make their labour remunerative.

81009. They found out their mistake?—Yes; farming is not a particularly profitable industry in this country, I believe.

81010. If you put more men on a farm than it requires, that is an extravagance?—Yes.

81011. So far as you have gone you are pretty well satisfied with the result of your experiment?—Quite.

81012. You would like a larger experiment to take the shape of a graded colony combined with the policy of the open door?—Yes.

81013. What do you mean by that?—I would not place a man in a colony for a fixed period. As soon as he could maintain himself he should be at liberty to go.

81014. What power of detention have you?—None.

81015. Do they try to go?—Occasionally, and come back again. They go on the tramp for a week sometimes when they are new colonists, and then come back; and that is the best thing that could have happened to them; they learn a lesson.

81016. By the open door you mean that a man should win his way out, not that he should go out whenever he liked?—That is so.

81017. So you want power of detention subject to a man's good conduct?—Yes; it would be a very great thing to us if I could say to a man occasionally: We must send you down to a lower grade where you can be detained under harder conditions if you do not improve.

81018. If you have power of detention so that you could have recourse to punitive measures you must also have power of gradation?—Yes.

81019. From your experience you would not often have to use that power, would you?—No, our disciplinary measures are very few. We fine the men by stopping their good conduct money. That is the chief thing we do for them if they are not good.

81020. How do they get good conduct money?—When they come to us we allow them 3d. a week if they are just decent, and most of them use that for tobacco. When they have been with us about a month, if they get a good recommendation from the farm bailiff or Brothers, who are in charge of them, we increase that to 6d., and that 6d. is a very considerable pull upon the men.

81021. Assuming that this experiment was tried on a larger scale, would you associate it with any system of putting by something for a man, if he conducted himself well, week by week, so that he might have something when he went out?—That is an idea we have carried out in a small way at Lingfield Colony. When men are doing

special work we give them as much as a shilling a week, but we do not pay it to them, we keep back part; the result is that when the men go to Canada they have a few shillings to draw. I have known men go out there with £2 or £3.

81022. What is the effect on the man generally of the knowledge that he is getting something, does it stimulate him?—Yes; it is about the only leverage we have.

81023. You think that idea might be developed?—I think it would be a very good idea to develop. When a man gets to Canada it is much better if there is a few pounds for him there than that he should go quite destitute.

81024. It seems to me that it would be advisable to put before the people you are training some material advantage?—Yes; they most of them are looking forward to going to Canada; that is the great thing, though we do not press Canada particularly.

81025. (Mr. Lansbury.) At the end of Paragraph 2 you say that there were sixteen failures through drink, eleven of which were private cases. Does that mean that only five of the 219 men from boards of guardians were drink cases?—The eleven refers to a proportion of the sixteen failures.

81026. That leaves five?—That leaves five drink failures that came from boards of guardians.

81027. Out of the 219?—Yes.

81028. That is rather extraordinary, is it not, it is a low percentage rather?—It is. Our worst results, from a drink point of view, are usually with old soldiers.

81029. You had six failures of the physically unfit? Would that be mainly from the guardians?—All of them I think.

81030. The next is "mentally unfit, thirty failures"?—Nearly all the men we are dealing with are guardians' cases; and except where I have stated to the contrary they are guardians' cases I am speaking of. I specify those drink cases because the difficult drink cases come from private people.

81031. People send their friends in the hope that they will get trained?—That is so. The majority of our cases from guardians are young lads under twenty who have never fairly got upon their feet; intractable and difficult cases.

81032. You say at the end of Paragraph 3 that many of your cases should find a permanent home in a colony devoted to hopeless inefficients. Would that be mental inefficients?—Mental and physical. There are some of them physically inefficient. I have a man now that we wanted to send to Canada last year. We put him into the stable, and the first time he went out with a horse and cart he was knocked into a ditch. His legs are about as thick as one's arms.

81033. How old is he?—About thirty.

81034. Your experience leads you to gather that a number of so-called able-bodied persons whom the guardians send you are not able-bodied in the real sense of the word?—A very considerable proportion are not able-bodied.

81035. Therefore these people are people who in some way society has to provide for?—Yes; it is better to provide for them in the country on a farm than shut up within four walls in a city.

81036. You believe in dealing with the people you have to deal with through kindness rather than penal measures?—Yes; the majority when they come to us are a bit stand-off, they suspect us; but after a month they get to understand our methods and our ideals a little, and then it is quite a different thing.

81037. You find that a number of what would be called really bad and vicious people do respond to decent treatment?—Yes.

81038. Are you in favour of making the treatment for the unemployables purely penal under the prison authorities?—Not at all. I think the only way in which you can possibly do anything with them is to turn them over to sympathetic folk who want to do them good.

81039. You are not in favour of police penal institutions?—No, I think it would be better for Christian people to deal with them than the police.

money at
Lingfield.

Superiority
of kindness
to punitive
treatment.

81040. Your idea of a graded colony is so that you can grade the men and have the very worst class with probably a larger number of people dealing with them than the docile men?—When you have sifted them all you come ultimately to a few who are bad; that is, they do not want to work and do not work; and I would make those men work.

81041. Have you ever thought of making people work by not feeding them?—Yes, it is one way, I dare say, of making a man work, although he would not feel very workish when he had an empty stomach.

81042. But it brings him to his senses rather, do you not think?—Yes.

81043. Therefore you might grade your dietary in your graded colony, might you not?—Yes.

81044. That would be one of the things that would help you in discipline, because everybody asks how you are going to make your man do certain things if he will not work?—I think it is a very good thing to stop his food; on occasions now if a man says: "I will not work," I say: "Then you will not get your dinner."

81045. I notice from Paragraph 5 you are very much in favour of Canada for the men who are fit to go? They are always picked men, are they not?—Yes; the Canadian authorities are very careful as to the men they take. Three years ago they would allow us to send a general certificate for thirty men saying: These men are physically and mentally fit for emigration; but now they want a separate certificate for each.

81046. For each man?—Yes.

81047. You are really in a position of always having your heads cut off, that is, your best men are being continually taken out, leaving you with the least competent?—That is our difficulty all the time.

81048. One other word about Canada. I notice you say that you think that especially the young men you send should have some friend on the other side to see they are not badly dealt with by rapacious employers?—Yes; I saw twelve months ago something of the way in which young lads who could not take care of themselves were dealt with.

81049. All the question of cost the Chairman has examined you with regard to, I only want to emphasise this point, that your idea is, having regard to the men you are dealing with, that the money being spent is not spent for the purpose of getting a commercial return in an ordinary commercial sense, your return is the restored manhood of the men you are dealing with?—That is so.

81050. I notice that you are against labour colonies for seasonal purposes. There might be a considerable amount of work on some estates, such as road-making, and work of that kind, which might be done seasonally?—Yes, but that is not farming; my difficulty at this time of the year is that we get a lot of wet days, and it is difficult to find the men anything to do. I would not swamp a farm with surplus labour in the winter when it is not particularly wanted.

81051. If there is estate work to be done, or if you can employ a good deal of unskilled labour, either in making a sea wall more safe, or improving the roads, or in laying down water supplies, or any of that kind of work, is there any objection to that being done?—Not at all.

81052. Of course, weather applies to almost any outdoor work?—Yes.

81053. It would apply in London as well as in the country?—Yes, only there are certain works you can pick up and lay down, and it does not particularly affect the well-being of the work. Farming you want to carry on continuously.

81054. (*Mr. Bentham.*) May we take it that you recommend that farm colonies, should be used to reclaim unemployable men rather than deal with what are efficient able-bodied men?—Yes, personally I do not think a farm colony is the best place for temporarily unemployed men.

81055. In a pamphlet of yours which I have here you suggest three grades of colonies, and say that one should be practically under the police, one under the guardians, and another a voluntary institution?—Excuse me, I

have never suggested either the police or the guardians. *Mr. William Henry Hunt.* I do not know where that has come from. My idea is that the three colonies should be linked together under the administration of some philanthropic body. 29 Oct., 1907.

81056. Let me read this sentence again: "It has been suggested that there should be a kind of interworking control over these triple colonies in which the lowest should be run by prison authorities, and the highest by voluntary bodies, with boards of guardians' colonies in between."—Yes, it was suggested, but I think if you read on you will find I disagree with that. Our powers of discipline are very restricted. If I could occasionally say to a man: "You will go down to No. 2 or No. 3 grade in the colony," that would have a very considerable effect. At the present time he says: "Oh, well, good-bye, I am going," and I cannot stop him.

81057. You would have all the three colonies and the three grades under one management?—Yes, closely linked together. Management of graded colonies.

81058. And that management a voluntary body?—Yes.

81059. You attach great importance to a voluntary body dealing with the men so far as the moral influence is concerned, I suppose?—We cannot ignore the fact that there are men and women who are willing to give themselves up for the good of their fellows, and it is a pity that such enthusiasm should run to waste. I do not think you can do much with the sort of man I am dealing with unless you have some body like that to deal with them.

81060. Your suggestion really is that the State should provide funds, and provide the colonies, and that they should be handed over to be managed by a voluntary organisation with lay helpers?—Yes, under very considerable restrictions. I have no idea of giving public money to sentimental people to throw away, but it is possible for the State to exercise effective control without actually running the colonies.

81061. Why do you think the State could not manage them equally well throughout?—It just depends on the officials—the people who are running them. We have to show a good deal of Christian forbearance from time to time, and we have set ourselves definitely to lift these men up. If we were there as State officials we might be too ready to acquiesce in things as they were; whereas now we put forth effort and start with the assumption that there is hope even for the most unlikely.

81062. You feel that the moral atmosphere of a voluntarily managed colony would be far higher and far better for the men than one managed by the State?—That is so. You might get your voluntary workers (or perhaps you can scarcely call them voluntary workers)—your workers to work under the State. I would not tempt a man who is working in a colony like ours with too big a salary. I think it is a good thing for a man not to feel he is there to earn a salary, but for the good of the people.

81063. The danger of the State colony would be that the people would be paid a salary, and would be less efficient from a moral point of view than at the present time?—They would be more contented with things as they are.

81064. Can you tell us how many ordinary farm labourers could manage your farm with the acreage you have?—Four or five if for farming only, but we have a considerable acreage used as market garden. Number of men and work done at Lingfield.

81065. There are sixty colonists there?—Yes.

81066. Does that point to a large amount of waste time, or how is the time employed?—At hay-making time, instead of using machines, we turn the men down into the meadows and they get a chance. We have a good deal of grass, and occasionally there are twenty men down there. If I were farming for profit I would simply put on machines and clear the men out. We also yearly increase our area of market garden, and do a lot of digging and hoeing which employs large numbers.

81067. Do the men spend much time in classes receiving instruction?—There are many of them come to us who can neither read or write, and we give them a night school twice a week, and we teach a little carpentering and boot repairing; that is all. If we had greater facilities Education at Lingfield.

Mr. William Henry Hunt. we would develop indoor industries more. It becomes almost making work on a day like this if it is raining, with sixty men; you cannot turn them out of doors. It is demoralising for them to be idle indoors, and we invent all sorts of things, whitewashing, potato sorting, sack mending, or anything like that.

29 Oct., 1907.

Question of religion at Lingfield.

81068. Is the teaching confined to merely reading and writing?—That is all we teach them in the night school. We teach a little carpentering, and boot repairing.

81069. Have you religious classes?—We have prayers morning and evening: that is very routine; I have a Bible class of about fifty lads, some of them epileptics, on Sunday afternoons, and we have a general service for everybody on Sunday nights, which is just an ordinary mission service. That is all the religious training.

81070. There is no question of religion so far as their admission is concerned?—No.

81071. Do you take all creeds?—Yes, anybody.

81072. Roman Catholics?—We have some Roman Catholics. The Roman Catholic priest from East Grinstead called on me a month ago, and said: "You have two boys from Dorking that are both members of my flock; what do you propose to do with them?" I said: "Well, they are open to come to Mass at East Grinstead any time you like, and we will place a room at your disposal if you want to visit them." He said: "What about attending your meetings and attending your prayers?" I said: "For the good government of the place they must do that." We have found that Roman Catholics accept this.

The voluntary workers at Lingfield.

81073 (*Chairman*.) As regards the workers that you have there, do they come from all strata of society?—Yes.

81074. So that to some of them the 5s. is not an inducement?—Not a bit of an inducement. I have known a man give up £2 or £3 a week for that 5s. It is pure altruism, nothing else.

81075. How many have you there?—Sixteen now.

81076. Would you say that any considerable portion of those were persons who had given up something better in the way of remuneration?—All of them, because it is a very poor man who does not earn 5s. a week and his keep.

81077. What it really comes to is, the success of this colony entirely depends on obtaining persons with this religious enthusiasm, and that religious enthusiasm being properly superintended and directed?—Yes.

81078. How many years have you been there?—This is my sixth year.

81079. Do you find any lack of workers of that class?—Not at all. I could get a thousand in a comparatively short period if I wanted them. But we have not openings for a large number, nor the money to pay them either.

81080. Do you think that this sense of altruism is rather on the wax than on the wane in society?—It is on the increase, undoubtedly. The development of Christian social service organisations among the various churches has been considerable quite recently.

Previous occupation of witness.

81081. (*Professor Smart*.) What previous training had you for this kind of work?—I was a working journalist for fifteen years, then I had an impulse to go slumming, and I went into the East End of London and spent three years there, and saw where our raw material came from.

81082. You had no practical experience in agriculture?—Not at all, I had no love for farming.

81083. You have a farm bailiff?—Yes.

Farm bailiff at Lingfield.

81084. He is absolute as regards all agricultural matters, I suppose?—Under a small committee. He is left to do pretty much as he likes; the committee are satisfied that he is doing well.

Epileptics at Lingfield.

81085. I understood you to say that the work as regards sane epileptic children was so successful that it had rather overshadowed the other part of your work?—Yes; I should have liked all the farm for unemployables. I am more interested in the unemployable part of it. I should have liked all the colony for unemployable men, but my committee thought otherwise, and they are on the right tack I think, in suggesting that we should remove the unemployable men to another site. That is in immediate contemplation if someone will give us a farm or the wherewithal to buy it.

81086. Is sixty the maximum you have had?—Sixty is the maximum; we cannot go beyond that.

81087. How many have you now?—Sixty; we are full up.

81088. Why is a labour colony peculiarly suited for epileptics?—That was not the idea. An inspiration for this work came from Germany where Pastor von Bodelschwingh has developed colonies on a very large scale. Directly the promoters of the Lingfield Colony had a farm for unemployable men they said: "Why not follow the German example and take sane epileptics?" They took thirty patients and the work is growing very fast: it is crowding the other part out.

81089. It is only for children; you do not take grown-ups?—Only children.

81090. You do not take women at all?—Boys and girls under twelve.

81091. Do you dismiss the girls at twelve whether they are cured or not?—No, an education authority may maintain epileptics until they are sixteen; that is the age limit for schools for epileptics. We retain them till they are sixteen if they are education authority cases; if they come from boards of guardians we may keep them altogether. Our idea is that epileptics should be kept in an institution and not allowed to go out.

81092. Then you may develop into an epileptic home?—Yes, the idea is that we should keep our children if the public authorities will maintain them; they will never wholly maintain themselves.

81093. Who finances the colony?—We get a certain amount of public subscriptions, but those are usually used in extensions. We have just now built for another thirty-four children from the subscriptions; every child that comes to us is paid 14s. a week for by the authority.

81094. What do you do when you have a debit balance?—We just say that is a loss, and get a little further into debt or raise additional subscriptions to meet it.

81095. Are you getting further into debt?—No, we are getting out of debt now; we are on the upward trend.

81096. Who finds the expenses of emigration?—The boards of guardians.

81097. You simply say you have a good case for emigration, and charge the guardians?—Yes, the cost is £10; that includes all travelling and outfit. That will take a man up to Toronto.

81098. You give the men no wages?—No.

81099. Any pocket money?—Yes, from 3d. to 1s. a week, depending upon good conduct and industry.

81100. And the men are single men?—We have some married men.

81101. What do you do with the families?—The families are in the workhouse.

81102. Are these young men to whom you ascribe your success a kind of Toynbee Hall men?—No, I suppose the Toynbee Hall men are largely university men, but our men are men who have been earning their living in various capacities. We have one man who was an architect, and we have two or three railway servants; all sorts. We just make an appeal in the religious papers and we can get as many men as we require.

81103. They have the same motive as Salvation Army officers?—Exactly.

81104. Are none of these men preparing for any definite ministry?—I suppose they are looking forward to staff positions on colonies as colonies are extended; that they would prefer, but apart from that they go into institutions to work, asylums, or other places.

81105. That is what you mean by institution service?—Yes.

81106. Have these men had any agricultural training?—No; that, of course, is a slight difficulty with us, because we are dealing with inefficient men and some of our helpers are, from an agricultural point of view, also inefficient.

81107. These men are put to work in the same style as the ordinary men?—Yes; if you saw them on the farm you could not tell the difference between a Brother and his squad, except that the Brother might be working a little harder.

81108. You give them 5s. a week?—Yes.

81109. Have you any agricultural instructors on the colony?—No.

81110. Have you a permanent staff?—Yes, myself, the farm bailiff, and two skilled farm labourers; that is all the permanent staff.

Agricultural staff at Lingfield.

Agricultural staff at Lingfield. 81111 And you could work the whole farm with four labourers?—Yes as a farm. We should need more hands as we developed market gardening, which is also a branch of our work.

81112. Is that £754, which I see under the expenditure for farm wages for the bailiff and his men?—That includes the bailiff's salary, the two skilled farm labourers, and three of the brothers, who are debited to the farm, with their various other emoluments; interest on mortgage, rates and taxes, implements, etc. The item stands in the account as "Wages, etc."

To epileptic department of the colony. 81113. There is another item of wages, £535?—That is largely for the domestic staff in the epileptic part of the institution. The epileptic part of the institution is costly, because we have to maintain a double staff, teachers and nurses.

81114. How many epileptics have you?—One hundred and twenty-five.

81115. That number is pretty permanent, I suppose?—It is increasing rapidly. We have just built for thirty-four more, and we shall go on building; there is a very large demand; we are always swamped with applications.

81116. I gather if you had nothing but men, you could not make the farm self-supporting on a subsidy of 10s. 6d. per week per man?—Oh yes, we could.

Cost of unemployed colony. 81117. Then you base a good deal on that 10s. 6d. You are proposing to ask for public money, and you practically say that with subsidies of 10s. 6d. a man you could run an institution which would have all these reformatory results?—Yes. The farm, as apart from the institution, just about pays its way.

81118. Your mind is quite clear that the 10s. 6d. is a satisfactory figure?—Yes. We have worked it out on the basis of sixty men. If we had larger numbers we could save in various directions. *(The witness subsequently appended the following note, further explaining the question of cost:—*10s. 6d. is the bare cost of maintaining and training a man at Lingfield with the usual institutional charges. Of this amount 4s. 9d. goes in food and the remainder in living accommodation and management. The interest on the farm mortgage is debited to the farm and is met by the ordinary farm income and does not come out of the 10s. 6d. There is no interest on buildings as these were given. Stocking the farm and erecting necessary buildings for sixty men cost £3,000. It would require 1s. per man per week to pay 5% per annum on this sum. The clothing costs the guardians 1s. 6d. per man per week, and emigration costs 4s. per man per week, in cases where men are emigrated. Consequently to defray interest on capital, clothing and emigration it would be necessary to add 6s. 6d. per man to the 10s. 6d. charged by us—total 17s. But for this outlay, spread over a year, a dependent man is made self-supporting. It should also be borne in mind that sixty is too small a number to be economical.)

81119. *(Mr. Loch.)* Is not that maintenance only?—We do not provide clothing. The guardians provide clothing in addition to the 10s. 6d. a week.

81120. *(Professor Smart.)* Do I understand this 10s. 6d. covers maintenance, and a fair percentage of institution charges, up till the time you launch the men on society?—Yes.

81121. *(Mr. Loch.)* Is that including the building?—We have never charged anything for the interest on capital.

81122. *(Professor Smart.)* What about your land?—The land is mortgaged. It was purchased, and a mortgage was made in order that the purchase price might be defrayed.

81123. Do the expenses of the mortgage come in under this revenue account?—Yes, it is in "Farm expenses, wages, etc." Our interest on the mortgage comes to £140 a year, and we debit the farm with that.

81124. You debit the farm with the mortgage, but not the difference between the mortgage and the full annual value of the land. How did you get the land originally?—A committee was formed to seek a suitable site. They found this farm, which was cheap—I think with buildings and all it came to something under £13 an acre—and the purchase money was raised on mortgage largely.

81125. Not the whole of it though?—I think there was a very slight balance that was not.

81126. My argument is that if you are going to ask for public funds you would require to show that this 10s. 6d. covered everything, and the first question that would be put to you would be, What about the land, and what about the interest?—It does largely cover that, because we charge the interest on the mortgage against the farm. Interest on buildings and equipment would be met by an additional charge of 1s. per man per week.

81127. I thought you said in the previous part of your evidence that you could not carry on for 10s. 6d., but you carried on on account of the 14s. for epileptic children?—I said that was a large portion of our revenue, but that is swallowed up by the extra expense of the children. It is far more costly to run a home for epileptics than it is to run a farm colony for unemployable men.

81128. So you frankly are trying an experiment with what other people call "unemployables"?—Yes. We do not lay ourselves out for the temporarily unemployed; we get mostly people whom nobody else can do anything with.

81129. In Paragraph 7 you make a statement which I think I understand; you say: "We think as the State permits us to draw considerable sums for maintenance of men"—you mean the sums contributed by boards of guardians?—Yes, that is under the sanction and care of the Local Government Board.

81130. You do not think in any case of this colony as a permanent home for those who cannot get work otherwise?—If I had a three-graded colony I would put all the permanent men who could not find an opening anywhere else in the middle grade.

81131. Including the permanently inefficient?—Including the permanently inefficient. On a farm a permanently inefficient man might make something towards his keep.

81132. You do not say where Lingfield is?—Lingfield is in Surrey; it is in a corner of the county; we are about 3 miles from the Kent boundary and 2 miles from Sussex; 4 miles north of East Grinstead and 25 miles south of London.

81133. What kind of crops do you grow?—All sorts, potatoes, beans, oats, swedes, mangolds, wheat and garden produce.

81134. Does the bailiff advise the cultivation of wheat?—We grow about 10 acres a year or something like that.

81135. Do you grow it for the straw?—Yes, we need the straw. We milk quite a number of cows; that is one of our most important departments. We consume all the milk on the premises (the epileptic children are largely fed on milk), and milking is the best training for men going to Canada. When our men go to Canada, the first thing they are asked is: Can you milk? if they can milk they are pretty sure of a job.

81136. Do you find an easy market for all your other products?—Yes.

81137. You have never thought of high class farming, fruit farming or anything of that sort?—I would not put fruit on a farm colony except where it could be well over-looked.

81138. Why?—If you have 60 men and lads roving about the place all day, I think your fruit would get tithed considerably.

81139. What is the nature of your soil?—Stiff clay, and in wet weather like this it is impossible to get on it; you do more harm than good.

81140. Is it high up?—No, the lowest in the district. We lie at the bottom of a saucer. It is not a good place for inebriates. Dry places are more suitable. If we had a better situation we might show better results. It is a liverish place; the sort of place that makes a man feel wicked occasionally.

81141. You do not apply any restrictions. Can the men go off the farm when they like?—Yes, we treat them pretty well as if they were ordinary labourers.

81142. Is there a public house near?—Three fields away.

81143. Do you find it taken advantage of?—Very seldom. We have a pretty straight way of dealing with the men. If I get a man who is running after drink, I

Mr. William Henry Hunt.
29 Oct., 1907.
Cost of unemployed colony.

Value of colony for inefficient unemployed.

Farming operations at Lingfield.

Drinking at Lingfield.

Mr. William find that a friendly word and some sort of interest makes Henry Hunt. the man feel that he had better not do it.

29 Oct., 1907. 81144. Do you sell such a thing as tobacco on the premises?—Yes, I am a licensed tobacco merchant.

Position in Canada of men who emigrate from Lingfield. 81145. What kind of situations do these men get in Canada?—They nearly all go into farming situations. There are a few stay in the towns, and they do very well. I would much prefer they were on a farm, especially for the first year or two.

81146. You visited some of the men on the farms?—Yes, quite a number.

81147. Were they changed men as regards physique?—Yes, different men altogether. I met a boy in Montreal who went out four years ago, and I could not believe he was the same boy. He came to us a little under-sized miserable sort of chap, and he had grown into quite an intelligent self-respecting Canadian. He is coming over to see us this autumn.

81148. Were the men in towns equally successful?—Yes, I was entertained in Montreal by a man who went out two years before from Lingfield, where he had been a colonist.

81149. Do you know whether any of these returned any part of the amount which had been expended on them?—I do not think so. We get a few bad cases from Canada occasionally: they come back on cattle boats.

81150. Returns?—Yes, it is only a very small percentage, probably one in fifty, but they get back if they want to get back.

Medical attendance at Lingfield. 81151. (*Dr. Downes.*) How do you arrange for medical attendance?—We have a resident lady doctor. She is retained for the epileptic children, but of course looks after the other parts of the colony as well.

81152. Should you select a lady doctor to look after the unemployables?—No, but a lady doctor is rather cheaper than a man doctor: that is the reason.

81153. The epileptic children are on the same site, you told us?—Yes.

81154. Is there a separation between the departments?—So far as general administration is concerned they are combined. You see the accounts are run together very largely. I get out statements for my committee every year showing the position of the various departments, otherwise the accounts are combined.

Separation of epileptic children and unemployed. 81155. Is there sufficient classification between the children and the adults?—They are never allowed to come into contact with each other.

81156. You have that classification?—Yes. The homes and the labour colony are quite separate.

81157. What becomes of the epileptic children under the present arrangements when they grow up?—We have been in operation now about twenty years; some die and others are removed; a proportion stay with us and are set to work. On the colony at the present time there are ten lads and eleven girls over school age, and they are maintained by boards of guardians who feel they are better there than anywhere else.

81158. They still remain with you?—Yes.

Health of the epileptic children. 81159. Is the mortality very large at the age you have spoken of?—No, but we look at our children growing up and say to ourselves, We must make provision for twenty of these children; when we have made the provision we find it is only necessary probably for about fifteen, because two or three have died and others have left. If you get three out of twenty die it is a considerable percentage.

81160. What has been the cause of death?—One girl I remember died in a fit. Some of them are very weak; they have a tendency to consumption rather, or something like that.

81161. Did the consumption develop after they had come down to you?—I must not mislead you: I will not call it consumption, but they are physically weak, and they get a cold or something like that, and it carries them off: it would not carry off a robust child.

81162. Do any of them become imbeciles?—A few, but we select our cases.

81163. What becomes of those?—They are taken back, and go to Darenth or similar places.

81164. Have you any cases under certificate?—No, they are all sane epileptics.

81165. Are you inspected by any public body?—Inspection of The Local Government Board inspects the labour colony colony by from time to time. It is not a very regular inspection, Local Government Board and Board of Education. but the inspector comes down and looks round and expresses his satisfaction. So far as the children are concerned we are very definitely under the Board of Education.

81166. You are certified under the Act, are you?—Yes, we have a good school and the Board of Education is pleased with the educational results.

81167. When the men come down to you who pays the cost of travelling, the guardians?—Yes. Boards of Guardians and the unemployed at Lingfield.

81168. If a man discharges himself who pays his cost back again?—The guardians.

81169. Do any of the men discharge themselves very soon?—Yes, occasionally a man will come to us and the second day I am told: "So-and-so has gone." He will get up in the morning and depart.

81170. You have no powers of detention?—Not at all.

81171. So that that man is an exceptional cost just for no good?—Boards of guardians think they get some good, because the man is afraid to go back to the old locality again for fear of being prosecuted.

81172. Have they been able to carry a prosecution out?—Yes, I think I have given evidence in about five cases in six years, and we have always secured a conviction.

81173. Do you require the men to attend religious service?—Yes, that is part of the agreement: they sign an agreement of which that is one point. Religious question at Lingfield.

81174. Has any difficulty ever arisen in a prosecution from that part of the contract?—I went down to one of the East London police courts to give evidence a couple of years ago, and the magistrate asked me, "Do you compel these men to attend a religious service?" I said: "Yes." He said: "Does he understand that before he comes to you?" I then said: "No." He said: "I think you had better amend your paper and put that in as an item;" and we did that on the suggestion of the magistrate. Now when a man comes to us he knows he must obey our rules, which include attending certain religious services.

81175. Does 10s. 6d. an inmate cover the cost of the Brothers?—No, the Brothers' maintenance is paid partly by subscriptions. Finances of the colony.

81176. Do you find it an advantage to have a certain amount of debt?—No, it is very troublesome.

81177. Do your subscriptions fall off if your debt is clear?—No, because we should ask for subscriptions for extension.

81178. Have you had any complaint from the Canadian authorities as to the conduct of the men who have gone out there from your colony?—None. There have been a few congratulations. Attitude of Canadian authorities to Lingfield emigrants.

81179. While the men are with you do you make any distinction as to food?—Not at all: the number is too small. You could not do it. They all sit down in one dining-room, and it is quite impossible to make a distinction. Dietary at Lingfield.

81180. (*Mr. Gardiner.*) Has your school Government grants?—Yes. Education grants to Lingfield Colony.

81181. Does the colony take them or the education authority which sends the children?—The grants come into the colony exchequer.

81182. Could you give me any account of how the training of the workers is carried out?—Do you mean the young men who come to us? Training of voluntary workers at Lingfield.

81183. Yes, what is the kind of training. What do you mean by training?—They come to us, and we put them through various classes.

81184. What sort of classes?—First-aid classes, and classes in theoretical agriculture by a practical agriculturist, a class for bible study, and we take some book dealing with social subjects and go through that in a year. They also assist in the homes and get varied practical experience in institutional work.

aining of
untary
rkers at
Lingfield.

81185. What kind of book?—There is a book we are going through this year called "The Social Mission of the Churches." It is a series of papers contributed by various people on certain aspects of social life and work. Then they get some domestic training because these Brothers assist with the epileptics as well as with the men. They are taught to scrub floors and make beds and nurse patients, and various things like that. Then out of doors there is a fair practical agricultural training under the farm bailiff. They are taught to plough and reap, and do various other things.

81186. How long do you reckon this training takes?—Three years; it is a definite three years' course.

81187. When that is over you send them on to institutions if they want to go?—Yes; five left us last year four went to institutions, and one man as a missionary to South America.

81188. Do you find this training makes it more easy for them to get situations?—Yes; particularly in institutions dealing with feeble-minded folk, or people of that type.

81189. Would you like to see your training of Brothers further developed?—I do not quite know what we could do to further develop it.

81190. I suppose the intellectual attainments of the men who come to you vary considerably?—Very. They can all read and write. They have a fair elementary school education.

the unem-
ployed and
the voluntary
workers at
Lingfield.

81191. (*Mr. Chandler.*) The number of these unemployables which were dealt with during the five years you have had the management of the Colony you place at 324?—Yes.

81192. 219 of whom were sent you by boards of guardians?—Yes.

81193. Out of that number you claim to have had 155 successes?—Yes out of the total 324.

81194. I notice in your reply to questions that you state that you would almost despair of success were it not for the aid afforded by these twenty Christian young men whom you call Brothers?—Yes.

81195. The limit of your numbers is sixty?—Yes.

81196. Is that proportion considered to be about the requisite number—twenty to sixty?—No. Quite a number of those men are engaged in taking care of the epileptic children.

81197. They would not be superintending squads of these unemployables?—No; I have sometimes not more than five or six Brothers out of doors with the men.

81198. You consider that equally good results would be obtained by that number of Brothers working?—That is so. You want about one Brother to every ten colonists.

81199. Do you think with an extension of this scheme, which appears to be so successful, that this supply of earnest young men would be forthcoming?—Quite. I make an appeal about the autumn, as a rule, for a few men, I only put it in one, or sometimes two religious papers, and I get, say, eighty enquiries. I take five of the best out of those eighty.

81200. The supply would never fall short in the case of your one colony; but I was picturing in my mind an extension of these colonies throughout the country to deal with unemployables; I suppose you do not believe that this supply would be forthcoming to that extent?—I think there are thousands of people in this country only waiting for an opportunity to be of service. The experience of Germany rather bears this out. There they have developed the idea to a considerable extent.

81201. (*Mrs. Bosanquet.*) What about the future of the Brothers?—They ask me that sometimes; but I say "You tell me God sent you to Lingfield, and I expect God will take you away again when it is time, and He will look after you."

81202. There is no fear that any of them will join the ranks of the unemployed?—Not a bit. They are all too keen for that, they are men who would get on anywhere.

81203. You are sure of that?—Quite.

81204. Have you any women like that?—No, the women are all paid. Perhaps there is not quite the same amount of altruism with the women as with the men. *Mr. William Henry Hunt.*

29 Oct., 1907.

81205. Have you advertised for women?—Yes, we have occasionally, but we have never appealed for them on the same basis as the Brothers. It might be well to do so.

81206. And you have got no answers?—Yes, but only as salaried officials.

81207. (*Mr. Lock.*) Your colony is quite distinctive. Difference The idea of it is different from Hadleigh or from a Germany between colony?—I do not quite gather the drift of that question. Lingfield and Hadleigh or

81208. I want to point out this: In a German colony, German as you know, they come and go in winter; I suppose you colonies. do not do that?—No.

81209. At Hadleigh they come in the same way. This is a voluntary colony, unlike anything we have had in England before, for keeping people with a view to their restoration to society; and also you have a voluntary staff to help you for that purpose, which is quite unlike, as I understand it, any other staff in England?—That is so.

81210. Therefore there is no comparison to be drawn (that is what I want to make quite clear) between what you are doing and either Hadleigh or a German colony?—No. We approximate somewhat to Hadleigh, I believe. The same ideals. In a German colony they come and go, they do not do that with us. We sometimes receive a man a second time, if there is a good reason, but it is the exception, not the rule.

81211. How much of the land is used by the epileptics?—A very small portion. I should think about 30 acres at the outside. *Number of men that could be employed on farm at Lingfield.*

81212. If you had to extend, how many could you take upon your acreage? That is to say, how many people would you take for so many acres?—We have 250 acres; and I would take there, if I had the opportunity, 200 men.

81213. Roughly you would say 200 men to be trained could be taken on 250 acres?—Yes. We should develop our market gardens.

81214. With regard to Government help, most of the money you receive now is paid by the case?—Yes.

81215. Do the payments cover all the outgoings, so that if you got enough patients, if I may call them so, your accounts would balance?—Yes; we have carefully gone into the 10s. 6d. a week, and we consider if we had an institution free of debt that 10s. 6d. with 100 men would pay. (See note as to cost in Answer to Q. 81118). *Finances of Lingfield, and question of extension of colony by State assistance.*

81216. Then with regard to extension, you cannot of course, raise more money, your land being already mortgaged?—That is so.

80217. You trust altogether to voluntary contributions to extend?—Yes; I think as the State is good enough to let us draw money for maintenance they might, under proper guarantees, find us capital for extension.

81218. That is to say, that you might be put in the position of a normal public body which could, under the Act, apply for money to be raised at a certain percentage under certain Government conditions which usually apply to the public service?—Certainly.

81219. On the other hand, could you guarantee, if that were done by mortgage, or in some other way, that the money should be repaid?—No, but I think it would be possible to mortgage the land to the State; could they not be put in the position of an ordinary mortgagee?

81220. Is it not difficult to foreclose on a mortgage of that kind?—I think it might be. Our mortgage is for about £3,000, and our buildings are worth £20,000. (twenty thousand pounds). But the buildings would not be worth much except for an institution. If our mortgages were to foreclose, the farm is now worth £20 an acre at the least, and they would have full value for their money quite apart from the heavy value of our new buildings, erected during the past ten years, and consisting mainly of children's homes.

81221. You could not always say that, because the farm might be in a much lower and sandier place, and under other conditions of market?—I am considering

Mr. William Henry Hunt. extensions. If we were to buy a farm somewhere else, of a different class, and the money were advanced to us by the State, they would probably not get the value for their advance if they had to foreclose, is that your suggestion ?

29 Oct., 1907. Finances of Lingfield, and question of extension of colony by State assistance.

81222. It is quite possible that that may be so ?—Yes.
81223. Ordinarily loans are made on the security of the rates ?—Yes.

81224. You have no such similar asset ? I want to get at a suggestion which might cover a loan made on business lines for this purpose by a Government department ?—We have nothing to guarantee it ; we have simply the maintenance money from public authorities I take it if the Government advanced us money they would in a way supervise our accounts ; they would expect us to give them a revenue account showing what we were doing with the money ; and if they were not satisfied they would pull us up.

81225. But the money might not come back, it would have no fundamental security similar to that of the rates ?—The security for their advances would be the estate, the farm.

81226. Which might or might not cover the outgoings ?—That is so.

81227. Because the out-goings would have to do with institutional work which is quite special ?—Yes.

81228. Whereas a farm would not require that institutional expenditure *qua* farm ?—That is so.

81229. In this case it is unlike a loan on rates in so far as you are desirous from beginning to end to keep the institution voluntary ?—That is so. You have simply people there. You have little else to depend upon. The only thing is the farm cannot run away, and you have something there to guarantee the money. If these people are willing to do the work the State should be prepared to take a little risk.

81230. (*Mr. Lansbury.*) If the State grants you money you are in favour of the State having some control of the way the institution is doing the thing, and seeing that it is in accordance with their wishes ?—Yes ; I am first of all a citizen of this country, and secondly a servant of the Christian Social Service Union. I should say let the State look into everything ; let them inspect the place and give us a report ; if we are not doing what we ought, to tell us so, and see that the right thing is done.

81231. (*Mr. Loch.*) It is essential to your programme that the management should be voluntary and not official ?—That is so.

Epileptics' at Starnthwaite. 81232. Are you adopting this system at Starnthwaite ?—Starnthwaite is a much smaller thing, and we have developed the epileptic side there very considerably. It became necessary to find an outlet for the older epileptics ; so we have given that up as a labour colony ; it is to be used entirely for training and maintenance of the older epileptics when they leave the school.

81233. Practically, it is a sort of Upper House for epileptics ?—Yes.

Religious observances at Lingfield. 81234. (*Sir Henry Robinson.*) When you spoke of the arrangements made with regard to the Catholic inmates, I did not quite gather whether you said that the Catholic clergyman who spoke to you on the subject was quite satisfied with the arrangement ?—The individual clergyman at East Grinstead was not quite satisfied. We have dealt with an association, I have forgotten the name of it, it is the Catholic Aid Society, or something like that, and the secretary wrote to us some time ago, and said : "What will you do if we send you Roman Catholics ?" I said "We will give them every facility to exercise their own religion, but at the same time they must conform to our rules." He said : "That is quite satisfactory." At the same time he knew the rules meant going to our services. We are very undenominational, our Brothers are of all sorts of creeds.

81235. With regard to this clergyman, did he perform divine service in your institution, or did you send the inmates to East Grinstead ?—They went to East Grinstead to Mass.

81236. They did go there ?—Yes ; but their religion does not take them very far ; they are of an indifferent type, and it is four miles off ; and if they do not want to go they do not go.

81237. They still attend your services morning and evening ?—Yes.

81238. When you speak of a contribution by the Education State, there is no contribution by the State beyond what grant for comes from the local rates ?—We get a Government grant epileptics' school. from the Board of Education for our school work with the school.

81239. With regard to the cases sent by the boards of Powers and guardians, how is the money given by the board of guar- practice of the guardians in sending cases to dians, is it given as outdoor relief ?—I cannot answer that. I should think it is given as indoor relief. Lingfield.

81240. Are they inmates of the workhouse that are sent to you, or persons out or in ?—They are all inmates, I believe. I have never known one that has not been in the workhouse. I believe it is possible for guardians to send us people without their going in ; and it would be well in many cases if this were so, because it is rather hard lines that a man should be forced to become a pauper in that way in order that he may get a lift. It is putting a premium on the poorer class of man.

81241. Any poor man the boards of guardians can send direct to you and do ?—I have been told that is possible, but I cannot say of my own knowledge.

81242. (*Sir Samuel Provis.*) Do you think they come without their consent ?—No ; I think they are just asked : "Would you like to go to Lingfield ?" and they say : "Yes."

81243. They are not sent under any statutory authority, but under the general powers of administering relief ?—I think that is so.

81244. Under these circumstances does the man sign Conditions to any agreement with you when he comes ?—Yes ; there which men are certain conditions ; he agrees to be a teetotaler ; he must not enter licensed premises ; and must attend at Lingfield. certain religious services ; and obey certain simple rules for conduct.

81245. You do not agree with sending men for a definite time ?—No.

81246. I see from your statement that the county council sent some people to you, are those children ?—Children only. Children sent to Lingfield by County Council and by guardians

81247. They sent them as the local education authority, I suppose ?—That is so.

81248. You charge rather more for the children, do you not, than you do for the men ?—Yes.

81249. Is that because they require more attention ?—That is so. We are bound to keep a teaching staff that will satisfy the Board of Education ; and it is necessary also to keep a very considerable nursing staff.

81250. Do the guardians send you children ?—Yes ; the guardians maintain them after sixteen. The education authorities have no power to maintain after sixteen

81251. With the guardians it is merely a matter of agreement between you and the guardians ?—Yes.

81252. With regard to the emigration, I think you said Payments by guardians for emigrants from Lingfield. the guardians pay for that ?—Yes.

81253. Do they pay through you ?—Yes, they pay us £10 per man, that is, the passage money from Lingfield to Toronto, or whatever centre we send them to, and about £2 or 50s. for the outfit.

81254. Supposing a man is married and has got a wife in the workhouse, do you superintend her going, too ?—Yes ; we had a very good case two years ago of a man from one of the north of London boards, a man and wife and seven children that had been dependent for a long time. The man was sent to us, he was quite a decent man ; he wanted a new start in life. He went out to Canada and I had a letter from him a fortnight ago ; he has been doing exceptionally well.

81255. (*Chairman.*) Is the payment which is made Payments by by the education authority for the children the same as guardians that which is paid by the guardians ?—Yes, it is 14s. a week whether from the guardians or from the education authority. and education authority for children at Lingfield. Education grants at Lingfield.

81256. (*Sir Samuel Provis.*) You do not get any grant from the Board of Education if the guardians send the children, do you ?—Yes ; they are treated as if they were children in an elementary school.

81257. Even although the guardians send you the children, and not the education authority ?—It does not matter where they come from, so long as they are being educated.

Mr. HENRY WILLIAM FORDHAM, called ; and Examined.

81258. (*Chairman.*) I think you have been good enough to prepare a Statement for us which we may take as your evidence-in-chief?—Yes. (*The Witness handed in the following Statement.*)

6. In the employment exchanges there was a want of uniformity of action and a general lack of cohesion. The City of London (that hive of industry) was left absolutely untouched, and the outlying districts, such as East and West Ham, Hornsey, Tottenham, Acton, Chiswick, Willesden and Wimbledon, which in these days of cheap and rapid means of transit are the dormitories of the metropolis, were neglected.

Mr. Henry William Fordham.

29 Oct., 1907.

Want of uniformity and cohesion among the metropolitan exchanges. Bad working of metropolitan exchange system.

7. Local advisory committees were established, but their powers were limited. If they desired to "spend 3s. 6d." on the betterment of the exchange, permission had first to be asked of the Central Committee. They were accorded the privilege of appointing or suspending "the junior staff" only, which happened to be a clerk at 25s. a week. The success or failure of an office depended upon the figures produced, and in consequence situations were found and filled without any regard to the "living wage." Whatever it was it went into the weekly return, and that was what counted whether the job lasted one hour or one week, and, according to the governing committee, spelt success or failure.

8. In my opinion any scheme of this kind should in future be under the patronage or protection of the Government, and thus give the exchanges some degree of dignity, lifting them out of reach of party politics and beyond the realms of charity, for I am more than ever convinced of their need in the industrial economy of a nation. The whole "police area" of the metropolis should be covered; that is to say, the cities of London and Westminster, and the urban districts as well as the metropolitan boroughs. The exchanges should be well found, well manned, and periodically and systematically visited by an inspector of employment exchanges and a thoroughly competent and practical superintendent of exchanges. (Woolwich Exchange is badly situated, and was not visited for over six months.) I would go so far as to say that the system could be safely extended throughout the length and breadth of the country, and thus help to stay the depopulation of the villages by becoming centres of information and advice both in the matter of labour required and housing accommodation; and perhaps some system could be adopted whereby a man's fare could be paid when seeking a particular job, as is done in New Zealand; or even on the lines that our London County Council deals with blind children.

Need of national system of labour exchanges under Government patronage.

9. Efforts should be made, I think, to keep up both the standard of the men and their wages too. Jobs offered at below the standard and recognised wage should be ignored, and sweating rigorously discountenanced, while at the same time industrial fitness in the worker must be the first qualification recognised.

Proper attitude of labour exchanges to question of wages, etc.

10. I have pointed out these defects in the present administration not in any sense of carping criticism, but with the object of indicating what to avoid in the future.

81259. (*Chairman.*) I see that you have had some experience of labour bureaux, as you were the first officer appointed by the Fulham borough council under the Act of 1902, and you subsequently were appointed assistant organising superintendent by the Central Unemployed Body?—Yes. Previous to that time I was federating the employment exchanges under the authority of Mr. Walter Long, the then President of the Local Government Board.

Experience of witness.

81260. What is the difference between a labour bureau and an employment exchange? Is the exchange some thing in addition, and would each labour bureau have an exchange, or would there only be an exchange between a number of labour bureaux?—Labour Bureaux were first established under the Labour Bureau Act of 1902; but after a time our experience taught us that "labour bureaux" was the wrong term. They were called "Municipal labour bureaux," and we thought that some people were confusing them with labour bureaux for municipal labour. Then others, particularly of a certain class, did not quite grasp the meaning of the word "bureau." So we were labouring under a cloud as it were. I think I was the one to suggest at the Guildhall in formal conference called by Mr. Alderman Alliston, I think) that we should

History of the terms "labour bureaux" and "employment exchange."

1. I was the first officer appointed under the 1902 Act (by the Fulham Borough Council), and after that was entrusted with a scheme of federating the Labour Bureaux by the London Unemployed Fund (my own idea). When the Central Unemployed Body elaborated this scheme I was appointed Assistant Organising Superintendent, but, my best efforts being cramped, I applied for transfer to another department about two months ago, which took effect this week. (June, 1907.)

2. The Labour Bureaux (London) Act of 1902 was, I believe, the first step taken towards promoting the fluidity of labour, but it failed for several reasons:—

(a) Because it allowed borough councils the option of establishing bureaux according as their municipal minds grasped the idea or not, and the consequence was that only a very small part of the metropolis was covered. The Act was not compulsory.

(b) Because amongst those established there was no interchange of ideas, and the horizon of the superintendent was limited by the boundary of his own borough.

(c) Men were placed in charge of the Labour Bureaux who were perhaps the protégés of some influential councillor, regardless of their fitness for the work or their business capacity.

(d) They were the shuttlecock of party politics, and to a large extent became mere registers whence a Borough Surveyor could obtain his staff of scavengers, etc.

3. With the advent of the Unemployed Workmen Act of 1905 it was hoped that these disabilities would be cleared away. A central clearing-house was established in conjunction with twenty-five employment exchanges covering the whole of the metropolis with the exception of the city of Westminster. These local exchanges were all connected by telephone, and things promised fair; but unfortunately the majority of the committee were merely idealists—men with fads in place of business training or experience of the workers of the metropolis, and I find, after nine months' working, that these employment exchanges are degenerating much in the same way as the old labour bureaux.

4. In one Exchange (Islington) a large proportion of the situations found consisted merely of two or three days' work for the Borough Surveyor. In others (Wandsworth and Battersea) a large proportion of the situations offered were female laundry hands and charwomen, whilst others provided work for a goodly number of sandwich-men, one Exchange (Deptford) going so far as to have the very sandwich-boards made by the superintendent and his clerk in their office. Another Exchange (Finsbury) lays itself out largely to the supply of cheap female labour, factory and office boys. Can we wonder, then, that the skilled mechanic and better class of men stand aloof? The man who has striven to improve himself and to lift himself from the ranks of the casual labourer—the very class who make the best citizens—will have nothing to do with them. The superintendent of the Lewisham Exchange says (May, 1907) that he dare not enter any decent house of business in his borough for fear the proprietor would ask him for a shop assistant or clerk, which he knew he could not supply; and this is a common experience of the superintendents. The clerk to the Central Body asked for a shorthand typist (35s. per week) in April last, and, although the request was circulated to twenty-five exchanges, not more than three men could be secured, and not one of these was suitable.

5. Men were placed in charge of the offices because they happened to be the protégés of some member of the Central Body, or else because they happened to be in charge of the old labour bureaux—and cursed with a labour bureau mind—and therefore must run the new employment exchange or else incur the displeasure of that particular borough.

Mr. Henry
William
Fordham.

29 Oct., 1907.

Defects of
labour
bureaux
under Act of
1902.

employment
exchanges.

Importance
of well
organised
labour
exchanges.

call them by some other name; we had a coal exchange, a corn exchange, and a money exchange, so why not call them employment exchanges—and the name was adopted.

81261. Then the employment exchange would be a development, so to say, of the labour bureau; but the labour bureau necessarily would only stand by itself, while an employment exchange means communication with other bureaux?—The labour bureau should mean that, I take it, because I attempted first to federate the labour bureaux.

81262. As I understand your criticism of the bureaux which were established under the Act of 1902, it is that there was not that interchange between them, and that they were very much limited by the horizon of their own particular borough?—That is so.

81263. The idea of an employment exchange includes all that a labour bureau could do and something more?—Yes.

81264. You describe what has been done under the Unemployed Workmen Act; there have been a number of these employment exchanges established in connection with a Central clearing house, but they have not turned out as well as you had hoped, I see?—No, they have not.

81265. And you think that is a good deal due, amongst other things, to the persons who were on it not having the necessary experience, or being a little too ideal in their practice?—Yes, largely, bad organising generally.

81266. In what sense were they ideal?—They were idealists in the sense that they had no practical experience or actual knowledge of the working-classes. Perhaps their idea of the working-classes was possibly only a working man in his Sunday best, not in his actual work and his ordinary every day conditions.

81267. I suppose the members of the committee were connected with charitable work, and were people who would be naturally on a distress committee, but not necessarily people who were qualified for working as a business concern an employment exchange?—Not necessarily. That has been proved since, I may say, by the Central Body to some extent realising their weakness in that direction, and inviting the formation of local advisory committees.

81268. What is the machinery attached, say, to an employment exchange? Is the employment exchange under the borough council?—It is not under the borough council, and it is not under the local distress committee. The employment exchanges were established under a section, called the Employment Exchanges Section of the Central Unemployed Body for London.

81269. And therefore they are maintained by that body?—Yes.

81270. What would be the *personnel* of an employment exchange; would there be any committee?—There is a committee now in nearly all the boroughs. Some boroughs have not thought fit to form committees; but the majority of them have local advisory committees, as they call them.

81271. Is the practice of all these exchanges the same; that is, is there one uniform set of regulations affecting them?—There is one uniform set of regulations governing them regardless of local conditions.

81272. The advisory committee would not have power, I suppose, to alter those regulations?—Not of themselves, but they may send up recommendations to the central committee.

81273. Then I assume that the local advisory committee would be very much limited as regards expenditure?—Very much.

81274. Is there a secretary attached to each employment exchange?—The local superintendent is the clerk to the committee.

81275. (*Sir Samuel Provis.*) The local advisory committee do you mean now?—The local advisory committee uses the superintendent as clerk to the committee.

81276. (*Chairman.*) Then you are disappointed at the result, I gather from your Statement. You think that if these employment exchanges were properly worked they might be a very important factor in dealing with

unemployment?—I am sure they would be if efficiently organised.

81277. The first difficulty that occurs to one in connection with these employment exchanges is that they must not be in the mind of the employer associated simply with the unemployed?—Not necessarily, but of course the mere fact of an employer wanting an employee shows that he knows he is dealing with the unemployed.

Difficulties in connection with the exchanges.

81278. "Unemployed" now has got rather a particular meaning; it means the lowest stratum of unskilled labour?—Unfortunately it does.

81279. If these employment exchanges are to be really effective, I suppose the first thing is to dissociate from them the idea that the only persons on their lists are those who belong to the lowest stratum of unskilled labour?—That is so; and to such an extent is that necessary, that the local advisory committees in, I think, nearly every borough in London, have asked to have the words "London Unemployed Workmen Act" or "Central Unemployed Body" deleted from the note-paper coming from the employment exchange.

81280. The Act of 1905 was brought in in the hope that it would deal with a particular class of person, and the evidence we have had before us goes to show that in the greater part of London that particular class has not come forward to claim assistance under the Act. The class I allude to are those who are respectable persons ordinarily permanently employed, but who, through accidental matters, are temporarily out of employment. Did that class, this rather better class, come forward to register under these exchanges?—No, they did not. We had the greatest difficulty in attracting the right class of unemployed workmen.

Failure of right class of unemployed to register at metropolitan exchanges.

81281. That is rather a fundamental difficulty, is it not?—Yes, but it could be overcome.

81282. What would you suggest as a way of getting over that difficulty?—I can only answer the question by saying that under the Municipal Labour Bureau Act of 1902, I personally had not the slightest difficulty in getting hold of a good class of workmen. I felt I was not bound by any hard-and-fast rule, and that I was not compelled to take the application of every man presenting himself before me at my office.

81283. What was the class of man you wished to take?—When the labour bureau was opened, it was swamped by the public-house loafer and the work-shy, who thought there was something to be given away. They were very soon told by a few straight talks that there was nothing whatever for that class of man here. In that way of course, I was in better circumstances than the superintendent of the present employment exchange who is compelled to register ALL.

81284. Trade unions have declined to associate themselves, I understand, with these exchanges unless the trade union rate of pay is part of the regulations; is that not so?—I believe that is so in some cases.

81285. How do you get over that difficulty?—It has been tried to be met by the Central Unemployed Body appointing secretaries of trade unions and persons interested in trade union work to serve on the local committees, thus trying to enlist their sympathy in that direction.

81286. I suppose your idea is that these exchanges ought to be pushed, if not by Act of Parliament, then by Government influence, so that they should be established in every commercial centre and be in communication with one another?—They should be in every commercial centre, certainly.

81287. I assume you would wish, in order to get over this difficulty, with the trade unions, that the experiment should be made that they should be managed partly by employers and partly by employees?—Yes. That was the idea of the Central Unemployed Body.

81288. Do you think if that idea could be realised, that it would tend largely to distribute the congested mass of unemployed labour which periodically occurs in London?—If the trade union idea were adopted?

Effect of
organised
system of
labour
exchanges on
problem of
unemploy-
ment.

81289. If we could work these exchanges in the way you suggest by bringing the trade unions in, and so making these labour exchanges a real industrial factor. Assuming you could do that, do you think it would have a material effect in distributing the surplus of the industrial classes which are aggregated together in London?—It would promote the fluidity of labour. It would do nothing to decrease unemployment, or to increase employment—I am sure of that; but it would do a good deal towards promoting the fluidity of labour. For instance in Wimbledon, say, for arguments sake, we are requiring bricklayers, and in Battersea there are bricklayers wanting work; if there were a means of communication between one and the other, it would save those Battersea men from being out of work longer than was absolutely necessary.

81290. Then it would tend to diminish unemployment, would it not, to that extent—it must?—It would diminish unemployment, but it would not increase employment.

Difficulty of
getting
women to
leave
London.

81291. Apparently you think you can get people to move inside the area of London; but do you think you would be able to get unskilled labour to go outside London into the provinces? I understand that as a rule the rates are lower in the provinces than they are in London?—That is so.

81292. Is that not one of the difficulties that you have to contend with?—Yes. The men will not go away from London, and there is a tendency to flock towards the metropolis. They do not care to go far away. The rates of pay are lower in the country, but these men cannot be got to realise that living is cheaper.

81293. I suppose to this particular class there are more little odds and ends in London than in the country?—Yes.

81294. Not only for themselves, but for their wives and families?—Yes. It is a problem that few realise for the ordinary London wife to have to manage on an income perhaps 33 per cent. less than she has been, accustomed to.

81295. Therefore you are not very sanguine that you would be able to get any considerable number of those of whom you are speaking to migrate from London into the country?—I am sure I would not be able to do so.

Government
municipalities
should have
management
of labour
exchanges.

81296. You wish the Government to take up this question of the labour bureaux, but I suppose you would be quite satisfied if the obligation was put upon the different municipalities and local authorities to establish them?—No. I have already said they should be above the reach of party politics and not under the control of municipalities.

81297. You want the Government to manage the whole thing, then?—I wish it to be out of the reach of the borough councils altogether.

81298. But you will not get the local interest taken in it that you would if it were a local institution, will you?—We have the local interest in the Post Office.

81299. Yes, but that is not quite the same. However, that is your view; you prefer the Government taking it up, and for it to be, so to say, part of a Government department?—Yes; exactly in the same way as the Local Government Board or the Board of Trade.

Labour
Bureaux
before 1902.

81300. (*Sir Samuel Provis.*) There was something done, was there not, in the way of setting up labour bureaux before the passing of the London Act?—Yes; but they were an illegal charge upon the rates.

81301. There was no legal charge upon the rates. Were there more than one or two bureaux at that time?—Do I understand you to mean before the Act of 1902?

81302. Before the Act of 1902?—Yes; I think Battersea had one.

81303. Battersea had one, certainly; were there any others?—Yes, Shoreditch had one a good many years ago; and also Hackney and Chelsea.

Labour
Bureaux
under the
Act of 1902.

81304. Then there came the London Act of 1902. Not a great deal, I think, was done under that Act; was that not so?—Very little was done.

81305. Do you remember at all how many bureaux were set up under that Act?—There were eight.

81306. They were not co-ordinated in any way, were they?—Not until I started it myself with very crude machinery.

81307. You did that before the passing of the Unemployed Workmen Act in 1905?—Yes, before that.

81308. Was your action in that respect taken in connection with Mr. Long's scheme?—No; it was under the 1902 Act. I felt that working in Fulham I was alone, and that Fulham was a very small part of London. So I visited the other labour bureaux that were then established, and between ourselves we arranged a system of communication, unofficially, to a large extent.

Employment
exchanges
under
Unemployed
Workmen
Act.

81309. Then there came the Unemployed Workmen Act, and you have told us that under that Act the Central Body endeavoured to get labour exchanges set up in the various boroughs, and advisory committees formed?—Yes.

81310.—Does that system extend all over London now?—No; Westminster still is isolated, and the City of London is untouched.

81311. And does not co-operate?—Westminster does not co-operate in any whatever, and will not.

81312. Is there a labour bureau there?—Yes, and a very good one, too.

81313. What about the City?—There is no attempt whatever made to touch the City yet.

Need of
employment
exchanges in
the City.

81314. Have you not any labour exchange there?—There is no labour exchange in the City.

81315. Do you know at all whether the want of an exchange is felt in the City?—I should think it would be. Employers of labour would appreciate one.

81316. But perhaps that has not come under your own personal observation?—Yes, it has. The London Chamber of Commerce seem to be able to fill that want to some extent, but in a very small measure. I am sure that in a hive of industry like the City there is plenty of room for at least two employment exchanges; one would be hardly sufficient to cover the whole of the City?

81317. In London you have got a central body who have got a central organisation as well as local organisations?—Yes.

81318. Would you describe a little what is done practically?—The central office is used merely as a clearing house between the various boroughs in London. There are two telephones into it, and messages are coming in every few minutes from, for argument's sake, Lewisham, wanting so-and-so (we will say a clerk), and that is immediately circulated to the other boroughs.

Machinery
and adminis-
tration of
metropolitan
employment
exchanges.

81319. So that as regards London—I am only using the word generally; I realise that certain parts of it are excluded—you have got an organisation which enables you to get a man in one part of London who wants employment into another part of London where there is a vacancy?—Yes, we have that machinery.

81320. You think, do you not, that that machinery should in some shape or other be extended to the whole country?—In some shape or other it should, certainly, the same as in New Zealand; they have it there. And on the Continent? Of course, but I instance our own Colonies.

81321. Did you limit yourself merely to receiving applications from people wanting employment and from the people wanting employees, or did you endeavour to ascertain whether there were persons who wanted employees when you had applications for employment?—In 1902, I had to receive the applications from employees the first thing in the morning; the latter part of the day was given over to visiting employers of labour, telling them that possibly I had the very man they would be wanting, or if they were not wanting him now, they might do later on; and in that way introducing the machinery to them.

81322. Did you go to see employers who had not made application to you?—Yes, most decidedly.

81323. You did not limit yourselves then to merely being the means of communication between people who came to you themselves?—No.

81324. But you endeavoured to ascertain whether there was any vacancy?—Yes. If there were no vacancies to-day, there might be next week.

Mr. Henry
William
Fordham.

29 Oct., 1907.

81325. Was that done, do you know, all over London ?
—No, it was not.

81326. Then there was the other plan that I was mentioning, namely, merely acting as registers ?—That was frequently done with regard to several boroughs. They were merely registers, and did not trouble about canvassing the employers of labour in their district at all.

81327. (Mr. Lansbury.) Are you speaking of the work under the Central Body ?—I did not understand that the questions related to that. That would not be my answer, if we are speaking of the work under the Central Body. I was speaking of 1902-4.

81328. (Sir Samuel Provis.) What you are telling us happened prior to the passing of the Unemployed Workmen Act, then ?—That was under the 1902 Act, until the Central Body took over the management of these exchanges. Things are, to a large extent, altered now.

Administra-
tion of
present
exchanges.

81329. In that particular, what happens now ?—The superintendents upon appointment are instructed what to do and the way to go about their work. They are told that they must regularly canvass employers of labour in their district, and I believe that is done.

81330. Do the superintendents reject any people who desire to place their names on the register ; do they exercise any discretion, perhaps I should rather say, as to whom they will place on it ?—They are instructed to place every applicant on the register, provided he has resided in the borough for twelve months.

81331. Without investigating character or fitness, or any other consideration ?—Quite so.

Attitude of
employers to
the metro-
politan
exchanges.

81332. (Sir Henry Robinson.) Do the employers of labour generally make use of the labour exchanges themselves voluntarily without waiting for you to go to them ?
—Very few indeed do.

81333. You have to hunt them up ?—You have to hunt the employers up. You have naturally to bring under the employers' notice the existence of certain new machinery that has come to stay.

81334. Do you think that the employment exchanges are a very great advantage to the employers of labour ?—I am sure they are an advantage. It is just a point as to who appreciates them and who does not, who sees the advantage and who does not.

81335. Do you think in course of time employers of labour will come to make more use of the labour exchanges if they are maintained ?—I am sure they will ; it is becoming so every day.

81336. What is the process of setting up a labour exchange ?—Under the Central Unemployed Body ?

Proper way
of forming a
labour
exchange in
a new centre.

81337. Assume that you were sent down to some town where there was no labour exchange to start a labour exchange, how would you go about it ?—Of course, there would be the selection of premises in the first place, which is a very important item. It is like opening a new business. You must have the best possible position for your particular business. Then the man must be known in the district, or if he is not known, he has very soon got to make himself known.

81338. Do you mean the labourer ?—No. The superintendent who has to open this exchange has to make himself known as a "New piece of machinery that is coming to live amongst you, and it is for you to take advantage of it or otherwise, but it is going to pay you. Instead of spending a certain number of shillings in advertising for men, you may come to me ; I will supply you ; I can do so." Then, of course, he is very soon made known to the man who is requiring work. Advertisement to the superintendent is the breath of his nostrils ; and unless you advertise one way or another, you could not do any good at all. Having established your place and got your applicants, you are every day setting them to work if you are continually visiting the employers of labour.

How
superinten-
dent of
labour
exchange
should deal
with
applicants.

81339. Do you personally visit the employers of all the applicants who apply to be put on the register ?—Personally visit them—no.

81340. How do you find the facts about them as to their character ?—Hence the necessity of the superintendent being a practical man, and being able to run the rule over a man, if I may say so, by asking a few questions, and to

take the man's measure. There are not many people can do that ; but a superintendent will soon be able to take the measure of an applicant before him by asking just one or two pointed questions. The way they are answered will be a big indication to him as to the character of the man. Then if a man is no good, if the superintendent realises that he is a waster, I say it is the superintendent's duty to say to the man : "My friend, I have nothing for you to-day ; good morning ! and I am afraid I shall not have anything next week."

81341. Do you enter on the register all those who come to you that you think are fit cases ?—Yes.

81342. Is there not a very great disappointment among the people who crowd on your doors and get their names put down ; do they not think something should immediately come to them ?—They do. They think they have merely to put their name down. That was especially the case under the Act of 1902, when it was called a municipal labour bureau. There were crowds coming in who thought we were simply a register for taking the names of men who wished to work for the borough—municipal labour ; but it was nothing of the sort.

81343. How long is it before the real functions of the labour exchange are generally known in the district ?—That again depends upon the superintendent. It depends upon his personal influence largely in his own borough ; he should be a man, of course, well-known in his district socially.

81344. Do you find the employers very anxious to co-operate with him generally ?—Yes. There is a better spirit prevailing, I must say.

81345. Is it a very expensive thing to run a labour exchange ?—No.

81346. What staff, I mean, would you have for an exchange ; would it be only the superintendent ?—The superintendent and a clerk.

81347. Is that all ?—That is all.

81348. Have the superintendent and the clerk to make all the inquiries from all the employers of labour in the district ?—Yes. He would not expect to do them all in a day. It is part of his usual routine to cover a certain district to-day : "I will do such and such a road to-day." He may only be able to do two or three calls ; but he has got to keep on pegging away.

81349. When the requirements of employers are changing from day to day, how can he keep up to date ?—He is gradually building up a goodwill. He calls on an employer to-day who says "No, I do not happen to want anybody," but in three months' time, when perhaps the superintendent has not had an opportunity of calling upon that employer since, that employer says : "I want so-and-so ; now I will just give the employment exchange a chance." Then is the opportunity for the superintendent of the employment exchange to send in the right man ; if he does not send the right man he may just as well shut up.

81350. Do you not think the fact of a man getting his name down on the register of an employment exchange rather ties him to the district, and that he is inclined to hold on there ?—No.

81351. It does not prevent him going elsewhere ?—There should be no difficulty in his getting a transfer to another borough.

81352. Does it prevent him from going elsewhere if he has got his name on the register ? If he knows he has a good character with the superintendent of a labour exchange, might not that have the effect of tying him to the particular place rather than trying his luck elsewhere ?—I have never known it so.

81353. (Chairman.) Would a superintendent consider it at all improper on the part of a man who had his name down in one labour exchange to go to another labour exchange ?—If he has gone into that other man's district, most decidedly not.

81354. The locality rules it ?—Yes.

81355. (Mrs. Bosanquet.) You say something in Paragraph 4 about the kinds of situations that are found for people in some of the districts ; have you any analyses or statistics of those ?—No, I have no statistics and no analyses by me. The reports of the employment

exchanges, which are published in the agenda of the Central Body, will give you some idea and the "order books" can be inspected at all the exchanges.

81356. Is there no record kept of what situations are found; is that not part of the work of the exchange?—Yes, there is a record kept. Each superintendent has his order book wherein he enters orders received from the various employers, and on the same line he puts the name of the man who filled the berth.

81357. (*Mr. Lansbury.*) Does he put in the wages paid?—They do in some cases.

81358. (*Mrs. Bosanquet.*) Do they put in the time for which the engagement is made?—No, because they do not know in every case.

81359. Supposing a man came and said "I want a man for six days' work," would they put down "six days," or would they simply say "situation found"?—They would not put it down "six days"; they would simply say "situation found."

81360. "Situation found" applies to everything?—Yes, regardless of wages or length of time.

81361. From an hour upwards?—Yes. That I am sure of.

81362. (*Mr. Chandler.*) You appear to have great hopes of the establishment of labour exchanges enabling us to deal very largely with the unemployed problem?—I was a builders' manager for thirteen years. From my experience there, and my experience as an employee, and as a superintendent of a labour bureau, I am sure that, having got labour bureaux, circumstances will force them to be recognised in course of time.

81363. Has your experience been chiefly in London?—In London and Bath.

81364. You are working on the assumption that there is always a great surplus of undiscovered labour in the country, are you not?—Undiscovered?

81365. Yes, not discovered by those who need it.—Yes, I think there is.

81366. You know of course, that there is a system of communicating between the organised trades of the country from one town to another?—Yes, in the case of some of the *organised* trades, but not unorganised.

81367. Yet in spite of that their unemployed members are very large in numbers; take the building trade just now as an instance?—Yes, that is so.

81368. It has been so for some years?—Yes.

81369. In what way will labour exchanges help the situation, do you think?—Those methods of communication are for society men only, and the non-society man has nothing like them. He has no means of finding out where there is employment, and yet he says, perhaps for good reasons of his own, "I cannot join a society."

81370. My point is this, that seeing the facility of communication which the organised trades have, and that in spite of that they have still very large numbers on unemployed benefit, there cannot be the work to be had and therefore the non-society man could not find it, however many labour exchanges there might be?—That may be so, but the statistics published in the Board of Trade *Gazette* show the number of men placed in situations, though I do not think they do show the number placed out of one borough, say, into another. My experience from watching the figures when I was in the Employment Exchange Department of the Central Body, shows me that there is evidently big room for this, and that a Bermondsey man, say, may get work in Deptford if there are means of telling him that there is work going in Deptford.

81371. It would be chiefly in the large towns, would it not, where the principal opportunities of finding work would be found?—I suppose that would be so.

81372. Will you explain to me what you mean in your Paragraph 8 when you suggest that it would go far, if extended throughout the length and breadth of the country to stay the depopulation of the villages?—Tell me exactly what was in your mind with regard to that?—The item in my mind on that point was this—that in every centre there should be established an exchange. Now here is an agricultural labourer who says: "I cannot get on the land, but I believe I should do well as a carter;

I understand horses, and there is So-and-so gone to London and he has got a job at 22s. a week and I can get only 12s. here." He thinks that 22s. is such an enormous increase. But if he had someone to advise him, a local centre where he could go and ask: "Is that so?" or "What is the rate of pay for a carman in London?" he would be promptly advised: "Yes, if it is amongst the railway companies you are thinking of going, it is 18s. for a single-horse van and 25s. for a pair-horse van, but it is starvation wages under the conditions prevailing in London, the cost of living, house rent, means of communication and so forth." That labourer would realise then that he is better off with his 12s. in the country than he would be with 22s. in town. But he has no means of finding that out now.

81373. (*Mr. Gardiner.*) As regards the question of Labour wages, how would you meet the trade unionist difficulty, supposing a man applies for a carpenter and he wishes to pay something below the trade union standard rate?—The union rate of pay for a carpenter is 10½d. I have had an employer of labour ask me for a carpenter, and say he is prepared to pay him 9d. "Yes, all right, thank you." He is surprised later on, or he tells me later on, perhaps a week later, "I did not have that carpenter come round." "Well, I am very sorry, but I could not find a man"—neither could I at 9d. But if I had advertised the fact, as it were, that I had got a job for a carpenter at 9d. an hour, I should have had the trade unions on my track at once for taking any notice of such a job, and they would have voted me as a blackleg concern altogether. I did not want to do that.

81374. And so practically, as far as wages are concerned?—As far as wages were concerned, when it was a question of below the standard rate, I ignored those berths. I am speaking now as a superintendent under the 1902 Act; but such things do not prevail under the 1905 Act.

81375. Because?—Because there are rules governing the superintendents which they must conform to.

81376. Is one as to the standard rate of wage?—No. There is no rate of wage given, and there is no rule calling their attention how to act in the case of a lower rate of pay than the union rate, but the superintendents have to keep their figures up at all costs.

81377. (*Professor Smart.*) What was your experience of previous to 1902?—I was in the building trade as a witness in builder's manager and draughtsman for some nine or past years.

81378. Immediately before 1902?—I have always been with engineers of some sort. I was draughtsman to a firm of brewers' engineers. Then I was with the late firm of Woodhouse & Rawson, the electrical engineers, as prime-cost clerk.

81379. That is why you claim to be a practical man?—I think I know something of the trades, and have passed my examinations in Building Construction, but that is not why.

81380. Would you say that the labour exchanges have never had a chance in London yet?—I do not think they have under the Central Body's administration.

81381. Is there not a general idea that a labour exchange is only needed for the unskilled trades; and is not that the reason for the artisan not applying?—It is the unskilled trades that do not apply, and it is the skilled men, the better-class mechanics, who do not apply. They have not been encouraged to in a proper manner.

81382. But is it not rather understood amongst the working classes that the labour exchange is for unskilled labour?—Yes, and I am afraid they have lent themselves to that idea.

81383. Do you mind saying in what way your past efforts have been cramped?—I do not know that it is particularly privileged, though I was going to claim the privilege of this court for that, but I do not see that I need. The Central Body, or rather the Employment Exchanges Committee, drafted certain rules for the guidance of superintendents, and the superintendents were tied down to those rules. The superintendents were not left to make the very best of their offices. Of course, that I know could not be helped, because they had not in every office the right man, hence the necessity for framing certain rules and regulations, which to the unsuitable man

were perhaps a check, but to the man who was imbued with altruistic principles were somewhat harsh and harassing. But they were all treated alike, and, generally speaking, the superintendents were being cribbed, cabined and confined in their best efforts. So that I asked for a change. I did not want to be associated with what I thought under those conditions might be a failure.

81384. Was any reason given for there being no labour bureau in the city of London?—I do not think they thought of it until I suggested it some twelve months ago, but nothing has been done yet (October, 1907).

81385. I thought the twenty-five exchanges were to cover the whole of London?—Yes, with the exception of the City of London.

81386. And no reason was given?—No reason was given whatever. The Employment Exchanges Committee allocated a certain sum for the appointment of a superintendent to work the City of London eighteen months ago, but no steps have been taken yet (October, 1907).

81387. Referring now to Paragraph 4 and the matter of the Islington Exchange, do you mean there that if a man got a job of two or three days' work from the borough surveyor that would appear as a case where employment had been secured?—That is so. That is pretty general throughout the whole of London.

81388. A three days' job would be called a situation?—The superintendent does not always know how long the job will last. He may be asked, for argument's sake, for a fitter to do a day's work, and that may turn out, as I know it has in my own cases in 1902-1904 to be twelve months' or two years' work for a man. So that he was quite safe in taking every job found and making it count one, whether it was for a day or a week.

81389. Do you think that was done?—I am sure that was done.

81390. As regards Finsbury, would you say that female labour, factory and office boys, should not be provided for by a labour exchange?—No, I should not. But I wanted to emphasise the point that female labour (in that district especially) is in to-day and out to-morrow. There is nothing very permanent about it, and yet it is all counted in the statistics that these men have to send up, which, of course, are published in the Board of Trade *Gazette* as so many situations found. It is quite possible for there to be three situations found in one week for the same person, and this has actually occurred.

81391. It is on statistical grounds you object to it?—Yes.

81392. And as an argument for a success that really is not a success?—As an argument for a success that really is not a success.

81393. You speak of the supply of cheap female labour, but is not all female labour cheap, or do you mean anything special about that?—All female labour is not cheap; but some of the very unskilled classes is very cheap.

81394. Was there an attempt to supply female labour at even below the ordinary rates?—Yes.

81395. You seem to imply that the Central Body judged the success of the exchange by the number of cases?—That is so; I saw that, and knew such methods to be misleading.

81396. And had no means of checking?—And had no means of checking, hence as a protest I left that branch of the work.

81397. So I suppose if a return were given to us that 100,000 situations were found in a year you would not attach any importance to that whatever?—I should not, because I know what they are.

81398. Still, you are quite unshaken in your faith in the idea of labour exchanges?—The principle is splendid.

81399. When employers apply to you for workmen do they generally name the wage they are prepared to give?—No, they do not.

81400. In that case you do not keep back workmen, do you?—In some cases. A superintendent that is living in the neighbourhood knows pretty well—it is his business to find out—what such-and-such shop pays. One firm will pay 10½d. for their carpenters, another firm will pay 11d. perhaps, or 11½d. for their bricklayers, and another firm

will want them cheaper. It is the local superintendent's place to get to know all these things, and in course of time he need not ask. But where he does not know, there is no harm in asking. A man says: "I want a joiner." "All right; 10½d.?" "No, I cannot pay 10½d., I will pay 9d."

81401. But you say that generally the wages are not mentioned?—Generally they are not mentioned, because you are supposed to know it in the district.

81402. Do I gather that you consider that trade union principles generally should be respected by the borough?—I do. They should be respected, certainly; they should have recognition.

81403. But not exclusive recognition?—No, not exclusive recognition.

81404. You see the difficulty, of course?—Yes, I do; I realise that.

81405. You said in reply to a question, that there was nothing in the labour exchange itself, or in its successful changes will working, to increase the total mass of employment; is not increase that quite correct?—There is nothing whatever; they will never make employment except for one superintendent and his clerk. Labour ex-
changes will
not increase
total volume
of employ-
ment.

81406. When a man is needing work he is producing nothing?—Quite so.

81407. And he gets no wages?—Yes.

81408. If by means of labour exchanges you get a man a job now when otherwise he would walk the streets for a week, he gets a wage in his pocket immediately?—Yes.

81409. That wage is a new demand for commodities, and therefore a demand for labour right away back to the very circumference of the economic circle?—Yes.

81410. Have you not therefore increased the total employment?—No.

81411. How is that?—Because the employer will be waiting for that man, and the man will be waiting for the employer, and they would wait possibly.

81412. Neither the employer nor the man producing anything for a week?—Yes.

81413. You let the employer and the man get to work at once, and surely you get an article produced and money earned as well, instead of nothing being produced by them?—Yes, that is so.

81414. Does that not mean a new demand for labour?—It is merely introducing the labour to the labourer, not creating employment as generally understood.

81415. It is getting a man set to work?—Yes.

81416. And work means production of wealth, and production of wealth means production of wages?—Yes.

81417. And wages involve the spending of wages, I suppose?—Yes.

81418. And that means a demand. Does that not prove the point?—It proves it so in that case, but the general principle of employment exchanges is that they will never increase labour; they simply promote the fluidity of labour.

81419. (*Mr. Lansbury.*) Do I understand that you are in favour of only sending people to work at the union attitude of rates?—I think I have made that clear in the 9th Paragraph: "Efforts should be made I think to keep up both the standard of the men and their wages too." Proper
labour
exchanges in
regard to
fair wage
question.

81420. I want to get it emphatic one way or the other, because you see you cannot have a shifting line. Either you supply all that come to you, or you differentiate, and I want to know where you draw the line, saying that you will not send a person or that you will?—I would draw the line under certain conditions. It would be possible, and even the unions would say it would be possible, for a man to work at ½d. an hour less.

81421. Have you ever heard a trade union say that?—I do not know that I have known it—yes, I have; under certain conditions it is possible for a man to work at a ½d. an hour less. I think the Moulders' Society, but I am not sure, will allow a man above a certain age to work at a less rate of pay.

81422. Still, that is a trade union rate all the time?—Yes.

81423. My point is this: Are you in favour of the trade unions practically saying what wages are to be paid to people for whom the employment exchanges find work?—Yes, I do think so, where there is organised labour.

81424. I notice you object to the Finsbury exchange because of the women. How are you going to interfere there as to the rates of pay? Who is to be the person to decide whether it is a proper rate or an improper rate that is offered?—I was alluding there, and I think you will find that I say it pretty specifically, to “cheap female labour”; I do not say “women’s labour.”

81425. Cheap girls’ or women’s labour?—I meant girls chiefly.

81426. I do not care what it is, whether it is cheap female labour, cheap boy labour, or cheap girl labour; I want to know who is to be the person to decide, where there is no trade union, that it is a proper rate of pay or not?—The superintendent should be sufficiently un-biassed to know whether the work expected of a certain employee is commensurate with the amount of pay given.

81427. Do you think that under any public authority it would be possible for the superintendent to please his committee, please the employer and please the employee if he had to give a decision of that kind?—I do not think I said it would be possible for him to please all three.

81428. Would it be possible for him to please anybody—I will put it in that way?—Yes, it would be possible for him to please one of the three.

81429. At the expense of the other two? Honestly, do you think that is a very practical sort of an arrangement, to leave it to the superintendent of an exchange to determine whether the rate of pay is fair or not?—Yes.

81430. You think it is?—I do. He knows the local conditions prevailing, and the number of hours to be worked for a given wage.

81431. Then you would make him a kind of wages board?—No I do not.

81432. Let us understand. Where there is no trade union the question I put to you was, who is to decide, and I understand you to say that the superintendent is the person who ought to decide whether the wages offered are proper wages for the work expected to be performed?—I say that, but I must qualify that by some explanation. For instance, the employer asks for a clerk at 25s. a week; if he is going to work him from eight o’clock in the morning till nine o’clock at night, the superintendent ought to be the man to say “No, that is not sufficient money, and I cannot find a man for you that will do that.”

81433. As I say, you make him a kind of wages board?—If the employer says: “I am only going to pay 25s. a week, but the job only lasts three hours a day here” the local superintendent should be the man to say whether that 25s. is a fair rate or not under the circumstances mentioned by the employer.

81434. That is what I understood you to say. Do you think that is practical?—With that qualification, I say yes, that is practical.

81435. There is no qualification about it; the superintendent is to be the judge, I understand, as to whether it is right or not?—Yes. If he is the right man in the right place.

81436. As to the labour exchange, I understand from you that it does not find very regular employment at present, that is long jobs, but that a good many of the jobs which are found are casual?—Yes, a large number of them are.

81437. Is that anybody’s fault?—No.

81438. I mean, has it anything to do with the principle of a labour exchange? Is it not rather due to the fact that so very much of the work is casual work?—Of course, a great deal of it is casual work, therefore possibly that is so.

81439. The exchange is not responsible for that, is it?—No, the exchange is not responsible for it.

81440. Do I understand that in addition to settling the rates of pay, you also would require the superintendent of the exchange to settle the length of the job, if it is worth his while to supply a man or woman?—I do not think I said that.

81441. I understood that you were complaining just now about the statistics which were published being fallacious, because they said they had found so many jobs and a good many of them were only for one day perhaps, or perhaps only for a few hours; and I understood you rather objected to that?—I do not object to that at all, but I say that that sort of thing should be borne in mind in reading the statistics.

81442. But the exchange is still to be used for that kind of purpose?—It may be; I could not say at all.

81443. I want to get from you whether you think the exchange should be used for that kind of work?—It is an employment exchange, and therefore must be used for employment, whether regular or irregular, whether for long or for short periods.

81444. As you have already said, of course it cannot create labour?—It cannot create employment.

81445. I understand though that you do think that very often there is work being left undone because people do not know where it is?—That is frequently the case.

81446. Do you think that lasts any very long period?—That I have no means of finding out.

81447. You have not any experience to guide you about that, have you?—I have waited sometimes as long as a week for a plasterer when I was in the building trade, because I could not lay my hands on the right kind of man.

81448. It is also true, is it not, that during the last five or six years during which you have been engaged in this work, all over the country according to the trade union returns certain trades have been in a very bad state?—Yes.

81449. Therefore it was not a question of the workman wanting to go out of London or not wanting to go out of London?—No.

81450. Because if he went out he was out of work, and if he stayed he was out of work?—That is so.

81451. And no number of linked-up labour exchanges would have got over that fact, would it?—Not during the last five or six years.

81452. So that from the point of view of the periods of unemployment, such as that through which we have been passing, some machine other than the labour exchange must be devised for dealing with it?—Yes, certainly. The present state of chronic unemployment will never be met solely by a linked-up system of employment exchanges. We shall have to go further than that I am sure.

81453. The chronic casual employment, or what some one calls “under-employment,” that, too, labour exchanges, so far as I have heard you this afternoon, will not get over?—No, I do not think they will.

81454. Only just one other word about trade unions. Trade Unionists and the unemployment exchanges. The big staple trade unions are really labour exchanges, are they not?—I mean the Carpenters, the Joiners, and the Bricklayers?—Yes, and the Plasterers.

81455. The Engineers and the Bootmakers?—Yes.

81456. All these big unions themselves send their men from place to place, do they not?—Yes, but their methods of communication are necessarily slow.

81457. Is not the reason—I am putting a question that was put to you before, but I do not think this point was made quite clear—is not the reason why the skilled trades leave the exchanges alone, that the really best men in those particular trades feel that they have got their own organisation for finding out where work is going?—No, I do not think so. I think the reason is this—I will take an unorganised trade. Assuming that I am a clerk wanting a berth, in a well-ordered system I should be able to go to the exchange and register my requirements; but when I go I find that there is practically—that is, if I were to go to any one of these employment exchanges—a string of loafers—I know them to be loafers—on a form. I have seen them in the borough; I live in the borough, and I know those men by sight; they are navvies and lower-class porters usually. I feel that this exchange then is for that class of man. Well, I do not think I am called upon to hob-nob with them just yet, and consequently, I do not register.

Mr. Henry
William

Labour
exchanges
not a solu-
tion of un-
employment
problem.

Difficulty of
labour
exchanges in
finding long
jobs: and
relying
thereof upon
the statistics.

Mr. Henry
William
Fordham.

81458. Of course, you need not stop there ; you have only to go there and register ?—Yes, that is so, but I have to wait my turn.

29 Oct., 1907. 81459. But that is not a very long time ?—an hour perhaps usually.

81460. There may be a big rush, but as a rule now there is not such a big crush waiting there. is there ?—No.

Mr. Edward
James Fair.

29 Oct., 1907. 81464. (Sir Samuel Provis.) I understand that you are chairman of the Association of Employment Exchange Superintendents, and that Mr. Hunt, the gentleman who accompanies you, is the secretary of that Association ?—Yes.

81465. The evidence that you propose to give is given on behalf of the Association ?—Yes.

81466. You have prepared a Statement for us, have you not, which we may take as your evidence-in-chief ?—Yes. (*The Witness handed in the following Statement.*)

1. I beg to submit the following statement on the working of the employment exchanges established by the Central (Unemployed) Body for London, in the autumn of last year. The whole of the evidence has been prepared by the committee of our association, and finally submitted to all the members for their approval. They have also appointed myself, as chairman of the association, to give evidence on their behalf if required.

Basis of Employment Exchanges.

Object of
labour
exchanges.

2. The root idea of employment exchanges is that they shall act as a common centre in each area covered by an exchange between employer and employé, where the employer may, with the minimum amount of trouble, find all the labour he may require, and the employé get in touch with the employer requiring his services, without the cost and frequent disappointment of answering advertisements, or of wandering from works to works, often going away from the point where employment is awaiting him.

Centralised System.

Centralised
system of
employment
exchanges in
London
under Unem-
ployed
Workmen
Act.

3. The scheme of employment exchanges put into operation by the Central (Unemployed) Body for London is the first serious attempt in this direction to deal with the problem of unemployment on a scientific basis, all previous attempts to establish labour bureaux having failed owing to their isolation.

4. Modern industrial conditions are so varied that no attempt can be made to deal with the problem from any independent unit.

5. The scheme of the Central Body, by linking every portion of London together by means of a central exchange, acting as a clearing-house, brings the industrial needs of one portion of London into touch with the industrial supply of another.

6. The work already done by the metropolitan exchanges has amply proved the value of a uniform system, employers have promptly found men they could not have obtained so quickly by any other means, and men have been placed in employment where they could never have found it by their own unaided efforts.

Census and Classification of Unemployed.

Census and
classification
of unem-
ployed
obtained by
metropolitan
employment
exchanges.

7. The results already obtained by the metropolitan employment exchanges have, in our opinion, more than justified their existence. On completion of their first year's work their books will show that there are at least 100,000 men and women in London, who are only partially employed, independently of the trade unionists. The exchanges are able to show the various trades affected, and, further, to prove special stagnation in particular industries, and by the system of re-registration they are able to show how much work an applicant obtains during any given period.

8. There can be no question that any attempt to deal with the problem of unemployment must have as its basis reliable figures as to the number and capability of workers employable and of the capacity of various industries to absorb hands.

81461. And if a man wants work, after all, whether he is a clerk or a labourer, he has to rub shoulders with a good many people he may not like ?—Certainly. I personally would not mind it.

81462. You do not want to rule out these labourers, do you ?—No, not at all.

81463. The clerk has just got to get rid of his pride ?—He has just got to get rid of his pride.

Staff and Organisation.

9. The number of employers who have used the exchanges, Machinery of and who have been suited with satisfactory employés, metropolitan exchanges. has been highly creditable when the paucity of means at the disposal of the superintendents is taken into consideration.

10. Without any assistance but one clerk (in many cases an inexperienced youth), hardly advertised in any way, provided with offices often of insignificant appearance, and in bad business positions, the superintendents have had to struggle against many difficulties in trying to deal with the industrial needs of the largest city in the world. In criticising the existing organisation, and in considering any practical proposals for its reform, it must be remembered that we have now the experience gained by twelve months' work.

11. In starting a new organisation it was impossible to foresee all that was necessary for its successful development. Opinions previously had all been so moulded in the methods of the labour bureaux, as to be unable to realise the magnitude of the problem the Central Body was attempting to grapple with. In the light of our experience it has become obvious that the lines upon which the scheme was conceived were too narrow to meet the requirements of present industrial needs. However, in the absence of actual data to base their estimates upon, the authorities cannot be blamed for moving cautiously in financial matters.

Reforms
necessary in
present
systems.

12. The conditions of employment, postal facilities, and means of communication of each area covered by an exchange must be carefully considered. The exchange should occupy a good business position, a separate room and entrance being provided for female applicants.

13. The superintendent should be capable of dealing with business people, and have a good knowledge of industrial conditions, as well as experience in the control of men.

Qualifica-
tions of
superinten-
dent and
staff, etc.

14. In considering the number and composition of the staff employed at each exchange, it must be understood that the work of the exchange is a commercial undertaking. Sufficient staff should be engaged to do the office work efficiently, and in all exchanges a female officer should be appointed to deal with female applicants. We strongly advise that all classes of labour should be dealt with.

15. The advantages of the exchanges must be brought home to every business man. This can only be done by persistent canvassing (not merely calling once and leaving the matter, but repeated calls at frequent intervals) until a customer is obtained. Sufficient canvassers must be engaged to ensure a constant stream of business through the exchange. By this means the exchange would act as a centre of attraction to every unemployed person, a continual flow of applicants would be passing through, and situations would be promptly filled.

Need of
canvassing
employers.

16. It must, of course, be understood that the need for canvassers will lessen as the usefulness of the exchange extends ; but, in order to put the whole system on an active and useful basis, canvassing on a large scale is absolutely necessary in the earlier stages. As the work develops, the canvassers would be gradually absorbed in the offices.

17. The trade unions should be approached with a view to using the exchanges as houses of call, instead of the present system, which involves the too frequent use of public-houses. At present, in the case of centralised societies, men have to travel long distances for the purpose of registration. The exchanges should also be used

Desirability
of making
the exchange
a house of
call and
branch meet-
ing place for
trade unions.

for holding branch meetings, etc., and so would in time become recognised as the only centres where the best information (which might be of use to the unemployed) could be obtained.

18. At present there is a great difficulty experienced, when sending applicants a long distance from the exchange where they register, to a possible employer, as the men, in the majority of cases, do not possess the means necessary to pay the ordinary cost of travelling. This could be met by the employment exchanges being placed in a position to obtain from all transit authorities, special workmen's fares in all *bona-fide* cases.

19. It would materially assist the success of the exchanges if the Government and all public bodies inserted a clause in their contracts that their works' departments and contractors should, as far as possible, utilise the machinery of the exchanges for such labour as they require from time to time.

20. In completing arrangements as far as London is concerned, it is necessary that the exchange system should be extended to the cities of London and Westminster, and, in fact, to the whole of Greater London.

General.

21. In order that a scheme of employment exchanges can become really effective a national system should be put into operation. By this means a complete organisation of unorganised labour would be effected.

22. The advantages of this would be, the supply of labour available in all parts of the country could be accurately gauged, and could from time to time be moved to wherever required, and the known surplus could be promptly dealt with in Government schemes of afforestation, reclamation, emigration, etc.

23. The lack of organisation generally, at present, is responsible for much of the chronic unemployment prevailing. Trades that are already overstocked still receive more fresh blood than is necessary, while extreme difficulty is found in skilled industries to obtain necessary hands.

24. The exchanges would be able to tell the exact condition of every trade in the country, and divert youths about to enter business life to occupations where their services would more likely be permanently required.

25. The need for labour in country districts could be met by placing men from the towns who have received an agricultural training, and thus relieve the pressure in large centres.

26. An important point, which we think ought to have serious consideration, is, that if the local advisory committees (consisting of public men, local employers, and representatives of labour) were legally constituted they could become arbitration courts and wages boards.

27. There can be no question but that an organisation such as has been outlined above would greatly improve the status of labour in poorly paid industries.

28. As the exchanges become more extensively used, employers of even sweated labour would be compelled to come to the exchanges for the supply of hands, and the fact that the prices they were paying would be collated and at the disposal of applicants for employment, would, we believe, constitute a considerable check on the evils of the sweating system.

29. Since the commencement of the work of employment exchanges, we have been anxious to work with the trades unions, but, unfortunately, up to the present we have not received their co-operation, and much of the criticism that has been levelled against us accusing us of employing cheap or "sweated" labour, has, we believe, been due to the lack of sympathy shown by the various unions.

30. This difficulty we believe and hope will be cleared away by means of a better understanding.

31. We have found many employers keen on our work, and they would gladly make use of the exchanges if they were placed on a comprehensive basis.

32. There has been a tendency to confuse us with distress committees, and in some cases employers have stated that under our present constitution, if they made use of the exchanges, they would be assisting to aid a

system of State-created labour, to the principle of which they object.

33. The less connection there is between the distress committees and the exchanges, the less chance there is of the work of the two branches of the Central Body being confused. We strongly feel that employment exchanges should be under a separate authority to distress committees.

34. The quality of work offered by employers has, on the whole, been good, situations as high as £3 per week having been notified; and had our work been properly advertised we should have had no difficulty in filling these, and the number of situations notified to us would have been much larger. We find we now receive a better class of order than at first, and we also have a better class of men registering.

35. Workpeople living in Shoreditch have been placed in Bermondsey; workpeople in Woolwich have been placed in Kensington; workpeople in Camberwell have been placed in Islington; workpeople in Lewisham have been placed in Hammersmith; and so on. We can enumerate many instances in which men and women have been placed from one extremity of London to another more quickly than by means of advertisement, and without the waste of time and energy incurred in tramping from one point of London to another looking for work.

36. The present system of employment in vogue, whether in engaging men through advertisement or taking them on at the gate, shows an utter lack of organisation, and is unsatisfactory both to employers and employes. In districts where men are wanted for daily work it is customary for men to wait at the various firms where they may have a chance of work. We find groups of men at a dozen different gates. By using the exchange as a centre, the employer could rely upon having just the men required, and the men could know in a moment exactly where they would be wanted.

37. The exchange, by organising labour, would replace the present chaotic state of affairs by a comprehensive system based on industrial demand and supply.

38. In conclusion, we would point out that all private efforts in the direction of labour bureaux have failed. Private employment agencies can only be sectional and local in their efforts, however ably administered. They can only deal with applicants who have means, and further, only get in touch with a limited number of employers, the situations found bearing a small relation to the number of applications received, or fees collected.

39. I append copy of an estimate prepared by the association of the annual expenditure which it is believed would be necessary to maintain a system of employment exchanges operating over the whole of London, Greater London, and with special officers working the business centres in the counties adjacent to London (Appendix No. XCI (A).)

40. I also append copy of a statement as to labour exchanges in Germany, which was received by the association from the secretary of the Metal Workers' Federation at Stuttgart (Appendix No. XCI (B).)

STATEMENT AS TO DISTRESS DUE TO UNEMPLOYMENT.

41. The greater number of unemployed in Lewisham belong to the building or transport trades; there has been a considerable amount of work in those trades until two years ago, when a serious depression set in. The absence of all machinery to transfer the men affected to districts where a greater demand for labour exists caused great stagnation; the pressure in Lewisham is easing as the men gradually find outlets.

42. The effects of frequent terms of unemployment are bad on the individuals affected; they lose heart and, unless in possession of indomitable spirits, sink into indifference, frequently becoming members of the so-called "wastrel" class.

43. All special work provided by municipalities should only deal with trades in which seasonal depression exists, thus enabling a stricter discipline to be maintained; public works where men of all occupations are employed must be costly, as the slowest men set the pace.

44. Relief works provided by the Central (Unemployed) Body for London have suffered from the same cause as given above.

Mr. Edward James Fair.

29 Oct., 1907.

Desirability of dissociating labour exchanges from Distress Committees.

Work done by metropolitan exchanges.

Advantage of labour exchanges over present system of engaging workmen.

Failure of private labour bureaux.

Unemployment in Lewisham.

Effects of unemployment.

Municipal relief work. Results of relief work under Unemployed Workmen Act.

Mr. Edward James Fair. 45. The class of work provided has been most adaptable ; making cricket and tennis grounds, or preparing ground for cultivation, does not impose such a severe strain on men who are usually suffering from an insufficiency of food as road construction or repair.

46. The total amount of work has not been sufficient to allow of any discrimination between men who are used to manual labour and those who are not ; unless this can be done the financial results can never be very encouraging.

Labour colonies. 47. *Farm Colonies.*—As a training ground for emigration or settlement on the land these offer a wide field for useful work ; as merely places where a man can be sent temporarily for employment, they are much more costly than local relief works and not so beneficial.

Emigration. 48. *Emigration.*—Much useful work has been done in this direction, and as far as Lewisham is concerned the reports received from emigrants have been most encouraging.

Advantages of afforestation. 49. In considering any future means of finding employment for surplus labour, my own experience of landscape work leads me to believe that afforestation offers the most useful field.

50. The work entailed in preparing the ground and planting trees does not offer a constant variation of work, with the result that even the unskilled speedily become useful. It is easy to institute a system of piece-work, which enables the officers in charge to keep a check on the men under their control, and the training given would be valuable to the men in seeking employment under ordinary conditions.

81467. (*Sir Samuel Provis.*) You are, I think, the superintendent of the Lewisham Employment Exchange ; in 1904-5 you were foreman in charge of relief works at Avery Hill and Eltham Park ; and you were clerk to the Lewisham Distress Committee ?—Yes.

Association of Employment Exchange Superintendents. 81468. What does the Association of Employment Exchange Superintendents consist of ?—The Association consists of the exchange superintendents and their clerks, numbering about fifty-five at present all told.

81469. That is to say, the exchange superintendents under the Central Body ?—That is so.

81470. How many are there ?—There are twenty-five exchanges.

81471. Therefore, there are twenty-five superintendents ?—Yes.

81472. And there is a clerk to each ?—Yes ; and some of us have two clerks. I have a second clerk myself.

81473. Lewisham is your district ?—Yes.

81474. Does that mean the Borough of Lewisham ?—That is so.

Experience of witness. 81475. Had you any experience in connection with labour exchanges before you took up the post under the Central Body ?—I was superintendent of the old Lewisham Labour Bureau established by the borough council. I commenced the bureau there.

81476. Perhaps you would say when that was ?—That was about April, 1905.

81477. Lewisham was one of the places which established a labour bureau under the London Bureau Act, I suppose ?—That is so.

81478. That was not very long before the Unemployed Workmen Act passed, was it ?—No. I ran the bureau for about fourteen or fifteen months, I suppose.

Metropolitan exchanges. 81479. We have heard from a previous witness that now there is a labour exchange in each of the Metropolitan boroughs, with the exception of Westminster ?—That is so.

81480. And these are linked together under one Central Body ?—Quite right.

Work done by Lewisham employment exchange. 81481. Have you any figures showing how many cases you have had ?—I have not the exact figures upon me, but since I opened the employment exchange in Brownhill Road on August 27th, last year, I have had about 1,600 situations notified to me by local employers, and during that time I have registered just over 3,000 applicants.

81482. How many cases were found situations ?—I filled not quite 1,300 of those situations. I wish I had brought the exact figures with me, but I quite forgot to.

81483. Did you find those situations yourself, or was it by means of the central exchange ?—Those are purely local situations.

81484. Were some of the applicants found work by means of the central exchange ?—Yes. I have placed about eighty-five or eighty-six men in the twenty-five other exchanges.

81485. Are you able to say at all from memory how far those were cases of regular employment or casual employment ?—I should say those were all, as far as one is able to judge, permanent situations—not my local ones I mean, but those placed in other districts. Length of situations found by Lewisham exchange.

81486. Now take the local cases ; how far were they permanent ?—It is extremely difficult to say. The greater part of them were certainly for periods of at least three months. In the building trade it is very difficult to say. Of course there are no permanent situations in the building trade ; you may send a man to a builder, and he is there for three months, or it might be for three years—you can never tell. A purely casual job, where a man is only wanted for a few days, is quoted in the order book, and these particulars were available when we got the statistics out in the summer for the Unemployed Body.

81487. What was the class of workmen that you found situations for ; were they in the building trade chiefly ?—Principally in the building trade in Lewisham. We have no factories, but we have two engineering works. The bulk of the trade is building and shopkeepers. Class of workmen for whom situations were found by Lewisham exchange.

81488. Were the situations that you got by means of the central exchange of a different class ?—They were of a different class, and included factory workers, clerks and that sort of thing. Of course Lewisham is a dormitory where so many people come to sleep who do not work in Lewisham but who do work in the inner boroughs.

81489. You say in Paragraph 7 : “ On completion of their first year’s works their books will show that there are at least 100,000 men and women in London who are only partially employed, independently of trade unionists.” You are speaking there of a sort of census of unemployment ?—Quite so. Unemployed in London.

81490. Do you think it may be taken that generally the persons who are unemployed do come on to these registers ?—Yes, and increasingly so. In the earlier stages it was not so, but as they gradually realise what we are created for, we are getting a better type of applicant and we are getting more of them to register. Increase of registrations at Lewisham exchange.

81491. That number would exclude the more skilled workmen, would it not—that is, the ordinary trade unionists, as a rule ; they do not come on the register ?—In my case at Lewisham three of the trade unions keep their books in my exchange ; and their members come and sign there instead of signing in a public-house as they usually do. Trade unionists and exchange.

81492. In the figures for Lewisham are you therefore taking in trade union figures ?—Yes ; decidedly so.

81493. Have you anything to do with those trade union branches at Lewisham ; do you yourself exercise any jurisdiction or take any action in connection with them ?—Only in placing the men, if I can. If a situation is notified to the exchange which a society man can fill, I usually give the society man the preference if he is suitable. Practice at Lewisham exchange as to canvassing employers, supplying men, etc.

81494. What do you do practically when you get applications for work ? Do you inquire in your own neighbourhood whether there are situations ?—We have a system of canvassing the employers. We work one district one day and another another, and we follow it up by circularising. In the case of those firms who are on the telephone, and we have no time to go round to see them, we make a practice of ringing them up once in three or four days—constantly keeping the exchange in front of them.

81495. Do you exercise a certain amount of discretion in relation to the men who apply for situations in recommending them to particular employers ?—Most decidedly so.

81496. Do you advise them, then, as to whom they should apply to, or what is exactly the arrangement ?—

If an employer sends to me for a man, whatever he wants, say a carpenter, for instance, I simply select the most suitable carpenter on my books and send him to that employer.

81497. Are there certain rules which are applicable to these exchanges?—We have working rules which are not very stringent. We have a good deal of latitude.

81498. Are those rules made by the central body?—Those are framed by the central body.

81499. Have you a copy that we may put in?—I have not a copy, but I will send you copy. (See *Appendix* to Messrs. Jackson & Pringle's Report, p. 383).

81500. Have you at Lewisham an advisory committee?—Yes, I have an advisory committee.

81501. How is that composed?—The Lewisham Borough Council nominated five members, or rather elected them, I should say, and the Chairman (who was one of the local members on the central body) and myself were asked by the central body to select a list of likely employers and likely trade representatives, which was sent up to the central body, and the bulk of those were appointed on my committee. I have about thirteen members now.

81502. So your committee represents the workmen, the employers and the local authority?—Yes, exactly.

81503. But the actual selection, except in the case of the representatives of the local authority, was made by the central body?—Yes, that is it.

81504. Supposing a man on your register gets employment apart from you, does he notify that to you?—In some cases. As a rule, of course, they simply lapse. We register a man and his name is on the books for seven days; he then has to come at the end of the seven days to renew his application. If he does not do that, we simply pass him to the dead drawer. If he notifies us, as they do in some cases, that he has found employment, we make a note of that. As a rule, he is simply passed to the dead drawer on failing to renew his application, and we conclude that he has found employment.

81505. But the fact of your renewing them every seven days prevents your keeping on the books what may be called dead cases?—Yes; you are still on a live register.

81506. With regard to the trade unions in your district, what is the relation between you and them?—The relation at first was, well, very peculiar. They looked upon the exchange as a blackleg organisation, and in fact, a good deal of nonsense was talked about it, but I managed to get in touch with the local secretaries and arranged for them to allow me to address their branches. In company with my friend here, Mr. Hunt, and another of our superintendents, Mr. Bogan, who takes a good deal of interest in the question, we have addressed these branches, and we have had quiet discussions—sometimes not so quiet as at other times—and we have fought the whole question out. Now they quite realise that the exchange will not injure them in any way, and the feeling in Lewisham is certainly friendly. My advisory committee are arranging a conference on Friday week between the branches in order to finally fetch in those that are outstanding at the present moment.

81507. You have told us what your staff and organisation are; practically you have got two clerks, I understand?—That is so now. I have only had the second one about two months—that is all.

81508. They are appointed by the central body, are they not?—Yes.

81509. Do you get any voluntary assistance at all, or do you depend entirely on your own staff?—Entirely on my own staff.

81510. You say in Paragraph 10: "The superintendents have had to struggle against many difficulties in trying to deal with the industrial needs of the largest city in the world;" would you explain that a little, and say what is the nature of the difficulties you have in your mind?—Yes. The central body, in starting these exchanges—of course one can hardly blame them, because no one had had any previous experience in the matter—hardly looked upon it as a new business, and they did not put first the organising work in the district which ought to have preceded the creation of an exchange. I take it now

that if they were starting a new exchange in a district, they would send an officer or officers to work that district. First of all, these officers would approach the town clerk and from him they would go to the mayor of the borough and to the councillors, and then to the principal employers, then they would get into touch with trade associations and trade councils and all the rest, so as to familiarise them with the idea that they were about to open an exchange. At present when a superintendent starts in a district, no one has heard anything of what he is going to do, or what the exchange is, or anything else. Not one man in twenty knows what an employment exchange is or what it means, and that has made the work exceedingly difficult. It has happened when you go to canvass employers of labour that you have had to explain the principle on which the exchanges are worked. Even a short time ago, in my borough council, one councillor got up and said he objected to the exchange because it cost 30s. to find a man 5s. worth of work. It costs nothing of the sort; but this condition of things leads to much confusion on the point.

81511. I think there is another difficulty, namely, that the existence of the exchange is not always known in the locality?—Yes, decidedly so.

81512. How do you get over that difficulty? You have told us that you send circulars to the employers?—We are gradually trying to advertise the exchange as much as we can. I have been putting in a good deal of work in my spare time addressing trade associations—any society, or guild, or what not, where we have a chance of getting known. But certainly the best method would be to advertise us. Even as far as Lewisham is concerned, if we were advertised on the London County Council tram cars it would be a big step forward; if they would only advertise our exchanges on the sides of their cars in the same way as they advertised their steam boats this summer it would be a big help. I have a scheme which I have just lately introduced. I have boards outside the local libraries on which the caretaker every morning at seven posts up a list of the situations I have vacant. That tends to attract men to the exchange, and also to bring home to those employers who see the boards that we are really doing business.

81513. Does not the fact that you have succeeded in getting a good many situations for the men advertise the exchange?—It does up to a certain point. The difficulty has been this, that we could not get enough situations at the commencement. Going back to my returns this time last year, I find I was then having about seven or eight situations in the week, which was not enough to keep the decent class of men around us. Then when we gradually became known, the employers came to us, and the difficulty arose that we could not get men. If we had been able to fill up at first every situation that we got offered, as we would have done if we had got a fair support, and if we had had a number of canvassers to go round and give the thing a start, we should have been all right. You know the business method; immediately the gas company or the electric light company or the National Telephone Company open a new exchange, or anything of the sort, they put canvassers on. We have nothing of that sort, although the labour exchange is purely a commercial undertaking and nothing else.

81514. Has there been any alteration in the character of the applicants?—I do not mean morally, but I mean in their status and general position—of these men since you first started?—Decidedly so.

81515. Are they better or worse?—They are much better. The indifferent class simply go to the distress committee; in fact, we advise them to go there—we tell them frankly we can do nothing for them and they must go to the distress committee.

81516. And they do not renew their application to be put on the register?—No. We simply try to keep the best of them around us, and to transfer all the indifferent ones to the distress committee.

81517. What about the women; have you any women upon your register?—Yes, we register women.

81518. You yourself would have to deal with them, as you have no female officer?—That is so.

Mr. Edward James Fair.

29 Oct., 1907.

Difficulties in way of the metropolitan exchanges.

Need of advertising the exchanges.

Better class of applicants to exchanges.

Need of separate department for women at exchanges.

Mr. Edward James Fair. 81519. One of your recommendations is that there should be some arrangement of that kind?—Certainly so. It is very unpleasant at the present moment if you have to fetch a respectable girl down to the exchange at nine o'clock in the morning, which it is sometimes necessary to do in order to bring her to the employer, and there are a dozen or twenty navvies—I am not referring to the navvies unkindly—rough types of men, there. That is objectionable to a decent girl.

81520. Have you more than one room in which you see them?—We have only the one room.

81521. So that you cannot see the women in a separate room?—No, we cannot see them separately.

Desirability of dissociating labour exchange from Distress Committee. Proper authority to govern labour exchanges.

81522. You say, I think, somewhere in your Statement, that you would recommend that the labour exchange should be dissociated from the distress committee?—Yes, entirely so.

81523. Would you mind explaining a little more fully why you think that desirable?—My own idea is that labour exchanges should be placed under a Government department, preferably the Board of Trade, working conjointly with the county councils. I think we should work a lot better with the county councils than we would with the borough councils—a great deal better. It would be an advantage if you could work out a scheme by which the Board of Trade got a centralised control, so that they could keep all the exchanges up to a certain standard. Supposing one county council was sympathetic and another one was apathetic, then, unless you have got some centralised authority controlling the lot, you would get one exchange properly managed, and another mismanaged. So you do want some central authority, and, at the same time, you want to work with the county councils in order to get the local interest.

81524. In London, the County Council have rather a large area to look after, have they not?—Quite right.

81525. Therefore, would you say in London it would be desirable to bring in the County Council?—Yes, rather—decidedly, I should say.

81526. It would mean a system of Government management, would it not?—Quite right. My own idea is that the Government should be responsible for the staff, and the staff responsible to the Government, while the local management of the exchange, the cost of offices and fittings, and all that sort of thing, should be found by the County Council.

Importance of linked-up system of exchanges over whole country.

81527. Do you attach importance to linking up all these institutions all over the country?—Yes, decidedly.

81528. Do you think at the present time there is a want of knowledge that there is labour at one place and that there is room for the employment of that labour at another?—There is undoubtedly.

81529. That has come under your own knowledge?—Yes.

81530. Is there a difficulty in this way: Supposing it was known that there was work to be had in a particular place, are the circumstances of the place known; for instance, whether there is housing accommodation there?—Of course, we do not know that at present, but with exchanges working all over the country you would know the exact local conditions. At the present moment, for instance, I have sent some men to the Grimsby dock extension, but then I do not know what the local conditions are there. If we had an exchange at Grimsby, one would know exactly.

81531. I suppose the small numbers you have had to deal with in any particular place, have not made that question of housing important?—No.

81532. You say that London should, for these purposes, be treated as a larger unit than the present county of London?—Decidedly so.

81533. That is, I suppose, in order to bring in the working-class areas outside London, such as Edmonton, West Ham, and similar places; is that what you have in mind?—Yes, and right away into the heart of the adjacent counties all round London, because the building trade is extending and there is not much building in the heart of London. Take my own case; if I go down to Orpington and the other side of Bromley, the building trade is busy at the present moment, but it is frightfully slack in Lewisham and there is practically nothing doing

there at all. But, as I say, when I get out towards Orpington and Bromley, the building trade is working there, and if we were working Bromley we should have a chance of placing our men.

81534. Supposing you had a national system of exchanges all over the country, it would not much matter then what the local area was, would it?—No; that would be a matter of indifference.

81535. Except that the area should be of a convenient size?—Certainly.

81536. Can you give us at all what your exchange Cost of does actually cost at the present moment?—No; but Lewisham I should think as near as I can get at it that it would exchange. be about £350 a year.

81537. The second part of the statement which you have handed in deals with distress due to unemployment, and those Paragraphs 41 to 50, I understand represent your own personal views?—Yes, those are my own personal views.

81538. With regard to those, you are not purporting to represent your association?—No.

81539. I see you have some views with regard to the special work provided by municipalities?—Yes, I have, decidedly.

81540. What do you say about that?—I think that Municipal relief work. in the case of a municipality or of a borough council creating any special work it should only apply to the building and labouring trades; and it can only, to my mind, help those trades. I think that if we imitate somewhat the lines which I believe some of the German towns have adopted, that is to say, reserve all the new street work and improvements for the winter time and do it then—I believe that as a rule they do it by contract—that would help to relieve the distress when it is acutest in the building trade. To send an unemployed printer or engineer or boilermaker to build a new street is simply foolishness.

81541. Have you had personal experience with regard to that?—Yes, I have.

81542. Would you mind telling us what it was?—I was making a new street for the Lewisham Borough Council before I took up the labour bureau work. I had men sent from the stone-yard, and any amount of them were simply useless for that work; they might be quite willing to do it if they could, but they could not do it.

81543. Did you find that they were fairly willing to work as far as they were able to do so?—Some of them were, certainly.

81544. But you thought the work unsatisfactory, because they were incapable of doing that which you set them to do?—Yes, quite right.

81545. And consequently, I suppose, it was expensive?—Very expensive indeed.

81546. Then with regard to farm colonies, have you Faults of had any experience in respect to them?—Only as clerk present to the Lewisham Distress Committee. Of course I have system of had to send men to Hollesley Bay and to Fambridge. Hollesley Bay is the only farm colony really. It always struck me that to send a man to a colony merely for sixteen weeks was a waste of money. It might pull him round, it might restore his health, or anything of that sort; but merely as finding him a job there was nothing in it. It would be much cheaper to find him a local job. If he was a man that you could train for agricultural life or that you could train for emigration, or what not, then to send him to a colony for a fair period would be another matter altogether.

81547. That is to say, if you were to look upon a farm colony as a place of training, you would want a longer stay than sixteen weeks?—Certainly.

81548. At the same time, it did, did it not, find occupation for a man during the time of temporary distress?—Yes, merely as finding him a job, certainly; but I know there was a lot of objection from the social point of view to men being away from home for a month at a stretch—there was a great objection to that.

81549. Did that work badly within your knowledge?—Yes, it did. There were lots of complaints about it as far as Lewisham was concerned.

81550. I see you think that afforestation, and such like work, would be the best thing on which to put the unemployed?—I do.

81551. But would there not be this difficulty, that afforestation can only be done at certain times of the year?—You can, of course, do it in the height of summer, but it would not be very profitable to do so. As a rule, you can do it for about eight months in the year, if you include preparing the ground. Planting the trees is, of course, another matter.

81552. You could not do it in a very severe winter, when the ground was covered with snow?—You could not do it then, certainly not.

81553. That is the sort of time, is it not, when the unemployed chiefly want employment?—Yes; but then, I think, if you organise your local work, that would deal with the class who are affected and who are, to use a well-known term, frozen out. Is the building trade chiefly that is affected by the frost and snow, and all that sort of thing.

81554. (*Mr. Lansbury.*) You agree, I suppose, that labour exchanges do not really create work?—No, they will not create work, but I think they will tend to extend it, to a certain degree. I believe all improved organisation does that.

81555. To make more work?—Not exactly to make more work, but by reducing the period which elapses before a man gets employment now, I think it will tend to improve matters. I look upon it in this way: take a screw-cutting machine, and say you get one that produces so many screws per hour, and then you get an improved machine which produces a great many more, I do not think that creates work. So I am not going to say an employment exchange is going actually to create work, but I think an improved organisation will tend to find it.

81556. We are in a very bad period just now; there is nothing to prevent you, or to prevent labour exchanges in London, finding employment for all the men, if there were jobs for them in the country, say?—There is not in London, of course.

81557. I am putting it in the country. You could write to Manchester, Liverpool, Leeds, Bradford, all these various cities, for there is nothing to prevent you communicating with the town clerk?—You could not do it like that; you could not possibly do it.

81558. You are aware, are you not, that the Local Government Board did communicate with all the local authorities a few years back?—Yes.

81559. Three years ago, I think it was?—Yes.

81560. Did you see the return that came up of the places where men were wanted?—No, I did not.

81561. I think you might get that; it might help you in making up your mind as to what a labour exchange will do in the way of finding work. The assumption, I take it, is that there are jobs somewhere, but men and women do not know where they are?—They ultimately find them, but an exchange properly worked will find them quicker?

81562. It may be my density, but I cannot understand how that in any way adds to the volume of labour for a period; I do not quite see it. Take the Orpington building trade; I understand that at Orpington just now the building trade, you say, is busy?—It is fairly so.

81563. If you were at Bromley, you could supply the men?—Yes.

81564. Are there any men in Bromley to supply the needs there, or are the builders at Orpington not able to get their men?—They ultimately get them, but they have a difficulty.

81565. Are they able to get them to-day?—I do not mean ultimately, I mean now?—There is a difficulty in getting them.

81566. If you would not mind letting me have the addresses of them, I should be obliged, because we have got plenty of men we could send. You ought to be able to fill them up quite easily?—I have not the time to get in touch with the builders.

81567. You have just told us that you put notices outside your libraries; you could say: "At Orpington so many builders want men"?—It would not work at all, because then every man unemployed in Lewisham would go down; and that would defeat the objects of the exchange.

81568. They would go down there certainly and get the work?—They would get a lot of applicants for the work who would not be of the type they want.

81569. The point is, are they really wanting men? I am interested in this, because I can send them some?—I cannot say definitely. I have got in touch with these men to a certain extent, and there certainly does seem to be a demand for men there which there is not in Lewisham at the present time.

81570. That does not mean that the demand is not being met—that is my only point?—Certainly not; and I do not wish to say that at the moment, but I do say that an exchange working in Bromley would fill those situations quicker than they are filled now.

81571. And probably increase the amount of building that is going to be done there?—No, I do not think so.

81572. Then the volume of work would not be increased?—If you put it like that, no.

81573. Then about saving work up for the winter-time; do you mean the making of a new road, or the re-making of a road, and that kind of thing?—Certainly.

81574. You think that ought to be saved up for the winter?—Yes, I think so, and I have always thought so.

81575. Of course, there is the point Sir Samuel Provis put to you, that in the wintertime the roads freeze; that is certainly the worse time to do this work, is it not?—Certainly it is, and the most expensive.

81576. Then the argument about afforestation being unsuitable in winter really holds good in reference to your reserve work too?—Of course, if frost and snow come in, it stops all outside employment.

81577. That is the point I am trying to make, that when you get to that point, there is hardly any outside work that can be done at all?—Probably none at all.

81578. Then as to the separation of a man from his wife and children at the labour colony; did you hear any complaints in Lewisham, and if so, what was the nature of the complaints?—It is difficult, in a mixed audience like this, to say exactly, but there were a good deal of complaints from a social point of view.

81579. Lewisham must have been rather peculiar. Could you let us know the number of cases in which the women went wrong—that is what you mean, I suppose—because of the absence of the husbands?—I do not think I could definitely state a case, but there was a good deal of suspicion abroad, and I think that is almost as bad.

81580. Is it not rather unfair to put it in the way you have—that there were a good many complaints?—There were complaints, you know, and there was a lot of suspicion.

81581. I want to know in how many cases that suspicion fixed itself; because it is a serious thing?—There were two cases at least in which I do not think there could be much doubt.

81582. But it was never finally proved?—No. In one case the husband objected to proving it.

81583. Objected to what?—He did not want to prove it. He made the complaint at first, and then he let the matter slide; he did not like to prove it. That was a case in which he accused one of the inquiry officers of misconduct, and I am afraid from the inquiries we made, there was little doubt but that it was true.

81584. There are two cases that you have in your mind, are there?—Yes. I do not want you to misunderstand me. I am not saying that it is bad, but there was a complaint, and I think it would be far better, if you could, to send the wife and children as well to the colony, and to give the man a long period of training rather than just this sixteen weeks. That is all that I want to bring out. I do not know that there was anything radically wrong in it, but there are objections from the social point of view, and also, I think, it is wrong in every way to separate a man from his wife if you can possibly avoid it.

Mr. Edward James Fair.
29 Oct., 1907.

How far labour exchanges can remedy unemployment.

Question of postponing road-work etc., till winter months.

Labour colonies: suggested objection from social point of view of separating husband and wife.

Mr. Edward 81585. You are a man who has had considerable
James Fair. experience?—Yes.

29 Oct., 1907. 81586. Are you not aware that many carpenters, many
engineers, and many labourers go away from their wives
and children to work in other parts of the country, or in
other parts of the Metropolitan area, right away from
them, so that they are not able to get home every night?
It is not anything very unusual to leave your wife and
children to go to work, is it?—No, but I think, as a rule,
they come home for the week ends.

81587. They come home possibly every week, but not
always that?—Not in all cases.

81588. So it was not so new a thing?—I was not
bringing it forward as that at all. But there is an objec-
tion to it.

81589. I know there is an objection to it, but I am
wanting to put it to you that very often men have to do
this objectionable thing even under ordinary circum-
stances; that is all?—Yes, that is so.

Costliness of
labour
colony
relief.

81590. Then, as to its being more costly than local
relief works, the local relief works are tolerably costly, too,
are they not?—Yes.

81591. Any work that we have to provide in this sort
of way is bound to be costly?—It should not be so costly
if it is properly organised, I think.

81592. That is to say, if you eliminate the men who are
physically unfitted for the jobs?—Certainly.

81593. Have you any proposal to make in regard to
this?—No, I have none.

81594. There is a very large number of them, is there
not?—Yes, there is. I should say that the only solution
I can see is to take those men and their families to a
colony, and by careful training and good food to try to
bring them back to a state of efficiency if you can.

Rules for
exchange
superinten-
dents.

81595. (Professor Smart.) You have issued rules to the
superintendents?—Yes.

81596. And you are going to put those in?—Yes, I will.
(See Appendix to Messrs. Jackson & Pringle's Report,
p. 383).

81597. Have you observed they have any cramping
effect on the efforts of some of your superintendents?—
I do not think so. If a rule seemed to clash with the
work of my exchange I used to ignore it; it never seemed
to trouble me very much.

Advantage of
labour
exchanges to
employers.

81598. You say that employers promptly found that
they could not obtain men so quickly by any other means?
—Quite so.

81599. I suppose that applies to the small employers,
not to the large ones?—It applies to the large ones too.
Elliott Brothers, the engineers, wanted a charge hand for
a capstan lathe a short time ago. They told me there
were plenty of them in Derby, but they did not believe
there was one in London to be found. I found them one
the next morning.

81600. Then you have some large employers on your
books?—Yes. That man started at £2 17s. 6d. a week.

81601. Do you consider the advantages of an exchange
to business men are so great that employers only require
to be aware of them?—Yes.

Need of
regular staff
of canvassers.

81602. Have you any canvassers just now?—Only
myself and one assistant, who gets out as much as he can.

81603. You make a plea for a regular staff of can-
vassers?—Yes.

Desirability
of making
exchange a
house of call
and branch
meeting
place for
trade unions.

81604. What do you mean by the unions using the
exchange as a house of call?—At present the members of
some of the unions sign their vacant books at our ex-
change, though as a rule they keep them at public-houses.
We want them to keep them in our exchange, so that we
shall have a constant stream of these men coming through
the exchange, and as we get orders over the telephone, or
by post, we can place these men.

81605. Do you go the length of proposing to trade
unions to hold their branch meetings on your premises?—
Yes, I would give them an opportunity of doing that.
They could pay a small rent. I think most of them in
Lewisham would prefer to do so.

81606. Then you do not think there is any danger of
being too exclusively regarded as a trade union organisa-
tion?—No, I do not.

81607. You see no danger there at all?—No, I do not.

81608. Do you recommend that a railway company Cheap
should be bound by law to carry workers at reduced rates? railway fares
—Yes, I do. for workers.

81609. What is the constitution of the local advisory Constitution
committee just now?—I have about eight employers and of local
five representative employees. advisory
committee.

81610. Representative people?—Yes, that is, members
of trade unions.

81611. Who elects them?—They are nominated by
their society, and then elected by the central body.

81612. That is, nominated by their trade union society?
—Yes.

81613. Who elects the employers?—Partly the central
body, and partly the borough council.

81614. Are they working well?—Yes, very well indeed.

81615. Are there any women among them?—No, there
are no women there.

81616. You think they might be admirable bodies for
higher purposes?—I do.

81617. Boards of arbitration, for instance?—Yes.

81618. You find there are many small quarrels which
might very well be appealed to boards, but the boards are
not always to be found?—That is what I say.

81619. Since you wrote this Statement, you seem to Trade union
have had some signs of trade unions coming round to attitude to
labour exchanges; is that your experience?—Yes, labour
My friend, Mr. Hunt, and myself are addressing one of exchanges,
the ship-workers protection associations to-night at
Bermondsey. We are gradually getting into them. It
is only a question of meeting them on their own ground,
and debating the question with them.

81620. You think that is a thing we need not be afraid
of?—I do not think you need at all. I do not see any
objection to it. We do not create under-priced labour.
There is a lot of nonsense being talked about exchanges
being blacklegs, and about blacklegging exchanges.
There is nothing in it. Sweated conditions of employ-
ment are more likely to come from employers advertising
or taking men on at their works, than they are through
a public exchange. My experience is that the very cheap
employer of labour does not care about coming to us,
because he does not want us to know what price he is
employing all his hands at. I had a case only the other
day of an employer at Lewisham, who poses as a Christian
Individualist. He telephoned to one of our London
exchanges for men, and of course, the order was passed
on to me. I went down to see him, and he did not want
them. I knew the reason why.

81621. Is there not perhaps something in the objection
on the part of the trade unions that employment ex-
changes confer a benefit on unorganised labour which
hitherto has been confined to organised labour?—But
then the exchange is being supported from the public
funds, and if you benefit the unionist you must also
benefit the non-unionist.

81622. Have not the unions all along hoped to spread
their organisation over the unskilled labour?—Yes.

81623. Now you are helping unskilled labour to do
without the unions?—I do not think so, because the
whole functions of a trade union are not finding employ-
ment for men. As a rule, an employer objects to go to a
trade union for his men.

81624. But do you not think that is a good deal at
the root of this objection?—I think it is to a certain
point. The trouble is with the smaller societies. A
small trade union to a large extent lives out of the non-
society men, that is to say, their principal effort is to
find work for their members, and in doing that they
squeeze out the non-society man. That is the class of
society that the principal difficulty will be with, I believe;
it will not be with a great organisation like the A.S.E.,
or something of that sort, but it will be with the small
unions.

81625. Speaking of the building trade, a builder is Engagement
engaged universally by the hour, is he not?—That is so. of men in
building

81626. And his job never lasts longer than the finishing trades.
of the building?—Quite right.

seasonal
depression
building
ades.

81627. Referring to Paragraph 43, what do you mean by "seasonal depression" in the sentence: "All special work provided by municipalities should only deal with trades in which season a depression exists"?—I am referring there to the building and allied trades.

81628. You mean temporary depression then?—The building and allied trades are always slacker in the winter than they are in the summer.

81629. Then in Paragraph 47 you say that farm colonies are usually more costly than local relief works; that, of course, is true?—Yes.

about
colonies.

81630. But if the local relief works were put on a permanent footing, and had to be kept open all the year round, would they be more expensive than a farm colony?—That is another matter. I do not think they would.

81631. If anything in the nature of the Unemployed Workmen Act is renewed, probably some form of permanent organisation will have to be kept up?—Yes.

81632. Which will either be giving powers to local bodies, or in the form of farm colonies?—Yes.

81633. Would you then say that farm colonies were the most costly?—No. If you are going to have permanent relief works, the farm colony would be the cheapest I think.

81634. Why do you say they are not so beneficial?—As a temporary means, that is all. Personally, I am a firm believer in farm colonies. I believe to give a man a training it is the finest thing you can get; but merely as a temporary measure for finding a man a few weeks work or temporary employment or anything of that sort, I have always felt that local relief works are the best.

value of
afforestation.

81635. Have you any experience of afforestation?—Yes, I have, decidedly.

81636. Have you any experience of market-gardening?—I have had very little experience of market-gardening.

81637. What experience have you had of afforestation?—For one thing I was in the service of the London County Council for some years, in their Parks Department; and I have also worked in the Midlands in one or two places.

81638. What afforesting work had the London County Council?—They are doing tree-planting every year, a tremendous lot of it.

81639. In London?—Yes.

81640. In the parks?—Yes.

81641. Is it not the case that experts in afforestation say that the only kind of labour that is worth anything in afforestation is highly skilled?—I do not think so—not in preparing the ground, at any rate.

81642. Then you would be surprised to hear that the experts as a body say that there is no outlet there for unemployed labour?—I should be very much surprised.

81643. You say in your last paragraph that the training given in afforestation would be valuable to the men seeking employment under ordinary conditions?—Certainly.

81644. How do you make out that the training would be valuable, if you say it is so mechanical and so easy?—For one thing it is building a man up, and it is fitting a man for work, say, on a farm. A man who had been through a course of work of afforestation would be of much more use to a farmer, even if he had no actual experience of farm-work, than he would be if he had not been through a course of afforestation.

81645. As regards health?—And physical fitness generally.

81646. But it would not give him a skilled trade?—No, certainly not.

practice of
Lewisham
exchange as
selection
of men for
tuitions
ferred.

81647. (*Mrs. Bosanquet.*) What do you do with a man who refuses a situation; do you keep him on the books? It depends entirely on what grounds he refuses it.

81648. Do you give preference to the men with families, or to the men who have been long out of work, or do you take them in order of application?—It depends on industrial fitness entirely. We have nothing to do with a man's family; that is his private business. It is simply a man's industrial fitness. If two carpenters apply, and the carpenter who is a single man is the man fitted for the job, he goes.

81649. You would give them no preference according to the order of application?—No; none whatever. *Mr. Edward James Fair.*

81650. You would always judge by their fitness?—29 Oct., 1907.
If we have any doubt we take the characters of them, but as a rule any one who is used to interviewing men can generally tell whether a man is suitable or not.

81651. So that the man is to a certain extent at the mercy of the superintendent?—He has always the opportunity of bringing his case before the advisory committee, if he does not think he has been justly treated.

81652. That is so, is it?—Decidedly.

81653. So that if he thinks he has been hanging on the books too long, he could appeal to the committee?—Decidedly.

81654. And they would decide?—Yes.

81655. (*Mr. Gardiner.*) I did not quite understand the answer to a question that Sir Samuel Provis put to you, namely: Have you any method to suggest whereby trade unions could be brought into closer touch with exchanges?—It is very difficult to make a suggestion, but I think if the central body went on the lines they are going on now, and allowed the local superintendents to gradually organise their trade union branches and get in touch with their local trade union branches, these branches would of themselves come in. That is my experience in Lewisham. The central committee of one trade union in particular advised their members to have nothing to do with us, but the local branch in Lewisham are on the exchange, and are very anxious to hold their branch meetings there, because they realise that the exchange is doing nothing against their interests. It is a thing I do not think you can jump at for a moment. If you get the exchanges to give the trade unionist the same facilities as an ordinary applicant, and the additional one of taking their vacant book for registration but not compelling their men to register, and if you also offer them facilities to hold their branch meetings and that sort of thing in the exchange, I think they will gradually come in.

Method by which trade unions might be brought into closer touch with labour exchanges.

81656. That is, so long as you adopted the standard rate of wages?—No; I do not see how you can adopt a standard rate of wages. Question of adoption of standard rate of wages by labour exchange.

81657. Would you find a man for a job if it was to be paid at, say, $\frac{1}{4}$ d. per hour below the standard rate?—If a man on the books accepts it, certainly.

81658. Would not the trade unionist object to it?—He might object to it, but I do not see how he can help himself.

81659. He would withdraw his vacant book?—Then the only thing would be that when a firm paying trade union rates sent to me, as has happened before in Lewisham, a non-society man would get the job. That was the thing that brought the society men round. I used to canvass the employers, and if they sent to me offering the standard rate of wages, if a society man was not available a non-society man got the job.

Lewisham exchange and trade unions.

81660. That led to a coolness for some months, I suppose?—Yes.

81661. But in spite of that, vacant books are kept in your office?—Yes. I have one branch now that I am working simply by putting non-society men into one firm which previously had got all society men.

81662. Given one job, and two men apply, and as far as you are able to judge they are of equal fitness—the one a society man and the other a non-society man—which would you take?—I should take the society man as being the best man, certainly.

81663. Would you give him the preference, other things being equal?—Decidedly.

81664. (*Sir Samuel Provis.*) You will send us a copy of your rules?—Yes. (*See Appendix to Messrs. Jackson and Pringle's Report, p. 383.*)

81665. Have you a form of register?—It is all on the card-index system.

81666. Would you send up one of those to the Secretary, if you please, if they are in a particular form?—Yes. (*See Papers handed in by Mr. Beveridge, Appendix, No. LXXXVI (E).*)

Capt. Henry
Frederick
Wilkinson.

Captain HENRY FREDERICK WILKINSON, called; and Examined.

29 Oct., 1907.

81667. (Sir Samuel Provis.) You are Secretary of the National Association for the Employment of Reserve and Discharged Soldiers?—Yes.

81668. You have prepared a Statement for us which we may accept as your Evidence-in-chief?—Yes. (*The Witness handed in the following Statement*)

CAUSES.

Causes of
unemploy-
ment.
Alien
immigration.

1. *The Invasion of Aliens.*—These persons no doubt push out our workers, cheapen labour, and spread crime and disease. They are especially harmful to the clerk and servant class. At this bureau, when stating the wages asked for by our ex-soldiers, I am constantly met with the reply, "I can get a German for less than half that money." The consequence is that our best men are driven out of the country (for it is our best men who emigrate), and the less capable are crowded out by the foreigner, and swell the mass of unemployed.

Female
labour.

2. *The incursion of women and girls* taking smaller wages than men, into pursuits not feminine *per se*.

Social and
economic
evils.

3. *The physical and mental inability to work* of a large and, I fear, a growing proportion of the population, caused by:—

(a) Early and improvident marriages.

(b) The union of diseased persons.

(c) Crowded homes, insufficient nourishment and fresh air.

(d) Ignorance of ordinary sanitary laws and hygiene on the part of parents.

(e) Growing extravagance in dress in the attempt of the poorer to imitate the richer classes, involving scanty meals, and consequently an anæmic and weakly condition of the body, resulting in even more sickly families.

Uneducative
boy-labour.

4. *The practical abandonment of the apprenticeship* of boys to trades. As soon as a lad leaves school he is sent to the first job that brings in most money to the parents, regardless of his future prospects. When he grows to manhood he loses his situation and joins the crowd of unskilled and casual labourers. The postal authorities take on lads of fourteen who join with a view to becoming postmen and sorters with a pension in the future, and are obliged to throw hundreds of them out every year at the age of sixteen, without any trade or prospect of work.

High rates
and taxes
and foreign
competition.

5. *High rates and taxes and competition with foreign trade* compel employers to reduce their staff to a minimum, and to employ cheaper boy and female labour instead of male. Whereas in old days good hands would be kept on in idle seasons, now employers discharge extra hands in slack times, and take on the casual worker when busy.

Tradeunions.

6. I think *the trade unions*, although they have done excellent work in stopping sweating and securing a living wage, have somewhat overstepped themselves and destroyed the family feeling between the old employer and employed, and are thus also indirectly responsible for unemployment.

Machinery.

7. *The increase of labour-saving machinery.*

Over educa-
tion of the
poor.

8. There can be little doubt that free and higher education has in a sense added to the difficulty of employment. Numbers of children are educated in schools to take positions beyond the station in which they are born, such as clerks, etc., of which there are not sufficient vacancies. They will not accept, and are not trained for, rougher work.

Lack of
discipline.

9. *The lack of control and discipline* amongst the younger people nowadays increases as they grow older, making them intolerant when in work, and under the slightest provocation or reprimand throwing themselves out.

Government
economies.

10. It is of course obvious that if a Government economises, *such economy is the cause of much distress and a shortage of employment.* The working classes do not seem to realise that the greater proportion of the money spent on the Army and Navy and public works, etc., comes out of the pockets of the richer classes, remains in England, and comes back to them (the working classes) in wages.

11. *Military Aspect.*—Turning to the particular work of this association, what applies to the civilian applies in most cases to the ex-soldier, and he also has to suffer disadvantages of his own.

Unemploy-
ment among
ex-soldiers.

12. It is comparatively easy to find work for the men of the Royal Horse and Royal Field Artillery, Cavalry, Army Service Corps Transport, and Royal Engineers, as they have some kind of a trade to offer to employers. They can drive, groom, etc., and are used to hard work, but the linesman is the most difficult man to place, as his duties while serving are comparatively light and he learns little or nothing but discipline and drill. This seems to point to the cause of unemployment of many ex-soldiers, viz., the want of some instruction during service to fit a man for civilian life.

Difficulty of
finding work
for ex-
soldiers, and
causes
thereof.

13. Another cause of unemployment is the disinclination of many ex-soldiers to live away from home and work in the country, and to endure the hours and wages of civilian life, which are often longer and the wages smaller than in military service.

REMEDIES.

14. It is more difficult to suggest remedies, but I would venture to lay the following before the Commission:—

Remedies for
unemploy-
ment:
restriction of
alien im-
migration.

(a) *A stricter Aliens Act.*—When there is not enough work for our own people it cannot be politic to allow a number of foreigners to enter the labour market and make things worse. The Germans do not act so foolishly. I am convinced that this is at the root of our trouble.

(b) *No doubt it is a good principle that the State shall do nothing for individuals that they can possibly do for themselves.*—State provision weakens the energies of people, who, left to their own exertions, become self-reliant, hardy, and enterprising, but if the State feels it incumbent to take our children and feed and educate them, and provide pensions for the aged, etc., why should it not take the whole duties of a father, and control marriages, and forbid the union of diseased persons, etc., subsidise and encourage apprenticeship?

Objection to
State relief.

(c) *I would also recommend an increase of training ships and military and naval schools.* It is quite extraordinary how lads taken from bad homes and surroundings improve in these environments. Not only would there be a constant supply of recruits for the Navy and Army, but an improvement in the character and physique of many thousands of the young. The number of unemployable and loafers would therefore largely diminish.

Training
ships and
naval and
military
schools.

EMPLOYMENT BUREAUX.

15. In dealing with the unemployed ex-soldiers in this institution it is found necessary to draw a sharp line between the two classes of unemployed, viz., those who ask for charitable aid, the unemployable and the loafer, the man of doubtful or bad character; and the man of tested and good character who wants work. For the past twenty-two years we have only attempted to deal with the latter class, those who have left the Army with "Exemplary," "Very Good," and "Good" character up to date. Latterly—owing to the fact that some 20,000 to 30,000 men leave the service every year and employment is so scarce—we have only been able to deal with those who have been transferred to the Reserve or discharged from the colours recently, or within three months. We have steadfastly set our face against charity in any form, so that any man of good character can apply to us for work without fear of being accused of "cadging." We have during the last few years become even more strict in obtaining references and in only registering the best, with most beneficial results. Not only has the confidence of employers in our association increased, but the men themselves are encouraged to make greater efforts while serving, to obtain recognition by us on leaving the colours. We have further decided latterly, that after we have once placed a man in a situation of a permanent character, to leave him to his own exertions, so as to encourage his self-reliance, and we do not help him again unless he is thrown out of work through no fault of his own. I cannot but think that civilian labour bureaux should be conducted on the same lines.

The Nation
Association
for the
Employment
of Reserve
and
Discharged
Soldiers, its
object and
principles.

the National Association for the Employment of Reserve and Discharged Soldiers, its Object and Principles.

81669. (Sir Samuel Provis.) Will you tell us a little about the nature of your Association?—It is an Association whose efforts are directed towards getting employment for reserve and discharged soldiers, of good character only.

81670. Then there is some investigation of character, I suppose?—Yes, and it is very strict indeed.

81671. You have a register, I presume?—Yes, we have a large register. Every man who leaves the Colours is provided with an Army Form, D. 402, which directs him to register either at my head office or at one of the branches. It is only given to men of good character.

81672. Is the investigation then made by the Association, or is it made before this recommendation?—A man is only recommended to us by the Army officer as a man of good character, and then when he comes to me he undergoes a further investigation.

81673. In what way do you make your investigation?—If a man has a very short service I usually try and get a character before he joined the service. I am not sure whether you know the different Army characters—"Exemplary," "Very good," "Good," "Fair," "Indifferent," and "Bad." If a man has only a "Good" Army character, not "very Good" or "Exemplary," I usually write and ask for the details of his character during his service, just for my private information, so that I may judge whether to put him into an ordinary working place, or into a confidential place of some trust.

81674. When you have got this information you see the man, I suppose, yourself, do you not?—I see every man who comes to my head office in London. I see men every morning.

81675. And you have branch offices?—We have 114 throughout the United Kingdom.

81676. Therefore your organisation extends to the whole country?—Yes, to the whole of the United Kingdom; we have four branches in South Africa and one in Egypt.

81677. Do you endeavour to obtain employment for the soldiers who are discharged and who are on your list?—Yes.

the Association's method of finding employment for ex-soldiers.

81678. In what way do you get the employment? Are you brought into connection with employers in some way?—I do it in several ways. We advertise a good deal, but I have no great faith in advertising. We also answer advertisements, and I call on employers when I think it worth while. But in London I find that in the case of a busy man if you call and he thinks you are going to give him a large order for pepper or salt or whatever it may be, and then finds you are only asking for employment, he is rather annoyed though civil. But when I see a good opportunity I go to them. For instance, at the opening of the Tube Railway I called at the right moment, and I got a large number of men put on.

the nature of employment fund.

81679. What is the nature of the employment generally?—It is very varied, as the men are of such a variety of classes. We have engineers who are skilled men, and we have the ordinary unskilled person. We have clerks, chauffeurs, grooms, valets, and all kinds of people.

the numbers of ex-soldiers applying for employment.

81680. Have you any notion of the numbers who apply?—For the twenty-two years we have been in existence we have found what we call permanent employment for 104,703; and last year we registered at all our branches and at the head office 16,343 and found permanent employment for 8,179 and temporary employment for 2,546.

the distinction between permanent and temporary employment.

81681. How do you distinguish between permanent and temporary employment?—I will just read you our rule which gives the definition; that will be the shortest way of answering your question. "Employment will be classified as permanent or temporary according to the definition of the employer; it will further be defined as 'permanent' when the employment lasts over three months or is of a nature that a man can retain for a period not limited; as 'temporary' when the employment is terminable within three months from its commencement." Of course, we cannot absolutely guarantee that it is permanent, but we do not mark a man as permanently employed unless he has settled down for three months and the employment has every appearance of lasting. Of course the employer may go bankrupt and put him out of work.

81682. The association is a voluntary organisation, I presume?—Yes, perfectly so. We are rather unique in that we do not beg. I think we are the only society that does not beg.

Capt. Henry Frederick Wilkinson.

29 Oct., 1907.

81683. How do you get your funds?—We have a Government grant of £1,000, and nearly all the regiments contribute £2 or £5, as the case may be, from the profits of their canteen funds, and charities. Then a certain number of private individuals who are interested in it, subscribe.

81684. So I take it your expenses are only office expenses?—Office expenses, postage, advertising, and so on. We do not give a man a penny, and never have any money dealings with them at all.

81685. Not even in cases of distress?—No, never. They do not very often come to me in distress, but if they do, I always hand them on to the nearest bureau or charitable organisation that I know of, or to another military society which is given up to charity.

81686. Practically, do you find that you have any difficulty in providing employment?—Yes, I have great difficulty in getting, not simply employment, but especially the employment I want and the men like.

Difficulty in finding work for ex-soldiers.

81687. Would you explain that a little? The men state the exact employment they desire, I presume?—Yes. When they come to register at my place they put down the kind of work they would like, and the kind of work they can do. They do not always like what they can do. Sometimes a man has been in a trade before he has enlisted, and he will not go back to it again. That is rather curious.

81688. Is there any particular class of employment that they desire, and that is more popular than anything else?—Yes. I think they prefer what they call "living-out" work, such as warehouse work, motor-car work, railway work and so on. As a rule they dislike a living-in job, and I do not altogether blame them. When a man is put into a house perhaps as odd man, he is kept at it till ten o'clock at night; so he prefers a job where he can get home to his family at six, and perhaps after that get a little job at something else.

81689. A good deal of the work would not be familiar to them, would it, and they would not easily become familiar with it?—No, some would not.

81690. I have rather gathered from one of your paragraphs that the men in the Cavalry regiments are more easily provided for?—Yes. The Artillery, the Cavalry, the Army Service Corps, and the Royal Engineers are most easily provided for, because they all have more or less of a trade—either horses, or engineering, or driving, and so on. The Army Service Corps especially are very handy men.

81691. Then those men would not have any difficulty in finding situations?—Not much.

81692. What about the less trained men?—It is the Linesman who has done nothing but drill and that kind of thing whom it is most difficult to provide for. He is often a much shorter man, and so it is more difficult to find work for him.

81693. Do the men work pretty well?—Yes, exceedingly well, really. Of course, we only take the best, you see. We are unable to deal with both classes at our place, so we are obliged to limit it to the men who have kept a good character while serving.

81694. You make rather an interesting statement in Paragraph 13 to the effect that there is a disinclination on the part of "many ex-soldiers to live away from home and work in the country, and to endure the hours and wages of civilian life;" is that because the hours are longer than in military service?—Yes, they are, there is no doubt about it; and, of course, the pay in the Army is exceedingly good at present.

Dislike of ex-soldiers to work in the country, and reasons therefor.

81695. What are the hours in the Army?—I could not exactly say, as they vary a good deal. A man of good character in a Line regiment is very often done by the afternoon in ordinary times, though they work much harder now than they used to.

81696. He gets a certain number of hours in the day?—He is done by tea-time as a rule, unless he happens to be on guard, and he has his tea and goes out for the evening till twelve o'clock at night, perhaps.

Capt. Henry
Frederick
Wilkinson.

29 Oct., 1907.

81697. And he misses that?—Very much. Then he misses the comradeship of the army, too. Many of them have been to India, and they come back to their old parents, and they do not like to leave them to go into the country where I might often get them work. Then the wages in the country are so poor, which is another reason why they will not go.

81698. And so they remain in town?—Of course I am only speaking of London, and of the men who come to my office. Even in the branches they generally will not accept these places unless they are real countrymen.

Casual
boy-labour.

81699. In your statement you enumerate the various reasons which you think lead to unemployment, and are causes of unemployment. You mention, amongst other things, the practical abandonment of the apprenticeship of boys to trades; is the absence of apprenticeship or the diminution of apprenticeship within your own experience?—I have been more or less mixed up with this sort of thing for many years. I had a large boys' club and men's club in Marylebone for many years, and I have had five years of this present work since the war. I carried on a cadet corps at Marylebone. I found almost invariably when the boy left school he was popped into a job which brought him the most money for a time, but he learnt no trade, as a rule, because the parent could not afford to put him into work where he would only be paid a small sum. If he were learning a trade, it would be, say, half-a-crown, but in the other case he would get 10s., and so be able to provide boots and clothes and part of his food.

81700. But when his employment as a boy came to an end he would be thrown out of employment altogether?—Yes.

81701. If there is any point you would like to mention in connection with it, or anything that you would like to add, please do so?—Thank you. I should like to say that I am only speaking of men, and that I have no experience of the under-employment of women, and if I may, I should like to apologise for the sketchy nature of my statement.

Trade unions
as cause of
unemploy-
ment.

81702. Then I think you consider that trade unions have had some effect in creating unemployment?—I do not wish to criticise them, but I cannot help thinking from my own experience of about twenty-five years that there has been a great change—and I have noticed it specially—in the feeling between the good old-fashioned employer and his employee. I am thinking of some of the old firms who used to keep their men on through bad times. It is difficult to give the names of firms, and I should not like to, but the impression I have formed is that now they take men on and put them out at once when trade is slack.

81703. One effect of trade unionism has been, has it not, to get the men better wages?—Yes, and it has stopped sweating and all that kind of thing. It has done immense good; I did not mean to say in the least that they have not done good.

81704. It has done a great deal of good for the men in that way?—Yes, but it has a little destroyed the sort of family feeling between the old-fashioned employer one used to know in old days and his employee whom he knew from a boy upwards.

81705. In what way would that bring on unemployment?—In the old days, a man would keep his staff on through bad times and good; now, when he gets slack he pops them out and takes on a casual hand when busy.

81706. It has simply to do with a commercial reason?—Yes, quite. He has not got the same interest in his men.

Machinery
as cause of
unemploy-
ment.

81707. Then you refer to the increase of labour machinery as one of the causes, but that would be a temporary effect, would it not?—I should think it would be permanent.

81708. After a while you would get a number of them employed on the machinery, but not so many as were displaced, would you?—I have no experience really of that, and that is only a thought which I put down.

81709. You also think that the invasion of aliens has had a good deal to do with it; has that come from your experience in London?—Yes, it has. I never allow a soldier to work under the ordinary wage if I can help it, unless he does so of his own accord, and I constantly find people saying to me: "I can get a German servant or I can get a German cook, or I can get a foreigner for half the money; I think your soldiers are very extravagant in their demands."

81710. There are trades which the aliens, the Jews in the East End particularly, work at, but you refer, do you, to cooks and valets and people of that kind?—Yes, that is what I am especially thinking about. It always strikes me that there is only a certain amount of work to be done, and we have too many men in England do it, and I can never see why others should come in and make matters worse.

81711. What is your view with regard to employment bureaux; do you think they are advantageous?—Yes, I do, for this reason, that an employer perhaps advertises for a porter and he gets 500 or 600 men outside his building, and he has to sift all their characters and interview them all, or as many as he has patience to, and then perhaps does not find the right man. But if he telephones down to me, "I want a porter for my shop, he must be a sharp young fellow, of good education, and be able to take in orders and attend to people," I send him up two men of good character, with their character already investigated for him, and he takes one on without a minute's trouble.

81712. Would you have labour bureaux organised under the local authorities; is that your scheme?—I am really not experienced enough to say, but I think that labour bureaux ought to be organised more in the same way as our own in this sense, that there ought to be a line drawn between the really good man, the man with a tested character and ability, and the sadder class who are perhaps more or less unemployable. We find it impossible to mix up the two classes.

81713. Therefore, you would have that investigation into character before the man is put on the register?—I think it is absolutely essential both for the man's sake and for the employer's.

81714. Do you think there is an advantage in having a national system of bureaux by which you may link up all the places?—Judging from my own experience in our association I should say so, because we communicate with each branch, and if one branch has not got a man who is wanted and they tell me, I send from another branch.

81715. So you, to a certain extent, are linked up?—We are.

81716. (Mrs. Bosanquet.) How do you distinguish between pursuits which are feminine and pursuits which are not feminine?—Perhaps it was rather a bold thing to say that. I was thinking only of the unemployed men, and I wanted to state that there are certain things which are always looked upon as a man's employment, but which women undertake now.

81717. Such as?—Take, for instance, a shorthand writer.

81718. Is there anything unfeminine about writing shorthand?—I mean to say that it was always, up to a certain time, a man's employment, and ladies did not try to come into offices.

81719. Then it is only a question of what has been usual. I suggest that shorthand writing is a particularly feminine accomplishment, and very suitable, being a sedentary occupation for women. Then there are other occupations, for instance, such as cooking; that, I suppose, is a feminine occupation?—Yes, partly.

81720. And serving in drapery shops?—Yes, I should say that was much more a feminine occupation.

81721. Teaching children?—Yes. My remark is quite open to criticism, I know, but I was speaking from the man's point of view.

81722. Would it not be as accurate to say that the incursion of men into women's pursuits has caused their unemployment?—If I was giving evidence on your side, I certainly should say so.

Advantage
national
system of
bureaux

Women's
occupations

81723. (*Dr. Downes.*) You guard yourself there by adding the words, "*per se*"?—I do.

81724. Do you find that a knowledge of languages is an advantage to your men in gaining employment?—I hardly know, but I always have a certain number of men who have a knowledge of French and German. I generally have one or two of them available whenever one is wanted.

81725. A soldier sometimes has an exceptional advantage in learning languages, has he not?—Yes; and they know, sometimes, two or three.

81726. While the men are serving with the colours, is the existence of your association made known to them?—Yes. The reports and notices are put up in all the barrack rooms, and each man gets a form when he leaves. It is well known.

81727. Do they apply to you before they quit the colours?—Yes, numbers of the men do.

81728. Do you give them advice?—Yes.

81729. Do you find that the military training is of value, as between the man and his employer?—Yes. He gets into habits of punctuality and cleanliness, and it generally brightens him up, or smartens him. If you have a civilian and a soldier side by side, you can always tell which is which. The employers like him for that reason.

81730. Do you think if a certain amount of military training were possible for the lad of eighteen or nineteen, it would be of advantage to him?—I think it would be an excellent thing.

81731. It would smarten him up?—Yes, it would be excellent for him. They would all be on the same footing then.

81732. Have you any information as to the number of old soldiers who get on to the road—on the tramp?—No, I have none. Talking about old soldiers, the ex-soldier whom I deal with is a man of good character with good references. I do not know how many old soldiers get on to the road, but in nine cases out of ten, if it were investigated, I think it would be found that it was his own fault. They are men who have had their chance and have lost it; I think on inquiry you would often find there was a blot somewhere.

81733. Have you ever found one with a good discharge on the road?—Not on the road, but I find them in distress in London.

81734. Have you any knowledge of the class who find their way into the workhouses?—My men do not get there as a rule. I have once or twice had a man get there, but it is very seldom.

81735. Do any of the battalions institute any kind of training for civil life?—Yes, a number of them are doing that. The marines, for instance, have a motor-car; and, in fact, an Army Order has just been issued to all the commanders to do what they can to encourage the teaching of trades.

81736. Do the marines come under your association?—Yes, but not the sailors.

81737. (*Professor Smart.*) In reference to Paragraph 10, Why is it "obvious that if a Government economises, such economy is the cause of much distress and a shortage of employment."?—Because there is less work; I mean if a battleship be built it means employing a certain number of hands.

81738. Where does the money come from which the Government spends?—I suppose it comes more or less from the richer classes, I mean from those who are taxed.

81739. So when the Government economises, that means that more money is left in the pockets of the people?—In the pockets of which people?

81740. The taxpayers?—Possibly. I put down the thoughts that came into my mind, and I have already apologised for the sketchy nature of the statement.

81741. I think that particular thought requires to be revised, if you will allow me to say so, because it leads to

the conclusion that a spendthrift Government is a friend of the working classes?—I had no idea when I put this thing together that it was going to be taken in such a formal way. If I had known it I should have been more careful.

81742. How do you account for the statement that soldiers are exceedingly stupid, and that this is the objection to engaging soldiers?—I have numbers of employers who come to me who will never take anyone else but a soldier, and who says he is far brighter and quicker than a civilian.

81743. For what kind of employment?—In warehouses and shops, hotels and private houses.

81744. As porters?—As porters and clerks in offices.

81745. But not as men who use their brains?—I have men who are clerks in offices. I sent two this morning to two large firms close by here.

81746. I am afraid you are rather fortunate in your experience?—I always see the men myself, and I generally know the employer, if I can. If I find an employer is a very difficult man to get on with, I send him a quiet and gentle man. I always try and fit the man to the employer, if I can.

81747. Then in Paragraph 4 you make rather a serious charge against the Post Office; of course you are quite assured of your facts there?—Yes, I think so. I do not mean to say that they do it out of malice, but they have to do it.

81748. Is it not the case that every boy who is any good at all has every chance of getting on in the Post Office?—I do not think so. Looking after the telegraph boys is not my work, but I have a great sympathy with all unemployed and with these fellows in particular. They are generally very smart lads. They join at fourteen with the idea of working up and becoming a sorter or a postman and getting a pension eventually, and if they are put out at sixteen that is a most difficult age for them to get other work. I have constantly places at my office that men will not take, where the wages are small and the work is boy's work. I keep a register of these lads in my district, and send round to the postmaster when I have a position really fitted for them, so as to give them a start. I have probably fifty or sixty on the books now.

81749. (*Mr. Lansbury.*) Has not the good old-fashioned employer been got rid of through doing things in a big modern way, through joint stock companies?—I suppose he has industry to a certain extent, but still there are old-fashioned firms such as Messrs. Cook & Son, etc.

81750. Probably they do do old-fashioned things?—Not so much as they used to do; they come to me for casual hands, I know.

81751. But it is true, is it not, that the whole organisation of work has undergone a great change?—Yes.

81752. And that the development of unionism is only one cause of the change that has gone on?—I suppose so. I "black-should like to add one thing. There is always an impression abroad that the soldier trades on his pension and takes work away from union men and other people. That is quite a mistaken idea. I find employers complain that the soldier generally asks for a higher wage than he is justified in doing. Soldiers always look upon their reserve pay, which retains them to fight for their country if they are called upon, as their own money; and also they never take their pensions into account, and I never allow employers to do so by any chance.

81753. (*Sir Samuel Provis.*) They do not, in fact, take a lower rate of wage?—They do not; and their pensions they look upon as their own private money.

81754. Would you have any objection to putting in a copy of your rules?—No. I will send a copy to the Secretary. (*See Appendix No. XCII. p. 606.*)

81755. (*Mr. Chandler.*) May I ask whether it is the fact that the Government themselves recommend in engaging ex-soldiers as messengers that they should be paid less than the ordinary wage paid?—In answer to that question I can only say that the facts are printed in the Blue-books.

Capt. Henry Frederick Wilkinson.
29 Oct., 1907.

Question of the intelligence of soldiers.

Employment of boys by Post Office.

Alleged "black-legging" by ex-soldiers.

ONE HUNDRED AND TWENTY-NINTH DAY.

Monday, 4th November, 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
The Right Hon. Sir HENRY A. ROBINSON, K.C.B.
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.

Mr. J. PATTEN-MACDUGALL, C.B.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
The Rev. H. RUSSELL WAKEFIELD.
Mrs. BERNARD BOSANQUET.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. W. G.
Martley.

4 Nov., 1907.

Mr. WILLIAM GIBSON MARTLEY, called ; and Examined.

Experience of 81756. (*Sir Samuel Provis.*) You are, I think, organising
Witness. secretary of the Charity Organisation Society for Poplar
and West Ham ?—Yes.

81757. And a member of the Poplar and West Ham
Distress Committees ?—Yes.

81758. How long have you been a member of these
committees—from the outset ?—I have been a member
of the Poplar committee from the outset, and of the
West Ham committee from March, 1905, or March, 1906.
I have not been the whole of the time on the West Ham
committee.

81759. Were you connected with those districts prior
to the passing of the Unemployed Workmen Act ?—I
have been working for the Charity Organisation Society
in Poplar since 1891 ; and I have been a resident in
Poplar since 1891.

81760. You have prepared a very full Statement which,
if you will hand in, we will take as your evidence-in-chief,
if you please ?—Yes.

(*The Witness handed in the following Statement.*)

Causes of
unemploy-
ment.

1. The causes of unemployment may be classified
thus :—

- (i) Defects in the individual worker, sometimes
due to himself and at others to his environment.
- (ii) Mistaken action by groups of workers.
- (iii) Defects in the individual employer, sometimes
due to himself and at others to his environment.
- (iv) Mistaken action by groups of employers.
- (v) Natural disturbances.
- (vi) Industrial disturbances.
- (vii) Commercial disturbances.
- (viii) Social disturbances.
- (ix) Social action.
- (x) National action.
- (xi) International action.

2. The following are illustrations :—

- (i) Want of health, want of intelligence, want of
efficiency, want of character, increasing years.
- (ii) Restriction of apprentices, restriction of output,
unwarrantable claims as regards wages, strikes.
- (iii) Want of brains, want of enterprise, want of
organising power, neglect of business.
- (iv) Insistence on feudal rights, refusal to recog-
nise unions, unfair use of black lists ; and, as regards
the public, unfair dealing and adulteration.
- (v) Bad harvests, epidemics, earthquakes, hurri-
canes, floods, fires, the seasons.
- (vi) Changes in production, substitution of
machinery for labour.
- (vii) Closing and opening of markets, trade-routes,
etc.
- (viii) Changes of habit and fashion.
- (ix) Unproductive expenditure, want of thrift.
- (x) Taxation, regulation.
- (xi) Tariffs, wars.

3. It is clear that unemployment means different things Extent and
at different times, and that some kinds of it are much duration of
more closely connected with distress than others :— unemploy-
ment.

(a) Sometimes it means under-employment. A
man has casual work, but has not enough to fill his
time. Or he has seasonal employment and is out of
work between the seasons. Or he has work out of
doors which is much interrupted by the weather.
To men of these types provided work is very tempt-
ing.

(b) For many men employment consists of a suc-
cession of jobs, the gaps between which may be quite
short. They are only out of work between them.

(c) For those who "lose time" it is the time they
lose.

The above all have employment to some extent. Some
of them cannot get more. Others do not want more. A
majority do want more but cannot get it. In the cases
that follow, the trouble is more acute.

(d) Cyclical depressions throw large numbers out
of work in many trades simultaneously.

(e) Men in permanent situations lose them through
no fault of their own, sometimes at an age when it
is difficult to make a fresh start, and at others when
depression of trade makes it impossible for them to
find a new employer in their own line and not easy
to find one in any line.

(f) Trades die out and the men who have followed
them have no resource but to adapt themselves to
new ones. The life of a trade is in many cases grow-
ing shorter and the need of adaptability is becoming
greater. And as a fact adaptability is increasing.

(g) Individuals lose work because of faults of
character.

Some of the above causes are unmoral in their action,
but many of them operate morally. If some men are not
needed, the least efficient, the least reliable, are discharged.
There is a natural rejection of the less fit, a fact which
has no bearing, or very little, on the prevalence of
unemployment, but which makes it difficult to remedy
effectually the evils caused by it. The chronic under-
employment of casual labour is also a crying evil.

4. It may be said that unemployment takes two main
forms, one in which it is transient and another in which
it is more or less permanent ; also that apparent unem-
ployment is not always real, and that when it is real it
is not always sufficient to cause distress ; also that while
unemployment is to some extent due to the workers
themselves (acting individually or in groups) in the main
it arises from causes beyond their control.

5. This fact does not do away with their duty to use
their best exertions to provide for themselves when
thrown out of work, but it does make it the duty of em-
ployers, the public generally, and the State, to co-operate
in dealing with the unemployed problem.

Industrial insurance.

6. The workers already do much to protect themselves by thrift, by co-operation, by membership of trade unions, by insurance, by mutual aid; and the providence and resourcefulness thus shown are yearly increasing.

7. Many who do not now protect themselves in these ways are in a position to do so, and it is desirable that their responsibility should be brought home to them. But they are hardly likely to become more provident till those above them in the social scale become so.

8. Many are not in a position so to protect themselves. When out of work they have to part with their furniture and clothes, and to go short of food. If their distress continues they are obliged to apply to the Poor Law. A time comes to some when the home is broken up, and the family, entering the workhouse, ceases to be a family. Nor are these people all worthless and unsocial. Many make a heroic fight against adverse circumstances.

Reserve of labour: how provided.

9. A reserve of labour is demanded by the existing industrial system, and it is provided at present partly by the workers, partly by the employers (sometimes by expedients socially mischievous), partly by the goodwill of the public expressed in charitable gifts, and partly by the Poor Law.

10. Some workers sacrifice too much, many employers do too little, charitable aid is spasmodic and unequally distributed, the Poor Law is out of date in its way of dealing with the problem.

Heavy sacrifices expected of the working classes.

11. It is not fair to demand of the weakest class in the community efforts and sacrifices which would tax the resolution of the strongest. It is not fair to expect them to lower a standard of living which is already too low because of industrial pressure for which those better off are responsible. As men and women, as citizens, they cannot be so treated.

Duty of community, of employers, etc.

12. As the reserve of labour exists for the benefit of the whole community, this latter has a corresponding duty towards it which is as yet inadequately fulfilled. Employers should do more than they do at present; and social service and the Poor Law require to be re-organised, developed, co-ordinated, and inspired with a new spirit.

Intervention necessary.

13. Theoretically, then, the case for intervention is complete, but in practice the duty of society is far from clear. To what extent should intervention be carried and what should be its aim? Which kind of intervention is best, direct or indirect? Should different groups (*vide* 1 and 3 above) be dealt with in the same way or in different ways?

14. Some aim at a complete re-construction of society, and their schemes always have this in view. Others seek merely to prevent and remedy distress, and have no ulterior object. Again, there is much difference of opinion as to the relative importance of legislation, regulation, and voluntary action. And, lastly, some see a single problem where in reality there are many.

15. The re-construction of society is not here in question, but only the prevention and cure of distress. Methods of intervention are considered only as they bear on this. The fact that there are different problems requiring different treatment is emphasised.

Methods of prevention and cure of distress.

16. Three ways of intervening are possible, viz. :—

- (i) General legislation.
- (ii) Regulation of industry.
- (iii) Special provision for distress due to unemployment.

17. Under (i) come expedients for enlarging opportunity and increasing efficiency, such as reform of the land laws, the establishment of continuation schools, better housing and sanitation. Under (ii) come such suggestions as a minimum wage, an eight hours' day, the abolition of homework and overtime, a national system of labour exchanges, plans for regulating the employment of casual labour or for taxing it. Under (iii) schemes maintained out of rates and taxes, and voluntary schemes.

18. Proposals made under (i) and (ii) are not discussed here, but some intervention under these headings cannot be avoided. What form it ought to take is, of course, another matter. In the past its results have often been mischievous, and if legislation and regulation are insufficiently considered they may be so again.

19. Under (iii) several types of schemes are possible, viz. :— *Mr. W. G. Martley.*

(a) Some are more or less satisfied with the existing methods of meeting the difficulty (*vide* 9 above). They wish, however, to see them further developed and made effective. They believe in "industrial re-organisation, social education, and discipline." They would seek for fairer conditions of employment, they would develop self-help and mutual aid, they would adapt the Poor Law to modern conditions. Public employment would be utilised only in times of crisis, and the money paid would be considered relief, not wages. The conditions would be those adopted generally in connection with schemes for the temporary employment of unemployed Londoners in the country. Country workhouses would be set up for the able-bodied men who are now kept in town ones. Individual responsibility would be maximised and social responsibility minimised. *4 Nov., 1907.*

(b) Others would have the State concede the right to work and would have it organise a system of public works apart from the Poor Law. It is suggested that a Government department should be formed and that it should undertake road and harbour making, land reclaiming, sea-walling, afforestation, etc. The work would be carried on on ordinary trade lines, and trade wages would be paid. It is not proposed that there should be any safeguards or limitations.

(c) Others, while equally in favour of the provision of public work, would organise it locally and limit it by conditions, *e.g.* :—

- (i) No man should work for less than a certain period.
- (ii) He should work away from home.
- (iii) He should earn less than ordinary wages.
- (iv) His earnings should be paid not to him but to his wife.

(See also 23 below.)

(d) Others, accepting this last plan, would combine with it :—

- (i) A system of labour exchanges.
- (ii) A system of insurance.
- (iii) A system of friendly visiting.

20. The following criticisms are offered on the foregoing plans :—

On (a) : The three forces here relied on are indubitably real, and there seems no reason to doubt that they will gradually become more effective. Some words may be said on each :—

(i) *Industrial Re-organisation.*—Three types of business are found to-day side by side, representing the past, the present and the future. They may be described as :—

(a) The paternal type, treating those employed more or less as children.

(b) The cash nexus type, in which the workers are regarded as responsible for their own welfare, but are not considered as having any share in the trade.

(c) The partnership type, in which employers and employed meet on more or less equal terms, and in which the trade is allowed to belong equally to both.

No doubt this evolution may be quickened by a changed temper on the part of employers, the extension of trade unionism, the introduction of profit-sharing, and other schemes. The devising and popularising of such methods are effective means of preventing and diminishing distress.

(ii) *Social education.* That every citizen should be trained to use his gifts and opportunities to the greatest advantage is extremely important, and much can be effected in this direction by individual and associated effort. Such effort is doubly blessed, for it increases the civic efficiency both of those who exert it and of those for whose benefit it is exerted. Here, again, civic efficiency includes the power of self-protection. *Importance of social education.*

(iii) *Discipline.* This has a positive and a negative side. It implies training for those who have never had it, or who, having had it, have lapsed into bad habits. It implies also discouragement of irresponsibility. It deals differently with those whose oppor- *Importance of discipline.*

Importance
of discipline.

tunities have been different. It has a special concern for the groups which are weakest and least capable of self-guidance. Some wrongly interpret discipline in terms of repression. The strict school of administrators of the Poor Law are open to criticism here. They forget that they are dealing not with a subject race but with fellow-citizens, and that England is not India. They forget also that while repression alters statistics it leaves facts unaltered. Distress is redistributed rather than removed, and the area over which it is redistributed is too small. Moreover, it is not always redistributed. Apart from this misuse of it, this type of scheme has much in its favour. It involves a minimum of social and economic disturbance. It interferes with industrial freedom as little as possible. It does little to weaken and something to strengthen the initiative of the unemployed. It in no way hinders the adoption of new methods and expedients in industry. If it fails in practice—and in large urban centres it does fail—it is partly because those in need, exhausted by the struggle for life, cannot make the efforts demanded of them, and partly because the community does not yet provide the social energy needed for making it a success. Employers do not take thought enough for their workers, men and women ignore the claims of citizenship, the Poor Law is administered without intelligence or else without sympathy. The seriousness of the problem to be dealt with is usually underrated by those who take this position.

Question of
the "right to
work."

On (b): As only a minority suffer from unemployment, and as only a portion of that minority are in distress because of it, such an extreme measure as the concession of the right to work seems uncalled for. It seems a very impractical suggestion. It is neither possible nor desirable to provide quasi-normal work for all who call themselves unemployed. National work might, however, be provided, as local work is now, after investigation and on strict conditions. But if confined to a few centres it would do little good, and, if organised throughout the country, would involve needless outlay. It seems unnecessary to create problems where none exist, and where they do exist they should be dealt with locally. The problem of London is unique and calls for special treatment.

Advantages and disadvantages of labour colonies.

On (c): The conditions here outlined as desirable require the establishment of temporary or permanent homes from home for those to whom work is offered. Such "colonies," if they may be so called, should be of different types and have different aims (see 24 (e) below). They are best organised for large areas, and, when permanent, should be willing to admit suitable inmates from areas contiguous. London (i.e., Greater London) might have a group of colonies centrally administered. The Birmingham district, Yorkshire, Lancashire, Glasgow, might have similar groups. It may be argued against the provision that wages on such colonies shall be less than normal, that it means increasing a demand for inefficiency which is too large already. But in reply it may be maintained:—

(a) That country wages are everywhere lower than town ones.

(b) That from physical weakness and other causes the men employed in such places for a time hardly earn their food.

(c) That they are being taken out of the labour market for the time being.

The great merits of the scheme are:—

(a) That if well managed it should prevent the workman from deteriorating in physique and morale while he is out of work.

(b) That it should keep his home together and insure a sufficiency of food for his wife and children. Against these merits must be set off the facts that:—

(a) This kind of offer is tempting to many casual labourers, though it is only fair to suppose that many of them accept it for the sake not of themselves but of their wives and children.

(b) The knowledge that such colonies exist may make men in season trades even less provident than they are now.

On the whole, however, the balance of advantage is decidedly in favour of schemes of this type. Probably, too, the social gain will outweigh any financial loss that may be incurred.

On (d): Those who propound this last plan take a deeper view of the problem to be solved. They are not content with remedial measures, but seek to combine with them preventive ones. Knowing also how men differ in individuality, they seek to apply not administrative method only but personal influence as well. Heartily in agreement with those who lay stress on industrial reorganisation, social education, and discipline (in its positive meaning of training) they would interpret these requirements in a more democratic spirit. And in order to make their action more effective they desire to see each distress committee linked with a voluntary committee, which, as it would not be controlled by an Act of Parliament, would be able to render assistance in many ways which to the distress committee would be *ultra vires*. It is desirable that as large a number of citizens as possible should be given civic work to do, and the State would do well to organise volunteer help for this purpose on a large scale. But prevention is better than cure, and those who adopt this view insist on the need of provident work on the part of the State, of groups of citizens, and of individuals. They suggest the creation of a network of labour exchanges in urban centres throughout the whole country at the earliest moment possible. Such a network would render invaluable help to workmen and employers alike, and would provide distress committees with a means of judging how far those applying to them were actually excluded from the ordinary market for labour. They suggest also that schemes of insurance should be devised to meet in some degree the evil of unemployment. The technical and other difficulties in the way are great, as foreign experience shows, but by limiting the amount of benefit in the early years of insurance (when the workman's expectation of unemployment is distinctly less) and by bringing in, if necessary, such third parties as employers, trade unions, municipalities, it should be possible to formulate a scheme which would be of material value (see 27 below). Recognising that different groups of the unemployed require radically different treatment, such persons would seek to utilise very varied methods of assistance. They would have no two colonies (in a single group) exactly alike, and in each colony they would aim at unlike treatment of unlike men so far as might be possible. They would be glad to see new colonies established by voluntary effort, as in them yet greater elasticity of method would be possible and moral and religious influences could be utilised more fully. Again, at each colony efforts would be made to introduce piece-work, and by a bonus system to stimulate industry. The men would not be allowed to work in large gangs, but would be broken up into small groups and some real effort made to provide appropriate tasks and to give training.

Special cases would be dealt with at home by individual methods as at West Ham (see 32 (f) below).

21. The distress which arises out of unemployment places duties on the unemployed themselves, the employing class, citizens generally, and the State. All four must co-operate if it is to be effectually remedied. Hitherto the responsibility of the working class has been overstated, and that of the rest of the community not sufficiently insisted upon. That there is a want of thrift in the better paid sections of the workers is certain, and there is need of enforcing upon them their duty to make provision for the contingencies of life (see 7 above). But it is sometimes overlooked that large sections do make such provision (see 6 above). And it is forgotten that there is a class which cannot do so except at a cost which is ruinous to itself (see 8 and 10 above). The rich at times justify their selfishness by libelling the poor. But it is becoming increasingly difficult to do this now that the workers are in a position to make themselves heard in the matter. Public opinion is becoming better informed and more equitable. Its operation is, however, very slow when it is not accompanied by appropriate action. Intervention is therefore necessary, and the problem is how it can be best adjusted to the needs of the community. It may take different forms (see 16, 17 above) and against all of them more or less plausible arguments may be used. It may be said that they interfere with industrial freedom, or that they operate in restraint of trade, or that they drive capital out of the country, or that they demoralise the class which they are intended to benefit. And no doubt intervention may be carried to such an extent as to produce all these

Necessity and limits of State intervention in industry.

results. But in reply it may be fairly maintained that when it is kept within limits it will not have such disastrous effects; and such drawbacks as it may involve should be less than those now actually caused by unemployment. It is not always remembered what a disintegrating force this is and how constantly it is at work.

22. The exact form which intervention should take under each head is more debateable and no opinion is here expressed on the proposals made in 17 (i) and (ii) above. But increased action does seem to be called for in these directions (*i.e.*, legislation and regulation).

23. Under 17 (iii) the following arrangements seem to be possible:—

- (a) Work provided and controlled by municipalities.
- (b) Schemes of local work organised by distress committees.
- (c) Metropolitan and county day schemes.
- (d) Temporary schemes other than local.
- (e) Permanently organised labour colonies.
- (f) Subsidised co-partnerships and associated small holdings.
- (g) Migration.
- (h) Emigration.

24. Some words may be said as to each of these:—

(a) It seems impossible that poor municipalities can, unassisted, provide at times of crisis for all who are in distress or claim to be so. They can undertake large works only by contracting loans, and when rates are high and rateable value is low they cannot be fairly expected to add to burdens already heavy. If the responsibility of finding work for those in distress is to be laid upon municipalities, it will be necessary to classify them according to the quantity and quality of their population and their rateable value; and in the case of the poorer ones grants from the national exchequer will be necessary. The plan now adopted by so many municipalities of substituting direct employment for contract employment is sometimes spoken of as *pro tanto* a provision against local unemployment, since in most places there is a tacit or open understanding that local men shall have a preference. But the general effect of the policy is to restrict each man to a single municipal market, and a working class borough may in the end lose more than it gains by such an arrangement. Nothing which is here said is intended to prejudge the question of the advisability of transferring to municipal bodies the powers now exercised by boards of guardians.

(b) Schemes of local work from which those employed can return home every evening approximate closely to the conditions obtainable in the ordinary labour market. As a rule trade union wages are paid, and even if a shorter week is worked the job compares favourably with many of those offered normally. By utilising such schemes side by side with those under (d) and (e) below, committees can classify the work-seekers in two grades and keep such local jobs for the better men. In this way something may be done to preserve the self-respect of the best applicants. But this end can only be reached by making the employment offered continuous. The plan of giving doles of work in turn to the whole number of registered men who seem *prima facie* eligible is not to be encouraged, seeing that it tends to make the regular man casual and the casual man more casual still. It is, however, forced upon committees when applications are very numerous, as at West Ham. Up till now much of the employment provided in London has been of this type. The supply of "works of public utility which would not under ordinary circumstances be taken in hand" is necessarily limited, and there are signs that in and around London the limit is being reached. Some of the works which have been utilised seem to be such as would sooner or later have been undertaken. It seems inevitable that such schemes should to some extent reduce the demand for labour in the open market, and in proportion as they *immediately* do so it is impossible to justify them. Again, the wages offered are too attractive to casual labourers (*see* 3 (a) above) and the result sometimes is that men of this type break their connection and fail to

regain it when the work is over. It seems important that a clear line should be drawn between provided work and work that the market offers, and the balance of advantage seems to be on the side of restricting the offer of distress committees to country work under (d) and (e) (*cf.* 16 (c) above) and to migration and emigration. At the same time it is unlikely that these latter methods will ever meet the needs of great urban centres in times of depression. At such times local works may be considered inevitable, and if they in some degree anticipate a later demand for labour it may be said that even this anticipation is useful inasmuch as it helps to reduce violent fluctuations in the demand.

(c) Schemes under this head are less attractive than local ones and less like those offered in the ordinary market. They usually involve a tedious journey twice a day, and at the scene of operations there is a certain amount of exposure and discomfort, especially in cold and wet weather. As a rule, such schemes do not outbid the normal market, and do adequately relieve the distress of the unemployed. But the criticism made on schemes under (b) applies also in part to them.

(d) These schemes involve the establishment of temporary colonies, such as those in recent winters at Osea Island, Farnbridge, and Letchworth. There is much work in reclaiming and developing land which unemployed men can do, and this way of helping when there are large numbers to be helped seems to be a good one. The difficulties of organisation are shown by experience not to be great.

(e) But, besides the groups which are temporarily unemployed, there are others which are either economically superfluous or unemployable. The unemployable are a Poor Law problem and are not considered here. The economically superfluous are men who have lost their proper occupation and who, owing to age or want of adaptability, are unable to satisfy the requirements of a changed market. They are efficient, but there is no longer a demand for their form of efficiency. They are below the average in character, but not much below. Now, if these men cannot be dealt with by migration or emigration, do permanent labour colonies offer any solution of the difficulty? It is sometimes suggested that men of this type should be trained in agricultural pursuits and set up on small holdings, but such schemes cannot possibly succeed. They require a maximum of adaptability and these men possess only a minimum. Moreover, up till now the instruction in agriculture is inadequate at all colonies and farcical in some. Again, there is no real wish for such a life among the bulk of the men for whose benefit it is suggested. Further, a great difficulty is presented by those whose physique or sedentary occupation renders them practically unfit for work on the land. Another difficulty is suggested by the age of many work-seekers. The expectation of unemployment begins to increase after forty and becomes rapid in many trades after fifty. Want of work due to increasing age tends to be chronic, especially if there are other contributory causes. And the problem presented in such cases is practically insoluble either by the offer of employment or by that of industrial training. Whatever else, then, colonies may do, they will not, except in rare instances, turn out men capable of supporting themselves and their families in new and unfamiliar callings. But though colonies cannot effect social miracles, they may still do useful work of a less pretentious kind. They will be always there, in good years as in bad, to meet hard cases and to give a breathing time to the unfortunate. As already explained (*see* 20 (d) above) different colonies will have different aims. Among such aims may be placed the preservation or restoration of physical vigour, the increasing of general efficiency, schooling in good habits, industrial training, preparation for emigration. Up till now most colonies have been most successful in achieving the first of these. They have been to the working man "out of sorts" what Marienbad or Karlsbad are to those at the other end of the social scale. Probably they would be yet more successful in this direction if simple gymnastics were made an element in their

work. Not much has been done so far (very little in fact) to make them schools of industry, and until they are made schools of industry they are not likely to do their inmates much real good. There is, indeed, a grave danger that they may degenerate (some perhaps have already done so) into centres of idleness and demoralisation, or if not that into mere reservoirs of labour for which there is no demand. It would seem desirable that the duration of stay should be from one to three months, and that no person should be kept more than six months except for some special training.

(f) A carefully thought-out scheme for promoting small holdings to be worked on co-operative principles (somewhat on the lines already suggested in connection with Hollesley Bay) ought to be given a fair trial, as until the experiment has been definitely tried, the twin illusions will flourish :—

(i) That the ordinary townsman can learn to support himself and his family on the land.

(ii) That he will be content to live under the conditions which now exist in most rural places. Experiments in industrial co-partnership should also be made possible.

(g) Experience shows that migration from town to country is seldom feasible, and that where it is want of adaptability on the part of those sent often makes it a failure. Country housekeeping offers great difficulties to townspeople. Moreover, the conditions offered are not always fair, and it is difficult to advise intending migrants satisfactorily. Migration from town to town should be facilitated by the establishment of labour exchanges.

(h) Emigration, though in no sense a solution of the problem of unemployment, is a useful safety-valve, and the old prejudice against it seems to be gradually breaking down. In East London the families seeking to emigrate are improving in type, but of course it may be that industrial depression has temporarily affected a higher stratum. The cost of emigration compares favourably with that of prolonged colony training.

25. When schemes have been drawn up (on whatever lines) for the benefit of the unemployed the question will remain, on what principle those to be helped by them are to be selected :—

(i) The socialists ask that work should be provided for all who choose to apply for it.

(ii) Mr. W. H. Long in his scheme of 1904 suggested that applicants should be divided into two classes.

(a) Those who were respectable men temporarily distressed owing to inability to obtain employment.

(b) Those who should be regarded as ordinary applicants for Poor Law relief.

(iii) The Unemployed Workmen Act virtually adopts this definition, but introduces a limiting clause "from exceptional causes." The regulations issued by the Local Government Board distribute those who come within the act into two classes :—

(a) Those who have been regularly employed and have been well conducted and thrifty.

(b) Those who are of good character and for twelve months previously have not received parish relief.

(iv) The Charity Organisation Society has for many years recommended a threefold classification on moral and social grounds, as follows :—

(a) Thrifty and careful men.

(b) Men of different grades of respectability with a decent home.

(c) The idle, loafing class or those brought low by drink or vice.

(v) The Charity Organisation Society classification of the unemployed in West Ham in 1905-6 attempted to introduce an economic element and to distinguish between artisans and labourers, regular and casual workers. It accordingly distributed those applying into four classes :—

(a) Regular artisans.

(b) Casual artisans and regular labourers.

(c) Casual labourers.

(d) Persons ineligible from whatever cause.

(vi) What seems to be really wanted is a classification of the eligible, and two such are here suggested. They may be divided into :—

(1) (a) Those whom the market will absorb again ; (b) those whom it will not absorb.

(2) (a) Those who can adapt themselves or be adapted to a new demand ; (b) those who cannot.

26. On these suggested methods the following remarks may be made :—

(i) Those who take this view regard classification as unnecessary. The offer of work, they say, will act as an automatic test, and, should it fail to do so, shirkers can always be dismissed. Experience, however, shows that provided work does not act as a test in the same way that ordinary work does, and also that it is by no means easy when men have been once taken on to put them off. Committees and foremen are alike unwilling to visit the sins of the breadwinner upon his wife and children. At the present stage, therefore, inquiry and selection cannot be dispensed with, with one possible exception. Employment might be offered to members fully paid-up of trade unions without inquiry. (See, however, 27 below.)

(ii) The principle is here laid down that there should be a division of labour between distress committees and Poor Law guardians. This principle is sound, though not an easy one to apply.

(iii), (iv), (v) These are applications of the principle which reach very much the same result by somewhat different roads. They show who should be helped, but not how they should be helped.

(vi) Here an attempt is made to deal with this second problem, the difficulty of which cannot be appreciated by any except those who have struggled to solve it. Whichever classification is taken mistakes are likely to be made. It is impossible to be certain beforehand which persons the market will absorb and which it will not, which persons are adaptable and which are not. There will be many ambiguous cases. It is, however, essential that the problem should be studied, and it has been very little studied so far. (See 3 and 24 (e) above.)

27. The best workmen (those especially who are trade unionists and friendly society men) are slow to apply for provided work, but unemployment affects them seriously. Schemes of insurance seem to be the best way of meeting their need, but the whole cost of providing these should not be thrown upon them. The State might undertake to pay a premium for every trade unionist, who had been one for five years, so long as he should remain one.

28. It remains to be considered whether the organisation of provided employment should be a local or national matter :—

(a) In support of national organisation reference is made to the departmental work already carried on by the State (e.g., the Post Office), and it is argued that unemployment is really a national concern (see many headings under 1), and that, owing to the massing of the well-to-do in some areas and of the needy in others, the burden cannot equitably be distributed in any other way. It is argued also that schemes of great magnitude are required and that the central government alone has sufficient means for developing them. (See 19 (b) above.) Now, it may come to be desirable to create a new Department of Public Works and to give it discretion to undertake extensive operations. But so great a departure from precedent does not seem to be immediately justifiable, and it is quite possible that it might prove to be a retrograde step.

(b) In support of local organisation it may be argued that local needs should be met as far as possible locally, that the provision of work is only a part of what is required (see 19 and 20 above), that local opinion is best able to decide what needs to be done, and that local supervision is more likely to be efficient and sympathetic than departmental would be. But while administration may well be left in local hands (subject, of course, to central regulation as now) it is not fair to expect the whole cost to be borne by local rates, even when (as in London) there is some equalisation between rich areas and poor. exchequer should be made in special cases. When the scheme proposed met with the approval of the Local Government Board or other central authority, such a grant might amount to two-thirds of the whole cost, and where the approval was withheld to one-third. Increased rating powers might be simultaneously given to local authorities, and they might also be encouraged to co-ordinate and develop the voluntary charitable groups already at work in their areas.

29. The elements of the problem of unemployment are so complex, and the issues so serious, that it is extremely difficult to make definite suggestions. Those here made arise out of a limited experience and may not be of wide application. Again, they are no doubt unconsciously coloured by views of society, of ethics, and of economics, which some will think inadequate and others erroneous.

THE UNEMPLOYED WORKMEN ACT.

30. The Act is valuable as:—

(a) The assertion of a principle, viz., that unemployment is a social evil which requires to be coped with (just as other evils are) by preventive and remedial public measures.

(b) The assertion of another principle, viz., that not individuals are in fault, but a system, and that for this reason workmen are not to be penalised by accepting assistance.

(c) The assertion of a method, viz., that of offering useful work at reasonable pay to those willing to do it instead of task work under degrading conditions.

(d) The assertion of another method, viz., that of offering continuous employment rather than casual employment. (Regulations, Art. V. (d).)

(e) Enabling certain industrial experiments to be tried.

31. It should therefore be continued.

32. The following amendments are suggested:—

(a) The word "workmen" is confined to the title of the Act, the body of which speaks only of "unemployed persons." It seems desirable to restrict its scope to workmen and workwomen, and that these terms should be defined. "Workmen" might be taken to mean hourly, daily, weekly or monthly servants or contract hands whose normal earnings do not exceed £2 10s. a week, and dealers who pay no rates (unless their rent exceeds 10s. a week). "Workwomen" might be taken to be women working for others or self-employed whose normal earnings do not exceed £1 10s. a week.

(b) Persons under twenty-one and over sixty should be excluded from the scope of the Act.

(c) The residential qualification should be amended, so that persons moving out of one scheduled area into another shall not lose their qualification. In the case of recently discharged soldiers and sailors, former residence in the area should be counted a sufficient qualification. At present such men are disqualified for twelve months.

(d) The limitation of the Act to exceptional distress should be removed. Unemployment is not an exceptional phenomenon, but an unavoidable concomitant of the present industrial system. It varies much in amount, but very rarely becomes a negligible quantity.

(e) The statutory bodies created by the Act should not be left to rely on charitable contributions for the means of carrying out their duties. The restrictions on the uses to which money raised by rate may be put, should be removed, larger rating powers should be given, and in addition exchequer grants should be made to necessitous areas. It is suggested that such grants might amount to two-thirds of the total expenditure incurred under schemes approved by the central authority and to one-third under schemes not so approved.

(f) At present, only work can be offered under the Act, and it is illegal to advertise on behalf of individuals, to redeem tools or provide them, or to give necessary boots or clothes to men seeking work in the open market. It is desirable that much greater discretion should be given in these directions.

(g) Power should also be given to distress committees to associate voluntary agencies (e.g., friendly and charitable societies, and registered trade unions and councils) with their work and to delegate special branches of it to such agencies.

(h) Better provision should be made for due assistance being given to distressed women.

(i) There should be power to frame and carry out local schemes of insurance against unemployment.

(j) The provision of labour exchanges should not be left to distress committees. What is wanted is a uniform, national system centrally controlled, and power should be taken to establish such a system.

(k) Scope should also be given for developing experimental schemes for co-operative small holdings and workshops.

33. (a) It does not seem advisable to establish a national department for the direct provision of work for the unemployed. (b) It is desirable that the Central Unemployed Body for London should be maintained. It secures fair play between different parts of the area, equalises the financial burden caused by the Act, and is better qualified than local committees to carry out large undertakings and educate public opinion. (c) Single authorities should not be allowed to establish colonies or other permanent works, but should be grouped for such purposes. The representative committees of management of such colonies should also be strengthened by the co-optation or nomination of experts. At present it is possible for "amateur committees to be engaged in the task of running works they know nothing about."

34. There can be no good administration without careful discrimination between applicants, but such discrimination can only be secured by personal local enquiry of a sympathetic kind. Hard and fast rules are a hindrance to effective working. Much hardship has been caused by the regulation that an applicant must not have received parish relief for twelve months prior to application, and much will be caused this winter by the provision that nobody may be assisted under the Act more than two years running. It is quite certain that many persons in both these categories should not be relegated to the Poor Law.

WOMEN AND THE UNEMPLOYED WORKMEN ACT.

35. A great deal is being said both in administrative circles and elsewhere of the Unemployed Workmen Act; and what it has done and what it has failed to do, have been and are, subjects of much comment. But of women's claim to a share in its benefits little is heard and it may be news to many that they have exactly the same right as men to have their cases dealt with under it. Up till now it has done very little for them in London and nothing at all elsewhere, but when we consider the many difficulties which the distress committees have had to overcome, the preponderance of men upon them, and the absence of any effective demand for relief on the part of out-of-work women, this is not altogether surprising. At West Ham last year, out of over 4,000 applicants fewer than 200 were women, and to-day the numbers registered are everywhere small. Probably the great majority of women are unaware of the Act and its provisions, and it will be some time before they become acquainted with them. It is significant, too, of the selfishness of women that, when the so-called "March of the Mænads" was organised in November, 1905, it was not any claim for themselves that the women pressed upon Mr. Balfour, but a plea for their husbands, brothers, and sons. At a later date the Women's Industrial Council formulated a series of proposals for employing women and submitted them to the Central Unemployed Body, but for the moment nothing came of them. The central body was so busy in organising its machinery and meeting the insistent claims of the male unemployed that it was unable just then to consider the needs of the weaker sex. A sub-committee was set up to examine the suggestions made and then for the moment the matter rested. At the local centres even less was done, Poplar alone going so far as to form a women's sub-committee, though with little hope of effecting anything useful. Then in March, 1906, the good news spread from Temple Chambers that a central workshop for women was in contemplation. But hopes were only raised to be dashed, for in May the central body abandoned their scheme owing to the fewness of the women registered. Per-

Women's
workroom in
Poplar in
1906.

mission was, however, given to the local committees to act for themselves, and availing themselves of this the Poplar committee formulated a scheme of their own, submitted it to the central body, and in July had the satisfaction of seeing a pioneer women's workroom opened at Leys Hall, Barking Road. Miss Cheetham, of the Canning Town Women's Settlement, very kindly undertook the responsibility of directing it and it could hardly have been in better hands. Provision was made for twenty women, of whom the larger number came from Poplar, though other districts were also represented. The work done was sewing, and the hours were from ten to four, with a brief interval for lunch, which was supplied to the workers. The workroom was open five days a week and the women were paid at the rate of 2s. a day. Where there were children, an allowance was made for each child in addition. The articles of clothing made were forwarded to the central body, which utilised them for its emigrants and men at farm colonies. There was no forewoman in the ordinary sense in the workroom, but a lady was paid to give her whole time to the work of supervision, and other ladies, unpaid, helped from time to time. Two sewing machines were used and the lady superintendent did the cutting out. The workroom itself was well-lighted and airy, and it was a pleasure to see the women hard at work and at the same time happy. It was, indeed, a new experience to many of them to be paid 4d. an hour and not to be driven or bullied by a foreman. Several of the women had worked in clothing factories under more or less sweated conditions, one or two were local dressmakers whose customers could no longer pay for having dresses made, others had worked at industries which had reduced hands owing to the long depression, a few found themselves forced into the labour market by widowhood and other special causes. Employment was not given to married women with able-bodied husbands, nor to domestic servants out of place, nor to women for whom situations at service could be found.

Women's
workrooms
under Central
(Unem-
ployed)
Body.

36. The experiment lasted for five weeks and cost something under £20 a week. It was considered so successful by the Central Unemployed Body that in September, 1906, they proceeded to organise three centres for women on somewhat similar lines, one at King's Cross, one at Peckham, and one at Poplar. In these about 120 women are now being tided over a period of unemployment. The length of time during which they stay varies, but the terms offered by the central body are better than most of them can obtain outside, and accordingly they, as a rule, remain for the full sixteen weeks allowed by the Act. Mr. John Burns has sanctioned these workshops as an experiment, but refuses to subsidise similar ones outside London. The West Ham Distress Committee has appealed to him to assist it in organising a centre of the kind under Miss Cheetham's management, but until now he has not seen his way to do so.

Question of
women's
workrooms
in general.

37. At present the relief employment of women is in the experimental stage. The relative advantages of small and large workrooms have to be considered, and the issue of professional or non-professional management. To some of us there seems much to be said for the small workroom managed by a lady where the individuality of each woman is studied and sympathy and hopefulness are in the air. Again, a small output may be better than a large one if it means that women are being taught more thoroughly and more kinds of work. A more difficult question arises in connection with wages. In the open market these are regulated by what a woman needs for herself alone and they hardly ever suffice to maintain a family. At present, besides the wages earned by the women for their work, the central body makes allowances to them for their children, but the policy of doing this seems more than doubtful. Again, while the way into the workroom will in time become easy enough, a way out of it still remains to be found. At its worst such a place is a reservoir of inefficient labour, at its best it is a sort of technical school, but in any case it does not by itself afford a real solution of the problem of unemployment. To lift women permanently on to a plane where they will be above want something more is needed, and it is not clear at present what means are most likely to effect this end. It has been suggested that after a period of training selected women might be helped to set up for themselves in co-partnership, but clearly this would only be possible

for women acquiring skill of a specialised kind. Mere sewers or machinists could never hold their own in a competitive market. But if workrooms are to be made socially useful they must in some way make women better able to maintain themselves. Otherwise their remedial value will be very small. It is thus desirable that the experiment should be tried in as many places and as many ways as possible, and money given to promote efforts of the kind will be well spent.

SOME TENTATIVE SUGGESTIONS.

38. *Boy Labour*.—Boys should be required to attend Boy labour school as half timers from fourteen to eighteen. Three-quarters of their school time should be given to manual instruction. They would thus become half-timers in industry. Boys apprenticed or being definitely trained in a factory might be exempted.

39. Employers should be required to take on a number of boys as learners proportionate to their staff of men. At present the large London builders take no learners at all.

40. Firms employing mainly boys should be required to employ a proportion of men as well.

41. *Casual Labour*.—Labour of this kind (*i.e.*, casual, Methods of inefficient, and poorly paid) should be made scarce and reducing dear. Employers might be made :—casual labour.

(a) To take out a yearly licence, paying according to the amount of labour they might wish to employ.

(b) To pay extra poor rate. In the event of their casual workers becoming chargeable they might be required to provide part of the relief.

42 They should be required to post up monthly, outside their factory gates, the exact number of casual hirings made by them during the month, and also to make a half yearly return to the proper authority.

43. *Home Work*.—This should be regulated in all trades. Home-work.

44. The Home Secretary should have power to hold inquiries in any trade and to prohibit any home industry on cause shown.

45. Home work should be gradually abolished and small industries gradually restricted to premises specially constructed for them.

46. *Women's Employment*.—Respectable widows with young children should be taken out of the labour market altogether. They should receive adequate relief (out-door) and should be in the charge of friendly visitors.

47. Married women with able-bodied husbands should be assisted only through the latter. Married women with afflicted husbands should be treated as widows.

48. Relief work should not be given to domestic servants out of place as there is always a market for them.

49. *Bona fide* wage earners who cannot obtain work in the market and are unsuitable for service should be considered eligible (other things being equal) for employment in sewing schools.

50. The work done should be on Government clothing contracts taken at the market rate. The loss incurred would have to be made good by the distress committee.

81761. (*Sir Samuel Provis*.) I do not propose, unless there is anything you wish to say upon it, to ask you any questions with reference to the earlier part of your Statement; but will pass on to the remarks which you make on the Unemployed Workmen Act. You regard that Act as valuable in certain particulars?—Yes. Value of Unemployed Workmen Act.

81762. You propose, therefore, that it should be continued?—Yes.

81763. You consider that it asserts the principle that unemployment is a social evil which requires to be dealt with by public measures?—Yes.

81764. And that it is not the individuals who are in fault, but the system?—Yes.

81765. Have you considered at all how you would work in that view with the theory upon which the Poor Law is based, the Poor Law being based, as you know, upon the theory of dealing with the individual?—The Poor Law deals with the destitute individual. Proper function of the Poor Law.

81766. How would you consider that your view is consistent with the view on which the Poor Law is based?—I take it that the Poor Law does not ask how destitution has been brought about; but I would go further and ask that question.

Pro-
fession of
the poor
Law

81767. That is to say, you would regard the Poor Law as merely dealing with destitution when it occurred, without regard to the circumstances bringing it about?—I think that has been the view generally taken.

81768. Would you alter that view with regard to Poor Law administration as well as with regard to the Unemployed Workmen Act?—I think that in any legislation it is necessary on both sides to go back to the root of the matter.

81769. If you establish this principle, would you apply that principle to Poor Law administration too?—Yes.

81770. How would you apply it? What would you do with regard to Poor Law administration on that basis?—I did not quite understand that I was to be examined on the whole principle of the Poor Law. I understood that I was to be examined on this part of it dealing with unemployment.

81771. I am asking you about unemployment. I was wondering how, taking your view as expressed in Paragraph 30, you would reconcile it or adapt it to Poor Law administration?—I think I can make it plain. A great deal of the Poor Law is repressive in its methods. I would limit that side of the Poor Law very severely, and make it much less repressive.

Suggested
amendments
of unem-
ployed Work-
men Act.

81772. In Paragraph 32 you suggest certain amendments to the Unemployed Workmen Act. I see you would define "workmen"?—Yes; it is not defined in the Act.

81773. You would define it, you say here, as meaning persons whose earnings do not exceed £2 10s. per week?—I put that in as a suggestion; but I suppose the definition would have to be very carefully considered.

81774. What makes you take that particular amount?—I did not want to put it too low, lest by putting it too low one might exclude a quite definite class of weekly wage earners.

81775. Then you would exclude from the scope of the Act persons under twenty-one and over sixty; why would you do that?—It seemed to me that it was difficult to provide for such persons under unemployment schemes. Persons under twenty-one in a very large measure have relatives to fall back on; and persons over sixty might be dealt with more as a Poor Law problem.

81776. Suppose that you had young men of twenty who were thrown out of employment by no fault of their own; should they not come under a scheme of work for unemployed persons?—I am disposed to exclude them.

81777. Is that not rather against the present principle at all events of the Act, which is to assist people who are out of employment without any fault of their own?—It comes under the definition of "workmen," I suppose.

81778. The Act itself, as it stands at the present time, contemplates that the distress committees will render assistance to people who are out of work without any fault of their own, and who should not be thrown on to the Poor Law; should not that extend to persons who are twenty as well as to persons who are twenty-one?—It is a matter of opinion. I think I should prefer to make the age twenty-one.

81779. And on the ground that the men under twenty-one are more likely to be assisted by their relatives; is that your reason?—That is not the only ground. I think that they come in also under the head of boy labour.

81780. What would you do with boy labour?—I mean that they would be less likely to be out of work. Some of them would be employed *qua* boys.

81781. If they were not out of work, of course it would not be necessary to consider their case; but supposing they were out of work, have you any other reasons for excluding them except that they may be maintained by their families?—No, I think not.

81782. I gather you would not limit the Act to exceptional distress?—That is so.

81783. Would you make it deal with any distress however caused?—If it were due to unemployment. But I would not take away the discretion of the administrators of the Act.

81784. Then you would not leave the statutory bodies to rely on charitable contributions?—No.

429—VIII.

81785. How would you exactly provide for their financial needs?—I should extend the present rating powers; and I also make the suggestion that Exchequer grants should be made to necessitous areas.

81786. That is to say, you would pay out of the rates, would you, the wages of the persons for whom employment was found?—Yes.

81787. Would you then go so far as to consider that it was the duty of the State to provide employment for those who required it?—I think I almost would; but, on the other hand, I should not recognise a correlative right.

81788. If it is the duty of the State to do that, it would almost follow, would it not, that there was a right on the part of the person requiring it? The two things would be correlative, would they not?—Not fully, I think.

81789. How would you distinguish?—I should say, for example, that the State might impose very severe conditions. I think it essential also that the authority should have discretion to refuse to give work.

81790. Conditions to be observed on the part of the applicant?—Yes.

81791. Then by Paragraph 33 I see you would maintain the Central Unemployed Body for London?—Yes.

81792. Would you maintain it in its present organisation, or have you any suggestions to make as to any alteration in its organisation?—I think I should prefer a directly elected body.

81793. Would you state your reason for that?—I think you will get more public interest taken in it, for one thing; and further, if they are to administer large funds, it is desirable that the public should have a direct means of controlling them.

81794. Would you maintain the distress committees as well; or would you give the whole of the business to the central body?—I should maintain the local committees, certainly.

81795. Would you elect them in the same way as at present?—Yes, I think so.

81796. You have added to your Statement some tentative suggestions with regard to labour generally; is there anything in addition that you wish to say on that subject?—No.

81797. You say: "Boys should be required to attend Education of school as half-timers from fourteen to eighteen"; boy labourers, supposing they were required to attend school as half-timers, would their earnings be sufficient to keep them?—No, I do not think so.

81798. Then how would you keep them?—I think some kind of maintenance grant would be required.

81799. To be administered by whom?—I have not thought of it; possibly by the education authority.

81800. Then you say: "Employers should be required to take on a number of boys as learners, proportionate to their staff of men"; do you mean that they should be compelled to do that?—Yes.

81801. By the State?—By law. At present the London boy is practically excluded from the London building trade.

81802. That would be a considerable interference with the employers, would it not?—It would be legitimate interference.

81803. Then you have some suggestions with regard to casual labour with the view of making it both scarce and dear; that is to say, you wish to get rid of it as far as possible?—I wish to discourage it.

81804. You say that employers having casual labour should pay extra poor rates; on what ground do you put that?—On the ground that their casual labour becomes chargeable to the poor rate.

81805. But in so far as they employ casual labour, they relieve the poor rate, do they not?—Yes, in a measure; but in so far as they employ men only casually, they do not relieve the poor rate altogether.

81806. Supposing that their needs are casual, can they employ anything but casual labour?—My view is that trade might be made much more regular if casual labour were discouraged. At present, we, so to speak, put a premium on casual labour.

Mr. W. G.
Martley.
4 Nov., 1907.

Suggested
amendments
of Unem-
ployed Work-
men Act.

Need for
discourage-
ment of
casual labour.

Mr. W. G.
Martley.

4 Nov., 1907.

81807. Would you explain that a little? How would you discourage it?—The exact means of discouraging casual labour would have to be thought out. My suggestions are only tentative ones, and there may be better ones; but I think that is what we should aim at.

81808. You have not thoroughly worked out in your own mind how far that could be practically done?—I think if the first suggestion that I made were put into force it would have some effect probably.

81809. Is there anything further that you would like to say about your other suggestions with reference to home-work and women's employment?—No, I think not.

Desirability of abolishing jurisdiction of guardians over the unemployed, and of maintaining an unemployed committee permanently.

81810. (*Sir Henry Robinson.*) I understand that practically you would abolish the jurisdiction of the guardians altogether so far as the able-bodied poor are concerned?—So far as the unemployed are concerned.

81811. So far as the able-bodied destitute poor are concerned?—"Able-bodied" is ambiguous, is it not? Because many able-bodied men are quite unfit to work. So far as those persons who are fit to work are concerned, I should put them under the Unemployed Workmen Act.

81812. And you would abolish the limitation with regard to exceptional distress?—Yes.

81813. Even in good years you would still maintain an unemployed committee?—Yes; and all the year round—not in winter only, but in summer as well.

81814. What would you gain by that? It would be less expensive; is that your point?—My point is that these unemployed men ought to be helped, and there are unemployed men in summer as well as in winter; therefore, the organisation ought to be going on.

81815. Would it not be rather difficult for an unemployed committee in ordinary years to test the destitution or the need for employment of these persons?—I suggest that the test will be supplied by the labour registers which I hope will be set up. Every man out of work will register at a labour registry, and the labour registry will show what the state of the market is.

Persons who should be assisted under Unemployed Workmen Act.

81816. Would you deal only with persons who are working men? Take the case of the small traders who are in distress?—I suggest a definition, and I think I exclude the small trader practically. I say a dealer whose rent does not exceed 10s. a week. I am not sure that I have not put that too low, because the rents in my district are very low; 10s. means a very high rent in my part of London.

Question of charitable contributions under Unemployed Workmen Act.

81817. Do you think that the charitable contributions to the unemployed committees would be lessened very much if they were subsidised by the State and received grants from the poor rates?—The charitable contributions have come to an end already.

81818. Have they come to an end?—Yes, as regards the Unemployed Workmen Act.

81819. Are there no charitable contributions given in all these towns in which the Act is operative?—I cannot speak for the provinces; I can only speak for London.

81820. And nothing is collected here?—No.

Provision for unemployed domestic servants.

81821. What is the nature of the work which you would give to domestic servants when they are out of place? I see that you make a suggestion with regard to them in one of your paragraphs?—I say in my tentative suggestions that domestic servants should not be given relief work as there is always a market for their services.

81822. How would you provide for a domestic servant who is out of place, then?—I would send her to the nearest registry office.

81823. Supposing work could not be provided for her at once, and supposing she had to wait some time, how would you deal with her case?—I do not think she would have to wait long. There is always a market for domestic servants.

81824. There are a great many domestic servants out of place from time to time, surely?—Yes, but only for short periods, or else from illness. If illness creeps in, the Poor Law would creep in to meet it—or charity.

General increase of adaptability in workmen.

81825. (*Mr. Patten-MacDougall.*) You say in Paragraph 3 (f), "The life of a trade is, in many cases, growing shorter, and the need of adaptability is becoming greater; and, as a fact, adaptability is increasing." Can you am-

plify or illustrate that statement?—I have seen an immense number of men in the past sixteen years, and I have been very much struck with the way in which they do pass from one kind of job to another kind of job—not the most skilled men, but men who, one might suppose, would not be very adaptable. We went through 500 men last winter who were applicants for migration and we found that quite a large percentage of them had been three or four or five different things in their industrial careers.

81826. You think that is a factor which has to be taken into consideration, and that they are now more adaptable?—Yes.

81827. Why is that? Is that because of early training, or is it because they are willing to put themselves to work which they previously have not done?—I suppose education is beginning to tell. You see we have had nearly forty years of national education.

81828. Do you think it is the result of education?—Very largely.

81829. I suppose to the same thing you would attribute what you also state later on—that providence and resourcefulness are yearly increasing?—Yes. I take an optimistic view. I think things are getting better; I do not think things are getting worse.

81830. Do you think that, on the whole, there may not in the future be so much need for the Poor Law as there is now?—I certainly hope so.

81831. Largely due, as you say, to the results of education?—Yes. I should take education in the larger sense there; I mean we are all educating each other every day.

81832. (*Mr. Chandler.*) In regard to your tentative suggestion No. 2, that employers should be required to take on a number of boys as learners proportionate to their staff of men, I assume that suggestion is made in order to reduce what you would call the unskilled or less skilled labouring class?—I think it is a matter of justice really, that employers should conduct their trade in a way which will not injure their fellow-citizens and their fellow-employers. They are not playing the game if they do not take in learners themselves, and if they leave other firms to do all the teaching for them, whilst they profit by it.

Question boy labo

81833. You do not suggest that there is any lack of supply in those trades in which you would like to see the boys engaged, do you?—No; but take the London building trade, for instance; that is recruited from the provinces, whereas I should like to see it recruited more from London.

81834. Is it not the fact that it is in the smaller firms throughout the country where the boys are principally engaged?—Yes, I should imagine so.

81835. It is the introduction of machinery, I assume, is it not, which has caused this lack of boy labour being required?—The introduction of machinery on a large scale no doubt lessens the market for labour for the time being.

81836. (*Mr. Gardiner.*) In paragraph 6, you say providence and resourcefulness are yearly increasing; are you referring there to trade union figures?—Not only to trade union figures, but to friendly society figures too.

81837. In friendly societies do you include slate clubs?—Yes, I think I should here.

81838. We have had some evidence to show that the slate clubs are not increasing; is it your opinion that they are?—I may be wrong, but I was under the impression that they were. They are not strong in East London.

81839. Then your last tentative suggestion is that the work done should be on Government clothing contracts taken at the market rate, the loss incurred being made good by the distress committee. Would you expand that? It seems to me that you are robbing Peter to pay Paul there?—You are referring now to women's employment?

81840. Yes?—The objection very often taken to any kind of relief work is that it brings down the market rate; but it seems to me that in this way it would not bring down the market rate.

Increase of providence shown by trade union friendly society and slate club figures.

Suggestion as to relief work for women.

81841. But you would deprive a certain number of women who now are employed—at a proper wage or not—in the Government clothing factories?—Yes, you certainly would.

81842. You would take work from them and give it to others?—I should face that.

81843. You do not think that is a serious question?—I think it would be if you are going to organise the whole of the labour in the country; but if you are only going to organise the unemployed branch of labour, I think, on the whole, it is perfectly justifiable to do that. Moreover, I am proposing to take widows with young children out of the labour market.

81844. (*Mr. Phelps.*) Your experience is mainly in Poplar, is it?—In Poplar and West Ham.

81845. How long have you known Poplar, let us say?—Since 1891—sixteen years.

81846. And West Ham?—More or less all the time, but much less closely. I have only been closely connected with West Ham for the last two years.

81847. Have you noticed in Poplar a shifting of population in your experience?—A change in the quality of the population?

81848. No, in the *personnel*?—Yes. The population goes eastwards; people come in from Stepney and Bethnal Green, and they go out to West Ham and Stratford.

81849. What is the reason for that migration?—I suppose it is part of the general movement outward from the centre.

81850. How do you account for that?—It is due to the better houses to some extent, I think.

81851. Are people following employment when they go out like that?—No.

81852. Do they come back into Poplar then for their work?—Yes, or they go further west still—to the City. The means of locomotion are much better, you know.

81853. On the whole, do you think that the change is to their advantage?—That the people should move out more into the suburbs? Yes, certainly.

81854. You have seen more than one attempt to deal with the question of unemployment in your experience, I think?—A great many.

81855. Do you think that the whole of those experiments have improved the situation?—I think they have helped to define the situation, but it is still very indefinite.

81856. What do you mean exactly by that now?—I mean that sixteen years ago, people did not much believe in an unemployed problem, or that there was any economic problem; to-day I think everyone admits there is such a problem.

81857. Various temporary expedients have been tried; do you think that they have checked what may be called the natural flow of labour?—Sometimes, and to some small extent I think they have.

81858. But not to any large extent?—That is so.

81859. You would not say that they were at all responsible, to any great extent, for the difficulties of the present day?—No, I do not think so.

81860. You are in favour on the whole of some of these expedients being continued?—Yes.

81861. But you do not, I gather, look to them for a permanent solution of the question?—No.

81862. Where do you consider that the permanent solution lies?—In some industrial reorganisation.

81863. Do you think that it lies with the producer or with the consumer?—It lies with both.

81864. Do you think it lies with one more than with the other?—I am afraid I am hardly qualified to say.

81865. Do you think, I mean, that the conditions of production can be modified much, unless consumption is very much altered?—I think both will be affected undoubtedly. I think that the consumer is responsible in this matter *qua* citizen.

81866. Do you think that the irregularity in the demand for labour, to use a current expression, is due to the vagaries of consumption?—Yes, very largely.

81867. Do you see any way in which that can be remedied?—I think it will be very difficult, but I do think casual labour can be discouraged, and that when it is discouraged, trade will become more regular, and consumption will have to adapt itself.

81868. That is to say, you would rather begin by legislating with regard to labour and affecting the consumer in that way, than begin with the education of the consumer?—I think I should work at both ends.

81869. What machinery, so to say, would you suggest for influencing the consumer?—I think the recognition of the duty of society to the unemployed is a first step.

81870. In the interval between the completion or perfection of the education of the consumer, and the present time, what do you recommend; on what lines would you proceed, I mean?—To deal with the actual unemployed men that I meet with?

81871. Yes?—I have laid down certain lines in my Statement.

81872. Where do you think the least difficulty lies, or which, on the whole, do you think tends least to interfere with the natural course of things?—That is rather a difficult question, is it not?—It is a very wide question.

81873. It is. With regard to the proposal to turn townspeople into small holders in the country, I gather that you have no high opinion of that?—I do not believe it is feasible.

81874. What proportion of the people do you think you have known in West Ham who have been countrymen originally?—The figures have been printed by the West Ham Committee, and it is not quite so large a percentage as one would think. Out of 4,825 applicants last year, 45 were born in west urban districts, 109 in west rural districts, 113 in midland urban districts, 90 in midland rural districts, 52 were foreign, 24 were colonial, 112 were north urban, 42 were north rural, 218 were south urban, 116 were south rural, 365 were east urban, 351 were east rural, 1,156 were born in West Ham, and 1,982 in London. That is to say, 3,000 out of 4,800 were either born in West Ham or in London.

81875. That is to say, the immediate results of the migration from the country are not so very perceptible in your part of the world?—I think we must bear in mind that the countryman who migrates into London generally displaces a London man. He is not the man who comes to the distress committee; it is the man he displaces who comes to the distress committee.

81876. What advantage has he over the man whom he displaces?—He has a better physique very often, and I think it is thought amongst employers that he is a little bit more steady.

81877. Has he the same adaptability?—I have not made a study of that.

81878. What is the average age of the people who come before distress committees?—In this last season under twenty years of age there were 200; under thirty, 1,196; under forty, 1,227; under fifty, 1,064; under sixty, 786; and over sixty, 352, making a total of 4,825.

81879. That does not show that old age is a large factor in causing unemployment, does it?—I should not like to say that.

81880. What do you think it does prove?—I think it proves that the men over sixty are very slow to apply, because they know their chance is so very small, and they also have an alternative, they can go to the Poor Law.

81881. It is very difficult, though, to use figures, if you take that kind of consideration into account, is it not? As the figures stand the bulk of the unemployed are comparatively young people?—Between twenty and fifty years of age there were over 3,000 out of the 4,800.

81882. How do you explain that?—Would you not expect that? In periods of trade depression the normal man is thrown out of employment, and the normal man is in the prime of life—he is the man who is being employed.

81883. That is to say, it is due to temporary causes to a depression, and not to permanent causes?—I should not say that altogether, but I think I have said somewhere in my statement that the life of a trade is growing shorter, and I think one has to add to that that the working life of the workman is growing shorter.

Mr. W. G. Martley.

4 Nov., 1907.

Possibility of solving unemployed problem through the consumer.

Impossibility of making townsmen into agriculturists.

Percentage of countrymen among applicants to West Ham Distress Committee.

Ages of unemployed.

Mr. W. G.
Martley.

4 Nov., 1907.

Ages of
unemployed.

81884. That has been very often stated to us, and that the Employers' Liability Act is working in the same direction. Your figures do not show that the majority of people who apply would have been affected by those causes, though?—No. There is a considerable number who are quite young strong men.

81885. What is the reason of their applying in such numbers?—There are a number of reasons, of course. We have been passing through a deep trade depression and certain trades have changed.

81886. When you say we have been passing through a deep trade depression, are you referring to a local depression or a general depression?—I only know the local circumstances, of course. Certainly in Poplar and West Ham we have been passing through a very deep trade depression.

81887. It will not be true of the country at large, will it?—I cannot speak for the country at large.

81888. Your figures, at any rate, do not point in that direction?—No.

81889. Do you think it is due to trade depression that these young people get thrown out?—That is one reason. Of course there are many reasons.

81890. Would you not expect that any cause operating would throw out the elderly people first?—Yes, I should.

81891. But you think that their absence can be explained by the fact that they do not apply, thinking it is hopeless?—Yes, I am inclined to think so.

81892. Have you had a very great increase, do you know, in the number of applicants to the Poor Law, of that age?—I am afraid I cannot give you the figures, but the increase in Poplar is continuous.

81893. With regard to these young people, do you think it is too late in life to start them in a new calling altogether and in new surroundings?—No.

81894. What would you propose to do with them? I see that you do not approve of trying to plant them out in agriculture?—I do not think that is feasible.

81895. What do you suggest instead of that?—I am sure I do not know. You have got to expand trade somehow, and to absorb them again.

81896. Do you think that labour exchanges afford at all a solution of the question?—I think they are very remedial to the question of casual labour. They help to decentralise labour.

81897. Do you think any large proportion of those applicants could have been moved to different parts of the country, and so found work and settled down there?—I think with a national system of labour exchanges many of them could be in good years.

81898. Do you think there is any particular motive for them staying where they are, in West Ham or Poplar?—No.

81899. It is merely that they cannot go away?—Yes.

81900. You do not think that the action of the distress committees, and so forth, has at all kept them in the place?—No, I would not say that. It may have done so to some small extent.

81901. If you offer to migrate a man to a distant part of the country, do you find reluctance on his part to move?—Not a very great reluctance, but it is very difficult to get openings.

81902. Do you think labour exchanges would meet that difficulty?—I think they ought to help it very much.

81903. That is, if a system of labour exchanges were established and linked up all over the country?—Yes; I attach enormous importance to that.

81904. Over and above that, have you anything on those lines and on that scale which you would recommend?—I have suggested labour exchanges on national lines.

81905. I say over and above that, what would you suggest on that scale?—I propose that the workmen who are not absorbed by these labour exchanges should be helped.

81906. Speaking roughly, what sort of residuum do you think would be left who would be outside the labour exchanges?—That, no man can say at all—I mean, the extent of the unemployed problem cannot be defined until you have the labour exchanges.

81907. Would they be, do you think, as a rule people who were defective in character?—I think the unemployed are always rather below the average of the employed, else they would not be selected for unemployment.

81908. What I mean, rather, is this: Do you think the labour exchanges would carry off the people whom the employers would wish to employ, and that those people only would be left whom no employer would wish to take and for whom the workhouse would be, perhaps, the natural place?—Much would depend upon the state of trade, would it not? If the market were expanding, everybody might be taken; if the market were contracting, very few people might be taken.

81909. You do not agree with the evidence that we have had, then, that wherever you find a deficiency in the demand for labour, somewhere else there must be a surplus in the demand for labour?—Certainly not.

81910. You do not think you could rely on that to keep the whole mass of labour employed at any one time?—No, certainly not.

81911. Do you think that employers are, on the whole, favourable to the existence of a good deal of casual labour?—That, again, is a very large question, is it toward casual labour? Some employers are, others are not.

81912. They have seen enough, so to speak, of the problem to feel that it is to their advantage, and they know it?—I think in certain trades and in certain ways of conducting industry it is to their advantage.

81913. Do you remember the dock strike?—Yes.

81914. Do you think, on the whole, that employers at the docks are satisfied with the result, as shown in the present state of things?—As compared with what was the case before?

81915. As compared with the old state of things?—One hears such different opinions. Some people think that the dock strike was the beginning of all the evil; others, on the other hand, think that it has improved matters very much. Personally, I should say that it has improved matters.

81916. What I rather meant was this: Here you have the employers in the dock at one time depending on a large amount of casual labour, but that has now, more or less I suppose, been abolished?—Less. The dock companies have no doubt abolished it or limited it very narrowly; but the private employers have done very little.

81917. Do you still find the same sort of struggle for employment, then?—The private employers are still going on the bad old system.

81918. You do find that?—Yes.

81919. Can you suggest any remedy for that?—I have suggested that they should be discouraged from carrying on that system.

81920. That they should be practically fined and punished for it?—That such labour should be made scarce and dear.

81921. That I understand, but your proposals go a good deal beyond that. If they are to pay an additional poor rate and so forth, as a penalty for employing casual labour, that is practically to fine them—you are treating it as an offence and fining them proportionately?—Yes, it would be so; but I do not attach very great importance to that precise suggestion. These are very tentative suggestions. I attach importance to the principle. You want to discourage casual labour, and unless you make it expensive in some way, by taxing or licensing or inspection, they will go on employing it.

81922. Do you think that the position and the action of employers is, so to speak, sufficiently immoral to call forth penal action on the part of the State?—I should not call it penal action. I should say discourage it. You do not call the sending of an inspector into a factory penal action.

81923. I quite agree, but I do call the making a man pay a higher poor rate penalising him?—Yes, that would be so, I think.

81924. Do you think public opinion is ready for that?—I think you will have to go step by step. I suggest that every employer should post at his gates the number of casual men he employs.

Labour exchanges as a means of helping young men unemployed.

Labour exchanges and migration of workmen.

Question of residue of labour outside labour exchanges.

Question of residue of labour outside labour exchanges.

Attitude toward casual labour.

Suggested method of discouraging casual system.

81925. That is to say, you would make him a public example?—Yes, quite so.

81926. (*Professor Smart.*) Just to continue Mr. Phelps's questions, you say in Paragraph 9 that a reserve of labour is demanded by the existing industrial system, and then in Paragraph 12 you say the reserve of labour exists for the benefit of the whole community; are not these rather strong statements?—I should have thought not.

81927. Why do you say that the present industrial system depends on this reserve of labour—of unemployed labour, I presume?—Is that not generally admitted?

81928. It is stated very often, but I have never seen any proof of it?—There must be a margin if you are going to work on the principle of free exchange.

81929. The fact of the margin exists, I think, but I never saw any reason for it. Of course it suits employers to have two men running after one master, but I never saw it argued that that was for the advantage of the community?—Perhaps I am wrong.

81930. I do not know; I wish to know what you are thinking of particularly. You are quite clear that there is a margin?—Yes.

81931. Independent of a few trades, such as dock labour?—Yes.

81932. You think there is a margin in every trade?—Yes.

81933. And a margin of unemployed labour—labour that cannot be employed?—Yes, except in times of booming trade, when, of course, every one is employed.

81934. Do you believe that of skilled labour as well as of unskilled labour?—Yes. I think the trade unions say that in the best years they still have 2 or 3 per cent. of their men out. The necessary passing from job to job no doubt accounts for that.

81935. You are arguing on the 2 per cent. of the trade union results?—Yes. But I think I must in fairness say that there is a certain economic waste in passing from one job to another which accounts for part of that 2 per cent.

81936. Do you really think this surplus, this margin, is a healthy thing for the community?—I should like to see it much smaller.

81937. I think somewhere you use the words "the health of the community." What do you mean in Paragraph 9 by the words "sometimes by expedients socially mischievous"; you are there referring to the employers?—I mean the plan by which they distribute a small amount of work over a very large number of employees.

81938. Is it dock labour you are thinking of?—Yes; but it is done in many other trades, too. Many factories are conducted on the principle of a permanent staff of seventy-five, and then a casual staff of seventy-five of whom only twenty-five are employed on any one day.

81939. You do not think it is done in order to spread employment over a wider area?—I think it is done in order that the employer may have workers within call, in case he has a demand for more workers.

81940. What are you alluding to in Paragraph 11 when you say: "It is not fair to expect them to lower a standard of living which is already too low because of industrial pressure for which those better off are responsible"?—The suggestion is sometimes made that they should lower their standard of living, that they should not expect to be helped by the Poor Law or by the State in any form, but that they should reduce their standard of living—their rent, and their food, and their clothing.

81941. And take a lower wage, do you mean?—Yes; and when they have a very inadequate income, live down to that very inadequate income.

81942. I thought you meant that it was not fair to demand saving on their part, the wages being so low; but you did not refer to that?—I do think that, too.

81943. In Paragraph 19, where you speak of four types of schemes, you seem to prefer the (d) type?—Yes.

81944. Including, for instance, such things as labour exchanges, distress committees, a scheme of insurance, and voluntary as well as State colonies?—Yes.

81945. In Paragraph 24 (b) you say that in the local work organised by the distress committees the workmen are employed at trade union wages; is that correct?—As a rule trade union wages are paid.

81946. Is that the case as a rule?—That has been our practice in Poplar. We have worked the men shorter time, but we have paid them at the trade union rate. I do not object to that.

81947. In Paragraph 24 (e) you say you do not think much of the permanent labour colonies, even with the object of setting up men on small holdings, and yet you think the experiment must be tried in order to dispel illusions—at least, so I understand?—Yes.

81948. You think the experiment should be tried, simply for that purpose?—I think, if I may say so, that a great mistake was made in preventing the Hollesley Bay colony being developed on the lines of its promoters. If they had been allowed to develop it, and if they had failed, then the experiment would have failed definitely, but they have been interfered with.

81949. In Paragraph 27 you seem to believe in universal compulsory insurance; at least so I gather?—No, that as to State is not quite so. I propose that the State should subsidise the trade unions—I am referring now to the last sentence; I might expand that perhaps, a little, to explain what I mean.

81950. Please do?—The trade unions make returns showing what percentage of their men are out of work. I would suggest that the State should give them a sum which would be partly determined by their total membership and partly determined by the percentage, at the time, out of work. I would propose that the grant from the State should increase automatically as the percentage of persons unemployed increases. I would propose further that the actual management of the funds so provided should be left entirely in the hands of the trade union, and that they should divide it at their discretion between such members of their union as they thought fit to give it to.

81951. That, of course, would be a very strong recognition of trade unionism by the State?—Yes.

81952. Would it not involve similar privileges to other friendly societies?—No, I think not. This is a matter of unemployment.

81953. But there are some friendly societies which insure against unemployment, are there not?—Accidentally, so to speak; but I do not think I should encourage that, just as I do not encourage trade unions to give provident benefits.

81954. With regard to labour exchanges, have you any criticism to make on the principle of the labour exchange or on the practice of it?—I am in favour of the principle.

81955. Do you see no argument against it?—I have seen an argument against it. I think Mrs. Bosanquet stated in one of her essays that it might discourage a man from doing his best to look for work.

81956. (*Mrs. Bosanquet.*) Could you give me the reference?—"Aspects of the Social Problem"; but it is a long time ago. I have also heard it stated on the trade union side—but this, again, is a long time ago—that some trade unions are against labour exchanges, because they say it shows the bareness of the land to the employer.

81957. (*Professor Smart.*) But you have no criticism of your own to make upon it?—I think the advantage of labour exchanges far outweighs any contingent disadvantage.

81958. Would you agree that the negative value is as great as the positive, namely, to show when a district has no employment?—It would be of the greatest possible importance as defining the state of the market. At present we do not know the state of the market.

81959. Are you pleased with the present labour exchanges in London?—It is too soon to say, is it not?

81960. Would you like them put on a wider basis—a national basis, say?—Certainly. I should like to say one dissociating more thing. Labour exchanges, it seems to me, have nothing whatever to do with the relief of distress, and exchanges they ought not to be under the Local Government Board, but they ought to be under the Board of Trade.

Mr. W. G. Martley.

4 Nov., 1907.

Trade union wages for men assisted by Poplar Distress Committee. Advantage of labour colony experiment.

Suggestion to trade union insurance funds.

Advantage of labour exchanges.

Mr. W. G.
Martley.

4 Nov., 1907.

Question of
townsmen
adopting
country life.

81961. And particularly they should be kept apart from the distress committees?—As much as possible; they should have different premises and different officers.

81962. (Mr. Lansbury.) About the people who are to have work under your proposals, do you know of any men who have really gone into the country and started over again in country life?—No; I know of certain men who have been sent down to the country in the hope that they would start in country life.

81963. You are not aware that the central body have migrated quite a number of men and their families from different parts of London?—No.

81964. I do not mean to Hollesley Bay; I mean that they have definitely migrated them to situations?—No, I am not aware of that.

81965. You do not know then, that two men at least, one from Hackney Wick and one from some other place in London, are now getting their living in the country?—I am very glad to hear it.

81966. You make the statement in your memorandum, but without evidence, I think, that it is an illusion that a London man will go to work under decent conditions in the country?—I am quite prepared to be convinced.

81967. You say that in Paragraph 24 (f); and you also say there that another illusion is that he will be content to live under the conditions which now exist in most rural places. You are aware, of course, that part of the scheme was that it should not be under the conditions that prevail at present?—You mean co-operative holdings, and so on?

81968. Yes?—Of course, that would be different.

81969. Is not the fact which you state, that the men are so very adaptable, rather an argument that they might adapt themselves to the new work and the new conditions, if those conditions were made more tolerable than the ordinary agricultural labourer's conditions are?—I am bound to say that I do not think it will work. Here and there you may get a man who will do it, but he will be a very odd man.

81970. Then with regard to casual labour, is it not the fact that at the docks, both East and West India, and at the Albert and the Victoria, the bulk of the employment is simply casual labour?—Yes, if you take in the private employers.

81971. I am taking in the volume of employment generally at the docks?—Yes, certainly.

81972. Take the dock company itself; is it not true that under their system of A. and B. men, the B. men are very casually employed—even by the dock company itself, under their scheme?—Yes.

81973. And that the attempt, praiseworthy though it is, of the dock company, has not been productive of the results which were hoped for it?—I think it has produced a good deal of result.

81974. Perhaps you can tell me this: Do the dock company know the names of the men they employ, or are they just called on and given a ticket at the end of the day to go and get their money for that day's work without their name being recorded?—That I cannot say; but the registered men, the staff men, surely they must know the names of.

81975. I am not thinking of the staff men, I am thinking of the B. men?—I should think they show their tickets and nothing more—I should imagine so.

81976. I was wondering whether it would be possible to find out how many of the B. men really were regularly employed?—There would be very few.

81977. That is my information. I wondered whether yours was the same?—I think Mr. Charles Booth gives the number in his paper.

81978. I meant now. I was wondering whether that part had got worse at the docks in the last few years?—The staff is dwindling and dwindling all the time.

81979. The regular staff, do you mean?—Yes.

81980. About labour exchanges; do you really think that there were people wanting thousands of men in England during the last three or four years when we were registering all those people in London here?—No, I do not.

81981. So that a linked-up system of labour exchanges would not have helped us very much during that period, would it?—It would have defined the problem, but it would not have solved it.

81982. From that point of view, of course, everybody agrees. What you mean is that we would have known definitely there was not work?—Yes.

81983. There is a trade union register going all the time, is there not?—Yes.

81984. So that certainly the skilled men could have been moved from place to place?—Yes.

81985. There is only one other point I want to put to The you, and that is about the margin of workpeople. In all the trades at the East End there is that margin, is there not, all the time?—Yes.

81986. It was put to you: What is the advantage of the margin? Is there not rather this advantage, that it tends to keep the workman in his place, and the workwoman in her place too?—Do you mean that it keeps them there until they are wanted?

81987. No; it is the other way on, rather. It keeps them in a subordinate kind of position, and those who are employed do not get too impudent, because they know that outside there are people ready to come in and take their employment?—I suppose it has that effect.

81988. I would point out to you that the railway companies in issuing their manifestoes to their men have called attention to the margin of people who are outside the railway, and want to get taken on?—Yes.

81989. They use that as an argument against the recognition of the unions?—Yes, that is so.

81990. That is in the newspapers every day. I want to ask how you think, without a complete reorganisation of industry in England, we are going to get rid of this margin and find regular steady employment for everybody?—That is a very large question, is it not? I think we must go one step at a time.

81991. Your steps are to define the problem, and then those people for whom through your labour exchanges you find there is no room, will have in some way either to be emigrated or migrated, or to be found work by the State; is that your view?—Substantially I think that is it.

81992. (Mr. Russell Wakefield.) In Paragraph 32 (d) you say that: "The limitation of the Act to exceptional distress should be removed. Unemployment is not an exceptional phenomenon, but an unavoidable concomitant of the present industrial system." Might I ask whether that is not a fact which has come out rather through the Unemployed Workmen Act itself, and was not very well realised before its existence?—As regards the public, yes; but surely the economists have been well aware of it?

81993. I meant as regards the public. Therefore the Act was passed, so to speak, rather under a misapprehension, and with idea that a thing was exceptional which is regular?—Possibly.

81994. Then in 32 (a) you say: "The word 'workmen' is confined to the title of the Act, the body of which speaks only of 'unemployed persons.' It seems desirable to restrict its scope to workmen and workwomen, and that those terms should be defined." I want that a little bit expanded; "unemployed persons" does not seem to you quite the same as "workmen"; would you just give me the distinction that you draw?—I think the Act at present includes cabinet ministers out of office.

81995. What I wanted rather to gather was, did you mean that "unemployed persons" let in the loafer as distinct from the man who was as a rule at work?—No.

81996. That was not your intention?—I think that it lets in the professional man, the middle-class man, the tradesman.

81997. That was your point?—Yes.

81998. In 32 (e) you say: "The restrictions on the uses to which money raised by rate may be put should be removed." You think it rather hard measure that it should be possible to use the rates for emigration in sending people out of the country, and not to use the rates for providing the work to keep the people in the country?—Yes.

Casual
labour at
the docks in
London.

Labour
exchanges
no solution
of unem-
ployed
problem.

Necessity
defining
persons to
be assisted
under
Unemploy-
ment
Act.

Question of
rates and
the Unem-
ployed
Workmen
Act.

81999. It has been suggested that part of the reason of the unpopularity of emigration with some people is that there has been an undue favouritism given to emigration by allowing the rates to be used for that and not to be used for the provision of work at home; there would be something, you think, in that?—That would be set right, would it not, if the present use of the rates were extended?

82000. And you would see no objection to its being extended to the provision of work at home, as well as being used for emigrating people out of the country?—I do not think it is exactly a matter of objection. I think that if the Act is to go on it must depend on rates or grants.

82001. I think you lay a great deal of stress upon the provision of work for women under the Act; you have given a good deal of attention to that, have you not?—Yes.

82002. Might I ask to what class of women you would confine assistance under the Act?—I think I have made that clear in my tentative suggestions.

82003. Could you give me them?—I exclude widows; I exclude married women with able-bodied husbands; I exclude married women with afflicted husbands; and I exclude domestic servants. I include *bona fide* wage-earners who cannot obtain work in the market and are unsuitable for service.

82004. What would you do with widows?—I suggest that if they have young children they shall be given allowances to keep them out of the labour market.

82005. "They should receive adequate relief (outdoor) and should be in the charge of friendly visitors"; that would be bringing them right on to the Poor Law?—Yes. I think it is a choice of evils you know, and in my view I think that is the lesser evil.

82006. But a deserving hard-working woman with children you would bring right on to the Poor Law?—Yes, out of the labour market.

82007. Does that not strike you as a little hard upon a woman of good character, a struggling woman?—I do not see that it need be. If you like you can have some other agency to give her the allowance.

82008. That is just what I wanted to see, whether there should not be some other agency which would deal with them. If you provide work for the man and keep him off the Poor Law, there might be some agency which would

also keep the woman off the Poor Law?—Surely the argument is rather that all these things are Poor Law things, but that the Poor Law ought to be much more departmentalised than it is, and should have quite separate departments. Mr. W. G. Martley.
4 Nov., 1907.

82009. You do not penalise the man in any way; you might call the Unemployed Workmen Act more or less a part of the Poor Law, but still you do not penalise the man who is assisted under the Act?—No, you do not, and I should not penalise the widow either.

82010. Therefore you would have to establish some agency rather distinct from what we commonly call the Poor Law, in order to deal with her?—Yes.

82011. (*Sir Samuel Provis.*) You have prepared, I understand, a diagram which you wish to put in; would you like to add a word or two about it, and in explanation of it?—Perhaps I might say a word or two. The classes are Mr. Charles Booth's classes. (For Diagram see Appendix No. XCIII.) Explanation of diagram relating to unemployed.

82012. Those are lettered A, B, C, etc.?—Yes. I divide each class into five sections according to character, and again into five sections according to efficiency. Then I estimate roughly the amount of character and the amount of efficiency in each class, and I show that where they are combined that part of the class is going upwards, and where they are falling asunder that part of the class is going downwards. The object of the table is to show that the residuum is not down at the bottom all by itself, but that there is a continual going up and coming down. Then I should like to dwell on the words at the foot of the diagram: "A, B and C are at a great disadvantage in bargaining. There is a permanent economic residuum due to this cause." I consider that there are three residuums. There is the residuum due to bad character or failure of character; there is the residuum due to inefficiency, and then again there is a class of quite efficient, quite respectable people who are being forced down by the unequal pressure in bargaining, because they cannot bargain efficiently.

82013. Is the diagram intended to relate to the whole country, or to any particular area?—The table relates to nothing; it is only an argument.

82014. It is not based on particular figures then?—No.

82015. But is put in as an illustration of an argument?—It is merely a way of presenting an argument graphically.

The Rev. CHARLES BAUMGARTEN, called; and Examined.

Rev. C. Baumgarten.
4 Nov., 1907.

82016. (*Sir Samuel Provis.*) You are vicar of St. Gabriel's, Canning Town, which I think is part of West Ham?—Yes.

82017. And you are chairman of the South West Ham Unemployed Aid Society?—Yes.

82018. You have prepared a Statement on allotments as a remedy for distress due to unemployment which we may take as your evidence-in-chief, I think?—Yes.

(*The Witness handed in the following Statement.*)

ALLOTMENTS AS A REMEDY FOR DISTRESS DUE TO UNEMPLOYMENT.

1. During the summer of 1906 the Bromley Gas Coke and Coal Company gave us a small plot of three acres out of about fifty for which they had no use in the vicinity of their works. We have received every possible assistance and encouragement from the company, which has given us the ground free of rent and subject only to such conditions as we had suggested.

2. The land was in a rough and somewhat uncultivated condition and we spent some money which had been given us for the unemployed in setting a body of fourteen men to work continuously upon it till it was in a proper state for cultivation. The object of doing this was (a) to provide decent employment better than wood-cutting, which was the only alternative, for the unemployed, and (b) to give the men who were to occupy the allotments a fair chance and some encouragement to do their best. The Gas Company supplied us with what manure was required. This was deposited upon the soil and was later on scattered and dug in by the men to whom the allotments were given.

3. The land was divided into twenty-four allotments of twenty rods each. No public intimation was given that it would be available for allotments, but the members of the committee sent along likely men, forty in number, and of these twenty-four were selected.

4. The method of selection was to exclude (a) those in full work; (b) those with no work and no prospect of work, or in receipt of parish relief; (c) bad characters. The object we had in view was to secure allotments for men who could reckon on two or three days' casual work at the docks or elsewhere.

5. A qualified instructor was placed in charge to direct proceedings and to give instruction when required.

6. Seed was supplied to such men as could not purchase it, and this was for the most part given to us.

7. It was stipulated (a) that two-thirds of each allotment should be cultivated on an uniform plan under the direction of the instructor, and that the remaining one-third should be under the absolute control of the holder, provided that he cultivated it; and (b) that the portion so reserved should be dealt with co-operatively, *i.e.*, that the ground should be cultivated uniformly with proper rotation of crops and that the produce should be sold *en bloc* and the money divided between the men; but it was agreed that the committee or the individual holder might contract out of this as regards the sale if the former found that the latter was not putting in satisfactory work or the latter thought that he could make better terms independently.

8. With the exception of three men, two of whom have gone to Canada, the present occupiers of the allotments are the same as those to whom they were originally given, and the work has been done to the satisfaction of the instructor.

Allotments under South West Ham Unemployed Aid Society.

Rev. C. Baumgarten. 9. It was pointed out to the men that they could not hope to secure sufficient profit out of twenty rods of soil, cultivated at odd moments, to pay house rent or get a wage upon which they could live independently of other work, but that they ought to be able to obtain sufficient vegetables to supply their own households for a year. I am told that this is likely to be the case, and if we reckon the value of the vegetables produced to be 2s. a week for each man, which I think is a fair calculation, it means that the soil produces vegetables to the amount of from £40 to £50 per annum per acre at retail price. This, of course, would be more than the wholesale price.

10. There is a very great hunger on the part of the men for bits of land, and if we had advertised we should probably have had hundreds of applicants for allotments. I am told that the men who have secured them are perfectly satisfied and expect to do well this year, and a great deal better next.

Cost of the allotment scheme. 11. We have tried to avoid making this a "charity" business in any way, and there is no reason why it should not be run practically without any public support except the provision of the soil. The initial expenses were heavy, but (i) they were not absolutely essential, and, as explained above, were partly incurred for the sake of finding work for the unemployed, and (ii) will not be necessary again on this particular plot of ground. The instructor is paid 30s. a week, and this has to be obtained from outside; but the one man could as effectively and as easily direct a much larger number of allotments with a proportionate less charge upon the individual holders, if a charge were made, and after a time his services will not be necessary.

Class of men provided for. 12. It will be noticed that we tried to secure some profitable employment only for men who could hope for nothing beyond casual work at the docks or elsewhere. It seems inevitable that, under present circumstances there must always be a certain residuum of such men, and their lot in life would be rendered less irksome if opportunities were given for spending odd moments in useful and attractive work instead of loafing about at street corners.

Willingness of townsmen to adopt country life. 13. Assuming that the policy of small holdings is a sound policy, I have no doubt but that a small proportion even of town-bred men would be more than willing to go into the country and could prove themselves to be as good cultivators of the soil for intensive purposes as those who have been brought up upon it. Only a very small percentage of those who have taken advantage of these allotments would probably be either willing to go into the country or to do well if they were there, but it should be borne in mind that the men we have selected are for the most part over fifty years of age, and less suited for country work than younger men.

Moral results of the experiment. 14. It is difficult to speak definitely of moral results, but I am inclined to think that the facilities given for getting on to the land have had a distinctly good effect upon the men themselves and have restored to them some measure of self-respect and confidence with a proportionately less desire to become dependent upon other people.

A South West Ham Unemployed Aid Society. 82019. (*Sir Samuel Provis.*) Will you tell us a little about the South-West Ham Unemployed Aid Society?—That is a society which was started about five years ago. What we wanted to do was to try and get the different local societies to amalgamate, if possible. We tried to get representatives from the different bodies down there to meet together in one society.

82020. Are you now referring to the various local charitable organisations?—Yes.

82021. Did you also try to bring in others, such as the local authority and the guardians, for instance?—No; we had nothing to do with the guardians at that time. The Charity Organisation Society was not down there, the distress committee had not started, and there was a great deal of overlapping and interfering with one another. So we tried to get a society which should combine the whole lot. As a matter of fact we did not succeed; it was almost a hopeless job.

82022. Did the society come to an end then?—No, the society is going on now. Practically it is only another society added to those which were there already.

82023. In 1906 the Bromley Gas, Coke and Coal Company gave you—I suppose you mean the South West Ham Unemployed Aid Society?—Yes.

82024. A small plot of three acres of land, which you used for allotments?—Yes.

82025. How did you select the persons to whom you gave these allotments?—The members of the committee recommended people. There were about forty turned up and applied for the plots. We saw that forty, and we questioned them as to whether they were in work, or whether they were out of work, and whether they were casuals. If the people told us they had had no work for six months and were not likely to get any work, we just put them on one side, as we could do nothing for them. The men we selected would be men who were more or less certain of getting on an average three days' work a week.

82026. Did you do anything to assist them in the meanwhile?—Some of them had been put on digging the ground, and getting it into order. All those who had done their work properly, and of whom we got favourable reports, if they satisfied the conditions about the three or four days' work a week, we were very glad to let them have an allotment. Up to that time we had been paying them.

82027. That is, you paid them for laying out the land?—Yes. That is where the expense of this scheme came in really.

82028. Did you get the funds for that from voluntary subscriptions?—Yes.

82029. When the land was prepared the persons to whom you then actually gave allotments were persons who were in partial employment?—Yes. They really belonged to what you would call the unemployed. One does not quite know what "unemployment" means. By "unemployed" I do not mean a man who is never employed at all, because obviously if you have got a man who is never employed at all he must ago into the workhouse, and he is eliminated after a time. By "unemployed" I rather understand people who are casually employed.

82030. (*Mr. Russell Wakefield.*) Who are under-employed?—Yes, really I mean the under-employed. There are a great many down there, for example, who are technically unemployed. My own churchwarden, who has been on a regular job for thirteen years, is unemployed at the conclusion of every day's work. He receives his money and he is dismissed, and it does not necessarily follow that he will be put on the next day. If you went round to him every evening you would find him unemployed. The unemployed we were thinking about were people who really had two or three days' work a week.

82031. (*Sir Samuel Provis.*) You were not intending people who were out of work altogether, but persons who were only employed a part of the time?—That is so, because people who are out of work altogether are eliminated after a time. A man cannot do anything if he is entirely out of work; he has got to go into the workhouse, or to live on his relations, or to go on tramp.

82032. Or he might be dealt with by the distress committee, might he not?—Or the distress committee can deal with him.

82033. The people you are dealing with are not that class at all?—No, not at all.

82034. What is the result of your experiment?—It has been most extraordinarily successful from our point of view. The soil produces from £40 to £50 per annum per acre at the retail price. It produces distinctly over £40.

82035. What were the allotments planted with chiefly—vegetables?—They were planted with vegetables entirely, except that one man planted a few herbs.

82036. With one or two exceptions the men have remained as tenants of the allotments, have they?—Yes. One or two have gone to Canada; and one we found was no good, so we turned him off.

82037. Was the emigration to Canada under your auspices at all?—That was not done under the society. I was connected with East-end emigration and with the Local Charity Organisation Society, but this Unemployed Aid Society as a society did not touch it at all. It helped in one or two cases, but practically it did not touch it.

Selection of men for the South West Ham allotments.

Expenses of the allotment scheme.

Allotments given entirely to "under-employed men."

Success of the experiment.

Emigration of certain of the allotment-holders.

Rev. C.
Baumgarten.
4 Nov., 1907.

82038. Was there a great desire to get these allotments?—Not at first, because the people did not hear of it. We were working very quietly on purpose, and so the people did not know very much about it. The forty who applied were all anxious to get them, and twenty-four did get them. At the end of this year, if we get hold of more land, there will be any number of applications.

82039. Are you hoping to get more land?—The Bromley Gas Company have got about fifty more acres there, and I hope we shall be able to get hold of some of them. At present we have got an overdraft at the bank. You see you must have preliminary expenses, but after those are met the expenses are very small.

82040. You have got your land free of rent, have you not?—I think it is absolutely essential for a scheme of this kind that you should get it free of rent. I may say that the rent of this ground is £2 per acre per year. They offered to let the guardians have it, for example, at that rate.

82041. You are hoping to get some further land from them, also free, I presume?—Yes. I am afraid we should refuse to pay rent under any circumstances. If it is a question of doing it on vacant land, and the question of rent comes in, it becomes impossible, I think.

82042. Do your tenants pay you any rent for the allotments?—No, they pay no rent.

82043. None at all?—None at all. We advanced to them some seeds—I am not sure whether I have mentioned this in my Statement—but that cost has been paid back entirely, every penny of it.

82044. And you give them some instruction, do you not?—We have an instructor on the ground, and besides giving instruction to the men he also acts as a sort of caretaker. I think it is these two things, having an instructor on the ground and only giving the allotments to men who have got partial employment already, which have made the scheme successful, because at the gas works they have some more allotments which they have given to their own employees, and those allotments are not a patch on ours. I think the reason is that they have been given to their employees who are in regular work, and such men will not put in the necessary time on the allotments after they have done their day's work, and then there is the second reason that they have had no one to give them advice how to cultivate the soil, and so on.

82045. Did your men know anything about the cultivation of vegetables before they took these allotments?—One or two of them did, and only one or two of them. One or two of them had had allotments before, and knew something about gardening, but with the exception of those the rest were the casual men you met loafing about in the street.

82046. Would you advocate any extension of this system of voluntary allotments as a means of dealing with the unemployed problem?—I think so, certainly. Mr. Fels wrote in the paper a few days ago that there were 10,000 acres in London which were available for that purpose. I am not guaranteeing those figures, and I do not know whether they are accurate or not, but if there is anything near that quantity of land available, and you can get anywhere near the amount out of it that we have got out of our allotments, you will run into very big figures. This goes directly into the homes of the unemployed without touching charity at all.

82047. That is just the point; you think it can be all done without any touch of charity?—Yes. A man practically works for two days a week, or for two or three days a week, and in return for that he gets produce which is worth 2s. or 2s. 6d. There is not much charity about that.

82048. But you give him the land without charging him rent for it?—Quite true. Even if he paid rent, the rent would not be more than 5s. per annum for his 20 rods, which is the eighth of an acre.

82049. You yourselves get the land very cheaply?—We get it free, and we hand it over to them free.

82050. Therefore the only other assistance to him is the benefit he gets from your instructor?—Yes, there is that. It must be charity in one sense, but it is not a charity of the debasing sort, and it is not a charity which appears in an unpleasant form. It is a very straightforward kind of thing.

82051. But it is charity in the shape of certain assistance; that must be admitted, I think?—Yes; but ninety-nine-hundredths of the assistance the man does for himself. It is helping the man to do it for himself; really that is what it comes to.

82052. (Chairman.) Where are these 3 acres of which you speak in Paragraph 1?—At the Bromley Gas Works, just by the railway line, between Bromley and Canning Town stations.

82053. Did the people who cultivated these allotments sell the vegetables at all?—They could if they wanted to do so, and some of them did sell their vegetables down the street. They just took what they wanted. They had an enormous crop of radishes, for example, and they have a tremendous crop of celery there at the present moment. That they will sell to some of their neighbours.

82054. That is important rather. They get this land for practically nothing in a very populous district, and therefore anything which they produce in that way has a high value?—It could not be higher than the market value, because the people would not pay them any more than they would pay to the shop at the corner.

82055. That is so, but the produce is there on the spot, and it has not to be brought up and transported from a distance?—That is so.

82056. You could not draw much from the result on those 3 acres thus exceptionally favourably situated in the middle of a very populous district, or argue in consequence that you could adapt that same system on any large scale to a non-populous district?—No, I do not think you could. I think the advantage there would be that the man would grow his vegetables so as to get a sort of continuous supply for his own household without selling them at all.

82057. The moral effect you think is incontestable?—I think my last paragraph I would emphasise enormously. It simply means that the men, instead of loafing round, are working on their allotments.

82058. Did they work themselves always, or did they send in their families?—We would not allow the families to come on the allotments. It might have led to interference with other people's allotments, and one thing and another, if we had permitted that.

82059. (Mr. Russell Wakefield.) The amount sold, I suppose, is very small?—It varies. One man tells me he sold about half, but most of them sold considerably less than that, and some of them did not sell at all.

82060. Did any of your small tradesmen object?—No, the quantity produced was too little.

82061. But you can conceive that if the principle were extended it might interfere with the small trader?—Yes, if it was widely extended it would interfere.

82062. And that might make it rather unpopular than otherwise, I think?—Yes. I think we are bound to have a little disadvantage of that sort with these allotments.

82063. I did not quite catch what you said with regard to rent. You said, "We would object to pay any rent"; to payment is that on principle?—No. This plan is being worked in Philadelphia, and I am told it is a very strong point there that it should not be worked for rent at all. I think the reason is that if there is rent charged it becomes a question of competition, and then the rents run a chance of becoming—rack rents I think is the technical term—so excessive that you really cannot get a margin of profit. So they go on the lines that the land must be voluntarily loaned.

82064. One has heard this objection raised to your work—I do not say there is anything at all in it—that you employ on these allotments people who get a couple of days' work, or three days' work a week in other directions, and some people say that you make those men satisfied with only two days' work a week, or three days' work a week, by providing them with these allotments, and therefore you take away a certain amount of their go and independence, and desire to find work for the whole week?—I should not think so. I should think that if a man could earn 3s. or 4s. a day at the docks he would not go on to an allotment where he could only earn 6d. a day—I am taking it that he would be working four days in the week on the allotment.

Rev. C.
Baumgarten.
4 Nov., 1907.

82065. There is a certain class of men who rather like having a couple of days at one kind of work, and then a couple of days on an allotment?—I should not think that would apply in this case.

82066. Still that objection is taken?—I can quite understand that, but I should think it is an academic objection.

Tenure of
allotment-
holders in
South West
Ham.

82067. (*Mr. Lansbury.*) There is a danger, of course, that, unless you have a proper agreement with your landlord, the people might get turned off just as their crops came on?—Yes.

82068. They are tenants at will, I understand?—The Gas Company are extremely good to us over that. There was some difficulty, I think, about their charging rent, because that would bring them under the Market Gardens Act, or something of that sort, by which they would have to pay compensation, and rather substantial compensation, if they got rid of us. So the Gas Company made us absolutely tenants at will, and then they said, "Of course, if we want this land we shall turn you off, but we shall not turn you off until after three months' notice, and as a matter of grace if there are crops on the ground we shall allow for them."

82069. Of course you would have to get that kind of arrangement with any sort of landlord?—Yes, or you might have a difficulty with the landlord coming along and simply turning you out at a moment's notice and appropriating what you have got.

The allot-
ment scheme
and the
casual
labour
system.

82070. As I understand, this is a kind of arrangement which is sometimes spoken of as for seasonal trades, and it is to help the casual labourers by giving them a kind of subsidiary occupation when they are not wanted at the docks?—Yes.

82071. Do you really think that is a good thing?—I do not know. It seems at the docks that you may want so many men to-day, and you may want no men to-morrow. I should think that is an extremely bad arrangement, but if it is inevitable, then something of this sort is exceedingly good for giving other occupation to the men.

82072. You think it is possible that they will have to sit down under the present arrangements for casual labour at the docks, and in the building trade, and that sort of thing, do you?—I should hope it is not, but that goes beyond my department. It seems to me disastrous that you should have a trade where you want 100 men one day, and you want no men the next day. If it is inevitable, well and good, but I do not know whether it is inevitable or not.

82073. Of course, you are only proposing this to meet some practical difficulty at the moment; that is what it comes to, is it not?—It is a little bit more than that. It is not only meeting a practical difficulty at the moment, because one often wants to do something practical when you may be doing mischief in the future, and I should be very sorry if this were to do anything of that sort. In the present conditions it does seem inevitable that you shall have a large body of men who are in casual employment.

82074. Casual employment is not only in vogue at the docks, is it? In your district it would be very considerable in the building and carrying trades, as well as at the docks?—Yes, but of course the docks are the main thing.

Age of
men on South
West Ham
allotments.

82075. You found a fair proportion of these men were men who would not have been quite satisfied to get their living in the country?—I think so, because they are too old.

82076. Too old to change?—It is rather old to plant a man in the country when he is over forty and he has not been accustomed to it at all.

82077. What is the age of your men?—Their ages vary, but roughly they are between forty and sixty. Preference was naturally given to a man who was at that age, because he does not get a preference elsewhere, and he could still do this work.

82078. (*Professor Smart.*) I should like to analyse your 2s. The first charge is 1s. 3d. for instruction?—You mean if they paid an instructor?

82079. Yes; it would be that figure with that number of men. You start with an undertaking which is not a charity, you say; but I rather think your 2s. is all used up already in charity. You put 1s. 3d., for example, as the charge of the instructor to begin with?—Not quite, because one instructor could take 1,000 allotments.

82080. But he does not now?—At the present moment he would not.

82081. Then you gave the land the first rough turn-over?—Yes, the land was in an impossible condition.

82082. That is to say, you set fourteen men to make ready the ground for twenty-four?—That is right.

82083. Then you gave them manures?—Yes. But the manure cost nothing. People are glad to get rid of it in Canning Town.

82084. You got the cost of the seed returned?—Yes.

82085. Therefore we will not include that; but you gave the land free?—Yes.

82086. I think you calculated the land to be worth £2 per acre?—Yes.

82087. And you said something about 5s.?—That would mean 5s. a year for each man.

82088. That is sixty pence; that is over 2d. more—that is 1s. 5d. for the charge of the instructor and the rent of the land, is it not?—Yes, but if you are raising that point of view, I think you would have to include also the wages of the man, and then, of course, it is hopeless.

82089. I want to know what exactly you think this experiment proves?—I think it proves that you can get a great deal more out of the ground than we thought we could.

82090. It also proves that you have to put a lot into the ground before you can get anything out of it?—Yes, but the man is putting it in—he puts in his labour, which we say is worth 3s. a day, and he is content to put in his labour, which is worth 3s. a day, on condition that he gets out 2s. a week. He gets something else out of it, of course; he gets the satisfaction and the pleasure of doing it. To set men to work and to pay them wages and expect to make a profit out of it, you can see would be quite impossible. A man might do it for himself, but it would not be profitable to put on somebody else to do it for him.

82091. You would not say that universalising this method would do otherwise than universalise a very good form of charity?—I do not like putting the word "charity" in very much, because if a man is working three or four days a week for 2s. a week, I should not like him to think that there is any charity in it.

82092. But you do not prove that it pays in any way whatever?—It would not pay you or me to employ somebody to do it, but it pays the individual.

82093. But the individual gets everything done for him?—No, because he does all the work for himself.

82094. And he does not get any return for that work apparently?—He is extremely well satisfied with what he does get somehow or another. These men have had the value, and as to whether they want the allotments again for the following year, I can say that the whole of them have been taken up again by the same men, and at once.

82095. Do you think that is any solution of the unemployed problem?—It is very, very partial.

82096. It proves that a lot of men who have worked on allotments are willing to work on allotments?—Yes.

82097. And that is all. With regard to your crops, they are all vegetables, are they?—They are all vegetables.

82098. Both the two-thirds and the one-third?—Yes.

82099. You consider that the men obtain sufficient vegetables to supply their own households for a year, and sometimes something over to sell?—Yes. Next year I am hoping we shall be able to give them glass, in which case there ought to be a considerable increase in what they get from the land.

Results of
the allot-
ment experi-
ment.

Rev. C.
Baumgarten.
4 Nov., 1907.

Results of the allotment experiment. 82100. It is possible your experiment may turn out very much better as it goes on and expands, is it not?—Yes. I think it has gone on pretty well as it is, but of course, if one were to look at it from the point of view of my, for example, employing twenty-four men on those three acres, one can only say it would be a disastrous failure from the financial point of view. But when men are working on it themselves for their own households, then I think it is slightly different.

82101. This does not prove anything in the direction of small holdings, does it?—I think it does, because you see it shows that a man can get at the rate of £40 or £50 an acre out of his ground—and a man can manage more than one acre if he puts in his whole time.

82102. It seems to me that you put £40 into the ground before you take it out?—I see the point.

82103. (*Mr. Lansbury.*) Would it be fair to charge against the first year the whole cost of bringing a piece of land which was derelict into cultivation?—No. I think you have to put that down to capital account, as it were, and that you should only charge interest on it.

82104. So that the cost would be stretched over a period?—Yes. You would only charge interest on it.

82105. (*Professor Smart.*) That is what I meant when I said the experiment might prove very different indeed if it were extended?—That would be so.

Value of the vegetables produced on 3½ West End allotments. 82106. (*Miss Hill.*) I do not quite understand, but is this 1s. 9d. a week, the value of the vegetables, the only tangible benefit that the man gets?—That is the only material benefit.

82107. And it is not, I suppose, that they sell any vegetables in addition?—No.

82108. They either sell or eat them?—Yes.

82109. And the 1s. 9d. is the whole value?—That is the net result of what they receive.

Amount of work done on the allotments by the holders. 82110. How much work do you think they really put in for that?—That is very difficult to say. I have been speaking of two or three days a week, by which I mean that a man would go down on the ground very likely two or three days a week if he was not engaged elsewhere.

82111. You mean that they are willing to work for two or three days a week for that result?—Yes.

82112. How do you know the value of the vegetables?—I take the value of the vegetables at the retail price they would have had to pay for them, checked by the price at which they sold them.

82113. If it only produces 2s. a week, although I can quite see that this work will be helpful, yet that is not a very great assistance to their finances, is it?—It is a very great help in one way. If a man is earning 12s. a week, and he gets an extra 2s., that is an addition of one-sixth to the man's income, which does make a very material difference.

82114. And even to get that they have to receive instruction, land and manure free?—I should like to say that the cost of the instructor is a very small item. There is only one instructor for the twenty-five men, and that one instructor would have done for 250 men; so that the cost there is almost *nil*. The cost of the land is not great: if you take it at 5s. a plot it works out to a penny a week. Then as to the manure, if you want manure taken away in Canning Town you have to pay for it.

82115. It would seem as if the benefit were moral rather than material; I mean the 2s. a week is a very small amount for a man to take, having regard to the quantity of work he has to do for it, is it not?—Yes. But I doubt whether the men who have the allotments would have applied for them if it had been purely a moral advantage which they derive from them. The point of view from which they look at it is that they have been able to get hold of good vegetables for themselves and to get something for what they are able to sell. What has happened in some of the cases may be illustrated by a man who came to me yesterday. The money that he got for all that he sold he handed over to his wife, and she, he said, put it into the savings bank. I was able to confirm that, because it was in my savings bank, and I saw that since June she had been steadily paying in every week 6d. or a 1s., which was the money they had received for the vegetables sold.

82116. It is a very interesting experiment, and I should think it would do a lot of good to the men, but as a means of meeting unemployment it seems to me very small?—Of course it is an extremely small plot of ground, but then there is this large number of acres all over London.

82117. Do you think it really means as much as two or three days' work a week to produce this result?—No. I should think if a man chose to work eight or ten hours one day a week it would be sufficient. But he does not do that. He goes down to the docks and cannot get on, and then he goes out to the allotments.

82118. It is broken time rather, then?—Yes, it is.

82119. Do you know how much the time he actually spends on the allotment amounts to in the week?—No. I daresay it would be less than two or three days.

82120. (*Mr. Loch.*) Is this not really trying to add, so to speak, a garden to a house, by giving a small patch of land on a separate piece of ground?—Yes. Value of allotments or gardens in general.

82121. So if it produces any kind of margin on that basis, just as in the case of any cottager's garden, you would be satisfied with the result?—Yes, I might say I would, but I am not quite sure I understand you. Of course, I would not be satisfied from the financial point of view.

82122. A garden is not financially worth very much when it is attached to a cottage, is it?—No.

82123. Financially it is the cottage which is paid for, and the garden is always taken in?—It is a sort of extra. If you have got a house with a little bit of garden and another house without garden, and the rents are equal, you will find the house with the garden will go much more readily, because of the garden, even though the man will get very little indeed from it.

82124. It gives him some margin of profit for his work over and above his industrial daily work?—Yes.

82125. And that is why it is attractive?—I think that is the attraction.

82126. A man with a garden like that is very often not so pushed as a man without it—even when it is a very small garden?—Yes. A man has said to me: "This has been an enormous help to me this year; one feels that it is something."

82127. Do you see your way, if it were otherwise possible, to have such gardens for a large number of people in such districts as you live in?—There is another fifty acres here.

82128. Land which is really available for such a purpose?—I think so. There are hundreds of acres lying vacant; in fact, there are thousands of acres lying vacant there.

82129. (*Sir Henry Robinson.*) How long a period would these fourteen men have been working continuously on this land in order to get the plot into a state of cultivation?—That was done about this time last year, or a little bit later. I should think they went on for about ten weeks. They were very slow on the job, as it was a very rough job. Cost of preparation of land for allotments.

82130. What wage were you paying them?—We were paying them 6d. an hour, but I forget how many hours a week we gave them.

82131. If it were possible to get a better class of land you might work this scheme without loss, might you not?—I think so. These 3 acres of land cost us nothing. If we take over another 3 acres we shall have to put it into condition; we must dig it up roughly—that is all. It is a little bit too hard upon a man to put him on to an almost impossible bit of land.

82132. But if you have got land which is fit for cultivation you would be prepared to pay rent for it, would you not?—That is a little bit out of my department, but rates on the there seems to be some reason why you should not pay rent. It is alleged that it then becomes a question of competition, and then it comes to be a very narrow margin that the man can get. Question of rent and rates on the allotments.

82133. (*Mr. Loch.*) If you extended it, would you not pay some form of rent?—They do not think it will help here. I confess I got this idea from the Philadelphia people.

82134. (*Mr. Gardiner.*) Do you pay rates?—We do not pay rates.

Rev. C. Baumgarten. 82135. Does the parish close its eye then?—I do not know. I really do not know whether we are rateable or not. But if we are rateable, it is such a very small matter.

4 Nov., 1907.

82136. Its success all depends on the economic basis?—Yes.

82137. (*Sir Henry Robinson.*) Do you think you would find a difficulty in collecting rents from these men?—No; that is not the objection to paying rent, because after all one has got the land to fall back upon. In one or two cases, for example, the men were unwilling to repay what they had had for seed, and we pointed out to them that if they did not repay us, we should annex the crop, or else they should not have the allotment next year. We really would not have annexed the crop; but we should not have allowed them to have the land next year, and we should have just cut the loss.

Philadelphia vacant land allotments scheme.

82138. (*Chairman.*) Is the Philadelphia system on a very large scale?—I cannot say it is on a very large scale; it is on a fairly large scale.

82139. What number would you say it had put on the allotments?—I am afraid I cannot tell you, but I can get you the information.

82140. It is an allotment system I suppose tacked on to Philadelphia an urban population; is that it?—No. I imagine that in Philadelphia they have got great conveniences for getting allotments from one part to another part, and they would be people working in the crowded centres and living in comparatively rural districts.

82141. And they would pay no rent at all?—That is so.

82142. The land is given them?—Yes.

82143. It is a charity then?—It is charity in a way, but then the owner is doing nothing with the land. The point that they make in Philadelphia is that the owners of the land are extremely glad to let the people have it.

82144. (*Mrs. Bosanquet.*) It is only let for allotments in this way until it is wanted for other purposes?—That is it. It is something similar to what has happened at Berkhamstead. There was a lot of land there for allotment, but the land has now become valuable and all the tenants have been removed.

82145. (*Chairman.*) Then this system really utilises the land until it becomes wanted for more profitable purposes?—Until it becomes suitable for selling purposes really.

Miss MAUDE E. MARSHALL, called; and Examined.

Miss M.E. Marshall.

4 Nov., 1907.

82146. (*Chairman.*) You are the secretary to the Whitechapel Committee of the Charity Organisation Society, a member of the Central Unemployed Body for London, and of the Stepney Distress Committee?—I am.

82147. You have been kind enough to prepare a Statement which we will take as your evidence-in-chief, if you will kindly hand it in?—Certainly.

(*The Witness handed in the following Statement.*)

1. *Character of persons affected.*—It had better be admitted at once that, on the whole, the character of this class is comparatively weak, *i.e.*, weak in intelligence, training, physique, or *morale*, or all four. The men themselves say they are out of work through slackness of

Character of unemployed.

* I have had analysed 108 unselected applications to the Stepney Distress Committee. Of these 108, ninety-eight men give as the reason of their discharge "slackness." The written employers' character confirm this in sixty-eight cases (though three of these state that the applicant has no chance of re-employment). In thirty cases the reasons for discharge are given as follows:—

"Partly slack"	-	-	-	-	-	-	1
Unsatisfactory	-	-	-	-	-	-	5
Dishonesty	-	-	-	-	-	-	1
Bad time-keeper	-	-	-	-	-	-	3
To better himself	-	-	-	-	-	-	1
Ill-health	-	-	-	-	-	-	1
Most unreliable and only irregular earnings for rough work	-	-	-	-	-	-	1
Gambling	-	-	-	-	-	-	1
Want of attention to his work	-	-	-	-	-	-	1
Left of own accord (no chance of re-employment)	-	-	-	-	-	-	2
Dishonesty suspected	-	-	-	-	-	-	1
Private reason	-	-	-	-	-	-	2
Irregularity in attendance	-	-	-	-	-	-	2
Not stated by employer	-	-	-	-	-	-	8
Total	-	-	-	-	-	-	30

Thus, in about a third of the ninety-eight cases, we get from the employers an indication of the personal weaknesses leading to selection for discharge in time of slackness.

In some other instances, where the employé gave as cause of discharge:—

"Illness;" the employer gave: "unsatisfactory last six months."

"Death in family" the employer gave: "absent without leave."

Not stated (in three cases); the employer gave: "unsatisfactory."

"Being a union man;" the employer gave: "neglecting horses."

Special; the employer gave: "pilfering."

"Reduction in wages;" the employer gave: "careless."

The Charity Organisation Society usually gets verbal characters from employers. Their enquiries in unemployed cases bear out the distress committee evidence, that a fair proportion of those who apply to them for relief are personally weak. I have had the papers in twenty-two "out-of-work" un-

trade, and this is true in the sense that when trade is extraordinarily brisk almost anyone can pick up some work. Employers' written and verbal characters show why one is chosen to be dismissed in time of slackness rather than another.*

Character unemployed

2. In some Stepney Distress Committee cases analysed (*see Note*), about two-thirds of the applicants have nothing whatever alleged against them by their employers. In some Charity Organisation Society cases analysed, about half have nothing against them (except in some cases ill-health) as far as the employers are concerned. The preliminary report upon the work of the Central (Unemployed) Body for London, to May 12th, 1906, on p. 26, hits off the unemployed as a class in a way that accords very

selected applications to Charity Organisation Society analysed, and find that according to the employers:—

9 were discharged for slackness.

3 were discharged for illness.

1 for illness and slackness.

1 "would not do a fair day's work; absented himself; drank."

1 dishonesty, hard worker.

1 for slackness, drinks. *N.B.*—Man said "lead poisoning."

1 for drink.

1 "industrious when anyone looking after him."

1 for leakage in number of packing cases.

1 "did not do his duty."

1 for accident; not particularly industrious.

1 for drinking and gambling; worthless.

These twenty-two men gave generally as cause of discharge, "slackness or end of job"; in nine instances the employers confirm this and have nothing of a personal nature to offer as a reason for their selection for discharge; in three or four cases illness, and in eleven weakness more or less serious in *morale*, explain their selection for discharge rather than that of other hands.

That so large a proportion are weak in character should not surprise, when the conditions of their employment are remembered. The men flit from odd job to odd job; their "characters" are not "taken up"; when no records are kept, strenuous efforts to maintain a high moral standard do not necessarily secure a man a preference; and complete failure to maintain the ordinary standard of his class creates no prejudice against him in the eyes of a fresh employer. The world of work to the typical casual man is governed by chance; for the good are not more successful in securing work than the evil. No class in the community could withstand the demoralising influence of such a view of life and such a system. It is not that the casual man has a larger dose of original sin than his fellows; it is that he is exactly what any other class in the community would become, the clergy, the bar, or the professions generally, were they submitted for any length of time to the same system of employment.

Causes of unemployment among applicants to Stepney Distress Committee

Character of exactly with my experience, as follows: "The real fact unemployed. appears to be that while, to a very great extent, *lacking in resourcefulness, in energy, and in efficiency*, the unemployed men assisted by the Central Unemployed Body included among their number a not inconsiderable proportion of those who were, whether judged by personal character (including in this a genuine care for their wives and children) or by industrial standard, favourable representatives of the class to which they belong. More of them appear to have *lacked energy* than good intentions." (The italics are my own.)

Tides most
acted by
unemploy-
mit.

Problem
of the
irregularly
employed.

To organ-
ist workers.

3. Cause.—But men of industrially weak character are found in all trades and professions and classes; but not all of industrially weak character in time of slackness join the ranks of those *in distress* through want of employment. The weak of most professions, trades and classes may be a problem for their friends in times of slackness, but through individual or family thrift, or group (or trade) thrift, or otherwise, avoid, as a rule, becoming a public problem.*

4. Only the industrially weak of certain trades, such as waterside labourers, carmen, bricklayers' labourers and members of other unorganised low class trades form, as a rule, in times of depression a public problem.†

5. It may be asked what is there peculiar to these unorganised trades, which prevents them from protecting their weaker members from distress due to unemployment, as the more highly organised trades do?

6. They are peculiar in:—(a) Employing a large proportion of irregular hands; (b) who are normally under-employed; and (c) therefore unable to provide by individual or group thrift against periods of depression.‡

7. The problem for the public to consider is:—"What is to be done with those who belong to the unorganised trades or trades employing an abnormal proportion of irregular hands, who, as they are chronically under-employed, are unable to provide by individual or group thrift against periods of depression?"

8. It may be urged that in narrowing down the problem to the above class, we are leaving out part of the facts. We are leaving out (for the time) the fact that members of organised trades *do* apply to distress committees, and do, therefore, claim the help of the public.

9. But they apply in nothing like the same proportion as the members of the unorganised trades (see Note †, p. 67. 0), and, on the whole, those that do apply are found, after investigation, through help of their grown-up children living at home, and otherwise, not to be "in distress" through want of employment; and it is only with those in distress through want of employment that the public is rightfully concerned.

10. Many of these men, "too old at fifty," often of the highest character and with excellent homes, in spite of the sympathy peculiarly inspired by their cases, were classed by the Stepney Distress Committee B2, "or men fit for consideration, but not in urgent need, owing to the amount of earnings in the family.§

11. The difficulties of this class of unemployed seem mostly to be met privately through trade organisation, and out-of-work pay, and family thrift; and it seems that the true line of progress is to encourage the further development of these non-public forces.

* Stepney Distress Committee Report, July, 1906, p. 3. "Out of 1,710 persons registered only 188 could be classified as skilled men; another 340 had some sort of skill—were, for example, builders' labourers—these were classified as semi-skilled. The unskilled labourers numbered 1,174 out of the whole. Of the whole 1,710, only eighty-one, or under 5 per cent., stated that they were still, or up to six months before registration, in benefit societies, and twenty in sharing-out clubs. What was more noteworthy was, that only eighty-five stated that they were members of trades unions."

† Cf. Unemployed committees' analyses of trades, *passim*.

‡ Some consider, of course, that even under present conditions casual labourers could make, if they chose, more effective provision. But where work, and the search for work, is a mere gambling transaction, the searcher is liable to contract the vices and virtues of the gambler, of whom thrift is not one of the virtues. Nevertheless, I have been struck with the number of casual labourers who have at different periods of their lives belonged for a few years together to trade unions or thrift clubs, and dropped out, so they say, during a fast time of slackness.

12. We are also excluding (for the time) from the public problem (though certainly a problem demanding the closest attention of the trade groups), the members of seasonal skilled trades, whose wages during the season may not be high enough fairly to cover living expenses during the slack period, even with the best management. Miss M. E. Marshall. 4 Nov., 1907. Problem of seasonal workers.

13. These cases apply to the distress committees, but seem hardly suitable for relief work. The solution for this class seems to lie either in the direction:—(a) Of forcing up the wage to such a point that with management it fairly covers living expenses for the year; or (b) linking the trade with some other subsidiary trade whose brisk period alternates with the brisk period of the principal one. And, again, this may be best effected not by the public but by the trade group concerned.

14. Remedy.—Excluding the two above groups the Methods of problem is, how to organise the disorganised unskilled groups so as to secure such co-operation among employers that a less number of labourers obtain more regular labour. decasualisa- tion of labour.

(i) The most "English" method, doubtless, would be for the labourers themselves to reorganise the conditions of employment, and drag themselves out of the slough of under-employment by co-operation or otherwise. But it must be remembered that a great proportion of these men are, as was said above, industrially weak and relatively inefficient. The stronger and more efficient members of the group work themselves out of it into other groups. One doubts whether those left have "the character" to do it. These unorganised groups, moreover, from the fact that little or no skill is required in their work, are continually being recruited from the breakdowns of other organised groups, who, either permanently or till their own trades "look up," join the unorganised groups, and floating in and floating out exclude group homogeneity and effective group action. There seems, therefore, little hope that the unskilled under-employed themselves will ever reorganise trade conditions.¶

It may be of interest to give particulars of a few non-selected applications from men over forty, this last winter, from the class marked "not urgent."

§ By "unorganised" all through these notes I mean without organisation for securing more regular work for a smaller number of men, whether the end is attained by a trade union or by some other means.

¶ Distress committee and Charity Organisation Society papers reveal the fact that many unskilled irregular labourers at one time or other had a trade. These seem to have drifted out of their proper trades in time of slackness, and, taking the line of least resistance, to have drifted into that course of casual unskilled work which is the easiest of all to enter upon, and from which it is so difficult to escape. It is suggested that these men, if the entrance into the unskilled labour market were not so invitingly open, if there were the least organisation about the market resulting in the new member

Miss M. E.
Marshall.

4 Nov., 1907.

Possibility
of decasuali-
sation by
employers.

Labour
exchanges.

Methods of
dealing with
unemployed
residue after
decasualisa-
tion.

(ii) If the men cannot, will the masters? The action of the great dock company seventeen years ago makes one hope that the employers may do something.* But, so far, employers of the unorganised trades have not followed the company's example. It appears that they secure, on the whole, as many good men as they require under the present system (or want of system) of engagement, and, therefore, are not driven by any trade necessity to make a change. Moreover, natural conservatism and trade jealousy make it not very easy for individual employers to combine to obtain more regular work for their casual men. Perhaps further information on this point is desirable.

(iii) The employment exchanges, established under the Unemployed Workmen Act, have not yet run long enough for an opinion to be formed as to their efficacy. They boldly appeal to the public spirit of employers and employes (just as Mr. Charles Booth appealed to the public spirit of the dock company). "Good" employers may prefer to engage their casual men direct and may find no difficulty in getting enough of them; "good" casuals may get enough irregular work and prefer to seek out their temporary masters themselves. They are asked by the labour exchanges, nevertheless, to try the new system of engagement for the sake of the general good. It will be well, probably, to wait until the employment exchanges have had a fair chance before deciding whether their system of voluntary registration should (1) either remain as at present or (2) be encouraged by the State or (3) superseded by some compulsory system.†

15. It will be seen that when a smaller number of men obtain more regular work, the balance excluded will obtain no work whatsoever. How should they be dealt with?

(a) The younger members may be taught; there may be developed in them sufficient skill, intelligence and adaptability for them to be available for more skilled trades.‡

(b) The older members, or those not physically so fit, may be brigaded into a reserve to be called upon only in times of great pressure. (?)

(c) The excess generally may be dealt with by emigration, migration, labour colony or other relief measures with a good heart; for the present danger (of increasing the number of the under-employed through the very means, invented to relieve them, acting as an additional attraction to the unskilled labour market) will not exist when the entry into the unskilled labour is regulated.

having not quite so good a chance in it as the old hand, if there were the slightest effort to be made or formality to be gone through before obtaining the right of entry, might by patience, by struggling, by improved trade organisation, through migration or otherwise, recover a position in their proper trades. Of the 108 cases analysed above, sixteen had formerly had trades, and eight of them seem content to remain unskilled irregular labourers.

* The London and India Dock Company, who, influenced apparently by Mr. Charles Booth's investigations, brigaded their casual labourers into A's, B's and C's, ordered their forty-seven departments to take on no C man whatsoever until every B man was engaged, and no B man until every A man was engaged, with the result that the forty-seven departments became one labour market; the C's dropped out of work as far as the company were concerned altogether, and the A's and B's had more regular work. It is suggested, that had this system been more scientifically carried out the result would have been even more satisfactory.

† "Encouraged," as by giving some automatically working preference (in the matter of rates, say) to the employer who engages his casual hands through an exchange, or "superseded," as by making it absolutely illegal, in certain scheduled trades, for an employer to engage a labourer for less than a given period except through an exchange; or by giving badges or registered numbers to a sufficient number of casual labourers and obliging employers to engage the registered men before they approached the outside labour market; the object in all cases being to tempt or force employers so to co-operate in methods of engagement that a less number of labourers obtain more regular work. It will be remembered that State encouragement of co-operative action on the part of employers already exists, as, for instance, in that part of the carrying trade which is concerned with the sea.

16. Then, when a smaller number of unskilled labourers are getting more regular work, thrift, individual and group, has at last its chance to provide effectively against distress due to trade depression.§

17. The danger of relief works providing but another attraction to the life of the casual is, of course, obvious; || but there are relief works and relief works; and it is possible to imagine relief works so conducted that they do not act as an additional attraction to the casual life. Grant that they have not justified their existence as means to bridge over an interval between two regular jobs, as designed by the Unemployed Workmen Act; ¶ yet they may be justified on the same grounds as workhouses are justified. If we assume that the casual labourer under employed to the point of distress is to be relieved somewhere, there is much to be said for his relief in a specialised workhouse, designed for the unemployed only, rather than a general workhouse. Both should be deterrent, of course, but while the ordinary workhouse is deterrent first and educational secondly, as a rule, though there are exceptions,** the special workhouse or work colony or farm should be so educational in atmosphere that it is also deterrent. And if, meanwhile, the inmate's

Relief wor-
and casual
labourers.

Specialise
workhouse
for unem-
ployed.

The temporary employer of the seaman engages him for a casual job only, i.e., for the voyage. The Board of Trade compels him to enter in the seaman's book of continuous discharges an account of his character and capacity. This book is returned to the seaman at the end of each voyage, and is a guide to the next employer to whom the seaman applies for work. The seaman with the most unbroken series of "V. G.'s" gets most regular work, the man with the less superior record gets less work, while the man whose book reveals him as inefficient in some way is liable to drop out of the trade altogether; moreover, the break-downs of other trades have little chance of entry. This system is enforced and worked by the Board of Trade, who keep copies of every character earned by every British seaman. It would be interesting to know more about this system.

‡ Skilled employment committees, which are springing up now in many parts of London, are attempting to divert some of the excess labour that is pouring into the casual unskilled labour market through the channels of errand-running, van-guarding, etc., into careers with better prospects.

Nothing is said in the text about rate of pay, as it is assumed that where, and if, the rate of pay is, even given full employment, inadequate for provision for the future, there the trade itself, when organised, will be able to look to the matter.

Nothing is said either about the great fund of charity or good feeling existing in the community. This vast national asset can be drawn upon with perfect confidence for the help of exceptional individual cases, or exceptionally "hit" trades. The public is peculiarly sympathetic in cases of distress due to want of employment. But, unfortunately, this great fund is at present dribbling and wasting away in perpetuating the mischief it pretends to cure. The large sums given away in providing doles of work or money to unsuitable cases, still more the expectations raised by these doles and by injudicious Press discussions, tempt whole classes of the population who might otherwise set about remedying their grievances themselves, to wait about "to see what will turn up."

But the fund of charity, though at present being so misused and wasted, owing to the ignorance of the public, is, nevertheless, in itself a most powerful and life-giving force.

|| Cf. the large number of re-applications to distress Committees.

¶ The Stepney Distress Committee has very carefully revisited all the "helped" cases, and found, of course, many very grateful for the spell of regular work provided by the committee; but of the 242 cases "helped," the hon. secretary informs me that he estimates that thirty-three only found the relief work a means of bridging over an interval between two regular jobs. Of the 1,714 applicants to the committee, 84 only came within the definition "usually permanently employed, but out of work through no fault of their own." Of these over 30 found work before they were offered relief by the Distress committee.

** The Whitechapel Workhouse Committee arrange for a gentleman to spend every evening of the week with the able-bodied men (when there are any) in the workhouse. He brings the newspapers and discusses plans of work with them. Next morning, any inmate who has shown grit, civility and industry, whom the workhouse master can trust, may be allowed to leave the house and search for work. The late workhouse master assured me one day that he had more applications from employers for labourers than he could fill, and that he was never at a loss to place out a really decent man.

wife and family are being maintained at home under a kind of Whitechapel order or modified workhouse test, so much the better in every case where the home is worth preserving.

ADDENDUM.

Through the courtesy of Mr. C. B. Hawkins, Honorary Secretary to the Stepney Distress Committee, I have been able to study certain analyses of applications to that Committee from unemployed workmen and work-women, which will doubtless be referred to in his Annual Report but which meanwhile may be of interest to the Commission.

I purposely omitted all direct reference to the experience of this Committee in my previous notes, believing that other witnesses from Stepney would deal with it. As I find this will not be the case, I add a few paragraphs to cover points which might otherwise be omitted; I also add a few (omitted for a similar reason) touching the provision of employment for working women.

18. The Honorary Secretary has had all the papers searched with a view to detecting number of *re-applications*. He finds that out of 160 men from the Borough of Stepney who were *assisted* by the Mansion House Committee of 1903-4, 78 applied to the Joint Committee under Mr. Long's scheme the next year. This makes 48·7 per cent. Out of the 222 men who were *assisted* by the Joint Committee of 1904-5, 84 applied to the Distress Committee the next year. This makes 37·8 per cent. Out of the 305 who were *assisted* by the Distress Committee in 1905-6, 126 re-applied to the Distress Committee last season. This makes 41·3 per cent. If from this 305, those who could not have re-applied (*viz.*, 5 retained at the colonies from the summer of 1906 to the summer of 1907, 2 who had died, 22 who had been emigrated in 1906), the percentage of assisted cases re-applying next year works out at 45·6 per cent.

The recurrence amongst applicants who were not assisted is not so high of course, but remarkable as throwing light on the statement made sometimes, that relief works have created, or are creating, a special class of applicants. In 1903-4, 301 applicants for relief work were not assisted; of these 13, or 4·3 per cent., applied for relief work next year.

In 1904-5, 1,103 were not assisted; of these non-assisted cases, only 463 have been examined; and of these examined cases, 90 or 19·6 per cent. re-applied.

In 1905-6, 1,412 applicants were not assisted; of these, 20·6 per cent. applied next season.

19. In fact, it seemed as though the Central Unemployed Body in many cases was only another employer of casual labour. Instances where the men treated the Central Unemployed Body as merely an ordinary employer wanting men for a three months' job, were very common; they tried to fit the three months' job into those periods when their ordinary casual employers were slack. Thus case No. 805 refused work at Farnbridge for a ten days' wool-sale, and when the wool-sale was over, applied again for Farnbridge. When, after some interval, he was finally recommended to Central for relief work, he wrote to the Committee to say that he had had one day's work the previous week, and expected another that day, Monday, and therefore declined relief work. Two or three months afterwards he called again, and reported that he had earned 18s. to 20s. weekly during December, and 12s. 9d. to 17s. weekly during January, mostly at wool-sales; but for the first week in February (at the end of which he applied), only 6s. Hence his application.

The reserve list system showed the same thing. (By this system extra cases were passed by the Selection Committee as a reserve to be drawn on for unexpected vacancies.) Thus nineteen men who were passed for the reserve list in February and March, 1907, were tested on March 27th, 1907. They had all, of course, previously declared themselves as willing and anxious for relief work. It was found that of the nineteen, nine were now in work, four had left the addresses given, six only were "again out of work." The "again" is suggestive.

20. It may be urged that this class of casual in-and-out worker was not the class intended for relief work under the Act, which is true. But as was said in my first set of notes, the supply of applicants who had till recently been in regular continuous employment was so scanty that in order to keep their vacancies for relief work filled, the Selection Committee were obliged to have

recourse to casual labourers. Then all sorts of difficulties occurred. It was found practically impossible to determine whether a casual labourer was "in distress," through want of employment or not. He might be in distress when the popular Parks work was in question, but not in distress when the less popular Colony work was all that would be offered him. He might be in distress on Monday, but at a job on Tuesday, and again on Wednesday out of a job, and willing to take relief work. The Selection Committee had no means of determining, whether the casual labourer who applied to them had previously *thoroughly* searched for work of the ordinary sort, and failed to find it, or whether he preferred the Central Unemployed Body's casual job, and was applying for it *before* thoroughly searching for other work.

21. The effect of relief work on the wages of casual "in-and-out" labourers is an interesting point. In one or two instances there were indications that casual labourers who had been helped by the Committee were taking rather less than the usual rate of pay for their class of casual work, but whether this was in consequence of the relief work or not, one cannot say.

22. On the whole, the "best" men, the men with a recent record of regular work, who had maintained hitherto a high standard of independence, did not apply. It was not apparently that this class resented inquiry as inquiry. On the contrary, those of this class who did apply, were often proud to give particulars, which proved them to have work records superior to those of the ordinary applicants. To do away with all inquiry would probably drive away even the few applicants of this class, as there would be no means of distinguishing them from the casual labourer to whose work-record they rightly feel theirs to be superior. The reason seems to be something as deep as human nature. Men take a pride in being independent. So do children, if only in the matter of untying a knot in a piece of string. Moreover, the man who maintains his independence even in the face of difficulties, commands the respect of his neighbours, more than the man who is compelled to "give in." To the end of time, the stronger and more self-reliant men will avoid having recourse to Poor Law, Charity, or Relief works. I came across one or two instances of men in this district who would have been received with open arms by the Distress Committee if they had applied, and sent to relief work immediately. I hinted as much to them, but I could not induce them, though to my knowledge they were suffering great hardships, to humble their pride and apply.

23. But how easily this instinct of independence can be broken down among men of more casual work records, is shown by the fact that applications tended to come from certain streets and districts, and these streets and districts not necessarily the poorest. The Central Unemployed Body became known in these streets as a good casual employer and attracted accordingly

24. To what extent did relief work bridge over an interval between two regular jobs and avoid recourse to Poor Law or other help; and to what extent did it merely put off the evil day, or prolong unsatisfactory conditions of labour, and accompany other forms of help?

The Committee noticed in most cases a long interval between the end of relief work and the beginning of ordinary work.* On the whole, the men sent to colonies showed less ability in re-settling themselves into ordinary work than the park men. The Honorary Secretary has analysed the cases with a view to finding out what Poor Law or charitable help had been received by the cases helped by the Distress Committee, and what Poor Law or charitable help has been received by those not so helped. There is not much difference; 39 per cent. of those who were *not* given relief work received, according to his papers, other forms of help; but 28 per cent. of those given relief work received charitable help too.

25. As a comment on the definition of character of the unemployed, given in Par. 1 of the first set of notes, may be mentioned the following curious fact. Out of a total of 333 younger applicants whose industrial history and school standards have been fully recorded, only 44 or 13 per cent. had reached the seventh standard at school; another 78 or 23 per cent. had reached the sixth standard, while no fewer than 211 or 63 per cent. were in the fifth standard or lower when they left school.

Miss M. E. Marshall.
4 Nov., 1907.
Causes of unemployment of applicants to Stepney Distress Committee.

26. Of all the 1,421 applicants of 1906, 103 applicants or 7·2 per cent. were thrown out of regular work during the last ten years by the bankruptcy or failure of the firm which employed them. Of these 103, 70 or 4·9 per cent. of the 1,421 failed to get regular employment again; particulars of these 70 cases are as follows :—

Men who obtained no other work at all	-	2
Men who became "casual workers" in other trades	-	38
Men who became "casual workers" in the same trades	-	25
Men who emigrated	-	5
Total	-	70

Of the two who failed to obtain any work, one was a man of good character aged sixty-six; the other was a barman who became a tramp.

The thirty-eight men who became casual workers in other trades were mostly thrown out of regular jobs of an unskilled nature, as porters, wharfingers and labourers, into similar work of a casual nature in other branches of unskilled labour. In a few (about ten)

instances they appear to have been skilled men once. Thus a French polisher in regular work became a general labourer (casual); a picture-frame maker took to "odd jobs," and a clerk fell to a general casual labourer.

The men who became "casual" workers in their own trades in some instances fell to inferior branches of their trades, for instance, a sewing machine packer remained in the sewing machine trade as a labourer.

The trades from which these seventy men came by reason of bankruptcy or failure of employer are too various to admit of classification.

In a few cases among the seventy, the men had regular work (one job lasting five years) between the periods of bankruptcy of original firm, and application to the Distress Committee. In these cases, of course, bankruptcy was not the cause of application.

On the whole, therefore, bankruptcies and failures of individual firms appear to have been an unimportant factor in the causes of unemployment.

27. The following is an analysis of women's applications to the Stepney Distress Committee during winter, 1906-07 Number of applicants, 36.

Women applicants to Stepney Distress Committee in 1906-7.	CLASS A. WOMEN WITH ABLE-BODIED ADULT MALE RELATIONS LIVING AT HOME.—20. And of
poorly
organised
workrooms
for relief
of women.

29. *A Possible Use of Relief Works for Women.*—Par. 17, written from the point of view of the men, would apply, in my opinion, equally well to the women "unemployed." If workrooms for women, as at present organised, in most cases leave the women at the end of their period of relief work just as they found them, as regards ability to earn their own living, is it not possible to organise them in such a manner, that each woman, in receipt of help, shall be carefully taught a real trade, that will be of value to her afterwards? Into such workrooms only those unemployed women who are willing to undergo a careful and systematic course of training would be admitted.

The present policy of most boards of guardians, in granting outdoor relief practically to every respectable young widow with children who applies for it, might possibly be modified—with a view to encouraging the more hopeful amongst them to learn a trade in the unemployed work-room, or adult technical school, as it would then become. Charitable agencies in certain instances have attempted to train women who have been suddenly called upon to support themselves and a family; but so far, their efforts in this direction have been hampered by the policy of the guardians, who by their offer of outdoor relief, as it were outbid those friends who are desirous of helping the women to be self-supporting.

Miss M. E.
Marshall.
4 Nov., 1907.
Effect of
general
policy
of outdoor
relief to
widows with
children.

30. A certain number of cases of men who have been sent to relief works by the distress committee during of the last year (1906-7) have been re-visited; following are particulars:—

Number to whom work was offered	-	-	-	-	82
Number who accepted	-	-	-	-	58
Number visited (deducting twenty-four who refused work)	-	-	-	-	58
Cases found	-	-	-	-	43
Cases not traced	-	-	-	-	15

Poor results
work under
Unemployed
Workmen
Act in
"tiding
over."

Of the forty-three cases visited only five obtained work immediately after quitting the relief works.

The following table shows the interval of idleness before work was obtained in the other cases.

Period of Idleness.

No Interval.	Interval under 1 month.	Interval under 2 months.	Interval under 3 months.	Interval under 4 months.	Interval under 5 months.	Interval under 6 months.	Over 6 months.	Indefinite.
5	4	3	6	4	0	1	5	15

This is suggestive in view of the intention of the Act to bridge over an interval of unemployment between two regular situations.

Of these forty-three cases, twenty-six had been in regular work before their applications, and the balance—seventeen—were in casual work at the time of application, or had been out of work for some time.

At the time of re-visiting (September, 1907) only nine, unfortunately, had returned to regular work, and thirty-four were now in casual work, or out of work.

Thus of the seventeen who were originally casual or out-of-work applicants, not one has been converted by the relief works into a regular worker; and of the twenty-six who were originally in regular work, only nine have been prevented from dropping into the class below.

General
effects of
relief work
shown
in cases
re-visited in
Stepney.

32. The forty-three men were asked either personally or through their wives, what permanent effect the relief work had had upon their position; of these, ten only considered themselves in a better position after the relief work, twenty-one said there was no change in their position, and twelve considered that they were worse off. The total of cases assisted by the Stepney Distress Committee, is, of course, much more than fifty-four, but fifty-four was the total number of cases re-visited to date (September 30th).

Several of the men and their wives said they "were very well satisfied with" the relief work. Several asked when the relief works would be opened again. A visitor who looked up 23 of the cases, reports that out of the 23 in two cases the work tided the men over a period of unemployment; in one case, after a stay of two and a half years at Hollesley Bay, the man "had learned something"; in one case the relief work gave the man a desire to live in the country; and in seven cases (Hollesley and Garden City cases) the men's health was permanently improved.

82148. (*Chairman.*) Your Statement relates to the persons who have applied under the Unemployed Workmen Act for assistance or relief?—It does.

Status of
persons
applying for
relief under
Unemployed
Workmen
Act.

82149. You are aware that the Memorandum of the Local Government Board gave a special definition of the persons for whom that Act was intended?—Yes.

82150. That was: The respectable persons usually in permanent employment who are temporarily out of employment. I rather gather from your Statement that only a very small proportion of those who applied come within that category?—That is so; a very small proportion.

82151. You give some very interesting statistics as to the Stepney Distress Committee; and in your note to Paragraph 3 you point out that out of 1,710 persons registered only 188 could be classified as skilled men, so that the class for whom the Act was specially intended have not in any material number come for assistance under it?—No; and I should say as a class that could be got at by any distress committee, or any public body, or any charitable society, it does not exist, because I think that they meet their troubles in other ways, and cannot be induced to apply.

Status of
persons
applying for
relief under
Unemployed
Workmen
Act.

82152. You give an analysis of the causes of this unemployment, and you make one remark in your note to Paragraph 6 which seems very pertinent. You point out that for many of these persons getting work is a mere gambling transaction?—Yes.

Thrift
difficult
for under-
employed
persons.

82153. You draw from that, I think, the legitimate conclusion that such being rather the nature of the life of the individual it is difficult to infuse thrift into them?—It is; and more than that, even if they had the desire to be thrifty, as I think many of them have, they have not the means to provide by their own savings against times of unemployment. I think that many of them when in normal work are so under-employed that though the rate of pay may be fair enough, yet it is not sufficient for them to have any margin.

82154. The rate may be fair enough, but the number of hours is limited?—Yes.

82155. In your judgment you think that the public problem of helping this particular class has its limits, or should be limited?—I do.

82156. I think the answer that you made just now gives one of your reasons for so wishing to limit it, namely, a certain class will try and help themselves, and they will not willingly come to distress committees or to charity?—Yes.

82157. Therefore you think from your experience that that class may be eliminated?—Yes.

82158. We will now come to the classes which you think constitute the public problem, and whom you describe as those who belong to the unorganised trades, or trades employing an abnormal proportion of irregular hands, who, as they are chronically under-employed, are unable to provide by individual or group thrift against

Men "too
old at fifty."

Miss M. E. Marshall.
4 Nov., 1907.
periods of depression. Following up your analysis, do you find that a certain number of these men are men who are too old at fifty?—I think I have ruled them out, as being problems, perhaps, for trade groups or their families, but I do not think they have flooded our distress committees.

Increase of casual workers who have difficulty in finding employment.
82159. You have been a good many years connected with the Charity Organisation Society?—Yes; eight and a half years in the East End.

82160. May I put a question to you upon that point: Do you think there are more of this class who now find difficulty in getting employment than there were, say, five or ten years ago?—It is a little difficult to estimate, but I should say since the distress committee has been running that the class has somewhat increased.

Workmen's Compensation Act as cause of unemployment.
82161. It has been suggested to us that the Workmen's Compensation Act has had an effect on unemployment; should you agree with that, is that your impression?—Yes; I have come across one or two instances of men dismissed because of that Act.

Skilled men in seasonal trades outside the problem.
82162. You go on to say you would exclude certain seasonal trades?—Yes, where the seasonal trade is a skilled trade consisting of men who, as they are skilled, and are the same men year after year in the trade, have a chance of combining and doing something for themselves.

82163. As an illustration, I suppose I might take the skilled trades of the building industry?—Yes; the builders and bricklayers.

82164. The unskilled who would be connected with the seasonal trades, I suppose, would come in your judgment within the problem?—Yes, they would.

Difficulty of organisation of low-grade labourers.
82165. Now we come to your remedies. The first and most English method you point out would be for these low-grade labourers to organise themselves, but you doubt if under present conditions that is practicable, as not only are they weak individually in themselves, but there is a constant accession to them from other groups?—Yes. I think that is the great difficulty, that you are not dealing with men who know each other and meet each other and are in the trade year in and year out, but they seem to be floating in and floating out, so that the men cannot easily combine to effect this object, which seems to me to be more work; not so much a higher rate of pay, although that may come in, but more continuous work.

82166. I assume you attach very great importance to regularity of employment?—Yes.

82167. And reversing it, irregularity is the most serious of the evils which you mention?—Yes.

Little likelihood of decasualisation by employers.
82168. If these men, from the conditions which surround them, are not likely to be able to organise themselves, you rather doubt if the employers will take any strong measures to improve the state of affairs?—Yes.

82169. The two reasons are, their natural conservatism, and, I assume, also that it gives a surplus or a reservoir of labour which is at times convenient?—Yes. I think so long as this system does supply an employer with a sufficient supply of good labour, or labour that is good enough for his purpose, it is not natural that he should make any change. I think many employers may already feel that perhaps they ought to know what their casual hands of two days a week are doing with the other days of the week, and I should like that spirit to be increased amongst the employers. So many employers, I think, say they can get quite enough good hands when they want them, which they do on so many days in the week; but if you ask them what do those good men do on the other days of the week, you find that they have not thought about it.

Partiality of men to casual labour system.
82170. It is alleged sometimes that a certain section of those engaged in casual employment like it, because it enables them to break their employment without losing it. Should you say that that feeling now exists to any considerable extent?—I am afraid it does exist, but I think it is a case of the appetite growing on what it feeds upon; they having got used to that system find it difficult to work regularly.

82171. Should you say that the liking of being able to be a day or two off, and then go back to their employment, would be a serious obstacle to curtailing the casual employment on the part of the men?—I should not say it would be a serious obstacle; it might be if things were done suddenly all at once, but if a gradual effort were made to lessen casual work, I think that the labour would adapt itself.

82172. You think that the employment exchanges might be considerably developed, and that through them a great deal of good could be done?—Yes, I hope so.

82173. I suppose that your idea is that through those exchanges and by appeals to employers and others, you might be able to increase the regularity of the employment of certain classes which Mr. Booth described as Class A and Class B?—Yes.

82174. But assuming that was done, then comes the difficulty, what is to be done with Class C?—Yes.

82175. You attempt to deal with that towards the end of your Statement where you make suggestions, but I see you are cautious because you point out that there is always a danger of increasing the number of the unemployed through the very means intended to relieve them?—Yes.

82176. I suppose you hold the view that indiscriminate charity, and some of these press funds, and so on, have done harm in that direction?—Yes, I think they have.

82177. Are you strong in that view?—Yes, I am. I have been very struck by the spirit of some of the men who come to interview me. I am Secretary of the Charity Organisation Society in Whitechapel, and every day all sorts of people pass through the office, and I have been struck during the last few years by the attitude of some of the hale, fine-looking casual labourers who come in and sit down, and tell me they cannot get work; that they are very respectable men, and they do not drink, and they have a wife and six children. Which kind lady is going to get them a job? We think that some of these men, good men in many ways, are beginning to think of themselves as objects of interest to the community—victims, and I am very sorry to see that spirit. I would very much rather that they should be looking for the work themselves instead of asking me to find it for them, or at any rate that they should feel it was a strong thing to come and ask the ladies to find them work. I think that spirit is perhaps growing.

82178. The remedies that you indicate would operate rather in the other direction?—Yes.

82179. May I just take you to one of your remedies? In your note to Paragraph 14 (c) you suggest that it should be illegal in certain scheduled trades for the employer to engage a labourer for less than a given time, except through an exchange?—Of course, I think that would be a very strong measure indeed. I do not advocate that, but I thought I ought to add a note explaining what I mean by being "encouraged by the State" or rather being "superseced by some compulsory system." But I should hope very much that on present lines a good deal may be done, especially if the employment exchanges could be worked not by ourselves (I am on the committee) but by some distinguished and well-known people whose names would carry weight.

82180. Would you like them to be so dissociated from any Association with the name of unemployed, that the employers might know that they would get other than the unemployed?—Yes, and I would like a Cabinet Minister in the chair, and perhaps members of this Commission working it, a class of people whose very presence on the committee would make people think there was something in it.

82181. Would you be opposed to the employment exchanges being official exchanges under the municipalities?—I think I should at present oppose a scheme to transfer them to the municipalities, because I think it would not be giving them a fair chance. I think they ought to be given time to see what they can do on their present lines; then if we find they cannot succeed in getting the confidence of the public, I should not oppose their being transferred to the municipalities.

82182. A labour or employment exchange to be effective must be one of a large system?—Yes.

Labour exchanges means of decasualisation.

Bad effects of indiscriminate charity, press funds etc.

Suggested principles and machinery of labour exchanges.

Miss M. E. Marshall.

4 Nov., 1907.

82183. I suppose you would contemplate, no matter what the machinery was, that these employment exchanges would be gradually extended all over the kingdom?—Yes.

82184. If that were done you would suggest that preference should be given to the persons who were registered?—Yes.

82185. To do that it would be necessary to get some skilled organisations, like trade unions and others, to approve of these employment exchanges?—Yes. I quite see that you could not limit your employment exchanges to the unskilled labourers without the risk of losing the sympathy of the employers.

82186. You make another suggestion, which I think is an original one. You suggest it might be possible to extend to land industries the system which the Board of Trade now adopts with regard to seamen?—I think that is a description of what I mean by "superseded by some compulsory system." I gather that the Board of Trade system is compulsory, and I thought that supposing things ever came to a compulsory system something on those lines might be possible, but I should like to repeat that I do not want a compulsory system rushed at until after a fair trial of the voluntary system.

82187. All these suggestions would go in the direction of more registration of individuals?—Yes.

82188. You have had some experience. What do you think those who would have to be registered would say to that? Do you think there would be a great objection? There is supposed to be a national prejudice against any idea of registration?—I have not found it in Whitechapel. I send a great number of men down to register. When they tell me they are out of work, I say, "Register," and they do not seem to resent the suggestion.

82189. Registration, to be effective, as you suggest, would necessitate some inquiry, and they would have to give their certificates and so on?—I think they do already take up the references of the two last employers, do they not?

82190. You do not think that is a serious objection, or do you think it is one that would have to be very cautiously dealt with?—I do not think it is a serious objection at all; my experience is that people do not resent inquiry, not if it is done in the right way. These men are aware that there are a great number, at any rate in our part of the East End, Whitechapel, whose work records are not so very excellent, and they think it quite natural that people should wish to know something about theirs.

82191. It has been suggested to us by various witnesses that a man's condition and his wants are best tested by his willingness to work; that suggests at once that there must be a form of work by which that man can be tested. In your judgment you would prefer that the test should be that of private employers?—Yes.

82192. I understand you are against anything like a large system of works by any public authority?—Yes, but at the same time I think there is room for testing the unemployed by the public authority; therefore, I should welcome perhaps some more specialised test than we get at present in many workhouses. I think that the workhouse master has to deal with so many varieties of people, from the ruffian who tears up his clothes to the decent man out of a job, that he may not always be able to adapt his manner to the case in point, and I should like to have a few specialised workhouses, if you like to call them so, or labour colonies if you prefer the expression, to be run by specially expert workhouse masters, specially expert in that class of case.

82193. How would you use those? I think we are all agreed that the person who will not work should be sent to one of those workhouses, but I am taking the case of someone who comes up and applies for employment. Would you send him off to some particular establishment, and there put the test on him; is that your idea?—I should like something, I think, to supplement our Whitechapel system at the present moment. When a man applies to the Whitechapel guardians as an out-of-work case, the relieving officer sends him along to us, and we look into the case, and we are sometimes unable to do anything. If the home seems good, and the man trying, we suggest to the relieving officer (he would,

perhaps, think of it himself) to offer him work at the workhouse for a day or two, to see what he is fit for. At the end of the day he takes home his wages, all in kind, and that keeps the home together for a bit. I should like, after a day or two, which proves that that man is willing to do something, though ignorant and perhaps untrained, to be able to send him to some specialised place where he would be kept hard at work, and when not hard at work hard at lessons, and when not at lessons doing drill, head work, bookwork, anything to make him a little less stupid.

82194. As regards individual deserving cases your view is that there is a fund of charity in this country, which you think can be relied on to deal with those cases; is that your experience?—It is. I think we had about fifty (that is my estimate though some say less, thirty to fifty) good cases that applied to the distress committee, well within the meaning of the Act. I think that the charitable forces of the borough could have dealt with those fifty cases quite well, but of course, as this Act had been passed, and a distress committee was in existence they went to the distress committee.

82195. We might put those cases on one side, but now we have still to deal with the mass of the Class C, which is the problem. You criticise the workhouse system, you think it is deterrent first, and educational second, and you would rather like to reverse that system?—Yes.

82196. You would prefer to deal with Class C, that is quite the residuum, solely through the agency of the Poor Law?—Yes.

82197. More classified, I suppose?—Yes, a more classified Poor Law I think is my idea.

82198. I assume that the persons whom you mentioned who were tried at the Whitechapel workhouse and took their wages home in kind, were made paupers by that relief?—Yes. You must remember that they had a chance of being saved from pauperism. They were sent on to our committee to see if we could do anything for them, and if it had been within our power to do anything, if their character, and ability, and training, and adaptability had been such that we could, they would not have become paupers.

82199. You would continue the existing Act?—I am afraid I would not. I think the machinery is too elaborate. To deal with the fifty cases you do not want a borough committee.

82200. Though you would not continue the Act, if the Poor Law was reformed, you would try rather to enlarge its operations by a more thorough classification?—Yes.

82201. And you would try by that more thorough classification to deal with the class we have been talking about?—Yes, while at the same time trying to prevent its development beyond the normal by an active system of employment agencies, because it seems to me that what develops the class is the chronic under-employment.

82202. I suppose you feel that to get that right it is preferable from a general social point of view to regularise more the employment of the higher grades, and make special provision by the Poor Law for those who would be pushed altogether out of work?—Yes, that is right.

82203. Do you think things are worse in Whitechapel now than they were when you began to work there?—No, I do not think so, except so far as that subtle change of tone is concerned. I think that is a dangerous sign.

82204. You mean the less reluctance to come to the Poor Law?—Less reluctance perhaps not to come to the Poor Law, but to come to other people. I do not like to see these great men asking me for work. Sometimes I try to put the position to them and say: "What shall I say to the foremen when I go round and ask them to give you work? Shall I say you are too shy to ask for it yourself?" and sometimes they see the ludicrous side of it. When you come to think of it, it is ludicrous.

82205. I have asked you about Whitechapel, did your previous remark apply to Stepney, which is a good deal bigger area?—I think my remarks would apply to the borough.

82206. To the whole area?—Yes.

Miss M. E. Marshall.

4 Nov., 1907.

Analysis of certain applications to Stepney Distress Committee.

82207. (*Sir Samuel Provis.*) When you say in your note to Paragraph 1 you have analysed 108 unselected applications, does that mean applications taken at random?—No, it means taken consecutively out of the books.

82208. It does not mean applications which were refused?—No.

82209. It means applications which you drew just as they came, without any selection?—Yes, in chronological order. In about one-third of them the failing or the weakness that had brought the men to the distress committee was a personal one; in about two-thirds there was no indication, but I think that the special analysis that the distress committee made of the careers of the younger men gives an indication of some other failing. They hunted up the records of 333 of the younger applicants, and they show that of these 333, 65 per cent. did not get higher than Standard V. in school. I think that points to the fact that many of these men are stupid. They may be very good fellows, but not quite so intelligent as their neighbours.

82210. These are the people who naturally fall into the ranks of the unemployed when there is a want of employment?—Yes.

Elaborate local organisation of Unemployed Workmen Act not necessary.

82211. Then I think you told the Chairman that you would not be in favour of continuing the present Unemployed Workman Act. Perhaps you had in mind then continuing it for the purpose of providing work. Would you continue it for other purposes?—I think I had in mind the very elaborate local organisation. I do not think that these borough committees are justified. I am not sure that I would not continue it for special branches of the work.

82212. That is to say you would amend it rather than abolish it, is that it?—I would amend it so thoroughly that it might come to the same thing.

Suggested modifications of machinery of Unemployed Workmen Act.

82213. Let us consider that a little. You think the organisation is too elaborate. Would you get rid of the distress committee and have only the Central Body?—I think that would be better.

82214. Appointed directly by the existing local authorities?—I should like to leave out the borough councils; I do not think they have much experience of these questions.

82215. Would you make the central body representative of the boards of guardians with added members?—I think that would make a good nucleus.

82216. That would give it rather a Poor Law flavour, would it not?—Yes.

82217. Perhaps you do not think that an objection?—I quite see your point. You think that the history of the Poor Law is such that it is almost too deterrent?

82218. Yes, that at all events it might be regarded in that way?—I should not think that a central body largely made up of guardians with others co-opted, and given some name that represented its action for all London, would necessarily be closely connected with the Poor Law in the minds of the public.

82219. At all events that would be a thing to be borne in mind which might, perhaps, be avoided by some method?—Yes.

82220. Supposing we had that arrangement, what part of the present duties under the Unemployed Workmen Act would you assign to that body?—I think I should like to see some such body as that running what I call the specialised workhouse. I do not think workhouse is the right name, but I will take it *pro tem*.

82221. You would like to have an institution under that body which was of an educative rather than a relieving character?—Yes.

82222. In the method you described to us just now at Whitechapel the persons are not admitted into the workhouse at all, I apprehend, because I understood you to say the relief was given them in kind, which they took home?—Yes.

82223. Therefore they are not admitted to the workhouse at all, I presume?—No.

82224. But perhaps you would say that in your The institution you would admit people into the building; is that so?—Yes.

82225. That would be, would it not, a form of Poor Law relief?—Yes, it would.

82226. Would you contemplate that the disabilities which attach to relief should attach to the people who were admitted into that institution?—Yes, I think I would, and I think it is fair. If a man is unable, through stupidity or through some lack of adaptability, to fit himself into the social system, and puts us to the expense of trying to fit him, I think he must pay for it.

82227. Therefore your institution would be a Poor Law institution?—Yes.

82228. So that the people who are anxious that something should be done for persons, out of employment for no fault of their own, which does not involve the disabilities of the Poor Law would not be quite satisfied with your scheme?—I am afraid they would not be.

82229. In Paragraph 15 (b) you deal with older members, or those not physically so fit, who may be brigaded into a reserve to be called upon only in times of great pressure. How do you contemplate that they may be maintained in the meanwhile?—I notice that a great many of the dock labourers get three days work a week normally and seem to manage. It seems to me that some of the older men, knowing how very heavy the work is, have quite as much as they are able to do without over-exerting themselves, so if the younger men can live on that, I hope that the older men, with the savings of their younger days, and the help of their families, will be able to manage on three days' work a week in normal times, and full work only in times of pressure.

82230. You would rely upon their savings or assistance from relatives, and so forth?—Yes.

82231. You do not contemplate any State maintenance?—No.

82232. Whether local or Imperial?—I think the docker might take the fact that later on he will be getting less work a week into consideration, and fix in his own mind a rate of pay for the amount of work on which he can live and put by, remembering that after a certain age he will be getting perhaps only three days work a week.

82233. (*Sir Henry Robinson.*) You spoke of men dismissed on account of the Workmen's Compensation Act: is that a common occurrence? Could you give any instance?—Yes, there was one man who was blind, and he had been for twenty-three years caretaker, if you please, of a boys' club: he swept and he cleaned the windows. After the Act the committee that managed this boys' club became frightened, and dismissed him. There were two men down at the docks, one was a very good man of sixty, a docker, very reliable, but getting cataract, and his employer, a wharfinger, was very sorry to part with him, and gave us 5s. a week for him for many months, but he said he dared not keep him where cranes were working.

82234. You speak in your statement of the regulations made by the Board of Trade which compel the employer of a seaman to enter on his book an account of his character and capacity; but is not that to protect the captain of the ship almost as much as the man himself?—Yes.

82235. It is rather different from a trade ashore. The captain of the ship is so entirely dependent on his crew; and if he has drunken and inefficient men he cannot get rid of them at sea, therefore there is a great necessity, in the case of vessels at sea, of a register of that sort?—I should imagine that was the origin of the provision. It was for the sake of the employer, but it is done, and therefore the principle in a way has been granted, not that I want it to be applied to this case immediately.

82236. My point was that it is a very exceptional case to take vessels at sea; and inasmuch as the Board of Trade have to keep a copy of every character of every seaman of course, they could hardly do that in the case of every workman?—No.

82237. It simply meets an exceptional case like that?—I do not think I put that note with a view of its being copied with regard to our unskilled labourers, or the insufficiently employed, but rather a note as to what I meant by "superseded"; it was an analogy.

The "specialised workhouse."

Position of older men after decasualisation.

Workmen's Compensation Act as cause of unemployment.

Analogy of Board of Trade regulations as to register of seamen.

Miss M. E.
Marshall.
4 Nov., 1907.

82238. With regard to the specialised workhouse designed for the unemployed only, how would you differentiate between that and the ordinary workhouses? Would you pay the people who came in for their labour?—I do not think I would; they might have a little encouragement money.

82239. If their relations were outside, as I think you contemplated in that case, it would not be necessary to bring the families into the workhouse; they should be left to keep up the homes?—My idea was that the system of the present distress committee might possibly be adopted, which is an allowance to the wife and children proportionate to their needs. My difficulty at present is that these men who go away to these labour colonies come back in very much better health but otherwise in just the same position as they were before. I am quite aware that in the labour colonies on the Continent men who have submitted to this training very often do not find work afterwards; but I think it is not so much the man who goes there whom we must remember, as the many others who, feeling there is nothing else for them but that educational workhouse if they do not somehow fit themselves for work, will be inspired to fit themselves. I think it is the indirect result that will be most useful.

82240. You contemplate that one of these specialised workhouses would serve a good number of unions?—Yes. I do not think the number to be started would necessarily be very great. I think very few would do, so long as they succeeded in capturing and keeping the interest and sympathy of the public, while doing their work extremely well. I do not think there would be so many applications for admission.

82241. It would be deterrent, I presume, in the sense that the people would be under discipline there?—Yes.

82242. And educational, because they would be taught certain trades and certain things while they were there?—When they were not at work I should not mind what they were taught—history geography, or anything that came handy, so long as they were kept at study pretty hard, and thus returned to the actual physical work with relief. They should be under discipline of some sort all the time, almost like boys at school.

82243. Might not the difficulty be in ordinary seasons that there would be nobody in these houses, whereas in periods of great distress they would not be large enough?—They would be difficult to run, I think, but that is a difficulty which applies to the unspecialised workhouses.

82244. An unspecialised workhouse is obliged to make provision for all seasons?—Yes.

82245. There is generally a large vacant space at all of them, is there not?—Yes.

82246. (Mr. Patten-MacDougall.) I suppose it accords with your experience, does it not, that very few sailors and seamen apply for relief?—Very few.

82247. Do you find also that as regards distress committees there are very few applications from sailors and seamen for employment?—Yes, not nearly in proportion to the number of soldiers.

82248. Have you ever tried to account for that?—I have accounted for it in my own mind by the feeling that his training at sea made him so very adaptable a man and he has so very thorough a training.

82249. He is ready to take on another job when it offers?—Yes; he is taught to do everything—make his own clothes, and even think.

82250. Have you any instances of that which you could give us?—I should not be able to give you many instances, because I have to say they have not come near me except in two or three instances, and then generally there has been some fault of character to account for their application for help. There was one very smart young seaman who came to me, and the blemish that brought him was eyesight; but the normal ordinary sailor would not come near my office, nor the distress committee's.

82251. Leaving sailors out of account, do you think the adaptability of the other part of the community is increasing or decreasing?—I am afraid decreasing, and I think perhaps it is largely the fault of the public and the papers, who are so spreading the view that if a man cannot

find work at his own job it is the duty of some kind lady or the State (which is the same to him) to find him a job at his own trade and at the normal rate of wages. It is just that subtle alteration in tone that I notice.

82252. It is not the want of ability to adapt themselves to other things, is it? Would you say that has also decreased?—That is a psychological question; I believe it is not so much the man himself as the atmosphere in which he is living at the present moment.

82253. We have been told to-day as to dockers that they are more adaptable?—I should think so. I do not believe the men could not take other jobs, if only one could induce them to look for them.

82254. You are all in favour of labour bureaux, I think?—Yes. Question of labour exchanges for boys and girls on leaving school.

82255. When would you begin them? Would you begin the labour bureau for boys and girls when they leave school in place of allowing them to drift into all kinds of casual labour?—I should like some sort of bureau, but I am a little doubtful about the advisability of dealing with the children at the ordinary bureaux, because there is a difference. The ordinary bureau for the ordinary grown-up man or woman is the better the more automatic and impersonal it is. Now these children cannot be treated in that way. To begin with, they are not individuals, they are members of the family. There is an anxious mother to be interviewed, and a father to be seen, and a great deal of talking and thinking and arranging to be got through. I do not see how your clerk, who is automatically working his exchange for the grown-up people, can do the personal work amongst the children and their parents, and the school teachers, who have very great influence in these matters. I think you must have a separate set of people, and a separate institution, though perhaps one closely connected with the ordinary employment exchange.

82256. In order to prevent this kind of thing: that the father or mother when the boy or girl leaves school has no time really to inquire as to where employment may be got, and says to the boy or girl, "You must find something to do for yourself"?—Yes.

82257. That is the sort of thing, is it not, which leads eventually to loafing?—Yes, it is a very serious problem, but I do not feel that you can trust the boy to run up to the employment exchange himself. He goes there, and you ask him what he wants to be, and he says what comes into his head. If he has been reading about balloons, he may say he wants to be a balloon engineer. If it is about pirates it may be something else he wants to be. Generally it is electrical engineer at present; that is the fashion in the East End just now.

82258. You do not on principle object to bureaux for children at that age if properly supervised?—No, I think they are very much wanted.

82259. You think it would meet a felt want, do you?—Yes, but it should be a bureau very closely in touch with the school and working rather differently, with different methods.

82260. (Mr. Lock.) You mentioned the case of the sailors, but in that case you have a regulated employment: do you think you could have a system by which that particular class which is most in trouble, being unskilled, might in some way come under a regulation from the point of view either of requiring them to put by money or any other way whatever?—A kind of trade union, something organised by the men themselves?

82261. I think you suggested there might be something in the nature of a ticket which they would have to show?—Yes.

82262. If you get that form of registration (rather a different form to that suggested by the Chairman) on that you might build possibly?—Yes, if you have a body of people whom you know, certain individuals with certain badges or numbers, as opposed to a shifting, more or less, elusive set of men.

82263. If that body were known to one another as being employed primarily, we will say, at the docks, though they were either A men or B men, do you think on that you could build?—I think you could. I think that if you can get a group consisting of the same

Problem of regulation of unorganised trades.

Small number of sailors applying for relief; and reason thereof.

General decrease of adaptability of workmen.

Miss M. E. Marshall.
4 Nov., 1907.
Problem of regulation of unorganised trades.

individuals, quite half what you want to do is done. My difficulty is that men take up this dock work two days in the week, and on the third day they are extra hands elsewhere. Moreover, the dock is so big and stretches so far down the river that it seems very difficult to find out who are doing the work and who are not. When you have found out who are doing the work this week, you do not know whether next week they will be the same men or largely different.

82264. I suppose it is true that a great many of the men that work casually work casually in preference, particularly at the docks?—Yes, that is so.

82265. So that the dock would be the best place, more than any other, to catch him most frequently?—Yes, the docks would be a very good experimental ground, I should say.

82266. If that were done do you think they have not any money to put by at all, granting all their work, so that whatever they did they could never save?—Yes, that is my belief. Of course my general belief is that any man of any class ought to earn enough money to put by sufficient to keep himself in slack times, and I think most classes do somehow succeed in avoiding giving the public all this trouble, but that class does not succeed and gives us anxiety annually.

82267. Do you think the problem must therefore be given up as they would not have enough to put by; is that your argument?—I think we must not give it up, but we must try to see if we cannot get a less number of men to do the work. At present it seems to me that many of these men are perfectly content if they get three or four days work a week; at any rate they do not grumble, and they keep their families, and they are often very good men, but there is not a halfpenny margin. Then a slack time comes, and their work drops to two or three days a week, and then all the trouble begins. I should like those men to have normally five or six days' work a week so that when a slack time comes they could drop to three or four days, and could then manage without becoming a public problem.

82268. You would have to regulate the labour at the docks from the point of view of the employer, would you not, on that basis, requiring him to employ only so many men so many days?—I should not wish to interfere with the employers. Of course one has to hear their point of view, but my impression is that there are so many men who normally get only three or four days a week that a less number of men could be more fully employed without the employers being in the least incommode or rearranging their work in any way.

82269. But the difficulty is, is it not, to bring the chaotic mass of labour into some form of compulsion to hold it and regulate it?—Yes.

82270. Do you think that the employers could be induced to take any step which would make them the responsible parties in that organisation of labour?—I should hope so, but I do see that self-interest would not lead them to do it, because the good employers down at the docks seem to be able to get as many good men, good casual men, as they want under the present system; and therefore, though I know many of them are quite willing to try other methods if it is proved to them that they may be for the good of the community, I think one ought not to trust too much to them to take the initiative.

82271. Does that not lead one to suggest there must be, by compromise or in some other way, a series of regulations accepted by both sides with the trend that you desire?—Yes.

82272. If that is so, and supposing that preliminary were possible, do you think it would be possible to arrange that out of every payment for a day's work there might be some subtraction made, which would be put into some kind of recognised fund for the benefit of the men, when they were out of work, some *interim* time passing before they could draw it out?—I think that would be an excellent arrangement.

82273. Do you think that the men themselves would fight against it on the ground that it was a subtraction from wage?—I think they would at the present moment, when many of them are getting normally three days' work a week only, because they would say that the extra 6d. was very valuable to them.

82274. Granted that it would be more valuable if they had it later on, would the 6d. represent actually the margin between existing and not existing, as they now live?—I am doubtful whether there is a margin in so many of these cases. I am doubtful because I have seen them try. I know many dockers who have joined sick clubs on two or three occasions when in pretty regular work, and have made little efforts for thrift, but have drifted out in past periods of unemployment. I am very anxious that it should be left to them, and made part of their work, to make their own provision, but I think they must start with a greater amount of work a week.

82275. Supposing there was any possibility of forming what would be a union for this particular purpose, you would have to rely first upon the creation of that union leading to fewer men being employed for longer times?—Yes.

82276. And out of that you would expect the growth to be?—Yes.

82277. (*Miss Hill*). Am I right in gathering that you rather regret that a second relief society has been introduced in which relief does not disqualify?—The distress committee?

82278. The distress committee? Would you rather have trusted to a development of the Poor Law system making it more remedial and more varied in its action?—Yes, I think I would, though I must own the local distress committee in the East End taught us a very great deal; as an educational process it has done something.

82279. At present you have seen just the germ of remedial and helpful Poor Law action with regard to able-bodied men at the Whitechapel Workhouse?—Yes.

82280. But that is so very exceptional?—I suppose it is.

82281. If it were to be developed it would require a good deal more connection with the charitable outside world, would it not? It could not depend wholly on the guardians, and on their officials, could it?—No, I think that the guardians ought to be able to refer a man who looks somewhat above the average to someone or other, if it is only to a guardian in his private capacity.

82282. When guardians have been in active and real communication with the Charity Organisation Society, a great deal of that kind of thing has been done, has it not?—Yes, in a very informal way. The relieving officer says, "So-and-so does not look quite the ordinary sort of man that comes to me, do have a look at him."

82283. But if that idea could be developed and more stress thrown on trying to start these people when first they come to the workhouse, you think more might be done with them?—Yes, I do.

82284. You have not thought that the establishment of the distress committee has increased the self-reliance of the people or their tone with regard to getting this work?—No.

82285. So far it has paralysed them, and not done them good?—That is so.

82286. Then with regard to the very interesting parallel you suggest between them and the sailors, have you heard of the same sort of thing having been done by the society for training charwomen?—Yes.

82287. They have, have they not, arranged that the employers should enter into a book which is provided the character and actions of the women?—Yes.

82288. That forms a character even for casual workers, which is of great value to them?—Yes, it is a very excellent system.

82289. Are you aware of that having been done in any other direction?—I am not.

82290. There I think they have both a central registration, and this gradually accumulating character for the person to whom you may send if you want a casual worker?—That is so.

82291. You do not know of it being done in any other case?—I am afraid I do not.

Question of compulsory insurance against unemployment.

Advantage of distress committee in Stepney.

Reform needed in Poor Law treatment of able-bodied.

Effect of distress committee on workmen.

Question of compulsory insurance against unemployment.

Policy of
guardians
as to out-
door relief
to be
given.

82292. When the applicants first come before the guardians, there is very little consideration usually as to whether they can be put in a self-supporting position. When a young widow comes before the guardians, they usually consider whether they shall give her 2s. 6d. or 3s. a week, or nothing, do they not?—Yes, that is the unfortunate state of affairs.

82293. With regard to certain London guardians, seeing how many people they have in their care, and how many institutions, it is exceedingly difficult for them to look beyond?—Yes.

82294. Unless they do come in touch with a body like the Charity Organisation Society, or some people who have time to take up the individual cases pretty strongly?—Yes.

82295. (*Mrs. Bosanquet.*) Do you think that Poor Law relief has any bearing upon regularity of employment?—I think it has. I think, with regard to the women who were just mentioned, a widow who has got a little allowance from the guardians, can do with, perhaps, two or three days' work a week, whereas if she were not getting that little allowance from the guardians she would not be content with that insufficient work and could not live on it, and would get slightly more regular work. I think our women of Whitechapel who do not get outdoor relief seem to be, on the whole, perhaps not so much paid at a higher rate, but getting more continuous work than those who do.

82296. (*Mr. Gardiner.*) Are you referring to the women who are employed as scrubbers?—Yes.

82297. Is that a special thing that would affect the problem of labour of Whitechapel women?—I do not mean scrubbing at the infirmary; they may be tailoresses or charwomen, or anything of that nature; they are not quite so under-employed as those are who are getting out-door relief.

82298. Is that true of the Gentiles or the Jews or both?—The Gentiles. I am afraid I have not much experience amongst the Jews.

82299. The Jews do not come to you very much?—They have a very excellent society of their own. They do come to us.

82300. With regard to your third note to Paragraph 17, can you tell us who that was?—I believe that he was a schoolmaster.

Be-
nevolence
of
the
guardians
towards
widows
with
children.

82301. (*Mrs. Bosanquet.*) Would you be in favour, in cases of widows with children, of giving them enough to live on without going to work at all?—I would so much rather they were referred to some body that would teach them a trade, and that the guardians would suspend their final action until they had a report from that body. I think these young women ought, if possible, to be left to support one or two children. I think if you try to give them enough to support the children without work they would not do it, they would still work a little; I think the result would not be very satisfactory.

82302. You do not think the children would suffer from being left?—No, I do not. Personally I have found that the boys who have been sent to the guardians' schools do better than the boys who have been left at home. I do not know how it is, but I think our East End women are often not able to exercise the discipline that is wanted with the boys, and that often these widows' boys turn out badly unless they have been sent to the Poor Law schools.

82303. But do the one or two that are left with the widow suffer if she goes out to work?—I do not think so.

82304. (*Mr. Gardiner.*) Assuming there are five children, the care of five children under thirteen is enough for any one woman to undertake?—Yes, it is too much, and she will not be able to keep the boys in order if she does not take care. These women are very devoted to the children, and they spoil them a good deal, and they have not much sense of discipline—(perhaps they have not been brought up themselves with much discipline in the home)—and then there is no father; I think the boys in that class particularly suffer.

82305. Do you think if they were removed from Whitechapel into a rural district the same thing would happen?—The whole family.

82306. Yes?—I do not know about that.

82307. You have never had any experience of that?—No.

82308. You have never tried it yourself, or at your board?—No, but I have been very struck with the difference between the way the boys turn out—the widows' children; it is the boys, not the girls, who miss the father so much.

82309. Do you find that when those boys who are taken away are restored to the ranks of labour, that they care for their mothers as much or more than the boys who are dragged up in the home?—More, especially where the mother is kept in touch with them and sees them on the proper days. I know one or two families in which the tone is excellent; one in particular, where the mother was a very poor-class woman—a decent woman, but with not much character. Her boys (two) have come home; one is now seventeen and the other fifteen, and they are quite the strength of the family.

82310. Are these schools what are known as barrack schools?—No. They were sent to a Roman Catholic school by the guardians—as they were Roman Catholics.

82311. Have you had any experience of barrack schools? In the case of non-Roman Catholic widows they would be sent to what used to be the Forest Gate schools?—It is not Forest Gate now.

82312. Was Forest Gate destroyed before you went to Whitechapel?—Yes, it was previous to eight or nine years ago.

82313. So you have no experience of the results of what are called barrack schools?—No, I am afraid I have not.

82314. (*Dr. Downes.*) Do the mothers keep in touch with their boys at the schools?—Yes, I think the guardians are very right in their regulations; they seem to wish the parents to see a good deal of them. I like the boys to come home for the holidays, too; I know sometimes that can be arranged; I advise the mother, instead of trying to drag them up at home, to send them to school and save up so that they can give the boys a good time when they come back for their holidays.

82315. (*Professor Smart.*) Your general impression of the applicants to distress committees is that they have something deficient about them, and yet you do not think badly of them as a class?—No, I think they are very good fellows, many of them.

Character of
applicants
to distress
committees.

82316. Would you endorse the opinion I personally have formed from my experience of distress committees, that most of these men would be worth their wage if some one found a job for them and saw they were carefully watched?—Yes. Does "carefully watched" mean telling them that they will come to grief utterly if they lose their work?

82317. No, just seeing that they work. I wonder if you would agree with this, that the standard required of this class during the last thirty or forty years has very much risen, so that such men as this usually found employment, say, a generation ago, and yet the times press very hardly on them now. My impression is that the struggle for life has become more severe in all places, and that now we expect a little too much of that very poor class if we expect them not only to find occupation, but to work in the very best way. Is that your experience?—I have not noticed any tendency of that sort.

82318. Of course, you have not the advantage of years, and cannot go back so far as I can?—I can only go back some nine years, I am afraid.

82319. The problem you are interested in is evidently the casual?—Yes.

82320. The under-employed, I think you call them?—Yes.

82321. You think something must be done for them, and that something is decasualisation?—Yes.

Decasualisa-
tion.

82322. Which really comes to this, that the best man should get a preference?—Yes.

82323. You make rather an interesting suggestion, which I do not think has been mentioned to-day, that somehow or other it should be made difficult for men to get into the unskilled labour market?—Yes.

Miss M. E.
Marshall.

4 Nov., 1907.

Desirability
of book
system of
men's
characters

Suggestion as
to educa-
tional and
deterrent
workhouses.

Stepney
apprentice-
ship com-
mittee.

82324. You think, in short, that labouring, inasmuch as some men are only fit for labouring, should be looked upon as quite a respectable and honourable occupation?—Yes.

82325. Into which, perhaps, people should not be allowed to fall from other ranks on account of bad conduct?—Yes.

82326. And if possible that people who do fall into this class from bad conduct should rather be counted blacklegs?—Yes.

82327. You hinted a good deal could be done by a record such as sailors get. I suppose the men get testimonials from their employers if they ask for them, do they not?—It is very unusual.

82328. It is unusual to ask, is it not?—It is very unusual for a casual employer to want to look at one, so there is not much incentive to the casual hand to collect his good characters.

82329. Still, when we want to find a job for any man the first thing we do is to get his testimonials?—Yes.

82330. Sometimes they do not get them?—Yes.

82331. Out of pure carelessness?—I think so. I think if these men were to go to the foreman and say, "I am not Bill" (they all go by nicknames), "I am so-and-so; I am going to give you as reference, will you speak for me?" that the foreman very often would. They have come up to me in that way, to apply, with no references whatever, and I have told them to go and see some foreman who they think will be good-natured and make themselves known to the foreman under their right names, and then we go round to the foreman and take up their characters, and we often get good accounts of the men in that way. I think it could be done.

82332. Does it not seem to you that a book system might be made compulsory with good results?—Yes, I think it might very easily.

82333. As to your suggestion of a separate workhouse so educational as to be deterrent, I suppose a thing could be so educational as to be a deterrent?—I think so. I think many of our Whitechapel men would rather have very little work than too much.

82334. That is what you mean by that, I suppose?—Yes.

82335. Is there not another objection to that, namely, that the time necessary for a training that would be worth anything would be very long?—Yes.

82336. It is not a matter of three months?—At least.

82337. It is technical education rather than training?—No, I think I should not aim at technical education in trades; that would be too ambitious. I should suggest they be kept to very regular hours, to writing, and reading classes; and essays, head work generally, and a great deal of it, so that when they got to their physical labour it would be quite a relief.

82338. That would be not only a matter of time, but a matter of expense, of course?—It would be a matter of expense. But I should say it would not be a matter of such great expense as many people think, because I do not think so very many will accept that sort of test.

82339. You think not?—No.

82340. (Mrs Bosanquet.) Can you tell us anything about the apprenticeship committee that you work with? I believe you are engaged in apprenticing young boys and girls largely?—Yes, we are.

82341. Can you tell us about the work of that committee?—We get from the school teachers lists of the boys and girls just before they are leaving school, and then we visit the parents and we ask them what plans they have for Tommy's future, and many of them I am glad to say have plans, or some ideas, and we then say, "We are glad to hear it," and withdraw; but others say they have not thought anything at all about it, and they think that the boy had better hunt about for himself when the time comes. In those instances we ask them to send the boy up to see us, and then they come up. Then we take up their characters from the school and get some hints as to their capacity from the school-master or schoolmistress (we often get the greatest help from the schools); then we try to place them in what we think will suit them best. But the great difficulty is that so many of them want to earn 7s. a week at once, and we

have to appeal to the parents to make a sacrifice and to Stepney consent to let the boy take 3s. 6d. a week as an apprentice for the sake of the future, rather than to have a high initial wage. Very many of them will do that with great self-sacrifice. Then there are others that say, "No"; they mean to have as much money with the boy as they can. So that the actual number of boys and girls that come up to the committee is not of course as large as those that leave the schools.

82342. (Chairman.) Is it a substantial proportion?—It depends on the neighbourhood a good deal. In a good school the parents are doing a good deal of thinking about the children's future. In a bad neighbourhood there are more who apply. The difficulty comes in if the neighbourhood is too bad, where the parents are of the thriftless, drinking order. This sort will make the children earn as much as possible at once.

82343. Do the teachers assist you at all?—Largely.

82344. Do you think that our educational system could be further utilised in this direction?—I think there is a great deal to be done in that way.

82345. If we take the three districts, the good district, the indifferent district and the bad district; have you any idea what proportion of the children go into skilled trades?—No, it is a little difficult to say. We have been so pressed lately that we have not been able to work that out. At one time we hoped to be able to give a statistical answer.

82346. It has been suggested that one way of getting over the difficulty that widows have in managing their schools for boys (it is a difficulty which does not exist only in the boys' class you mention) is that there might be schools something like the industrial schools to which the children should go early in the day, have their meals there, and return home to their mothers at night. Have you ever thought over that scheme, or has it ever been suggested to you?—No, but I have known the mothers manoeuvre to get the children sent to such schools.

82347. It was to be a school on the principle of industrial schools, but not necessarily an industrial school; that is to say, the guardians could order the child to go there?—So that the boy was under discipline at any rate during school hours, but what he did in the evenings or on Saturday and Sunday I do not know.

82348. He would be better fed?—He would be better fed, but the difficulty is to keep these boys at home in the evenings. They like to run about the streets. I do not see how the industrial school could quite meet that difficulty.

82349. (Mr. Nunn.) With regard to the children, are you in favour of any extension of the school age for the purpose of fitting them better for their after life?—That is a difficult subject. Of course, I am in favour of further training for the children, but I am not sure that I want it to be in the school room.

82350. You would have a further training under the state or the care of the managers, or some kind of teacher?—Or even in a workshop.

82351. Partly in the workshop?—If the father brought a certificate to the effect that his boy was going to be taught a trade in a proper workshop I think he might be left there, but supposing there is no plan of that sort to train him, there might be something to be said for keeping him on in classes.

82352. Supposing it is intended that a boy should only be a labourer, even then he requires some little skill and a good deal of strength, does he not?—Yes.

82353. At the age of fourteen he is probably not equipped really as much as he might be equipped if he were longer detained and more carefully trained for ordinary labourer's work?—Yes. I am often very sorry for these boys of fourteen. They suddenly change from the short school hours to the very long working hours; and I think the long working hours are rather bad for their health at that age.

82354. Do you not consider that a couple of years longer, partly at school, and partly in some kind of definite training for their after life occupation, would probably attend to turn out better workmen, workmen whose employ would tend to be more steady?—Yes;

Question of extension of school age and education of boys in general.

but I am a little afraid of continuing the literary part of their training, because I think already too many are trained into clerical work; but I should like some sort of compulsory evening continuation class, if only with a view to shortening their working hours. I do think the van boys are kept on those vans too long.

82355. Is it not the case under the present system that a boy works steadily through his standards till he is fourteen, and then he is turned adrift, and he falls into the hands possibly of good parents, or possibly into the hands of the School Employment Committee; in either case those who have been training him for his after life have no continuous time to consider what part he is best likely to play in his after life, while he is still under their control. Supposing the managers take rather a larger view of their duties than they do at the present time?—I think an ideal education system should do a great deal more for the boys than is being done at the present time, but I am not sure that I should want to merely extend the existing school age.

82356. You are satisfied with fourteen?—Fourteen for the present style of education.

82357. I am not speaking of the present style of education, but an education which fits a boy to take a definite occupation in after life and conduct himself well in it, but that our education does not aim at now?—When that is started I think it will be excellent.

Question of look of characters of workmen.

82358. You were speaking of the cumulative character. Do you think that would really be applicable to English workmen?—As applied say to a casual labourer at the docks?

82359. Yes, do you think it would be of any value to him?—I think he might have a book of discharges like the seamen, and he might get the employer at the end of his period to stamp his book, as the seaman at the end of his voyage gets it stamped, with a "V.G.," or something to that effect.

82360. It would not have much value unless superior classes of workmen submitted to the same class of thing, would it?—The difficulty is that the employer will not trouble to look at the book of discharges, as under the present system he gets enough good men without it; I think if you could somehow or other lessen the number of men that are competing for this work, if you get a smaller number of men doing the same amount of work, then the character system would perhaps be more important, and the employer would look at these books. I think it rather hangs on the other question of the reduction of the number who are dividing the work between them.

Character of best grade of casual workmen.

82361. You deal in Paragraph 15 with the methods you would employ in dealing with the reduced numbers after you had achieved a certain amount of decasualisation; as to C., the excess generally, they would be rather less good men, would they not, they would be the worst of the casual labourers?—Yes.

82362. Would they be subjects for emigration or migration?—I think the worst would not necessarily be bad. I think the point Professor Smart made about many of them being decent men, although perhaps ignorant and ill-trained, is a very true one.

Miss M. E. Marshall.
4 Nov., 1907.

82363. You say nothing of any possible system by which either board of guardians, or boards of guardians in co-operation with the magistrates, might exercise power of detention over the very lowest class. Does that come into your scheme of things at all?—Yes, it does. I think it would be necessary for certain classes.

Need for detective powers over certain classes.

82364. That would tend very greatly to de-casualise work, would it not?—Yes.

82365. It would cut off the bottom fringe?—Yes.

82366. Then with regard to the widows, do you really contemplate for young widows with a couple of children, a life of five days a week work. Is that what you consider the best thing for a young widow of that class?—Yes, that is what I am contemplating.

Treatment of widows with children

82367. What is your experience that they do with the children, *crèche* them, or give them to neighbours?—The old mother, or married sister looks after them. You see these widows belong to family groups. The old people I think understand children very well; the grandmothers get on with the grand-children, and it is often a very suitable employment for the grandmother to look after the children while the daughter is at work.

82368. The two children you would retain would be girls if possible?—Yes, I would retain the girls.

82369. That would give the family rather a lopsided appearance if all the girls were left and the boys taken away?—It is done in other classes, is it not?

82370. With regard to the distress committees, did you take up a good deal of emigration work last year?—Yes, we sent a good many away.

Emigration work of Stepney Distress Committee.

82371. If there were cases of men with families were they referred to the joint committee, and so to the district committee of the Charity Organisation Society?—Yes.

82372. I think you are on both of the committees, are you not?—Yes.

82373. Did you find that the Charity Organisation investigations upset the conclusion arrived at by the distress committee?—In only one case, and that was on a point which arose out of the health of the wife; a poor woman who was wrong in her head, or liable to be wrong in her head; it was a point which the distress committee could be excused for not having found out.

82374. You would be prepared to leave the distress committee with its present equipment, if it was such a committee as you had in Stepney, to prepare cases for emigration?—Yes, I would; I was very much struck with the way they did their emigration work.

82375. I think Stepney is the only one you have had experience of?—Yes, it is the only one.

Mr. REGINALD JOHN SOMERS, called; and Examined.

82376. (Chairman.) You are the Secretary of the Charity Organisation Society at Camberwell?—I was until recently. I am now Assistant Secretary to the Council.

82377. You have been good enough to prepare a Statement giving your experience of the working of the Unemployed Workmen Act in Camberwell, and if you will kindly hand it in we will treat that as your evidence-in-chief?—Certainly.

(The Witness handed in the following Statement.)

THE UNEMPLOYED IN CAMBERWELL.

1. The following table shows the number of men and women who registered for work in Camberwell from May, 1906, to June, 1907.

1,765 men and 191 women; of these
553 men registered in 1905-6.
253 " " " 1904-5.
106 " " " 1903-4.

The figures for the previous year (1905-6) were
2,040 men and 45 women; of these
564 men registered in 1904-5 and 1905-6.
88 " " " 1903-4 and 1905-6.
296 " " " 1903-4, 1904-5 and 1905-6.
1,165 men and 191 women registered in 1906-7 but not previously.

The ages of the male applicants in 1906-7 were:
Ages—15-19 20-24 25-34 35-44 45-54 55-64 65-74
Nos.—40 211 533 493 329 125 34

About 1,500 out of the 1,765 men who registered in 1906-7 were employed in the building trades and as general labourers, the remainder being composed of metal workers, printers, woodworkers, costers, etc., etc. These were classified (including the 191 women) by the Distress Committee as follows:—

Preferred cases	-	-	-	-	-	258
Eligible	-	-	-	-	-	857
Uneligible	-	-	-	-	-	509
Disqualified	-	-	-	-	-	332
Married men numbered	-	-	-	-	-	1,290
Unmarried	"	-	-	-	-	402
Widowers	"	-	-	-	-	73

Mr. R. J. Somers.
4 Nov., 1907.

Unemployment in Camberwell 1906-7.

Mr. R. J.
Somers.

4 Nov., 1907.

Unemploy-
ment in
Camberwell,
1906-7.

Work, amounting on an average to 9 weeks each, was found for 398 men—23 refused work, 4 were dismissed, and 5 left owing to illness.

Of the 281 men for whom work was found in the winter of 1905-6, 177 applied in 1906-7 or 63 per cent. 61 families and 45 single men were emigrated.

Most of those who had registered in the previous winter were visited this summer with a view to ascertaining their position with the result that :—

- 714 reported themselves as in work ;
- 747 " " " out of work ;
- 457 could not be traced (this seems a very large number) ;
- 42 had been emigrated.

2. As by far the greater number of those who registered were connected with the building trades, the cause of their want of employment may be attributed to the seasonal nature of their work and perhaps to a certain amount of slackness in those trades. It cannot be said that in any of the years 1903-4 to 1906-7 was there exceptional distress, but there was probably not so much demand for labour in the summer months in Camberwell as there has been in former years. I am, however, of opinion that the majority of the men who registered were of the purely casual type who may be said to be chronically unemployed or semi-employed.

EFFECTS OF UNEMPLOYMENT.

- 3.—(1.) Deterioration both moral and physical of the man.
- (2.) The wives being sent out to work.
- (3.) The children made to work both in and out of school hours, and on leaving school being placed as errand boys, &c., instead of being put to a trade.
- (4.) Loss of articles pledged through inability to redeem them and partial loss of home which is rarely recovered or replaced when once lost.
- (5.) Withdrawals of savings from provident clubs, loss of membership of friendly societies and trade societies.

ACTION OF BOROUGH COUNCIL BEFORE UNEMPLOYED ACT.

A.

4.—In Camberwell prior to 1903-4, unemployed men were allowed to register their names at the various depôts of the Borough Council. Each man then received two days work in rotation. Under this system no verification of residence was attempted, and no inquiries were made as to the requirement of the individual cases. There was, in consequence, no certainty that Camberwell men (for whom the work was intended) were being employed, and men from other districts used to obtain the work by giving a local address, and sometimes several days work a week by giving false names and different addresses. In 1903-4 an effort was made to systematise the work and ward committees were formed consisting of a guardian, a borough councillor, and a private person, representing a charitable relief agency. The scheme formed the basis of Mr. Long's Act—a scheme for giving adequate relief work to selected cases was attempted but fell through owing to technical difficulties with the Borough Engineer's Department and eventually the committees had to fall back on the dole of work (3 days) given in rotation which did little or no practical good. The borough council and the borough engineer both issued reports on this work.

The work done proved very expensive and was not well carried out.

B.

I consider that the distress committees have done most useful educational work in classifying cases and in shewing the public how useless it is to try to deal with the unemployed as a whole. I think that, at all events so far as Camberwell is concerned, much more could have been done in that way had a more experienced type of enquiry officer been employed. In many cases that came to my notice the results obtained by a skilled enquiry officer were quite opposite to those got for the distress committee. Men were also often returned as artisans and mechanics when only labourers, thereby conveying a false impression of the state of the labour market. Sometimes the borough engineer had to put off men sent him by the distress committee as artisans because he found that they were only labourers in reality.

The danger of the distress committee is that it inclines men to depend upon it for work and perhaps relax their individual efforts to get it.

Labour Bureaux appear to me to be at present useless, and are likely I think to remain so, unless (1) the Employers of labour come exclusively to them for their men, and (2) the best type of man registers his name at them.

C.

Labour Colonies.—That the advantage for the time being to the men and to their families of colony work is considerable, can, I think, hardly be questioned, but as a means of leading to permanent improvement, the system has, so far as I can ascertain entirely failed. I have been unable to hear of any case where a man has gone back to the land or has materially improved his position through the means of his period of work at the colony. Physically, the country air, regular hours and good food, have in some cases worked wonders, while the regular allowance to the wife has made a striking difference in some homes, and to her and her children. The general improvement would very probably be maintained if regular work was forthcoming immediately, but, I am afraid the majority of the men on their return drift again into the ranks of the casual, and only the more skilled or fortunate ones return to regular work. Under the present circumstances I think the farm colony can only be looked on as a palliative, and a very expensive one.

With the non-colony men who do not leave their homes and who receive their own wages the families do not, I think, benefit so much during the temporary spell of work.

D.

I have never gone fully into the figures and possibilities of trades union unemployed benefit ; but have always been of opinion that very much more could be done than is done at present to assist members when out of work if more support was given to the unions.

E.

I have no practical or personal knowledge of the German municipal insurance scheme.

82378. (*Chairman.*) The vast majority of those who applied under the Unemployed Workmen Act, according to your figures, were connected with the building trade or were general labourers ?—Yes.

82379. Apparently you had very few of the skilled artisan class ?—Very few.

82380. Would Camberwell be a fair test in that way ; is there a considerable proportion of skilled artisans living in Camberwell ?—I think, although there are not a large number of employers in Camberwell, still a great many of those engaged in trades sleep there and live there, both skilled and unskilled.

82381. It is a very large area ?—Yes.

82382. Not wholly built over yet ?—No, but the northern part is very closely built over.

82383. You classify them, and I see that about 1,100 were eligible, and a very large proportion were either ineligible or disqualified. One of the main causes of their applying apparently was the slackness of the building trade ?—Yes.

82384. I suppose the building trade is always slacker in winter than in summer ?—Yes, always.

82385. So that, although there was no exceptional distress in this particular year, there was the normal seasonal distress, I suppose ?—That is so.

82386. Is that seasonal unemployment always considerable in ordinary years ?—Yes, I think so. I do not think it varies much from one year to another.

82387. Therefore the idea which I think was in the minds of a good many who supported this Act, that it would deal with respectable people usually in permanent employment, and who were thrown out of employment through exceptional circumstances, was not realised as far as your experience goes ?—Hardly. I think the idea was simply to tide over those for the time being.

82388. But that class apparently came in very small numbers ?—Yes.

82389. You make certain suggestions or criticisms. You think that one of the advantages of the Act is that it has done good educational work in showing the public how useless it is to try to deal with the unemployed as a whole?—Yes, I think in Camberwell the general opinion was that they could be dealt with as a whole, that all that was required was that the borough council, or some one else, or the State, should provide a certain amount of work for them to tide over the winter. I think that all that has taken place at the committee meetings and at the public meetings at the Town Hall, has opened the eyes of the public very much, and that they now realise the difficulty of the question rather more than they did.

82390. They realise that it would require works of very large dimensions to meet the requirements of the unemployed?—Yes, they realise that a mere dole of work, or even some weeks of work, given in the slack season, does not meet the unemployed question.

82391. Would you contend that what has been done has gone in the direction rather of encouraging the aggregation of casual labour?—I am afraid it has on the whole. I think the Camberwell men relied on the distress committees giving them work; they did especially after the first year's work, but you will notice that during the last two years the number of applications has decreased.

82392. Is that, do you think, due to the stricter supervision, or is it due to employment being better?—I think it is due almost entirely to the small amount of work that was given.

82393. In fact I suppose the tendency was to look upon the work given by the distress committee as another sort of casual job?—Yes.

82394. Have you any suggestions to make as to how to deal with this class? What would you do; would you rely on the Poor Law alone?—No, I think a great deal more could be done by some system of out-of-work insurance, or unemployed allowance through trade societies or guilds. We read that in Germany and other countries a great deal is being done in that way, but it does not seem to be done in this country; and what struck me so very much in all the years' work in Camberwell was the very small number of trade society men and friendly society men who come under the notice of these committees at all. I think the percentage, during the year that I acted as honorary secretary, of friendly society men was about one, and trade society men certainly not more than fifteen, if that. It seems to point to this, that men belonging to trade unions do not come to the distress committees even when there is no out-of-work benefits attached to their unions.

82395. Then it has been suggested that these people who come for relief have not joined or are not able to join any union, because their work is so casual?—I do not think that that would apply except in a few instances. I think that there are a very few of the casual men who could not afford the small amount per week required to join a trade union.

82396. The unskilled labour connected with the building trade is very little organised, is it not?—Yes.

82397. There are not many who join these unions, are there. The number of men belonging to the unskilled employments in the building trade is not very much organised?—I do not think so.

82398. Do you think it would be possible for these special occupations to start any system of insurance against unemployment, or any provident system?—If the employers and the men could be got to co-operate I think that it might, but it would have to grow very gradually I think. I do not know that any compulsory system would be possible at present.

82399. It seems to me that constant irregularity of employment must necessarily tend to diminish co-operation and unions; is that not your view?—Yes, probably it does; any unemployed insurance scheme might be supplemented perhaps by an amplification of the labour bureau system. I do not know whether that would be workable or not. It would depend upon whether the employers and the trade unions were to join in the scheme.

82400. If these labour exchanges are exclusively or mainly connected with what is known as the unemployed class, you are strongly of opinion that they will not be a success?—I do not think they will.

82401. You must get a higher class of labour to affiliate itself or make use of these institutions?—Certainly.

82402. If that difficulty, which I admit is a very serious one, were got over, they would then play a very considerable part?—I think they would.

82403. Did they operate at all beneficially in Camberwell?—No, not that I know of. There again there was practically no touch between the labour bureau in Camberwell and the unemployed committee. For instance, names were not sent on by the unemployed committee to the labour bureau or anything of that kind.

82404. The labour committee or bureau committee was not composed of the same people or had it any people on it who were on the distress committee?—No.

82405. There was no communication at all?—Practically no co-operation at all.

82406. Was that the case, do you know, in other boroughs?—That I cannot say.

82407. (Mr. Nunn.) Was it not rather your object to keep them apart from one another if you want the better class workman not to be frightened by association with the ordinary out-of-works. You want your association to be used by that class of workman, and the most difficult man to get at was the better class workman, he being rather afraid of being mixed up with the ordinary unemployed, so it was your business, was it not, to keep the employment exchange rather separate from the unemployed distress committee?—So far as I gather, the same class of men used the employment exchange as used the distress committee.

82408. But I thought you agreed with the chairman that that was why the existing exchanges tended to fail, because you could not get hold of a higher class than the ordinary unemployed?—I do think that.

82409. Then it was important to keep them distinct, was it not?—I was thinking more of the question as a whole. I think to make the labour bureau a success it must be used by all classes of labour. The difficulty now, so far as I am able to understand it, is that better class men will not register, and consequently the employers will not use it either. I remember it was just the same many years ago when I made an inquiry into the labour bureau then in existence at Battersea; the employers of labour told me that nothing would induce them to use it, and I heard the same recently, down at Camberwell.

82410. Do you not think that may be very largely because the lower class cases of unemployed had already been too much associated with it, and therefore prevented the better class workmen from using it?—Possibly; but I do not think the better class workmen had need to use it. I think that, taking the men that applied to us at Camberwell, a very small percentage of them were what you might call better class workmen.

82411. I thought you believed in labour bureaux, provided the best type of man registered his name. Do I understand you consider that?—As a matter of fact, I have never believed in labour bureaux, but I think the only chance of their being a success is that they should be used extensively by the employers, and that all classes of men should register there. At the present time I gather that the trade unions to a great extent are their own labour bureaux.

82412. Yes, they are?—And employers have told me that they never have any trouble in obtaining men when they want them. They have only to write or send to the secretary of the union—those who employ trade unionists.

82413. You think that one of the two conditions under which it can be a success does not exist now, and is not likely to exist?—I do not think it exists now; I do not say it is not likely to exist, because that might possibly be brought about by a definite scheme being put before all concerned; but I think it will be a long time before it can be brought about.

82414. You think it is better that outside machinery should find work for a man rather than that they should find it amongst their own companions in the same trade?—Personally I think it is better for the labour market to settle itself.

Enquiries by
Distress
Committee
and by
Charity
Organisation
Society in
Camberwell
in emigration
cases.

82415. I do not know whether you heard the remark that I addressed to Miss Marshall just now about the different kind of inquiry that was made by the Charity Organisation Society and the distress committee on the identical cases that came up for emigration? I suppose in Camberwell you had a certain number of cases of men with families who originally came to the distress committees, and because they had families were referred to the joint committee of the Charity Organisation Society and the emigration fund, and thence were referred to the Charity Organisation Society's committee of the district?—Yes, we had a great many.

82416. My question is: Did you find that the Charity Organisation Society's investigation tended to upset the findings of the distress committee about those men?—The results of the inquiries made by the Charity Organisation Society committee were only reported to the joint emigration committee. We found a very great difference in the enquiries that were made by our skilled enquiry officer and the enquiries that were made by the less skilled officer of the distress committee.

82417. Did that lead to a certain number of cases that were selected by the distress committee being rejected?—Certainly, it did.

82418. Do you attribute that more to the want of training on the part of the men who were used as enquiry officers by the distress committee or to the very restricted programme of enquiry laid down by the Local Government Board?—I put it down to the want of experience of the enquiry officers, and to so much being dependent upon the replies of employers, and references being given in writing. There was a strong feeling on the part of one of the local committees of the distress committee that no enquiry should be made personally, on the ground that people might say anything, whereas they would hesitate at putting it on paper. In that particular district, I think, there were more cases rejected after thorough enquiry than in any other.

82419. I wonder whether you would be able to make any suggestion on that point, because it would be very interesting. It would be very interesting to obtain the figures of the emigration cases. It was quite one of the characteristics, was it not, of the distress committee's work to inquire of the employer?—I do not think it would be difficult to obtain the figures of those particular cases, but it would be impossible on the others, I should think.

82420. Did you find it at all the case that either through the feeling on your committee or through the restricted nature of the Local Government Board enquiry form a sufficiently free hand was not given to your officers when they made their report to the distress committee?—Yes; the Camberwell Committee took practically no notice of the information on the distress form. They made all their own enquiries over the head of the other.

82421. I do not quite understand that answer?—The committee did not supplement the information already on the distress committee's form, but they made the same enquiries over again.

82422. Which committee did that?—The Camberwell Committee.

82423. The Camberwell Distress Committee?—The Camberwell Charity Organisation Society Committee, in its emigration cases.

82424. They made the same enquiries in a different way?—They made the same enquiries by a different man, and other workers.

82425. (Professor Smart.) The painting trade is a seasonal trade, is it not?—Yes.

82426. And the building trade generally is seasonal?—Yes.

82427. Are not the wages there very high?—Not of the casual labour.

82428. The wages generally in the building trade, apart from the casual labour, are very high, are they not?—Yes.

82429. Do you find this in the skilled classes of the building trade or only the casual?—In the skilled,

82430. You consider the wage of the casual labourer in the building trade is not enough to allow him to tide over the bad season?—Hardly; except the best type of casual, who is more regularly employed than they ordinary type.

82431. What I am driving at is this: It is known to be a seasonal trade, and that being so, you would expect the normal wages to be more than enough to cover the necessarily dull times?—Not with regard to the poor type of casual that we have in North Camberwell. I should say that their average takings all the year through from their trade would not come to more than about 16s. to 17s. a week, if that.

82432. You have been unable to hear of any cases where the man has gone back to the land? Had they much opportunity of going back to the land through the labour colony?—No; so far as I know, I believe very little. Labour colonies and possibility of training men for the land.

82433. So you that cannot bring that as a charge against them, can you?—I understood the object of the labour colony was to educate the men to go back to the land and to assist them to do so.

82434. You could not educate a man in four months?—No.

82435. You seem very pessimistic; have you not positive suggestions?—When one has thought over this question what strikes one is the lack of possibilities after the training has been given; there seem so few at present. I think, as I have already said, a very great deal could be done to meet the question by the men themselves, by a system of unemployed insurance. I think we should remember that the opportunity for employment on the land is decreasing. They say that now there are 20,000 less farmers in England than there were about ten years ago; and over 250,000 less agricultural labourers. It does not seem to me possible to revive that industry by training London-bred men at a colony. I do not believe they will ever be induced to go on to the land.

82436. Unless there were small holdings, possibly?—The question is whether a living could be made out of a small holding.

82437. May I ask whether you approve of the continuation or re-enactment of the present Unemployed Workmen Act, or would you rather it was repealed?—I do not think I do really approve of the continuation; it does not seem to me it would lead us any further. Results of Unemployed Workmen Act.

82438. You think it might be repealed altogether?—I do not think up to now it has led to anything. I am afraid that the chief thing it has done is to create an opinion in some of the working men's mind that they should be supported by the State instead of by their own trades and industries.

82439. You think there is something possible in the direction of labour bureaus properly dealt with?—In my opinion I think it is the most hopeful outlook provided that the employers will co-operate. I believe in other countries the management of bureaus is undertaken by the men themselves and the employers combined, and that the trade unions use them and do not use the unions in competition, as it were. Labour exchanges.

82440. (Mrs. Bosanquet.) Can you tell us anything about the emigration work you have done?—So far as the men themselves are concerned our emigration work has certainly been the most satisfactory. We have emigrated a considerable number both through the joint emigration committee for the Central Unemployed Body and directly through our own committee; and we have practically no failures reported. Emigration by Camberwell Charity Organisation Society.

82441. You think that is the most satisfactory part of the work then?—For the men themselves, undoubtedly it is.

82442. What is the proviso in your mind?—I am afraid, although the casual labour market is so overstocked, we are emigrating the best of them. Class of men emigrated.

82443. It may be that though they are the best of the casual labour there still is not work for that particular type in England?—That is so; but if emigration is done on a very large scale, and almost limited, as it is now, to the casual type, it seems to me that we leave the lower grade of the casuals for ourselves and emigrate the better.

Wages in
painting and
building
trades.

Cases of
mal-
emig-
rated.

82444. Do you think it is possible, by diminishing the numbers very largely, to so far improve the condition of the labour market that even the low-grade casual will be better and get a better living?—It might improve the condition of the labour market, but I doubt if it would improve the standard of the work.

82445. Do you not think the low-grade men would improve under regular conditions?—They might, of course; but as a whole I doubt if it would benefit us at home here.

82446. Weighing one side against the other, would you like to see the present powers under the Act for emigration from the rates continued?—Yes, I think I would for the present. I would infinitely prefer to emigrate a man than send him to a labour colony and let him return to his old surroundings. I think it is better for all concerned.

Insufficiency
of voluntary
funds for
emigration
poses.

82447. Do you think that voluntary funds are insufficient for the emigration that is to be done?—Yes, I do, to meet the demands of those who wish to emigrate.

82448. Do you think they are sufficient to deal with those who are now coming to distress committees and seeking to be emigrated?—Yes, I think they are with the money voted by Government. There is a very great demand for emigration. I should think at Camberwell we only emigrated something like sixty or seventy, but I should say there were quite between 200 and 300 down on the lists for emigration.

82449. Were they approved cases?—Yes; they were recommended for emigration by the local committee.

82450. Did they fail to go for lack of funds?—I do not know. I think they did not come through the Central Body. They were, in the opinion of the local committee, suitable for emigration; but they might have been refused at the centre. Anyway, out of 250 cases that went up in one month, I think only forty were dealt with by the joint emigration committee.

82451. We have had it suggested to us that men are taking advantage of distress committees, to be emigrated by them, who might very well have emigrated themselves. Have you come across any such case that men who could have paid their own passage money have applied to distress committees, and been sent by them?—That is difficult to say. No case of that kind came under our

notice. The cases that were rejected after having been accepted by the central unemployed body were almost always rejected on the ground of character, not on the ground of having money available.

82452. Do you ever emigrate men without their families?—Never.

82453. Do you emigrate single women?—No, except in exceptional cases where relatives have offered them a home, or they have had a situation to go to.

82454. Do you emigrate single men?—No, not unless they pay over one-half of the passage money.

82455. (*Mr. Patten MacDougall.*) Do you know cases of men emigrating themselves and leaving their wives and families behind to come on the rates?—Yes.

82456. Is there much of that?—I have known several of those cases.

82457. Accordingly I suppose that is one reason why, in emigrating from your district committee, you take care that the wives and children should go with them?—Yes.

82458. Is emigration mainly or exclusively to Canada, or are there other places to which you emigrate them?—Almost entirely to Canada.

82459. Are there any other places?—Very few. We have emigrated a few to New Zealand, but generally when they have had relations there, and we have paid the passage of a few to the States, but then, of course, the committee have to raise the money for that.

82460. (*Sir Samuel Provis.*) Have you had any cases returned which have been emigrated? Have any of them come back?—No. Satisfactory results of emigration.

82461. Have you got satisfactory reports?—We have.

82462. You have reports, I presume?—Yes.

82463. And they are satisfactory?—Very. I do not think the committee have had one failure.

82464. Who reported to you?—The agent, or the applicants themselves. The reports come to the joint emigration committee and then are sent on to the Camberwell Committee. Very often the letters come direct to the Camberwell Committee.

82465. Who makes the reports to you from Canada as to how they have got on out there?—The agent of the joint emigration committee sometimes but the committee more often hear from the emigrants themselves.

*Mr. R. J.
Somers.*
4 Nov., 1907.

ONE HUNDRED AND THIRTIETH DAY.

Tuesday, 5th November, 1907.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).

Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. C. S. LOCH.

Mr. J. PATTEN-MACDOUGALL, C.B.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
The Rev. H. RUSSELL WAKEFIELD.
Mrs. BERNARD BOSANQUET.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (*Secretary*).

Mr. J. JEFFREY (*Assistant Secretary*).

Mrs. J. RAMSAY MACDONALD, called; and Examined.

*Mrs. J. R.
MacDonald.*

Nov. 1907.

82466. (*Chairman.*) You are the honorary secretary of the legal committee of the Women's Industrial Council, I think?—Yes.

82467. You have been good enough to send us a very interesting Statement of the evidence as to distress due to unemployment amongst women and girls, which we will take as your evidence-in-chief if you will hand it in?—Yes.

(*The Witness handed in the following Statement, prepared in June.*)

1. The Women's Industrial Council has for many years made a study of the conditions of unemployment of women and girls, especially in London. At the time of the establishment of the Central Distress Committee appointed for London by Mr. Long, the council felt it important that women should share in any efforts made

The Women's
Industrial
Council.

Mrs. J. R. MacDonald.
5 Nov. 1907.

to deal with the problem of unemployment. The council made special enquiries as to the prevalence of unemployment amongst women dependent on their own earnings, and drew up a Memorandum (see Paragraph 40) with some practical suggestions. This was put before the Central committee, but that committee did practically nothing for women or girls, although it received a deputation at last from the council, but only after it had spent all available funds on men. During and after the passing of the Unemployment Act, 1905, the council again pressed the claims of women and girls, and sent a similar Memorandum to the Central Unemployed Body for London. The result was more successful. The committee appointed a special Women's Work Sub-Committee, of which one of our members, Mr. J. R. MacDonald, was first chairman, and this sub-committee considered our suggestions and put the one regarding workrooms into effect, using the garments made largely for emigration cases.

Sources of information as to unemployment among women.

2. For the purpose of answering the Poor Law Commission questions as fully as possible, the council has made fresh inquiries and sent out questions to persons of experience, both in London and other parts of the kingdom. We have replies from between sixty and seventy secretaries of trade unions, including women as members, from nearly the same number of clubs and settlements, and from a score or so of other persons with special knowledge of the subject. We did not make enquiries, except in a few special instances, from Distress Committees, Poor Law officials, or Charity Organisation Societies, as we thought the Commission would have such evidence themselves. We regret, however, that comparatively few of the answers were sufficiently full or exact to make a tabulation seem very feasible.

3. With regard to the whole condition of women wage-earners, there is a very general lack of exact knowledge even amongst those brought in direct contact with the question, as workers, workers' friends, or employers, but when we come to the question of unemployment the inexactness and ignorance seems more pronounced.

Extent of Distress due to Unemployment.

Extent of unemployment among women in textile trades.

4. The numbers seem, in most cases, to be less than they appeared to be the previous year from our inquiries made then. We have a good many replies from unions in the textile trade in Lancashire, etc., where the record usually is, that for the past two or three years almost every available woman and girl has been able to find work in the mills, as they are so busy. The Hyde and Hadfield Weavers' Association, however, reports 150 female members unemployed now, out of a total of 5,000, and the numbers unemployed during the past year average from 100 to 200. These women are cotton weavers, winders and warpers, and some have been out for three months, some more, owing to the introduction of Northrop looms and other labour-saving machinery. The Bury Card-blowing and Ringroom Operatives' Association has sixteen cardroom operatives out of work now, out of 600 female members, and has had 68 during the past year. The Todmorden and District Weavers' and Winders' Association has 100 unemployed out of about 1,000 female members, and has had 150 during the past year as the result of a strike. The Hyde and District Card-blowing Room Operatives' and Ring Spinners' Association has about eight unemployed now out of 1,400, and has had about forty during the year, partly stopped through breakdowns of machinery and partly owing to two trade disputes. The linen trade in Belfast has been very busy for two years or so; no unemployment amongst 2,300 trade unionist women.

Unemployment among women in boot and shoe trade.

5. In other industries the trade union reports vary considerably. The woman secretary of the Leicester Boot and Shoe Operatives tells us that a great many of the members of the union are out of work at the present time, owing to the fact that new machinery, which is more and more easy and light to manipulate, is being introduced into the trade. This increases the number of women wanting work who cannot get it in two ways:—

(a) The places of adult women are taken by young persons.

(b) The men are thrown out of employment because their places are taken by women and young persons, and this drives a number of married women to seek work in the factories, since they have to try and earn wages instead of their husbands.

We have evidence from several Leicester informants of Unemployment among girls and women out of employment who have to live upon odd jobs, or, in some cases, have had to apply for charity or Poor Law relief, while others are working short time, the available work being shared out amongst a number of employees. The Northampton Boot and Shoe Union has had two women unemployed during the past year out of thirty members. Their secretary reports that they are in a somewhat fortunate position in this town regarding female labour. A new industry, viz., pinafore and blouse factories, has sprung up during the past six years, which finds employment for about 1,600 hands; thus there is very little difficulty in finding employment. The Higham Ferrers, Rushden and District Branch of the National Union of Boot and Shoe Operatives reports no members out of work now, but twelve out of a membership of 150 were out during the past year from one to twelve weeks, through the stoppage of a large firm. In lace-making dullness and short time is reported rather than full unemployment amongst females. The Society of Women employed in Bookbinding reports more than usual unemployment during the past year, and also that "women who have not signed for 'out-of-work' have had much short time in the past year." An Aylesbury correspondent reports seasonal slackness in the printing trades, for which the girls make up when they are busy. The Cigar Makers' Union reports about seventy-four unemployed now out of a membership of 894 females. A correspondent in the cigar trade in the Midlands reports that the trade has suffered very much in Birmingham, Coventry, and Leicester, especially as cigars have, for some reason (probably cheapness) been replaced by the vogue of cigarette smoking. The two trades are quite separate, the cigar makers being highly skilled workers who are usually apprenticed for five years, during which they get very low wages, and some of these girls have turned their hands to dressmaking or working at the Dunlop rubber mills, etc. Many of them were married women. The secretary of the Clothiers' Operatives of Leeds reports that the clothing trade is very different to most other trades, as the females are generally on piece-work, and, no matter how slack work is, they are not discharged. Therefore the number of unemployed is no guide as to the state of the labour market. A Preston correspondent tells us that dressmakers and milliners suffer from seasonal slackness, expecting, indeed, two or three months' loss of work in a year, and that some of these went into the mills in the less arduous departments when they were finding their own trade slack, and that some of them are remaining there so as not to risk out-of-work periods again. Upholsterers report a slack period in November, January, and February; whilst the shirt and collar makers in Taunton say, "there is a slack period of four or five months in the summer." Clerks and shop-assistants both give account of a good many out of work. The Aberdeen Shop Assistants' Branch paid unemployed benefit to two women out of forty-four during the past year; one, a milliner, for one week, and the other, a saleswoman in a fruit-shop, for twelve weeks. Another, a London branch, reports two out of work now, and nine during the past year, for periods varying from three to twelve weeks, out of a total of fifty-two female members.

Women's employment in clothing, upholstering and shirt-making trades.

Shop assistants and clerks.

6. We have a good many other answers without much definite information, some of them from unions too newly formed to have any statistics. These include several branches of the National Federation of Women Workers. The secretary of the Protective and Provident Society of Women working in trades in Oxford reports that five members out of seventy have received unemployed benefit during the past year, workers in a ready-made clothing factory which regularly closes for two weeks in the year, but that this is not necessarily the whole number of those who were unemployed, since no register is kept, only those paying for unemployed benefit who know definitely that they will be out of work for a certain time.

Information from other women's unions.

7. In considering the replies from trade unions we must remember that it is likely to be the most regular and steady workers who take the trouble to join a union, especially, perhaps, among women who are so difficult to organise at all.

Slackness
of women's
employment
at a few
Brighton.

8. Through a Civic Guild of Help at New Brighton we have evidence of the difficulty of finding work for women there, those who want work being principally charwomen, some lodging-house keepers. There are very few factories but several laundries in the town.

Unemploy-
ment among
Irish
dressmakers,
milliners,
tailoresses,
&c., in
London.

9. The remainder of our information concerns London and the neighbouring districts, and is chiefly gathered from clubs and settlements. The club which makes the most special point of interesting itself in the industrial welfare as well as moral welfare of its members, the Jewish Working Girls' Club, Dean Street, Soho, reports that it has 375 members, 341 of whom work for wages; that about twenty are unemployed now, and that during the past year about 200 have been unemployed for periods of from one week to three months. The unemployment occurred in the dressmaking, millinery, tailoring, and corset-making trades, and was due to seasonal slackness. There is an employment bureau connected with the club, and employment was found for 152 girls last year, some of them being cases of unemployment. Many girls learn secondary trades in the club, and they try to make a little out of this work. The fact that such a large proportion as 200 girls out of 341 have been out of employment during the year in a club where special arrangements are made for getting employment for the girls, shows that a terrible problem of unemployment exists. This is borne out, although with very little statistical evidence, in the constant references to slackness and dull times in the replies from other sources. Miss Cheetham, Canning Town Settlement, puts down roughly three facts:—

"(i) That all the working girls in our clubs give evidence of short time during the late winter. The girls I questioned last week belonged to (a) jam; (b) paper; (c) match; (d) mat; (e) pickle; (f) baking-powder factories; (g) shirt-making. Every one of these girls had been on short time for part or the whole of the winter in some departments of their work at any rate, with the result that those girls who, when working full time, can earn about 12s. a week, have for many months now averaged not more than 9s. weekly.

"(ii) Those women, widows, etc., who earn their living by taking in shirt-making and tailoring to do at their own homes, all complain of slackness of work, so that they could not get the work, much less earn a livelihood by it. Have seen much distress amongst these shirt-makers this winter, and we have had no work-room open to help them!

"(iii) There is very little charing or washing to be had in a district like Canning Town, few being able to afford to pay wages. Even the laundries have been slack and have had to discharge hands."

Reports on
various
women's
trades in
London.

10. A mission at Seven Dials has about 200 women and girls connected with it, a large number being employed at Crosse & Blackwell's. Work here is seasonal and the girls are often out. They fill in their time in various ways, a large proportion going to cardboard-box making under other women who have piece-work. Others go to seed-sorting at Carter's and other large seed merchants. A club in the City Road returns thirty-five workers, of whom four are now out of work, fifteen have been out for periods of two or three weeks during the past year, their work being that of upholsterers, sweet fillers, paper-folders, hawkers, and in Lipton's.

11. From Euston Road Miss Bunting reports that: "Many of the girls were on three-quarter or even half-time for weeks and weeks during the winter. The tailoresses, of course; the liquorice girls at various intervals; Maple's carpet-weavers for nearly six months had slack work; between Christmas and Easter the rest of them had three days a week at home constantly. Shoolbred's carpet-sewers were so slack before Christmas that our girls left. One got work elsewhere, one went to service."

Domestic
servants.

12. Several clubs report trying with varying success to get girls to go into service. Clubs whose girls are in service report a great deal of moving from one place to another, but not real unemployment amongst servants.

Under-
employment
amongst
girls in jam-
making and
book-folding
trades.

13. One club leader writes: "I cannot give you any exact statistics of unemployed in our club, as owing to the large number of married women who only work when their husbands are ill or under special circumstances, it is difficult to know when they actually want work and cannot get it, or when they think it best not to work, but

to stay at home. Among the girls who work for wages, numbering about seventy, there is, as far as I know, no case of actual unemployment now. One of our members was out of work for a month in the early spring, but then returned to her work of paper-sorting. On the whole, the girls do not suffer at all from unemployment, but they suffer very seriously from short time, the trades being specially affected are jam-making and book-folding. In the former, the time-workers (the more responsible girls) lost two hours a day and 2s. a week for about three months, but the piece-workers lost on the average 5s. and 6s. a week for a long time. Book-folding has been very slack at times, the piece-worker often making little more than 5s. 6d. or 6s. a week, instead of 14s. or 15s. Shirt-ironing (two members) has suffered in the same way. In spite of the lack of work, the girls in nearly all cases are required to be at the factory nearly the whole day waiting for work to come in. Under these circumstances, any other employment is out of the question unless the girl definitely leaves her trade, and I think this system of requiring the whole of the girl's time and only paying her for the actual time she is on piece-work is one reason why the girls so often prefer time-work in an unskilled trade to piece-work in a partially skilled one. In the majority of cases, the girls live with their parents and are partially supported by them in slack times, sometimes repaying them when things improve."

Mrs. J. R.
MacDonald.

5 Nov. 1907.

Under-
employment
amongst
girls in jam-
making and
book-folding
trades.

Causes of Distress due to Unemployment.

14. This heading seems to be wrongly worded, as distress due to unemployment is evidently caused by unemployment. We suppose the Commission means to ask the causes of unemployment. The great cause in almost all our experience of women's trades is the seasonal nature of so many of these trades. This applies very specially to London, where so many women are employed in dress-making and other clothing trades, in laundry-work, and also in work connected with the preparation of food, and where the London season gives rise to so much extra work. It applies also to such places as Brighton, where the inrush of visitors takes place at a different time of the year. More or less it applies to all the clothing trades, since people buy the bulk of their new clothes at certain seasons. This season work varies a good deal with the weather. For instance, the late cold weather this year has kept the clothing trades back from being so busy as usual. The mineral water trade is also slack, while, on the other hand, some sweets which cannot be made in hot weather are not yet in slack time as the weather is so cool. Jam-making is later than usual in demanding workers. The seasonal slackness very often, as has been pointed out, leads to short work rather than to no work at all, but a girl who for some months is only doing a few hours a day or two or three days a week, is not earning a living wage, and is not better off than if she were totally unemployed for a shorter period.

Seasonal
nature of
trades the
chief cause
of women's
unemploy-
ment.

15. Some other special reasons are given for unemployment, such as the introduction of machinery, of which we have repeated instances. A club secretary in Walworth reports: "To begin with, the keynote of the whole thing is, I should think, the introduction of new machinery. In the bookbinding no end have been discharged; they have even now a machine for stitching "with silk": this told with bated breath, for stitching with silk was always considered safe and well paid hand-work. Day & Martin are taking on hands now, but nearly all the old ones had been discharged, again through machinery. The ironers at the laundries have suffered greatly, as a new machine now takes the shirt, a roller passing over the front and cuffs, ironing them and glossing them, so that all that remains to be ironed is the back. Two girls (young) mind the machine."

Machinery
as cause
of unem-
ployment
among
women.

16. The removal of a particular firm is mentioned several times as a cause of unemployment. Rabbit's firm in Southwark discharged the whole of the girls and women eight weeks before our investigator called upon one of the directors to enquire. The director denied that this had been the cause of any distress, but we have conflicting evidence from a Girls' Evening Home in the neighbourhood. From more than one quarter we hear that the girls in tinned meat and other tinned stuff factories have suffered from great slackness as the result of "The Jungle" scare. The war, too, is still responsible, according to one of our correspondents, for discharge of workers

Other
causes of
unemploy-
ment.

Mrs. J. R. MacDonald.
5 Nov. 1907.
in a firm overstocked with brushes, and "those also that worked making leather pouches attached to the saddles, etc., have now nothing to do." The trades disputes mentioned above were, as recorded, responsible for some unemployment.

17. We have also many instances of the fact, already referred to, that where men are suffering largely from unemployment their wives join the competitors for work and cause over-crowding and consequent unemployment in the trades they seek to pursue. These very often cover comparatively casual or unskilled work, such as "charing."

18. One correspondent attributed some of the unemployment to "the absurd idea that a worker is too old at forty."

Effects of Distress due to Unemployment.

Effects of
unemployment
of
women

19. The effects may be summed up as starvation, more or less acute, loss of vitality due to want of means to pay for proper food, clothing, shelter, and warmth, loss of self-respect, which can hardly survive the repeated discovery that the worker is "not wanted" by her fellow-creatures. In the case of wives, with husbands ill or out of work, or widows, or others with families dependent on them, the starvation and loss of vitality is suffered by the children and other dependents also. Long absence from work or disheartening slackness of work also tends to lower the standard of work of the worker who cannot keep up to her best pitch of pride and interest, or skill, in it.

20. We must also point out that a woman can unfortunately always find employment in vicious ways, and that difficulty in earning money honestly must add very strongly to the temptation to earn it in immoral ways, although we bear testimony to the strength with which the vast majority of our hard-pressed women workers keep themselves above such temptations.

21. One of our correspondents pictures the distress in a particular district near London where laundries and some factories employ a great many women. The slack season is just after the busy spring and early summer. "To tide over the period of unemployment, the women are in a most hopeless case. Then there is no charing to be had; they pawn nearly everything, get credit from the smaller tradesmen, and go without. The shop-keepers inform me their takings are extremely low during this period, one general shop that caters for dinners, ham and beef, etc., finding that the women go without dinners at this period, discontinues this part of its business and, excepting bread and tea, almost everything is at a standstill. Rent is the great difficulty. The women seem to work for rent, which is very high and increasing, places which were 8s. have risen to 13s. in very recent years (since the opening of the electric trams and trains). In the laundries the great feature is not so much absolutely no work, but very little work."

Remedies for Distress due to Unemployment.

22. We append a copy of our Memorandum, to which we still adhere (*see* Paragraph 40); and also offer the following suggestions.

23. (a) We have not heard of any special work provided by municipalities for women, prior to the Unemployed Workmen Act.

Relief work
for women
under Un-
employed
Workmen
Act.

24. (b) The Unemployed Workmen Act, 1905. From some enquiries of our own, and especially from the information gathered by the secretary of the West Ham Committee, with whom we have, both this year and last, been in communication, we believe that London is the only place that has made any systematic provision of work for women under the Act, although the Act is declared to apply to women. We would point out that this fact alone prevents the numbers of women registering as unemployed from in any way representing the total number in need of work. Members of our council have in many instances not sent women whom they personally know to be out of work to the registers, because they felt it would simply take up time for nothing, and discourage these women by raising hopes only to dash them. The advertisements saying that the registers are open to women have often not reached the notice of those needing work; whilst some who might have made application have

shrunk from the publicity and the enquiries this would entail. Even this year comparatively few of those in need have found room in the three workrooms opened. If an adequate amount of work were provided to meet the demand for employment in any district, those women who applied first would find a useful result, and as others would learn this, their ignorance or prejudice would be overcome.

25. We consider the experiment of London workrooms to have been remarkably successful, and are sorry that its further extension has been stopped for want of funds. The training in good work which some of these women have received in the workrooms, has been as valuable as the actual money wages in time of need.

26. We wish to call attention to the suggestion of our Memorandum: "That where remunerative work cannot be provided, a small maintenance grant might be given, on condition that those receiving it should attend domestic economy, or other suitable classes, at some polytechnic or technical institute. This might specially apply to those willing to enter domestic service."

Question
of main-
tenance
grant where
relief work
cannot be
given.

27. We think the whole question of technical training is bound up with the better and more regular employment of women workers. The day trade schools for girls which we urged upon the London County Council, and of which they have now started several, will, we hope, turn out workers who can better command regular work. Some system of teaching supplementary trades to girls in trades which have slack seasons would be found useful, but the supplementary trade must be carefully chosen to suit both in season and in kind of work (*e.g.* a girl employed on fine work, such as lace, fish fly making, etc., could not do any rough work for fear of spoiling her finger tips).

Need of
technical
training for
women.

28. *Labour Bureaux.*—We consider that these should be much more numerous and should be put systematically in touch with each other, with employers and workers, and with the trade unions where these exist, so as to have as little waste time and over-lapping as possible. Our secretary has visited the women's bureau in Berlin, which is conducted on business-like lines. Adequate arrangements for travelling expenses and lodgings *en route* should be made.

Labour
bureaux.

29. We would support any protest against rates lower than trade union rates being offered through the bureaux, and would point out that although the standard rate amongst women is, as a rule, very low and very uncertain, yet that over 5,000 women are organised in London alone.

Labour
bureaux and
trade union
rates.

30. *Emigration.*—We deprecate this as a remedy for unemployment. Only picked girls and women can be emigrated, practically only those willing to do domestic work, and we want such women and girls at home.

Emigration.

31. Shorter hours of work would in some trades, such as shop assistants, waitresses, etc., open employment to larger numbers, besides being very much better for the health and general welfare of those already employed.

Shorter
hours and
abolition of
overtime in
seasonal
trades.

32. The same can be said of the abolition of overtime in certain seasonal trades, such as those connected with the making of wearing apparel. Such abolition of overtime might in some cases merely increase the demand for workers in the busy season; but we believe it would also have the effect of making customers spread their orders more evenly over the year, as they could not have them executed all at the same time.

33. The only possible way of adequately meeting the problem of seasonal over-supply and under-supply of labour is by making the workers more adaptable and helping them to move more freely to where there is a demand for their services, and this can only be done by improved training and more systematic registration.

Importance
of increasing
adaptability
and mobility
of women
workers.

34. (c) *Labour Farms or Colonies.*—We would draw attention to the suggestions in our Memorandum (*see* Paragraph 40):—

Desirability
of putting
women on
labour
colonies.

"(4) That on the land colony or colonies in connection with the Distress Committees, a portion of the colony should be set apart for women.

"(a) To be employed in the necessary laundry work, mending or making of clothes, and cooking for the workers.

"(b) To take part in some of the lighter work of the land.

"(c) To be trained in gardening, dairy work, or poultry farming."

35. We would also express our regret that when an offer was made by Mr. Fels to let the Central Unemployed Body put women on a farm at Wye, the proposal was not accepted, nor some suitable place taken as an alternative.

36. We would point out that two classes of women would benefit by training in light work on the land:—

(i) Widows with children, who might finally settle on the land on their own account.

(ii) Wives of men who are receiving farm colony training and who may become settlers, should have a chance of becoming accustomed to country life and work before they join their husbands in their new country homes.

37. With regard to any amendment of the Act, we wish to recommend:—

(i) That the organisation of provision of work should be nationally organised and not left only to local bodies.

(ii) That the local bodies co-operating in such work should consist of the local councils, upon all of which we hope women will soon be eligible to sit, and not of any special body.

(iii) That the disqualification of applicants who have been in receipt of poor relief should be abolished. We have personal knowledge of cases of women willing and able to work who have been disqualified because they had applied for poor relief in time of great distress (and women's wages are so low that only a few shillings divide them from want at the best of times).

38. (d) *Trade Union Unemployed Benefit.*—We have a good deal of information about the rates paid by those unions which have such benefits for their women members, but as already indicated, organisation amongst women is even less widespread than amongst men. Labour exchanges, as already stated, should co-operate where possible with trade unions.

39. As our last word we wish most strongly to urge that widows with young children, and wives with sick husbands and perhaps young children dependent on their care, should not be driven to neglect their charge by going out to earn money to keep themselves and their dependents. Such women have useful work to occupy them in caring for young or helpless citizens, and the State should enable them to perform that service fully, by giving them adequate monetary support for themselves and those dependent on them. These women, when obliged to work for wages, are amongst those upon whom unemployment or slackness of work presses most heavily, but we feel that they should not be dependent on outside work at all. The removal of their competition would also be a help to other women workers in times of slackness.

Women's Industrial Council,
7, John Street, Adelphi, Strand, W.C.
December, 1905.

40. MEMORANDUM ADDRESSED TO THE CENTRAL COMMITTEE AND LOCAL DISTRESS COMMITTEES APPOINTED TO DEAL WITH UNEMPLOYMENT IN LONDON.

The Women's Industrial Council, having evidence that there is special distress from unemployment amongst women and girls in various districts and various trades in London, wishes to draw the attention of the distress committees to the serious way in which this affects women and girls who are dependent upon their own earnings. We ask the distress committees to give special consideration to the problem of meeting the needs of such women and girls, and would make the following suggestions towards practical help:—

(1) That in all notices to the unemployed, forms of application, etc., issued by the committees, it should be specifically stated that women who are dependent on their own earnings may apply as well as men, and that their cases will receive careful attention.

(2) That wherever it is possible for the local authorities to undertake extra work which women can do, e.g., cleaning, upholstery, needlework, etc., this should be provided.

(3) That where the local authorities are unable to provide employment for women applicants, either through the labour bureaux or by special work under (2), these should be referred to the central committee to be dealt with.

(4) That on the land colony or colonies in connection with the distress committees, a portion of the colony should be set apart for women:—

(a) To be employed in the necessary laundry work, mending or making of clothes, and cooking for the workers.

(b) To take part in some of the lighter work on the land.

(c) To be trained in gardening, dairy work, or poultry farming.

(5) That for women and girls whose home circumstances prevent their moving to a labour colony outside London, one or more centres should be opened where they may obtain continuous employment for wages at making clothes; and that any garments made by them should not be sold, but given through responsible and experienced social workers to those in need.

(6) That where remunerative work cannot be provided, a small maintenance grant might be given, on condition that those receiving it should attend domestic economy, or other suitable classes, at some polytechnic or technical institute. This might specially apply to those willing to enter domestic service. The possibility might also be considered of teaching trades at present not largely followed in England.

In making these suggestions, the Women's Industrial Council has tried to carry out the principle upon which it believes the distress committees are working—that work given to the unemployed should be specially organised, so that they do not displace other workers, and that any work undertaken should be really useful.

ISHBEL ABERDEEN,
President.

L. WYATT PAPWORTH,
General Secretary.

82468. (*Chairman.*) In the early part of your Statement you point out that there is rather a lack of exact knowledge on a great many of the points with which you deal?—Yes, that is so.

82469. Taking the statistics of the unemployment of women, this occurs to me: If a man marries, he probably remains in his union, and the necessity for getting work is perhaps greater than before; but if a woman marries, does she, as a rule, remain with her union?—It depends very much according to the different trades and according to the fashion.

82470. Assuming that any considerable proportion of married women remain in the unions, they might be ultimately out of employment, but out of employment through their own wish?—Yes. I think we point out somewhere in the Statement that it is a little difficult, not so much with the trade unionists as with other women to know whether they are out of employment from their own wish or because they are driven to it.

82471. Of course, this is further complicated by the fact that whether a woman wishes or not to work very often depends on the earnings of her husband?—Yes.

82472. Speaking generally, and taking the textile industries, do women remain on the unions after they marry?—If they go still to the mills, I fancy they do.

82473. Assuming they were to cease from work for a year, would that probably break their connection with the union?—I am afraid I could not answer that. I have not very much personal work in the union.

82474. You have given us some very interesting figures in your Statement. In this case the statistics are in themselves necessarily small?—Yes, they are.

82475. And therefore one has to take with some little caution any conclusion based on such a shallow foundation of individual trades?—Yes. Since this Statement was sent in, we have had a big national conference on the unemployment of women, at which we got a good deal of fresh evidence. It all tends to show, I think, that there is a great deal of unemployment among them.

82476. It seems to me that there is almost a larger proportion of women's work which is seasonal than there is of men's?—Yes, I think that is correct.

Mrs. J. R.
MacDonald.
5 Nov. 1907.

Mrs. J. R. MacDonald. 82477. As long as the employment is seasonal, there always will be these ebbs and flows of unemployment; is that not so?—Yes.

5 Nov. 1907.

82478. Do the women try to work in more than one kind of industry in the course of a year, in order to overcome these seasonal conditions?—Yes, some of them do; only in the clothing trades, for instance, it is not very easy to change from one to another so much. We could give instances, I think, of changing from jam to marmalade, and then to pickles, and from ostrich feathers to artificial flowers; and some things like that.

Number of women in factories and other kinds of work.

82479. Should you say that there was a larger and larger proportion of women getting employment in factory work or in work similar to factory work?—I do not think the statistics show that there is much proportional increase lately in the number of women employed in that kind of work.

82480. Relatively to the population, the employment has not much increased, would you say?—I have not got the census statistics with me; Miss Collett has worked that out very carefully.

82481. Do you know at all roughly what conclusion was come to?—As far as I remember, I think female employment has decreased very much in agriculture and somewhat in domestic service; but, on the whole, I think the working-class women have not increased very much. However, I should not like to say definitely without looking it up.

82482. There is a decrease in the numbers employed in domestic service, is there?—I think so; but I never like to quote figures from memory.

82483. That is your impression though?—Yes.

Evidence of Jewish Working Girls' Club as to unemployment.

82484. Passing on to Paragraph 9 of your Statement, I see you there quote the Jewish Working Girls' Club; is that a highly organised institution?—Yes, very well. I think it is really Miss Montagu's work, and I had asked to bring her, because she has so much first-hand knowledge.

82485. Is that work at all connected with the Jewish board of guardians?—No. It is just a working girls' club in Soho. I have here one or two figures up to date from that club if you care to have them.

82486. The figures you give in this paragraph are interesting, I see the club has 375 members, of whom 341 work for wages, about twenty are unemployed now, and during the past year about 200 have been unemployed for periods of from one week to three months?—Just to bring that up to date, Miss Montagu sent me this two or three days ago. "We have about twelve at the unemployment bureau, mostly milliners; were it not for Miss Lewis, who finds work for them from the bureau, there would be many more. One or two are dressmakers. About 100 tailoresses are working two or three days a week." There is so much of that, of course—not only seasonal unemployment for the whole week, but working short time, two or three days a week. There are 100 tailoresses just now working like that out of this club of between 300 and 400 members.

82487. And, of course, fashion comes in very much?—Yes, a good deal, I think, but not so much with tailoresses, I suppose; I mean they learn the new fashions, whatever they may be.

General nature of girls' work in London.

82488. But the broad fact remains that the great mass of girls working in London are engaged in low grade labour?—Yes, that is true of the great mass.

82489. Passing on, it seems rather difficult to suggest any remedy, so long as so many of them are connected with these seasonal trades?—That is so.

82490. In Paragraph 13 there is a statement made, which I do not think is your own, as it commences: "One club reader writes"?—That is so.

Irregularity of work in certain factories.

82491. It is stated there that the girls in almost all cases are required to be at the factory nearly the whole day waiting for work to come in. That is a more skilled industry, is it not, to which your correspondent alludes?—I think it refers to all these trades, book-folding, jam-making and shirt-ironing. I just copied it out as she wrote it.

82492. It would very detrimentally affect the chance of the girls getting employment elsewhere if they were always to be waiting at a factory at which they occasionally got work?—Yes, it would.

82493. It is a repetition of the dock system?—Yes, when they have to be there whether there is work for them: or not.

82494. Is that in your experience, common, or do you think it exceptional in this particular class of work?—I am afraid I have not got enough experience to be able to say whether that is so in the majority of cases or not. She goes on to say that some of these girls "prefer time—work in an unskilled trade to piece-work in a partially skilled one."

82495. (*Sir Samuel Provis.*) In Paragraph 14, I think you really attribute the great cause of unemployment to the seasonal nature of the trades, as you were saying just now?—Yes.

82496. Have you any remedy in your mind for that?—I am afraid the only remedy I have in my mind that is of much value is quite a fresh organisation of industry altogether, making it much less dependent on the individual employer.

82497. Some general re-organisation of labour do you mean?—Yes, rather more responsibility on the part of the community to use all the workers.

82498. Under the existing arrangements, I gather you do not see any way of getting over that difficulty?—No, I cannot see any very practical way, I am afraid.

82499. Another point that you refer to as causing unemployment is the removal of large firms from one place to another. According to Paragraph 16, when a large firm moves from one place to another, they dismiss, in some instances, their existing workwomen?—Yes, they do.

Removal of business causing unemployment.

82500. Do the workmen follow them to the other place to which the firm goes?—I do not think so. In the case of Rabbits which I refer to there, I have only got what is rather hearsay evidence, but it was told us that they had moved to Leicester, and when we inquired at Leicester, we were told they had not moved there at all. I do not know whether they are simply doing the work by machinery and dispensing with the girls. However, I do not think it is the case that they are doing the work by machinery; I think it is simply that they are buying their stuff ready-made instead of making it themselves, but that is rather a second-hand inference. Certainly we cannot trace them at Leicester, although we heard they had removed to Leicester.

82501. At any rate, for some reason or other, there was a diminution of employment in that particular case?—Yes.

82502. Not merely that one set of people were employed instead of another set of people?—Of course, if they buy their goods from other firms, those other firms may be a bit busier, but in that particular neighbourhood, Southwark, a lot of the girls were thrown out of employment.

82503. In Paragraph 18 you say: "One correspondent attributed some of the unemployment to 'the absurd idea that a worker is too old at forty.'" Is that found to be any difficulty? for instance, is there a difficulty in the case of women getting employment in middle life?—Yes, there is a great deal of difficulty, I think.

82504. Does that difficulty increase, do you know?—I have some figures here for Holborn which might bear on that. This is a return of the ages of fifty-nine women who applied to the Holborn Distress Committee between July 1st and yesterday. There were five between twenty and thirty; seventeen between thirty and forty; sixteen between forty and fifty; sixteen between fifty and sixty; and five who were sixty years of age and over. So the great majority of those are oldish women.

82505. Is that a return of persons who are out of employment?—Yes, who applied to the distress committee at Holborn.

82506. Do you think that difficulty is increasing?—I do not think I have got any grounds for saying it is increasing. Might I just add one small cause for unemployment that I heard of this morning, I daresay you have heard of it too. In the Trained Charwomen's Bureau at the Women's Industrial Council they found a great deal more difficulty in obtaining work for the women this Autumn, and a good many came to them who were discharged because the employers did not care to pay the cost of insuring them under the Workmen's Compensation Act.

Effect of Workmen's Compensation Act on employment of charwomen.

82507. That extends to people like charwomen, does it ?
—Yes. That applies also to the older women, and would increase the difficulty in their case. Some of the older women who are coming to us say they have been turned off for that reason. I forgot that when you asked me about the older women.

82508. (*Mr. Loch.*) Can you tell us where you got that information ?—I got it from Miss Potter, the Secretary of the Association of Trained Charwomen which is in connection with the Women's Industrial Council.

82509. It has not been published yet, I think ?—No, I do not think so.

82510. (*Sir Samuel Provis.*) Then coming to the remedies for distress due to unemployment, you say that you do not think there was any special work provided by municipalities for women prior to the Unemployed Workmen Act of 1905; what work could they provide for women ?—The suggestions we make are work-rooms, and so on; but before that Act they had not any particular powers. Now and then they made special efforts for men, but we did not hear of any special efforts being made for women.

82511. And under the Act, the municipalities did not do it; the distress committees did it or the Central Body in London. I thought there you were referring to the ordinary local authorities ?—I think that is an answer to the question that was put to us, is it not ? I have not the list of questions with me.

82512. And I have not got the questions before me either; but you do not know whether there was any special work provided by the local authorities themselves ?—No.

82513. The Memorandum printed at Paragraph 40 showing some suggestions that you make was, I see, issued shortly after the passing of the Act of 1905. It is still being issued, I presume ?—Yes.

82514. One of the suggestions is: "That wherever it is possible for the local authorities to undertake extra work which women can do, e.g., cleaning, upholstery, needlework, etc., this should be provided"; that you mean to be done by the municipalities, I think ?—Just for themselves that is.

82515. But that would not be very much, would it ?—No, it is a tiny little thing.

82516. The work is practically done already, and must be done already so far as it is necessary ?—Yes.

82517. Another point that you refer to is, "That where remunerative work cannot be provided, a small maintenance grant might be given." That would be merely supporting the people who are out of employment, would it not ?—On condition that they were learning something.

82518. You intend that for adults, do you, as well as for young persons ?—Yes, that is what we suggest.

82519. Then that would really be money given for nothing at all ?—I think the idea was, first, the training of some of these women as charwomen, but I think that could be extended a great deal. It would be easier to find employment for them after a little training.

82520. In Paragraph 30, I see you deprecate emigration. As a matter of fact, are there many women who are out of employ, who do emigrate—of course I am excluding those married women who go out with their husbands ?—The emigration societies are very active in getting hold of women and girls. I have not got their figures with me, but their work would be done largely among the young girls.

82521. Sending them out with a view to domestic service, or what sort of employment ?—They did make an effort to send them out to factories, but the Women's Industrial Council inquired from Canada, and rather found that that kind of labour was not wanted in Canada, so they helped to discourage it here. I was in Canada myself last autumn, and I asked some of the people there about it, and they told me that even those girls who had been set out to factory work had drifted into household work often.

82522. Is there a willingness on the part of girls in England to go out to domestic work in the Colonies ?—*Mrs. J. R. MacDonald.* I think they find a good many hundreds who go every year. 5 Nov. 1907.

82523. Is there not a disinclination to go into domestic service in this country ?—Yes, there is a good deal of that here. Yet after all, it is much the biggest employment for women, although there is so much talk about it. Attitude of girls towards domestic service at home and in Canada.

82524. Would it be the case that girls who are unwilling to go into domestic service here would be willing to go into domestic service in the Colonies ?—I think some will.

82525. To what do you attribute that ?—I think it is a question purely of social caste, is it not ? They do not care to go into service here when their friends are in shops and factories.

82526. But that objection would not apply to Canada ?—No; the great mass of women are doing household work out there.

82527. You would propose that the Unemployed Workmen Act should be amended and "that the organisation of provision of work should be nationally organised, and not left only to local bodies" ?—Yes. Desirability of State providing work for unemployed.

82528. Do you mean that the State should provide the work altogether, without the co-operation of the local authorities, or do you mean that the State should provide the funds for local authorities ?—In Paragraph 37 (ii) we speak of the local bodies co-operating.

82529. That is to say, local councils and district councils ?—Yes. We are not very satisfied with the present distress committees, and we think it would be better if they were made committees of the local councils. Suggested alteration of distress committees.

82530. Without the interposition of the guardians, do you mean ?—A distress committee is a committee of the council now, is it not, only that the guardians can appoint some of its members ?—They do not report to the council, I think.

82531. The Act treats them as a committee of the council, but a certain number of the members are appointed by the guardians and a certain number are co-opted ?—There again it has not come much before the electorate, and it is not so much before the public as the proceedings of the education committee, for instance.

82532. What do you think you would gain by making the committee more of a committee of the council ?—We think at present that the distress committees hardly have sufficient importance. Take the one that I am on in Holborn. I do not think the council takes the very slightest interest in it, and there are only two or three of us who ever pay any attention to what is going on.

82533. But you would maintain the distress committee, would you not; you would not give the whole work to a Central Body ?—No; I think you must have local committees as well as Central Body. Need of local committees as well as Central Body.

82534. For what purpose ?—For registering and for finding out the local information. Then, of course, some of the people can be put into employment locally.

82535. You think that it would be too big a job, do you, for the Central Body to do that ?—The people must go somewhere fairly near them to register; they would not go to a central place to register.

82536. The Central Body, of course, might have some place in each borough ?—Yes, but I think it is healthier to sub-divide some of the responsibility.

82537. (*Sir Henry Robinson.*) Has the Women's Industrial Council got branches all over England ?—No. It is really for London only, but for this purpose we made inquiries from other parts of the country too. Women's Industrial Council.

82538. Has it been in operation for many years past ?—Yes, for about thirteen or fourteen years, I think.

82539. I think you said with regard to suggested remedies that you rather consider some re-organisation of industry is desirable ?—Yes.

82540. Can you refer me to any statement or any pamphlet which details any such scheme, written either by your council or by any other body ?—No. When I was speaking then I was not speaking officially on behalf of my council, I am afraid, because that was rather a Socialist suggestion and the council is non-party.

Mrs. J. R. MacDonald. 82541. Nothing then has been issued with regard to these remedies—I mean no particular statement?—We are just publishing a Report of our National Conference, in which a good many of these things were more fully dealt with by the different speakers who took part in the discussions. It was held only last month at the Guildhall.

Questions of women in labour colonies.

82542. Is that Report likely to be published soon?—Yes, very soon; it is in the printer's hands now.

82543. (*Mr. Patten-MacDougall.*) In Paragraph 34 you draw attention to the suggestions in your memorandum, the most important, I suppose, is the suggestion that women should have work set apart for them on the land colonies; how has that suggestion been received?—I think it is rather special colonies or special parts of a colony that we should suggest for the women.

82544. Have those suggestions been before the distress committee in any shape or form?—Mr. Fels made an offer of land at Wye to the Central Unemployed Body, and a committee went down to see it. They had an expert report upon it, but they did not take over the land. I think water was the chief difficulty. They did not do anything in its place.

82545. Have these suggestions been before any of the distress committees who have founded colonies, such as those in Suffolk and other places where the farm colonies are?—I do not know. We have sent round our memorandum as widely as possible, and at the National Conference only last week several of those who came up to it were advocating them.

82546. But no measures have been taken in regard to women in this connection?—No, I have not heard of measures being taken for doing it, except this Report of the Central Unemployed Body, which has not yet come to anything.

82547. How is the laundry work, the mending of the clothes, and the cooking for the workers done, do you know? Is that done by special service brought in for the purpose?—I think it is done by the women who are already there, but I am not quite sure.

82548. Women who are in the service of the colony?—Yes.

82549. It is your suggestion, is it, that the wives and other dependants of those who are there should be taken down to the colonies with the view of doing that work?—Yes, we suggest that; but it would only be a small thing in any case.

82550. (*Mr. Loch.*) To a certain extent do not the men in the colonies do the cooking and so on?—I am afraid I do not know the ins and outs of the working.

Attitude of employers towards Women's Industrial Council.

82551. Are your relations with the employers—such people as Rabbits—friendly, or do they look upon you rather as intrusive inquirers?—The lady who went to inquire at Rabbits was not at all nicely received, but I do not know who it was who received her—whether it was anybody really responsible.

82552. But generally are they friendly?—Generally they are very friendly.

82553. And willing to give you information?—Yes, on the whole they are wonderfully willing.

82554. So you may look upon them rather as co-operators than as entirely antipathetic?—Yes, quite.

82555. Do you think much of that as to future arrangements?—Not for unemployment, I am afraid.

Co-operation of employers in the matter of skilled training of women.

82556. Or for better terms and more continuous employment?—We do find employers very helpful in the question of skilled training. The employers co-operate with us a great deal in that, taking girls from the technical schools, and also taking an interest in the work by sending their apprentices to the trade day schools.

82557. Have you found that co-operating in that way practically you are getting a better bargain made for the women, so that ultimately they will get more continuous work?—Yes, I think so.

82558. So that there is this distinct point of advantage there, that if you can get trained women in conjunction with the employers, that will better the whole employment question?—Yes.

82559. Are the employers ready to train their workers in connection with their own factories and shops, or how do they get them trained?—We are rather pressing forward the training in the London County Council trade schools, and some of the employers send their apprentices for part of the day.

82560. Do they send their own employees there?—Yes.

82561. Is that done to a very large extent?—At present there are only five places where they have these day trade schools.

82562. Are the attendances numerous?—Most of those who attend are girls who have scholarships from the elementary schools. I think there are only three or four of these apprenticeship classes where the apprentices go to learn.

82563. Do you think it is a fact that there are many competitors for these scholarships?—Yes. They are extending the system of these schools very much; it is quite a new thing, but it is growing very fast.

82564. Could one say that these classes were really used almost entirely by the scholarship girls?—In Shore-ditch some of the girls are sent by the St. Luke's charities. Some of the other girls pay for themselves, and some have free places from the London County Council. They are mostly scholarship girls.

82565. Do you think it can be largely extended beyond the circle of scholarship girls?—I do not think it can very largely, but perhaps it might be considerably extended. On the whole the parents expect to have something coming in from the girls, not to have to keep them after they are fourteen.

82566. Do you think the employer will find it to his own interest to send girls for training?—That is what we are trying to make the employers see, and I think they are gradually coming to see it.

82567. If that were generally done, would it not meet a good part of the present difficulty?—Yes, it would meet a good part of it; only I am afraid we find that even these girls with this skill do not get regular work all the year round. They are more likely to get it than the other girls, but of course it does not make the trade any less seasonal.

82568. You do not think, then, that there is a gradual process of more and more skill being acquired, and so the grade of labour is being gradually raised?—I think you must have other things besides.

82569. What would make this side of the work more effective? What are the other things you have in your mind as bearing upon the question of improvement in ability and skill?—The other things I meant are trying to organise industry, so as to make it less seasonal and less of a rush. But that would not bear upon the skill at all.

82570. I do not understand that there is any distinct proposal of yours which would, as it were, control that further question of the seasonability, unless you were really to take over the position of employer and give allowances when work was off?—I am a Socialist, and so I want to have a more collective control of industry. The council itself is not Socialist particularly, so that that does not come into our Statement of evidence.

82571. One wants the best suggestions that lie before us, and I do not see quite how, granted the present conditions, you help us to tackle that seasonal question?—I do not think we do help you to tackle it.

82572. Therefore the reliance is to be placed rather in individual training by the people and in their having greater continuity of work, possibly as a result of their greater skill?—Yes.

82573. Rather in that than in anything else?—And then on the distress committees coming in to supplement that when they are out of work.

82574. Does that not practically mean a sort of perpetual rate in aid of wages?—I do not think the girls would get any less wages when they were busy because they were doing work for someone else when they were not busy.

How far skilled training will meet difficulty of women employment.

82575. Suppose the work lasted for nine months in the year, even if they could put anything by, would it not mean that there would be less inducement to do that for the remainder of the year?—From the evidence we have, I do not think they have very much to put by for their slack time. They seem to get into debt, and get along somehow.

82576. Do you not think it is possible to bring them together in any form of organisation which would have its own unemployed fund?—A few of the trade unions have such a fund, but it is so fearfully difficult to organise women.

82577. Is not the real issue there; that is to say, if you cannot take that step you can do nothing, but if you can take that step, you can do a great deal?—I think that the difficulty of organising women is partly the reason why the distress committees should be specially careful to provide work for them in their slack time.

82578. Would you be content with a system by which work and relief were continuously given year by year, there being nine months' work at their trade and three months' work in what you might call municipal employment?—I should not be at all content with it. I think it would be a stop-gap.

82579. Apart from your own theory on the future development, you see no answer to the problem?—No.

82580. (*Miss Hill.*) In reference to the figures which are given with regard to the number of days or weeks people are out of work, is it to be understood that that was always because there was no work for them, or do the figures include the days when they were away for illness or any other cause than unemployment?—I think our questions very much bore on unemployment, and our correspondents would quite understand that "unemployment" meant when they could not get work. I do not think they would count any days of illness.

82581. Then you do not think the days when they were ill are included in these figures?—They ought not to be, having regard to the nature of our questions, because they all bore on the subject of unemployment through want of work.

82582. Have you any statistics with regard to the proportion of days absent from illness as between men and women in any large works? I have heard that in the Post Office, for instance, the amount of illness is very much larger among the women?—Yes. Those are the only figures I can think of for the minute.

82583. But that is so, is it not?—In the Post Office, I think, it is certainly so. I suppose big employers could give you figures, but I do not remember any just now.

82584. It is possible that a good deal of unemployment may be due to absence through illness; however, you think that does not influence these figures?—No; I do not think it does.

82585. (*Mrs. Bosanquet.*) Does your council ever intervene to try and get better conditions with the employers?—Yes, it does sometimes.

82586. Did you approach Lipton's once?—Yes.

82587. With any success?—I do not think there was much success, but I forget the details just now.

82588. I think you got them to give their employees afternoon tea, did you not?—I think we did, and more washing basins, but I do not think we got the wages made any better, as far as I remember.

82589. Your suggestion for training women on the land is interesting; but would there be any opening for them when they were trained?—We have got a good many people who say there would be in poultry-farming and so on. The great cry is that we get so many eggs and that sort of thing from abroad which we might produce ourselves.

82590. It would mean capital to start with, would it not?—Yes; but not so very much, I think.

82591. Is not one reason for the emigration of women to the Colonies that the wages of domestic servants are so much higher there than here?—Yes, I think so.

82592. And the prospects of marriage are much better?—Yes.

82593. What is your view about the advisability of a minimum living wage to be regulated by the State?—The Women's Industrial Council has not got any official view on that subject. My personal view is that it would not be worth while to start it for those particular people who want it most.

82594. Could you tell us why?—It is specially with regard to the home-workers that I am opposed to it. It is rather a false remedy, because I think you would not get the home-workers to tell you what wages they were receiving, and I think they would look upon an Act with wages boards as an enemy instead of as a friend. In most cases, if employers had to give anything like a living wage to these people, it would pay employers better to take them into the factory and have the work done there, very often by introducing more machinery—at any rate, it would pay them better to get it done in the factory, by whatever means.

82595. I think you were in Australia and New Zealand recently?—Yes.

82596. Did you see the working of the Act there?—Yes. We gave as much time as we could to the working of the Acts in both places.

82597. Is your present opinion founded on your experience there?—It was very much confirmed by it. In New Zealand the Act seems to have quite broken down since we were there, and they are bringing in enormous Amendments which will quite alter it. In Victoria I cannot say that the Wages Boards are not successful; but simply from seeing how it worked in a small place, and the difficulties there, I think that the difficulties here would be so large as not to make it worth trying. That does not apply quite so much, perhaps, to some of these unskilled factory trades, and I do not know whether it might not be of some use in them.

82598. Can you tell us in what way it has broken down in New Zealand?—The thing that brought it to a head was the slaughtermen's strike. The men struck after the award of the court, and then the authorities were brought face to face with sending the men to prison; that did not suit the general public opinion, I think, and so they have had to reconsider the whole thing.

82599. Would that be a question of the minimum wage or of arbitration?—It would be a question of arbitration fixing the wage.

82600. Had you any indication there in the Colonies that the unskilled workers have been thrown out of work by the minimum wage?—No, I do not think so. They have exceptions, I think, in every case. You can have exceptions for the old or infirm workers; they can take a lower wage.

82601. You did not find that when the wage was fixed in, say, shirt-making, women were thrown out of that into, say, cap-making?—No, I do not think we got any evidence of that.

82602. (*Mr. Loch.*) The number of women or the number of men who are put to what you call infirm work or lower grade work is rather large, is it not?—I forget what the proportions are, but I do not think the number is very large.

82603. (*Mrs. Bosanquet.*) Have you ever thought about this question, whether it would be wise to prohibit women with young children from working in industries?—In our last paragraph (39) we very strongly recommend that widows with young children or wives with sick husbands and young children should be provided for from the State funds. You mean, perhaps, married women with their husbands capable of earning? The Council has not drawn up anything about that officially, and personally I do not see that legislation would be much good. I should very much like to stop their working, but I think we must do it rather by public opinion, and very largely by making the men's conditions better.

82604. Suppose married women were prohibited from working, do you think that would lead to any great distress?—It would lead to a good deal at first I think.

82605. It might lead to the men working?—In the long run I think it would; only the men cannot work unless they have got some way of getting the work to do.

Mrs. J. R. MacDonald.

5 Nov. 1907.

Minimum wage.

Working of Wages Boards in New Zealand and Victoria.

Question of prohibition of labour of married women.

Mrs. J. R. MacDonald. 82606. I thought perhaps you would tell us in detail about the experiment of your Council in training unskilled women for household work ; we do not all of us know it ?
 5 Nov. 1907. —We have got this trained charwomen's bureau, which arranges for the women to have a little training in a house where the lady can teach them the sort of things which are necessary for a charwoman to know, just beyond the mere scrubbing. It is rather, perhaps, as day servants than merely as charwomen that we aim at the best of them working. That has been very successful, only, as I have said, this last summer and autumn we have found much more difficulty in obtaining work for the women, and we have found it very difficult to take on new cases. The secretary says that is a good deal owing to the Workmen's Compensation Act.

Women's
Industrial
Council and
training of
charwomen.

82607. What sort of numbers do you deal with ?—I am very sorry that I have not got the numbers with me.

82608. Roughly, hundreds or tens ?—I think it is rather between the two. There are ninety-three regular members of the Association of Trained Charwomen, of whom fifty-one are now on the register, many of the others having obtained permanent work. On a supplementary list there are 232 non-members ; and in addition considerably over 100 well-recommended workers. For these latter work is found when possible.

82609. Did their wages rise after their training ?—We have a standard wage for them that they must receive.

82610. What is the standard wage ?—I ought to have brought the little paper along with me, as it is so confusing to give these things from memory when you have not looked at the documents for a long time. I think it is half-a-crown with meals for a full day, and 3s. 6d. without meals. I will send you the paper, and when I get the proof of my evidence I will put in the exact figures. A full day is ten hours. For a half-day or overtime, 6d. the first hour, and 4d. the succeeding hours. For a week a minimum of 12s. or by arrangement if for a permanency.

82611. In what way do you get the women ; how are they sent to you ?—All sorts of people send them to us—district visitors, the Charity Organisation Society, and all sorts of societies send them.

82612. (*Mr. Loch.*) Are you satisfied that it is a successful move, taken as a whole ?—Yes, we have been very pleased with its success.

Question of
training of
midwives.

82613. (*Miss Hill.*) Has your council considered the question of training midwives ? They will be very much needed when the new Act comes into force, will they not ?—Yes, they will be. We have not taken that question up as a council. We were in favour of the Bill before it came an Act, but we have not taken it up specially, because there are other societies that deal with it.

Possibility
of teaching
trades not
largely
followed in
England.

82614. (*Mr. Gardiner.*) In Paragraph 40 (6) you say "The possibility might also be considered of teaching trades at present not largely followed in England ;" what trades have you in your mind ?—We had some suggestions, but personally I do not know that any of them were very practical.

82615. Would you amplify that a little ?—If we had had anything very practical, I think we should have specified it. Glove-making I remember was one thing that was suggested—kid gloves ; and I think artificial flowers of the better kind is another that we were rather anxious should be more made in England than they are at present.

82616. There is nothing else that occurs to you now ?—No.

Question of
wives of
men sent to
labour
colonies

82617. In reference to Paragraph 36 (ii.) have you any opinion to express as to the policy of the unemployed body in sending the husbands down to places like Holesley Bay and leaving the wives and children to live in London ?—I am a member of the Holborn District Committee, so I have come across the question there a little. I think if the wives are properly visited in London it is quite a good thing.

82618. Do you not think the wives need building-up every bit as much as the men ?—You see they get almost all the wages.

82619. Do they not want change of air and scene and so on ? Are they not more broken-down in a period of unemployment than the men really ?—Yes.

Quest
of
wives
men s
to
labou
coloni

82620. Is that not an argument for dealing with the men in some other way ?—If you could send them all into the country it would be very nice ; but it would be rather a big undertaking, and it would be more expensive. You would have the trouble of taking the children to school and so on, and then there would be the difficulty of their homes.

82621. So that, looking at it all round, you are satisfied with the present system ?—I think it is the best we can do just now. We do suggest in 36 (ii.) that women who are the wives of men who are likely to be put on to the land afterwards might be sent to the colony and given a little training on farm work at the same time as their husbands.

82622. And also the women who want to emigrate ?—Yes.

82623. But you would confine yourself to those cases ?—Yes, I think those would be the most practical.

82624. (*Dr. Downes.*) Do you know whether there is any existing legislation restricting the employment of women on land in this country ?—There is some very mild Act about agricultural employment, but I think it is only enacting some regulations about their working in gangs.

82625. With reference to Paragraph 38, could you tell us how many trade unions provide benefits for their trade women members ?—No ; I am afraid I have not got that information with me.

82626. Or the rates that are paid by them ?—No. I have got that information at home, but I am afraid I have not brought it with me.

82627. (*Mr. Phelps.*) To follow up a question of Mrs. Bosanquet's, do you find that the competition of married women for employment is becoming stronger ?—I do not think I have found that myself. Opinions vary a good deal about it. I suppose it really varies in different districts, but certainly in connection with unemployment it becomes very much stronger when there is a lot of unemployment amongst the men—temporarily stronger I mean.

82628. Do you find, as was suggested, that a good deal of it is due to growing idleness on the part of the men ?—No, I do not think that is growing at all.

82629. That what you may call parasitism, or living on the earnings of the wives, is on the increase ?—I have got nothing to indicate that there is any more of that now than there was some years ago.

82630. Do you find that a class of wives whose husbands are earning good wages now are willing to go out to work in order to increase their income ?—That varies very much. In Lancashire it is largely a usual thing for the woman to go out even when her husband is in regular work. But in London it is not so common, although some of them take home-work in to make a little pocket money.

82631. You do not think it is on the increase, do you ?—There, again, I forget what the census figures are, but as far as I roughly remember it is the younger workers who are increasing. I have not come across any special increase myself except these temporary cases, when the men have a great deal of unemployment.

82632. With regard to the Workmen's Compensation Act, you say you think that has caused a good many people to be thrown out of employment ; on what ground is that—I did not quite catch ?—It was simply in the one instance that came before me in connection with our untrained charwomen. We find it more difficult to get those women places, and I asked the secretary what she thought people did instead, and she said they either have a young girl or do the work themselves.

Work
Comp
Act
as cau
of un
emplo

82633. What does the difficulty arise from ? Are the employers afraid that accidents might happen to middle-aged or elderly women ?—Yes, I think so.

82634. Do you find that really acting as a motive ?—Yes. Our secretary told me also that some of those who were already at work were coming to her and saying that they would be dispensed with because the employers did not care to pay the insurance for them.

82635. Have you any cases coming before you of people who, having made claims for compensation for accidents, have been dismissed in consequence?—No, I have not heard of any under this new Act.

82636. Have you heard it at all generally said that people are afraid of making claims for fear that they should lose their places?—I have not heard that myself; I do not know whether we have any information at the council about it.

82637. You say that for the wages of charwomen you have a standard which is 2s. 6d. a day and meals?—Yes.

82638. That is a higher standard than is common in the provinces, I think I may say?—Yes, I think it is.

82639. Why is it that in London you can set a higher standard than you can in the provinces?—I am afraid that a great many people in London pay a good deal below that standard, but we do not allow them to engage the women through us unless they do pay that rate. Then in return they get some guarantee of the woman's character and capacity.

82640. One would think off-hand that the supply of labour of that kind would be larger in London than in an average provincial town, and yet you think you can ask for such a standard as 2s. 6d. and their meals?—I do not know that the proportionate supply of women would be larger in London than it would be in the provincial towns. If the comparison is made with places where there is a great deal of other female labour, of course it would be larger in London.

82641. Have you seen a rise in your own recollection in the rate of payment for charwomen?—I do not think our experiment is large enough to affect the general pay so that one could see it.

82642. With regard to the scholarships that you were speaking about, have you had many instances before you of girls who have taken scholarships from the elementary schools and have gone into industrial training?—Yes. There are these schools which have been started within the last three years by the London County Council; I forget the total number—but I can easily put it in in the proof—of girls who have already received scholarships under that scheme.

As to this the witness subsequently wrote as follows:— 160 (80 each year) with maintenance grants for two years, out of nearly 300 scholars now at these schools.

82643. When they are awarded a scholarship are any conditions as to what calling they should prepare themselves for attached?—They get the scholarship by examination, and they say what school they want to go in for.

82644. Do you know whether they find that a very large proportion of those are preparing to be teachers?—No. What I am speaking of does not apply to teachers at all; it refers to tailoring, dressmaking, waistcoat-making, corset-making, ready-made clothing and upholstery.

82645. Supposing the scholarships were given in that way for the people to prepare themselves for life, do you or do you not find that they are almost monopolised by people who are preparing themselves to be teachers?—No, not at all, because the whole idea of this is that they should go into workshops afterwards.

82646. My experience is that in my own town they were almost all preparing to be teachers?—We have not had that experience so far, but then there is only one lot of girls who have really gone out from these schools, and they have all found work in workshops, except, I think, about one or two cases, where there was some special reason and they had to stay at home.

82647. On the whole, you think it has worked well? Yes, very well.

82648. (*Professor Smart.*) I suppose you would say that unemployment is quite as common a phenomenon among women to-day as among men, with this difference, perhaps, that there are fewer unemployed women from moral causes—principally from drink?—That is very flattering to the women. Perhaps it is so.

82649. Among the difficulties of women's work and wages is there not particularly this—that so many married women, when the husbands are out of work, become competitors with single women?—Yes, that is quite a difficulty. *Mrs. J. R. MacDonald.* 5 Nov. 1907.

82650. That is a perpetual difficulty, is it not?—Yes.

82651. You have mentioned the sewing work-rooms in London; what do you say to the criticism we have the women's had of that movement to this effect, that while the way into the work-room will in time become easy enough, a way out of it still remains to be found?—That is a difficulty, I am afraid, that it will be very hard to get over. At present a good many of the women who have been in for their sixteen weeks are not much better off when they come out, although a few of them have got regular work. Effect of in London. as sewing workrooms in London.

82652. Have you any figures?—No. I was just looking to see if I had. You can get them from Miss Smith, and from the Central Unemployed Body itself.

82653. Has your council considered the large outlet for women which there seems to be in the direction of what are called sewing maids in large households, that is, women who specialise in mending and darning and things of that sort? I understand there is a very large demand for that kind of labour; that the demand is not met at all; and that what women do apply for jobs of that sort are no good at it?—We have sometimes had it before us and thought of getting the County Council to give more special training for that, but at present we have not done anything special in that way. Openings for women in the direction of for women what are called sewing maids in large households, that is, women who specialise in mending and darning and things of that sort? I understand there is a very large demand for that kind of labour; that the demand is not met at all; and that what women do apply for jobs of that sort are no good at it?—We have sometimes had it before us and thought of getting the County Council to give more special training for that, but at present we have not done anything special in that way.

82654. You consider, I think, that a good deal of Advantage of employment could be given quite economically by the prohibition of long hours in the case of shop-assistants, waitresses and so on?—Yes. of long hours of shop assistants, etc.

82655. And you consider that the advocacy of that is perfectly consistent with economic principles, inasmuch as these hours are very unhealthily long?—Yes.

82656. I should wish your council would give some careful thought to Mr. Gardiner's point as to how leaving the women alone in London is thought of by people who have a right to have a view. It seems a serious thing to split up a family for so long a time, and we have heard one or two criticisms on it?—I will ask the council to consider it. Question of wives of men sent to labour colony.

82657. Do you not think it is worth while considering?—Yes.

82658. (*Mr. Lansbury.*) On the last point; is it not true that a number of men have to leave their wives now to go away and take ordinary employment?—It had not struck me as a great difficulty. I think that the regulation is that the money should be taken to the homes, and in Holborn I have tried to insist upon that, in case the woman should be going wrong. I know one woman I visited was not particularly respectable; I do not know whether she was worse than when her husband was at home or not. I think someone ought to visit.

82659. Apart from that I want to know whether it is a fact that men do go away for jobs in other parts of the country and leave their families at home?—Yes, certainly.

82660. So it is not such an unusual thing as some people seem to imagine that a man should have to go away and get work elsewhere than in the town or particular place he is living at?—No. I know lots of men who are like that.

82661. Then about the capital needed, that only means that any work that you do in training women in giving them a fresh start would cost money, whether it is on the land or in any other sort of way; is that not so?—Yes. Cost of training women for poultry farming and other work.

82662. So that that argument does not apply to poultry-farming any more than to anything else you are doing for them?—Except we think poultry-farming would be more remunerative to them in the long run, and it would be bringing in some practical result.

82663. About the men living on their wives; you have been on the Holborn Distress Committee practically since it was formed, have you not?—Yes. Question of men living on their wives' earnings.

Mrs. J. R. MacDonald. 82664. Do you find that that does apply very much—I mean purposely living on their wives—that the man is a lazy, good-for-nothing person, and simply makes his wife go to work instead of going to work himself?—I do not think the total proportion is at all large. In dealing with the applicants before the distress committee we do not consider a woman whose husband ought to be at work, and who is capable of being at work, but is out of work; we only consider the women with husbands if the husbands are incapable.

82665. I only meant did you, in your investigations, come across many of those kinds of cases?—Not many in proportion to the cases where the husband cannot really get enough work.

Attempt of Central Body to settle wives and families at Hollesley Bay. 82666. Then about taking the wives to the labour colonies, you know that the central body has tried to get more cottages at Hollesley Bay, do you not?—Yes.

82667. On purpose to take down the wives of the men whom they hoped would stay in the country, or would emigrate?—I saw those cottages where the people had been permanently settled, and I know you wanted to get more and were not able to.

State maintenance of widows with children. 82668. You would be in favour, would you not, of taking decent widows entirely from the Poor Law?—Yes; we are very strongly in favour of that.

82669. And you are also in favour of the woman being paid for bringing up the children?—Yes, as we say in the Statement. In South Australia they do that already; they call it boarding-out the children with their mothers.

82670. That is to say, instead of bringing in a foster mother they keep the natural relationship of the mother to the children?—Yes.

82671. Always, of course, taking for granted the mother is a decent person?—Yes. There is some sort of visiting, of course, whenever they pay the money; they have inspectors going to see them sometimes.

82672. Do you not think that would lift all those women out of the labour market, and get rid of a number of the women who are competing for the very lowest-priced work that is going just now?—Yes; I am very strong on that. The total proportion of widows is not so very large, but it is quite appreciable, I think. For individual cases, and for the sake of the children, we think it most essential.

Supplementary trades for seasonal workers, and possible effect on wages. 82673. Now as to giving women who are seasonal workers work in the workshops. You were asked just now whether that would not really be a rate in aid of wages, and whether it would not have the effect, perhaps, of bringing down wages. A suggestion has been made to the Commission that it might be possible privately to find other work with the ordinary private employers for women, or for men who are seasonally employed, that is to say, a woman might be a trousers-finisher one portion of the year, and perhaps a card box-maker another portion of the year. If the provision of employment by the State in the sort of way you suggest tended to bring down wages, do you not think that the other arrangement might also tend to bring down wages?—I should have thought there was a good deal more temptation in the other kind, that is, in letting private employers have them when they were slack. At present sometimes private employers take advantage of that sort of thing, and there are instances given of it, I think, not in our Statement, but in a Statement handed in by the Women's Labour League, which I have also had to do with.

82674. So that the effect might be to bring wages down in two industries instead of one?—Yes.

Possibility of trade-unionism in women's seasonal trades. 82675. As to women being able to force wages up through trade unionism in a seasonal trade so that they would earn enough to maintain them when they were not at work, do you think that is practicable?—I am afraid I have come to the conclusion that it is not. You see, marriage comes in so very much with women. I think you have to realise that their conditions are different from men's conditions altogether. The underlying difference is that women have marriage or household work of some kind before them, and you cannot get these girls to trouble much about getting more wages than will just keep them for the time.

82676. (*Mr. Bentham.*) With regard to the payment of widows with children, are you very strong on the authority who should provide the funds? Mr. Lansbury's question was, Did you approve of their being taken out of the Poor Law altogether and provided for otherwise?—My reason for that is that so many of them do not care to go to the Poor Law at present. A good many of the relieving officers, I am afraid, are not as polite to them as they might be, and the same may be said of some of the guardians themselves. Then there is this general pauper taint which the most respectable women dislike very much.

82677. Have you thought out in what way you would provide for them, and through what authority?—I suppose there is likely to be some sort of re-organisation when your Commission has made its recommendations, so I have not thought it worth while to think it out. I think one ought to have some aid from the central authority, and that it should not be altogether on the local rates, because it makes it so very hard on places where there are more poor widows than there are in other places.

82678. Then if its name was changed, and the conditions were somewhat altered under which the relief were given, it would answer the purpose, would it not?—If the relief were sufficient, and if it were not simply doles which compelled the woman to earn more when she had got her hands full really with the care of the children.

82679. I think we quite agree if the conditions of a particular family were the same in both cases—I mean the conditions on which the relief were granted—the authority would not matter much, would it?—No, if you had what is generally known as the pauper taint removed.

82680. (*Mr. Lansbury.*) That is the real *crux*?—Yes, that is the *crux*.

82681. You want to remove the taint of pauperism from that woman and her children; that is it?—Yes.

82682. (*Mr. Loch.*) Do you not think that the acceptance of that will lead to a very large number of widows applying who are not now applying?—I think a great many of them should apply who do not apply now.

82683. It would be a common sentiment with all people earning under a certain wage that they would have a provision made as a matter of course, for their widows?—I think any woman who has got any children to look after ought to look after them, and ought not to be obliged to earn a wage whatever the wage might be.

82684. That would mean practically the endowment of a very large class of people, would it not?—Yes.

82685. And that without inquiry, but by the mere fact of widowhood?—You would have sufficient inquiry, of course, to prove that they were widows, and that the children were not able to look after themselves, and also that the women paid proper attention to the children.

82686. Would that be by the same relief authority?—Yes, or whatever authority had the dispensing of the money.

82687. And you would have no limitation as to past wages, that is to say, as to what the husband earned?—I do not think so. If they had a lot of money saved up they would not be likely to apply.

82688. Therefore, it would tend rather to dissuade people from providing for widowhood than otherwise?—I think that the masses of working men at present cannot save up enough to allow their wives to keep their young children, if unfortunately the men die while the children are still young.

82689. But even if they now do something, the result of this method would be that they would do less, would it not?—Do they really do enough? Do they do much more than cover the funeral?

82690. I only said "something," not "enough." At present, you have, at any rate, the beginnings of a desire to see that they provide for themselves, and there is a great deal of self-sacrifice at times for that object; the proposal that you put before us would make that unnecessary, because they would think they have a right to rely upon this relief being given to their widows, a statutory right, as I understand?—Yes. But I do not myself think that

The proper authority to provide funds for maintenance of widows with children.

Importance of removing taint of pauperism from widows with children.

Justification of principle of state maintenance of widows.

Justification
of principle
of late
maintenance
of widows.

this self-sacrifice exists in large enough amount to make very much difference. Where it does exist, I think if the ordinary working man does save up on the chance of his dying early, it is rather at the expense of what ought to be spent on his wife and children.

82691. That is to say, you think the friendly society method is wrong and that they ought to spend and not save?—On the whole, yes.

82692. (*Mr. Lansbury.*) Of course nearly always the amount that a man can pay in to a friendly society is only enough for his widow to bury him and to properly pay the doctor's bill and the rest of it?—That is what I mean.

82693. (*Mr. Loch.*) Is that so as a fact, that she only gets enough to bury him and to pay the doctor's bill?—I have not got the friendly society statistics at my fingers' ends, but what I was saying was that if a man has young children, he ought to have spent most of his wages on those children.

82694. Irrespective of the amount of his wages?—I think the great mass do not have enough wages to do much more.

82695. Quite true, but you are asking us to accept it as a general rule that in all cases of widowhood the State should keep the widow and the children?—Where the children are young.

82696. Up to what age?—Until they can begin to keep themselves.

82697. Up to sixteen?—Generally they are of different ages; the family is going along.

82698. True, but should you say that the maximum age should be sixteen?—I think most children can hardly keep themselves entirely at sixteen.

82699. Therefore there would be practically all widows with their children who were at all needing help receiving relief until the children had turned sixteen?—I think that as long as they needed their mother's care she should be helped. Of course, a widow with one boy of sixteen would not need to pay so much attention to him, and you might think that she could spend a little time earning.

82700. But the children would be dependent really on the rates, in their turn, up to sixteen?—Yes.

82701. (*Mr. Bentham.*) Would not the number of children affect that?—Yes. I was pointing out that the number would affect it a good deal. At present, if a child loses its father we make it lose its mother too, because she has to do this wage-earning, and very often she really loses her life from overwork. At any rate, the child loses her attention. I do not see why, if it is good for a wife to look after her children when the husband is alive, it is not just as good for her to look after them when the husband is dead.

82702. If she is a widow with only two children and she happens to be living with her own mother, would you say the conditions there are exactly the same as if she were a widow left with four children and no one to assist her in maintaining them?—No.

82703. Should the State as a matter of course say, We will provide for all widows with young children?—I think the mother should be paid as the caretaker of the children and then she would get more money according to the number of small children that she had.

82704. Irrespective of the conditions under which she is living, or the circumstances under which she is living?—I think she would not apply if she was comfortable without.

82705. What I am trying to find is whether you mean an endowment for widowhood irrespective of their circumstances and conditions of life?—No, I do not think I mean irrespective of their circumstances and conditions of life, because I have explained that it depends a good deal on the number of children and whether any of them are earning.

82706. Then that would involve inquiry as to their condition, would it not?—Yes.

82707. And it would have to be laid before some tribunal to decide as to whether they were eligible or not, would it not?—Yes, I think so.

82708. Would not all that become a sort of deterrent? *Mrs. J. R. MacDonald.* Is that not exactly the objection they have to Poor Law methods?—It must be some sort of deterrent, I think; but I think it might be made much less deterrent than it is at present. 5 Nov. 1907.

82709. (*Mr. Lansbury.*) About the amount the man gets from the friendly society, have you any knowledge in respect to that?—I have no knowledge worth giving savings, you, I am afraid.

82710. (*Mr. Nunn.*) Are you aware that besides the amount which is actually provided for death, in many of the big registered orders of friendly societies there are opportunities for saving money which are very largely taken advantage of, and that a man's deposit with his friendly society very often considerably exceeds the amount that he has actually insured himself for at death?—I have not any definite knowledge about the amount.

82711. With regard to paragraph 37 (iii.) I should like to ask you whether what you contemplate is to be a purely official disbursement of funds like the work which is done by a relieving officer at present, or whether you incline to the other method of distribution by means of voluntary officers, such as occurs under the Act of 1905?—I think officials are much more dependable than voluntary workers.

82712. Do you think that a relieving officer paying money to the widow every week is more to be depended upon than a voluntary worker?—Yes.

82713. And you would prefer his influence on the whole?—I should have women relieving officers.

82714. Women relieving officers taking the money weekly?—Yes.

82715. With regard to Paragraph 37 (ii.) you are aware that the distress committees are committees of the borough councils, are you not?—They are not committees in the sense that the Water Committee, for instance, is.

82716. They are committees in the sense that they are statutory committees and it is optional for them to report or not when they like, but in London, at any rate, a considerable number of them do report to the council?—Then my own case at Holborn is a very unfortunate case. The council pays not the least attention to us, and takes no interest in us.

82717. What advantage do you think the attention of the council would be to such a committee?—You want all the local interest you can get, I think.

82718. What further local interest do you want in order that you may help the poor?—I think a public authority ought to have public interest shown in its work.

82719. But the public show their interest in these particular distress committees, do they not, by actually taking part in the work? You get representatives of the local bodies, and certain other persons co-opted in order to show their interest, who are actually doing the work?—Yes.

82720. Do you think it is desirable to have more people to work on the distress committees?—In Holborn, for instance, unless I went, and about one and a half other people, nobody would do anything. We only meet about once a year as a committee.

82721. From the point of view of the population of poor persons, Holborn is quite the smallest part of London, is it not?—Yes, but there is a great deal to be done there. *Holborn Distress Committee.*

82722. Stoke Newington and Holborn are comparatively insignificant in the actual population of poor people, are they not?—There are a good many unemployed there all the same.

82723. The percentages were asked for by the unemployed body?—The unemployed body has beaten us down, and we have sent in a protest again.

82724. That was in competition with the poorer localities, was it not?—That is partly because there is not sufficient interest taken in it, and people do not know. As soon as we got sufficient interest taken in it, we had a tremendous amount of women applying. We have eleven women at work now, and only one man at work.

Mrs. J. R.
MacDonald.
5 Nov. 1907.

Wages paid
to women
relieved by
Central (Un-
employed)
Body.

82725. May I ask what the wages are that the Central Unemployed Body pays to women when employed?—That depends on the number of children they have got. I have the figures here for the St. Pancras workroom if you would like to have them.

82726. If you have not got the average you might give us one or two by way of specimen?—11s., 12s., 16s. 6d., 12s. 4½d., 11s. 6d., 11s., 13s. 6d., 14s. 6d., 10s., 13s. 6d., 17s., 11s. 6d., 6s. 8d., and so on. They have a regular standard which you could easily get.

82727. That sounds like an average of 11s. or 12s. a week?—I have not got with me the regular standard.

82728. Are there any additions to that?—They have their dinner and, I think, tea.

82729. How much is that put at?—I suppose they allow about 6d. for the dinners. They arrange for their dinners.

82730. Sixpence a day?—Yes. The committee arranges for the dinners, and the women do not pay.

82731. What is it worth?—You ought really to get the information about that from the people who are responsible; I should only be able to give a guess.

82732. Do they get anything else besides their wages and their dinners?—Tea, I think—and yet I think they bring their tea—I forget.

82733. Do they get anything for travelling?—They get an allowance for travelling. There, again, you could get the exact amount from the officials.

82734. Does that not sound as if they were paying considerably above what they would get in the ordinary market as charwomen?—These are doing tailoring work.

82735. But anyone can apply, can they not?—Yes, anyone can, though they are not skilled tailoresses at all. I think the wages are quite a good standard compared with the ordinary market rate.

82736. Do you not think they come perilously near to contravening the regulation of the Local Government Board, which says that the wages paid to the unemployed shall be below the market wage?—I think if you compare them with the men's wages, you will find they are exceedingly low; and that for women there is no standard rate. I do not believe they are above the standard set, for instance, by the Women's Industrial Council.

82737. But, of course, the Local Government Board by this regulation simply wish to deter women from leaving ordinary employment in order to get artificial employment?—I do not know of any woman leaving her ordinary employment in order to get this employment.

82738. You have not detected it?—No.

82739. Mr. Loch, I think, dealt with the possibility of trade unionism filling up the gap in the course of time caused by seasonal occupations; in the case of charwomen I suppose most of their employers are persons who employ them in their own households, are they not?—Yes. Some of them are office-cleaners, but the rest would be working for private employers.

82740. The majority would be employed by private employers, would they not?—Yes.

82741. A cause of their seasonal employment is the fact that families are largely out of town in the summer, I suppose?—I do not know that I should say that charing was such a very seasonal employment, because when some families are out of town that is just the time when they might get in a woman. Perhaps they would be employed less then. But I do not think we are mentioning charing so much as a seasonal employment as some of the others. Of course, charing is rather irregular.

82742. But the older women are affected by the exodus of large numbers of families out of town in the summer, are they not?—Yes.

82743. Surely people do not employ the same class of persons who are doing daily charing also to look after their houses when they are out of town? They would employ rather a different class for a responsible charge of that kind, would they not?—A good many of these women are quite responsible. If the employers have a caretaker or a servant living-in, they get a charwoman in to help.

82744. Has it not been your experience that a good many charwomen and daily servants apply, and the cause of their application is that the families have left town?—Yes, I think we have some who apply in that way.

82745. Did you make any effort to get the mistresses of such women to consider whether it was not possible to make some kind of arrangements for their servants—for they are practically servants, of course—whilst they went away?—I have not done the working of the Trained Charwomen's Association myself, but I should quite think that the secretary has. I could not tell you about that. (On this subject the witness subsequently forwarded a letter from the Hon. Sec. of the Association of Trained Charwomen. For letter see Appendix No. XCIV.)

82746. Do you think it is desirable that a mistress should work a woman all the year round with fair regularity and then, because she is having a holiday herself, should just leave the charwoman, whom she has had at a minimum wage, to shift for herself? Is that not a side of the question which the Women's Industrial Council ought to take in hand?—I should be very glad to ask them if they had done that. I am afraid I have not asked about that particular point.

As to this the witness subsequently wrote as follows:— In some cases holidays are paid for, but more usually they come to the Association for Trained Charwomen for holiday jobs.

82747. (Mr. Russell Wakefield.) With regard to Holborn, as a matter of fact, I think you only sent up altogether eighty-one people in the year to the central board?—I have not got my Report with me. This time we shall send on a lot more. We have had fifty-nine women applying since July 1st.

82748. At any rate, that is your past experience. You would not consider Holborn, would you, anything but a rather favoured part of London in regard to this particular matter of unemployment?—We have very much casual work there, with the Covent Garden porters and those sort of people. Women come into that, too, because women do a good deal of work there. I think one of our grievances was that you would not recognise those people on the same plane as painters. You thought that a porter who was out of work for some weeks did not count like a painter who was out of work for some weeks, and you refused some of our people whom we thought eligible. Some of the women do work in the market in some way.

82749. You seem to have a desire for a closer touch between the distress committee and the borough council?—Yes.

82750. Is that in consequence of your appreciation of the high public spirit of the ordinary borough council, as far as you have been able to judge of it?—I think it is more public-spirited than the separate distress committees. I think it is a pity you have little odd bodies like distress committees; I think they ought all to be co-ordinated together more.

82751. Have you sufficient knowledge of your Holborn Borough Council to be able to say whether they viewed with any favour at all the Unemployed Workmen Act in all its operations, when it first came into being?—They have not shown much interest in it. In the distress committee's answers to you we have said that we think the Act, as it is at present, wants a great deal of amending to make it worth anything. You will find that in our official answers.

82752. That is not from the borough council?—No; that is from the distress committee.

82753. That is the opinion of Mrs. Ramsay MacDonald and of one and a half other persons?—No. We had a committee for that—a full committee.

82754. Those who had not taken any active share in the work throughout the year came to that conclusion?—A good many who were there had been to one or two of the *rela* committee meetings throughout the year.

82755. With regard to the employment of charwomen, have you any knowledge as to the effect of the large number of flats as compared with houses that are now in the west of London; whether, I mean, that has not decreased the employment of charwomen?—I think it has rather

increased it, especially in the case of women who are competent to take the place of day servants. We are supplying from the Women's Industrial Council a good many of those flats with women who can do the ordinary work of servants and who only go for the day, or for a part of the day.

82756. The experience we have in some parts of London is rather the other way—that, there being no stairs and things of that kind—servants can do the whole of the work, and the charwoman is no longer wanted to the same extent?—Of course, the stairs are done by somebody, who may be employed by the owner of the whole block.

82757. They generally have their permanent people to do that, I think. On the subject of the minimum wage I think that you have not been able to convert those who agree with you on many other subjects to your view of a minimum wage?—No.

82758. I may put it that you are a little heterodox on that particular subject?—Yes, at present, at any rate.

Mr. GEORGE N. BARNES, M.P., called; and Examined.

82764. (Chairman.) I understand that, in accordance with the request of the Commission, you have come to give evidence on behalf of the Trade Union Congress Parliamentary Committee?—Yes.

82765. I assume we may take the Statement which has been prepared by Mr. W. C. Steadman, the secretary, as representing generally the views of that body?—That is so.

(The Witness handed in the following Statement).

STATEMENT AS TO UNEMPLOYMENT GIVEN ON BEHALF OF THE TRADES UNION CONGRESS PARLIAMENTARY COMMITTEE BY MR. W. C. STEADMAN, SECRETARY.

CAUSES OF UNEMPLOYMENT.

1. We believe that the following are the chief causes of unemployment:—

(a) The absence of the organisation of labour. Goods are produced for profit irrespective of demand, the consequence being that there is, at points, overproduction, which, in turn, leads to confusion and displacement. This evil is intensified by the increased introduction of labour-saving machinery, without adequate reduction of hours of labour or increased remuneration of the workers. Moreover, as an effect of this new machinery, youths at lower rates of wages are substituted for skilled craftsmen, thus decreasing the economic efficiency of labour and, consequently, the area of employment.

(b) The absence of proper training and the consequent helplessness of a large number of the industrial population.

(c) The absence of any attempt to regulate the distribution of work so as to maintain employment at an even level, thereby causing alternate periods of rush and stagnation; coupled with this, the discharge of young men on attaining a certain age.

(d) The long, continued and systematic overtime prevailing in many trades.

(e) The migration of young men from the country into the towns in consequence of the non-cultivation of the land.

EFFECTS OF UNEMPLOYMENT.

2. The principal effects of unemployment on the workman are:—

(a) Loss of spending power, due to poverty.

(b) Physical deterioration.

(c) Moral deterioration.

REMEDIAL PROPOSALS.

3. Inasmuch as unemployment cannot be controlled by the individual workman, and that through the State he has been deprived of the right to provide sustenance for himself other than in the ways indicated by law and order, we believe the obligation rests with the State to provide a remedy to meet the evil. Our suggestions are:—

(a) That under normal conditions the Government be urged to regulate the distribution of work under its jurisdiction, so that the necessity to discharge workmen will be obviated.

82759. Then, in regard to the husbands who refuse to work, you do not encourage the employment of women whose husbands will not, as far as you can gather, work if the work is given to them, that is, you do not give work to the women under those circumstances, or do not recommend them for work, do you?—No.

82760. And obviously the husband himself is not recommended under those circumstances, his character being of such a kind as will keep him outside the purview of the Act?—That is not a matter which has come before the Women's Industrial Council particularly; but, personally, I should have much stronger measures available for dealing with those husbands.

82761. Something of a more penal character?—Yes.

82762. (Sir Samuel Provis.) You have stated that the distress committee only meets about once a year, I think; how is their work done?—We have a *rota* committee which sees the applicants.

82763. How often does that committee meet?—That committee meets about once a week.

Mrs. J. R. MacDonald.
5 Nov. 1907.

Question of husbands who refuse to work.

Holborn Distress Committee.

Mr. G. N. Barnes, M.P.
5 Nov. 1907.

(b) That the principle of regulating the distribution of work with the object, as stated in Clause (a), be urged by the Government upon all public bodies and recommended to private firms.

(c) That the practice of working overtime be generally discountenanced. Abolition of overtime.

(d) That workmen should be encouraged to join trade unions as a means of increasing their wages, and thereby increasing their effective demand for commodities. Trade unionism.

(e) The State should set up local unemployment authorities to establish registers for the unemployed in their respective areas, such authorities to provide suitable work, as far as is practicable, for those who sign the register. Authorities so formed to be fully representative of the various interests involved. Commissioners should be appointed by the Local Government Board to advise the local unemployment authorities, whose expenses should be paid by the Treasury, the same body to provide means for the payment of the work to be done, under certain conditions. Local unemployment authorities.

(f) There should also be organic changes in the utilisation of land and the incidence of taxation connected therewith. Utilisation and taxation of land.

(g) Some better provision should be made for those advanced in years. With the speeding up of industry it is becoming increasingly difficult for the old to keep up the pace. This provision ought to be made quite apart from the Poor Law. A great deal has already been done in this direction through the agencies of trade unions, of which details will be given. Old-age pensions.

(h) Moneys should not be spent in emigration to distant countries, but rather in migration in our own country. Emigration.

(i) Labour farms and colonies might be used temporarily as training establishments, and men passed on from them to small holdings. Labour Colonies.

82766. (Chairman.) Dealing with the causes of unemployment, in your judgment, I gather, the want of organisation of labour is intensified by the increased introduction of labour-saving machinery?—Under the conditions as stated. Effect of increase of labour saving machinery.

82767. You point out in the Statement that the results of the introduction of machinery often tends to substitute youths for skilled craftsmen?—Yes.

82768. Is it not almost inevitable, and must we not face that contingency, that machinery will not be introduced for the production of goods unless it cheapens production?—Yes.

82769. So, I mean, it is an evil that we must face?—Yes.

82770. That increased use of machinery does in many cases mean association with rather inferior labour?—And cheaper labour, yes; I quite recognise that.

Minimum wage.

Chief causes of unemployment.

Effects of unemployment.

Remedies for unemployment ought to be provided by the State.

Regulations of distribution of work.

Mr. G. N.
Barnes, M. P.
5 Nov. 1907.

82771. Therefore that is one of the difficulties which we have got to face for the future?—That is so. I may say here, if you will allow me, that women are often employed now to take the place of men on the introduction of machinery such as I have in my mind. Many instances might be given of women who are working on machinery at very much lower rates of wages than were paid to men. That has the same effect as the employment of youths.

Specialisation
in industry.

82772. I suppose I may go a little bit further and say that one of the difficulties connected with the introduction of machinery is that certain forms of production become more and more specialised, and the man who works on one machine for a long time finds it very difficult to find employment elsewhere?—That is so.

82773. I suppose that is a difficulty which comes a good deal under your attention?—A good deal; but I am speaking more from the abstract point of view here. It comes across me sometimes in my own trade, but I know it obtains in other trades as well, to a considerable extent. It is one of the things incidental to our present system of industry, specialisation being part of it, leading, as it does, to cheaper production.

82774. Specialisation, I suppose, speaking generally, is rather on the increase?—No, I should say there has been a halt in that direction in the last few years—at least I fancy so. I think it has become recognised to some extent that specialisation was going a little bit too far, and that people are not now so keen on specialisation as they were. I think it has been recognised that specialisation produces a lower type of man—a less efficient type of man; and that, after all, employers prefer to have a man who can be used for more than one particular operation.

82775. With specialisation all-round handiness disappears?—That is it practically.

Reforms of
education
system
necessary.

82776. Then, passing on to the next sub-head in the Statement, absence of proper training, had you apprenticeship in your mind there?—Partly.

82777. Do you think that the system of national elementary education is practical enough?—Do you mean supplementary to that we have already, or do you mean education of a technical character?

82778. I am asking whether the present system is practical enough, with a view of making those who pass through it efficient afterwards?—No, I do not think it is. I think it ought to be supplemented by technical training, and that there ought to be a larger proportion of people trained to trades than are now trained. I think that part of the difficulty arises through there being a larger proportion of unskilled labourers than there ought to be.

82779. And that evil will be accentuated by the fact that boys in big towns on leaving school can often without any difficulty take up those odd and end jobs?—Yes, and at comparatively high wages—at least at larger wages than they could get as apprentices.

82780. Would your idea be that this better training should be introduced into the present system with the present age limits, or would you rather it took the form of continuation schools if the boy has left the elementary school? I think it might be both. I would favour the raising of the age and the addition of some slight technical education to the ordinary education as we have it now. I would also advocate continuation evening schools.

Importance
of regulating
distribution
of work.

82781. Then we will pass on to your third cause of unemployment, namely, the absence of any attempt to regulate the distribution of work. I suppose you had in your mind there public authorities, rather, had you not, or were you thinking of private employers as well?—We were thinking more particularly of public employment there.

82782. Taking into consideration the fact that at certain periods of the year it is more difficult for people to find employment, you think they should try and regulate what work they have got to control, so as to give greater opportunities during the slack times for people to get work?—That is so.

Evils of
overtime.

82783. Then you are averse to people working overtime?—Yes, for two reasons—because I think it tends to increase competition for employment and because it tends to lower the physique of those who are working.

82784. There is another side, sometimes, to this question of overtime. A firm, or say, a Government dockyard, may have an exceptional strain upon it which they can meet by overtime; on the other hand, if, in order to meet just this temporary strain, they engage people with their families to come and settle, then when the strain is over those persons are without employment?—Yes, that is so.

82785. Woolwich would be rather an extreme case of that kind?—That may take place in towns such as Woolwich, where there is only one employment; but those are exceptional cases, I think.

82786. But admitting that, still you think overtime is bad?—Yes, it is.

82787. Then you speak of the non-cultivation of the land; by that I suppose you mean that more persons should be on the land, or that there should be smaller holdings than at present?—Yes.

The land
question.

82788. I suppose what you would wish is that rural life or rural occupation should be made more attractive?—And more remunerative.

82789. I think we are all agreed as to the facts of unemployment, so now I will pass on to your suggested remedies. I think (a) we have already discussed, and I think I understand what you mean there. Then (b), you would try to get private employers and big firms to recognise the principle of regular employment, I think?—Yes.

Remedies
unemploy-
ment.

82790. (c) I think we have dealt with already?—Yes; (c) is the question of overtime.

82791. Then in (d) you say that workmen should be encouraged to join trade unions as a means of increasing their wages?—Yes.

Trade
unionism.

82792. I think you are the Secretary of the Amalgamated Society of Engineers?—That is so.

82793. The difficulty of the problem that we have got to deal with relates not so much to skilled as to unskilled labour, of course?—Yes.

82794. The class that swells our unemployment is to a very large extent engaged in casual and intermittent work?—Yes.

Possibility
of casual
labourers
joining
trade union

82795. Is that, do you think, an insuperable obstacle to co-operation, or to joining a union?—No, I think not. It increases the difficulty—we all admit that—but it is not an insuperable obstacle, as is proved by the fact that in recent years the class of labour which you have in your mind has been reorganised, to some extent, and its conditions improved thereby. But I should like to say that there is still a very large number of unemployed men in the skilled trades. I have here some tables giving the numbers of unemployed men in the engineering trade right away back from 1851 onwards, and giving the fluctuations year to year. I find that the percentage begins at 1.6 in 1851, and ends at 2.8 last year. The fluctuations have been extreme; for instance, in one year, 1879, which was a very black year in the engineering and allied trades, we had an unemployed of 13.3 per cent.

Unemploy-
ment
sick and
superannu-
ated in
engineering
trade.

82796. Was there a fight then, or a strike then?—There was no fight at all then. I exclude the year when there was a fight, 1897. We had 14.8 that year. There was no fight in 1879; the figure for that year was due simply to depressed trade. So there are a considerable number of unemployed in all industries—but more of course in the unskilled industries.

82797. Take your own trade as an illustration. If the man was sick or ill would he be amongst those unemployed?—No, he would not. I have entirely separate figures here for those. The sick are much about the same in number as are the unemployed. Then there is a further number of what we call the superannuated men; beginning with 120 of them in the year that I mentioned, we came up to 5,300 last year. Many of these men are practically unemployed men. That is, they are superannuated, not because they are not fit to work, but because they cannot keep up the pace.

82798. Do those figures relate to your own union?—Yes, those are our own union's figures. The figures for the other unions are much about the same.

Unemployed, 82799. I suppose even if employment was very plentiful there would always be a small percentage in your union who would not be able to get employment?—Certainly.

82800. What would you put that at—about 1 per cent., or anything of that sort?—We would put it a little higher. We take a little over 1 per cent. as representing men who are simply, at the time of the returns being made, shifting from one employ to another.

82801. There must be, I suppose, a small percentage of people who, even though they are on the books, would not be fit for employment, and might be disqualified by some means?—They might be disqualified because they are getting old; apart from those and the sick, I do not know of any other.

82802. Then on the question of their getting old, I think you had something to do, had you not, with the Workmen's Compensation Act; you were consulted about that?—I was one of a small inter-departmental committee.

82803. The impression, which has not been supported by actual figures, of the witnesses who have come before us is that, though the Act has proved beneficial in many ways, it has tended rather to contract the age at which a man, if he is out of employment, can get into work again; what is your opinion?—I daresay it might have had some small effect in that direction, but I should like to add that I do not believe it has had the slightest effect in decreasing the area of employment. It has simply given the young man a greater advantage than he had hitherto over the old man.

82804. It is also alleged that the Workmen's Compensation Act affords a natural excuse for a man saying, "I am out of employment on account of the Workmen's Compensation Act," and there may be a certain amount of truth in it, or there may be none?—I have no personal knowledge as to that, but it is possible. There is always a proportion of loafers amongst the unemployed who do not want work, and they are always willing to avail themselves of any excuse that offers to explain their being out of work.

82805. To my mind this does seem rather a difficulty. Have the trade unions ever considered whether there can be a sliding scale of wages for men when they have reached a certain age?—Yes, and that is a thing in operation now among the trade unions. For instance, we do not require a man to shift from one town to another after he is fifty years of age, and, putting it generally, we do not require him to get the standard rate of wages—according to the discretion of the committees who may deal with the matter—after about fifty-five years of age.

82806. The contention being this, that an older man in certain trades is probably a less efficient workman, and is more liable to accident, and, what is perhaps the most serious consideration of all, if he gets hurt he does not so readily recover?—So far as the first part of your question is concerned I believe it is not only not true, but the reverse of true.

82807. That is he is not less efficient?—I mean to say that the old man instead of being more liable to accident is, on the whole, less liable to accident than the young man.

82808. Because he is more careful?—Yes. My experience bears that out. I have had many cases, probably numbering some hundreds, through my hands, and I find that the larger proportion of those who get hurt is of young men and not of old men. So far as the latter part of the question is concerned, it is quite true that there is a greater liability for the old man to be permanently injured, if he is injured at all, and that he has not the same chance of recovering.

82809. This is interesting; you say the number of accidents which occur are greater amongst the young men?—Yes.

82810. As regards the gradation of wages, do you think it would be possible to give a further extension than is now in practice, or in force, to persons beyond a certain age working at a lower rate?—No.

82811. You think not?—I think we have gone as far as it is possible to go in that direction, and that any further extension of it would be opposed by trade unionists.

82812. I suppose that the percentage is very small?—*Mr. G. N. Barnes, M.P.* Yes, it is, very. In fact, although we allow men to work under the rate at fifty-five years of age, it is rather the case that the men at fifty-five, or even sixty, do not avail themselves of the opportunity. So strong is the sense of discipline in the trade unions and their sense of loyalty to their fellows, that in most cases a man would rather give up work altogether than accept work at the lower rate. So that instead of trade unions standing in the way of the men accepting lower rates, the opposite is the fact, and the trade unions rather encourage it.

82813. What becomes, say, of a man at fifty-five who will not go on working; how does he support himself?—*Superannuation system in Amalgamated Society of Engineers.* It is a gruesome thing. As a matter of fact we have large numbers of our men from fifty-five to sixty years of age who come on our superannuation list, and take a pension of from 8s. to 10s. per week—the average is about 9s. and they eke out a living somehow or another, some of them getting assistance from their families.

82814. I am getting a little beyond our subject, but this is interesting. Does your union give pensions independent of sick pay?—Yes.

82815. After a certain age?—Yes. We have at the present moment 5,300 on superannuation.

82816. All above the age of sixty-five?—The average age going on superannuation is sixty-two and a quarter years, I think it is, but I am speaking from memory here.

82817. Is your trade a long-lived trade? It is a heavy trade, I suppose?—Yes, it is fairly long-lived, and the age has increased very much.

82818. (*Sir Samuel Provis.*) You have just given us the average age; have you a minimum age?—Yes, fifty-five.

82819. (*Chairman.*) Does the age of fifty-five itself entitle a man to a pension, or must there be a medical report?—He must be physically unfit to earn his living.

82820. The pension is independent of the sick pay, I think you said?—Quite so.

82821. Would a man get double pay if he was sick as well?—No; in that sense it is not independent of it.

82822. (*Mr. Nunn.*) Does he continue to contribute?—He contributes 1d. a week, and more if required, but then that does not, of course, cover the pension. As a matter of fact that is a special levy which has been made for some sixteen or seventeen years, and which has never yet been touched for the pensions. In that sense he pays a special contribution, but not otherwise.

82823. Is he subject to levies?—Yes, he is subject to levies as required.

82824. (*Chairman.*) Now we pass on to (e), which is a more controversial or difficult suggestion. You wish the State to set up local unemployment authorities and to establish registers for the unemployed?—Yes.

82825. That is not so difficult in itself; then you say State that such authorities should provide suitable work for those who sign the register—that you will admit is a very difficult question?—Yes, very.

82826. Would the idea be that they should get permanent work, or that the work should only be as a sort of test to see whether the application is a *bona fide* one?—I should say both. I should say that places should be provided similar to those that have been provided more or less under the Unemployed Act, at Hollesley Bay, for instance, and that provision should be made of a temporary character to pass certain of them through to permanent employment who were fit for it.

82827. That might lead to the State setting up very large establishments for work?—Yes, it might.

82828. What wages should they be paid? Would they have to be paid the standard rate?—The rate which was customary in the district in which they were employed—standard rates, where there were such rates.

82829. I think you will see that that is open to the difficulty and the danger that there would not be much inducement for a certain class of people to get employment outside?—It might be so if there were more permanent employment in those establishments.

Mr. G. N. Barnes, M.P. 82830. Whilst you put this forward you see the difficulties and some of the dangers of it?—Quite. I know the trouble we are in, the hobble we are in, and I want to get out of it.

5 Nov. 1907. 82831. Then in (f) you say that there should be organic changes in the utilisation of land, and in the incidence of taxation; is it the idea that land should be less heavily taxed or more?—More. I have urban land more in my mind there.

Taxation of land. 82832. Unoccupied sites, of course?—Unoccupied and partially occupied sites.

General increase of strain upon workers. 82833. Now we come to (g); the general tendency nowadays, I suppose, is towards the speeding up of machinery?—Yes.

82834. Should you say now that the strain on the individual in various trades is greater than it was before?—Yes, I am sure of it.

82835. Notwithstanding that there has been an improvement in ventilation, for instance?—Notwithstanding the improvements, sanitary and otherwise, I should say the strain is greater on a man while he is at work. Of course, I know that a man lives longer now, but I think that is due to improved conditions outside, and more moderate living, and various other things. I think the strain in the workshop is harder.

82836. And I think we may fairly assume that the strain will not diminish?—I should say the tendency is all the other way.

82837. Therefore, in your judgment, perhaps the age at which people get worn out is, under these conditions, earlier than it used to be?—Yes.
